Two approaches have been used to satisfy various DSS requirements. One philosophy says that everything needed by the user should be embedded in a single system; when the user is in that system, everything is readily available for use. Other systems adopt the philosophy of concentrating on specific activities; they provide interfaces with data base management systems, with graphics packages, risk analysis, time series analysis, statistics and others. A popular example of this approach is named Fits (Focus, IFPS, Tell-A-Graf, SAS).

In the hardware and software issues of integration, the DSS user must be aware that the presentation of integrated solutions is often more of a marketing concept than a practical reality. It is advisable to scrutinize each vendor's claims closely.

A final challenge to the DSS vendor is the need to provide user-seductive software — user-friendly is no longer enough. A comprehensive-solution orientation is required. DSS software must be able to grow with increasingly sophisticated user needs and must be attractive to all types of users. DSS vendors have responded by increasing their efforts in such critical areas as documentation and education, full-screen interfaces, expert systems and quality support and delivery.

In conclusion, the demand for information, the greater computer literacy of the population and the proliferation of increasingly sophisticated micros along with the need for integration have brought heavy pressures to bear on DSS vendors. The firms that succeed will be the ones providing total solutions. Because of the rapidly evolving marketplace, users of DSS should regularly evaluate their software offerings. **OA**

KNOWLEDGE-BASED SYSTEMS

BY ROBERT KELLER AND PETER TOWNSEND

One of the world's first knowledge-based expert computer systems, a program called Dendral, was begun in 1965. "Knowledge-based" refers to a system's ability to perform tasks at the level of a human expert, and Dendral's task was to emulate a human expert's performance in deducing the molecular structure of a compound, given its chemical formula and some mass spectrographic data.

Today the technology of expert systems has produced several successes and propelled the field of artificial intelligence into the public view. Systems have appeared that have raised hopes of truly intelligent computer assistance

for professional experts in any discipline.

Two of these are Stanford University's Mycin, which performs diagnosis of bacterial blood infections at a level of competence reported equal to those of the best physicians, and Xcon, which was developed for Digital Equipment Corp. to provide expert assistance in configuring the VAX line of computers.

Most early expert systems, however, were aimed at solving problems in scientific and engineering areas. Only in the last two or three years have workers in AI begun to apply knowledge-based systems to business problems.

There are now many start-up AI companies interested in developing, for business and industry, products that exploit the fruits of research in expert systems. To date, although several companies are nearing the end of their development phases, very few have successfully released a commercial knowledge-based product.

Application generators: Expert system application generators are more common than knowledge-based products. These application generators possess the ability to reason in a way similar to human reasoning, but are independent of any particular area of specialization. To use such a product, a human expert must enter extensive knowledge of a domain, a task that may take many months or years. (A knowledge domain is an area of expert endeavor; an expert in that area is a domain expert.)

Among the excellent media for the company that wishes to build a proprietary knowledge base are products such as Timm (General Research Corp., Santa Barbara, Calif.); S1 and M1 (Teknowledge, Palo Alto, Calif.); and KEE (Intelli Corp., Palo Alto, Calif.). The products generally possess one or more techniques for representing knowledge and can apply different techniques of reasoning, depending on the requirements of the domain being explored. In addition, they include fairly user-friendly interfaces to help the expert develop a complete and consistent compilation of the expertise gained over many years of practice.

Knowledge-based products: Easier to work with is a generation of intelligent products that come with a predeveloped knowledge base for a particular domain. Several would-be AI vendors are known to be working on such products, although many of them prefer not to have their developmental efforts publicized.

The first company to have released an off-the-shelf knowledge-based product is Intelligent Business Systems (IBS) of New Haven, Conn. IBS markets a complete general accounting software package along with the hardware needed to run it. The IBS accounting package runs on a VAX 730.

Included in the package is an extensive knowledge of accounting practices and a query facility, Easytalk, which allows users to ask complex accounting questions in natural English.

For example, in addition to asking questions based on simple retrieval requests — such as "How many IC96's do I have in stock?" — the user can assume the system understands relationships in a bill of materials. The user could, for example, ask, "How many IC96's do I need to build 300-dozen level-2 tractors?" Even more complex reasoning is available to answer such questions as "How many of them should I stock to fill an order of this size next time?"

The successful IBS release of Easytalk and its companion accounting software is one of the first signs that knowledge-based systems are ready for the commercial market. Many more such products are likely to follow.

Two other areas being explored for knowledge-based applications are risk management — particularly in the insurance industry — and financial planning. Although these two areas are receiving substantial attention just now, any area in which people are clearly expert at some task is a candidate for knowledge-based system application.

Among the most credible young contenders in the insurance field is Syntelligence (Menlo Park, Calif.), which has the services of several well-known AI people as well as experienced business management, and which is believed to have completed a prototype knowledge-based underwriting system for a major New York casualty insurance company.

Although this work cannot yet be considered a commercial product, it represents successful groundwork from which a series of knowledge-based products could evolve.

Features of knowledge-based products: Although phrases such as "user-friendly," "smart systems," and "Help facility" have been in use for some time now, the new generation of knowledge-based products is giving these terms decidedly enhanced meaning. Further, in addition to much deeper domain knowledge than traditional software products, knowledge-based products exhibit something like self-awareness in the sense of being able to explain why they took certain actions and also being somewhat aware of what they don't know.

At this time, Courtier, a system in the financial planning area, stands out as an excellent example of the features that should be expected from most future knowledge-based products. Courtier — French for broker — is a security portfolio advisory system developed at Cognitive Systems, Inc. (New Haven, Conn.) for installation in the lobbies of most branches of a major Belgian bank. Its purpose is to provide high-quality investment advice to customers of the bank, without the need for highly-paid investment analysts in each branch.

Because of natural language user interfaces that possess a deep knowledge of the user's situation, knowledge-based products can come much closer than previous products to the user-friendly ideal — being able to get what I want from the computer when I want it and without help from anyone else.

Courtier, for example, is to be used directly by the bank's customers, regardless of whether they have ever used a computer system before. The system, which will accept both conversational French and English input, offers specific recommendations about stock purchases and portfolio distribution and will also answer factual questions about the Belgian stock market.

For a new customer, Courtier conducts an interview to collect information about the user's financial situation. Then, based on the user's current portfolio distribution, common sense investment practices and current market conditions, Courtier gives advice about which stocks to buy or sell.

Although Courtier can conduct an interview with a customer and offer investment advice without any prompting from the user, the user may interrupt at any time. The user can then express likes or dislikes or ask questions about an individual stock, the advice given or investment matters in general. This mixed-initiative user environment is another essential aspect of the meaning of user-friendly for the new generation: The system has the expertise to operate in a free-running mode, but its self-determination can always be overridden by the user.

Depth of knowledge: Knowledge-base generally means an extensive collection of facts, rules and guesses which an expert in a domain uses in achieving expertise. The knowledge base in essence is a model of some human expert. Courtier, for example, is a model of an expert human investment adviser.

Like a human financial analyst, Courtier can give detailed investment advice only if it has a detailed financial profile of the customer. Courtier gives the customer the option of completing a brief or in-depth financial questionnaire, including current investments, assets and liabilities and cash available for investment.

Based on this information, Courtier may make stock recommendations or it may determine that, according to its built-in investment policy, the customer's assets are not large enough to warrant investments in the stock market. As always, the customer can choose to override the system's recommendations.

If the customer decides to invest in the stock market despite Courtier's recommendation to the contrary, the system would present a recommendation of stock purchases appropriate to the customer's financial profile and current portfolio.

At this point, the customer could say, "I don't want any utilities," and Courtier will respond by revising the portfolio to reflect this preference.

Self-awareness: One of the more frustrating aspects of traditional query facilities is that they tend to interpret questions too literally and provide answers that are less than the user really wants. Knowledge-based products have the means to discover the real question that's being asked and to provide a meaningful answer. Courtier, for example, uses its knowledge of the market to provide helpful answers to questions where a simple yes or no might be adequate. For example, a customer might ask, "Should I buy SGB?" A simple yes or no would be adequate, but Courtier is more likely to respond with something like "Soc. Gen. de Banque would not be a bad investment (it has average market performance); however, Kredietbank would make a better investment in the banking sector."

As another example, assume the system has only current price and earnings data available and that the customer has asked for a five-year history of price and earnings for SGB. Data base query systems are likely to tell the user the question cannot be answered. In contrast, the knowledge-based system is aware that it can't answer the question as asked, but that it can answer some part of the question. Its belief system suggests that some part of the total answer is better than no answer at all.

Courtier would produce an answer such as, "I do not yet have historical data available. However, this current data may be useful: The price-to-earnings ratio for SGB is 6.3."

Research applications of knowledge-based technology that have been done are many and are generally discussed in the literature. They have served well in their role as precursors of a possible future for intelligent computer systems. However, a second generation of systems is now bringing this potential into reality in ways that can benefit everyone.

Both through systems that allow expert personnel to transmit their own expertise to the machine and through knowledge-based off-the-shelf products, the computer is being transformed from a widely accepted, competent clerk into an intelligent professional. OA

SUPPORT TOOLS FOR MICROCOMPUTING

BY ANN L. MORLEY

End users are finding themselves faced with a wide array of technologies. The range of this technology is good evidence that no single blueprint will meet the requirements of architects charged with the design and maintenance of productive personal computing.

A company that attempts to organize for managerial productivity will find its ability to do so is influenced by many support tools, among them financial modeling and planning systems, fourth-generation DBMS-based languages, graphics software, spreadsheets, text processing and retrieval packages and natural language query systems.

Furthermore, their implementation on mainframes, minicomputers and/or personal computers and their ability to connect with users intra- or intercampus merely enhances the architect's opportunity to fashion a tool that takes into account a number of organizational considerations.

The information systems manager in many instances will find that the current crop of decision support tools is composed of familiar faces. Academics and industry pundits have envisioned a comprehensive system with highly general ways of handling information, but this system is far beyond the capabilities of the offerings on the marketplace today. Users, as a result, are looking at discrete solutions to meet the short-term requirements of end-user constituencies. Suppliers of single-purpose systems tools and languages are investing significantly in enhancements for broader-based decision support or are looking for third-party alliances for products that complement their own.

Organizational decision makers will continue their cry for improved software as hardware resources are distributed throughout their firms.

Application tools most frequently implemented for decision support read like an excerpt from the table of contents of any major packaged software directory. This article will briefly review the programs organizations are using to solve ad-hoc information needs and will look at what users can expect from software developers in the coming year.

Among the first to embrace the concept of decision support were a group of software houses and time-sharing companies offering programs developed in the 1970s to automate financial modeling and planning applications. These companies were a clearcut example of what the marriage between computers and management science might produce, and they became vigorous proponents of DSS in the '80s. The market for this type of application will top $587 million this year, according to International Data Corp. (IDC), the Framingham-based market research firm. Of that amount, $405 million will find its way into the pockets of the remote computing firms.

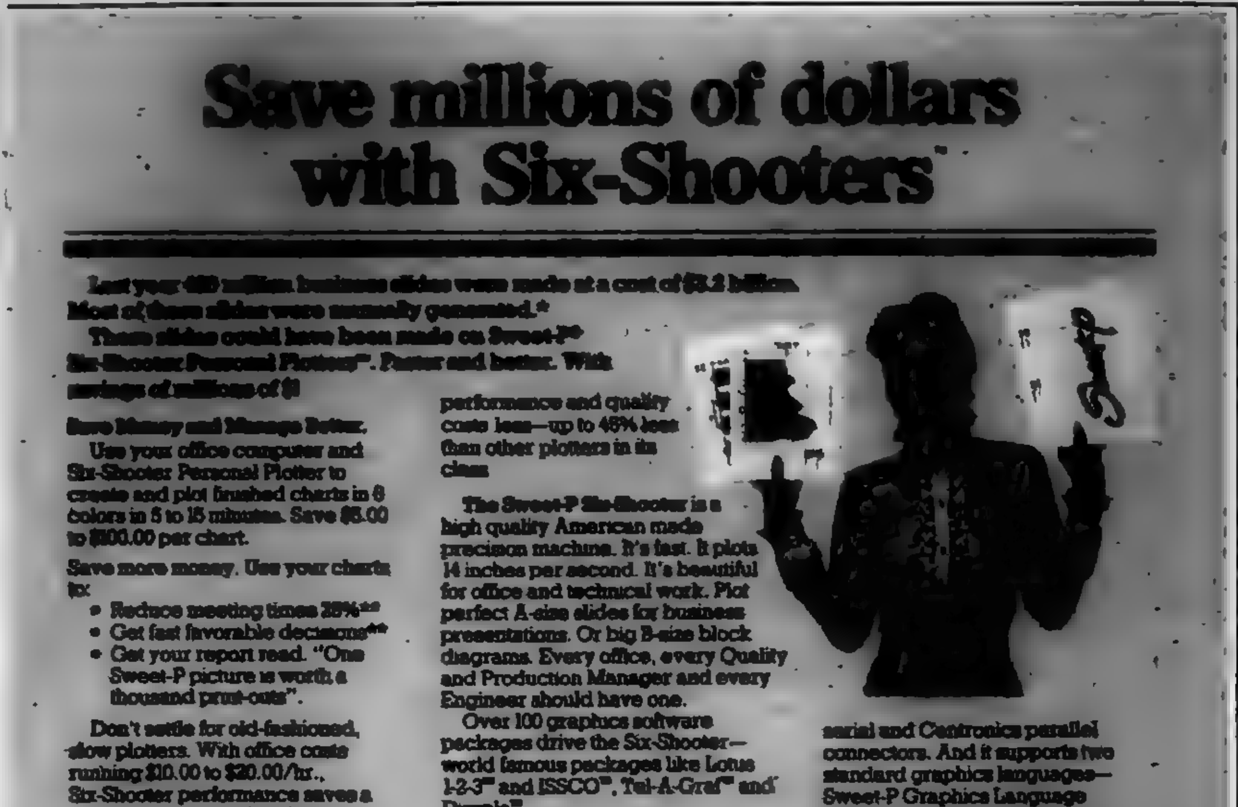
Market dynamics favor the packaged software supplier; these firms can expect to grow at a rate of approximately 40% compounded over the next five years. Moreover, IDC data indicates that at the end of 1983 only 10% of U.S. IBM mainframe sites had, in fact, implemented financial modeling and planning systems.

Users will find more and more companies competing for their dollar. Some are industry stalwarts, like Execucom Systems Corp. (Austin, Texas), Management Decision Systems (Waltham, Mass.) and Evaluation and Planning Systems, Inc. (Windham, N.H.). Others are new entrants like Comshare, Inc. (Ann Arbor, Mich.), Infotym (Cupertino, Calif.), Fame Software Corp. (New York, N.Y.) and a host of vertically niched companies enhancing their industry-specific offerings with planning and forecasting features.

The spreadsheet pioneered the widespread use of personal computers for financial budgeting and forecasting. In large and small businesses, however, there exists a group of users who desire access to some features that only modeling languages support. Ferox Microsystems (Arlington, Va.) and Addison-Wesley (Reading, Mass.) have targeted this particular customer, as have the mainframe software companies, which are steadily announcing personal computer versions of their software. For example, Comshare's clientele have access to Micro W; Execucom is shipping IFPS/Personal; Lloyd Bush and Associates (New York, N.Y.) is marketing Simple Basics; and Information Systems of America (Norcross, Ga.) is providing Micro-Foresight.

The marketplace for modeling applications on personal computers is predicted to grow at an annual rate of approximately 78% compounded over the next five years. It is exactly the kind of application users will want to distribute as more powerful machines and workstations become the order of the day.

In 1984, integrated and integrating software became the defining characteristics of the personal computer software industry, and they are becoming the pivotal strategy of large systems software houses as well. The integration of broad-based applications — graphics, report generators, data base management, spreadsheets and queries — stems from two not-incompatible growth opportunities: the need to wring incremental revenue from an expanding product line and the requirements of end users for friendlier front ends. As a result, vendors of financial modeling and planning systems face some competition from the likes of Information Builders (New



Save millions of dollars with Six-Shooters™

Last year [illegible] million business slides were made at a cost of $3.2 billion. Most of these slides were manually generated.*

These slides could have been made on Sweet-P® Six-Shooter Personal Plotters™. Faster and better. With savings of millions of $!

Save Money and Manage Better.

Use your office computer and Six-Shooter Personal Plotter to create and plot finished charts in 6 colors in 5 to 15 minutes. Save $5.00 to $100.00 per chart.

Save more money. Use your charts to:

- Reduce meeting times 28%**
- Get fast favorable decisions**
- Get your report read. "One Sweet-P picture is worth a thousand print-outs".

Don't settle for old-fashioned, slow plotters. With office costs running $10.00 to $20.00/hr., Six-Shooter performance saves a bundle. Best of all, Six-Shooter performance and quality costs less—up to 45% less than other plotters in its class.

The Sweet-P Six-Shooter is a high quality American made precision machine. It's fast. It plots 14 inches per second. It's beautiful for office and technical work. Plot perfect A-size slides for business presentations. Or big B-size block diagrams. Every office, every Quality and Production Manager and every Engineer should have one.

Over 100 graphics software packages drive the Six-Shooter—world famous packages like Lotus 1-2-3™ and ISSCO™, Tel-A-Graf™ and Disspla™

The Six-Shooter holds six pens. Pens are changed automatically. Pens are capped automatically when not in use, so that pens last longer and start quicker.

The Six-Shooter easily connects to almost any computer. It has RS-232 serial and Centronics parallel connectors. And it supports two standard graphics languages—Sweet-P Graphics Language (SPGL™) and Hewlett-Packard Graphics Language (HPGL™).

The Six-Shooter plots on almost any media. Make brilliant overhead transparencies. Plot on film, and on plain and coated papers.

Save on wiring costs too. The Six-Shooter will "eavesdrop" on the RS-232 cables that connect your terminals now. (This makes it easy for Six-Shooters to join local and long distance networks.)

What about support? Six-Shooter customers get fast professional help with software, hardware and interface questions. And warranty and service support is quick. If we ever have to fix your plotter, we'll repair it in less than a week (usually 2 or 3 days).

Don't wait, order an evaluation plotter today. If you can't possibly use a plotter now, at least call or write and we'll send you more information and a sample plot. You'll love this great machine.

Our toll-free telephone numbers are: 800/227-4376

Enter Computer, Inc.
6867 Nancy Ridge Drive
San Diego, CA 92121

York, N.Y.), Mathematica Products Group (Princeton, N.J.), D&B Computing Services (Wilton, Conn.) and Infodata Systems (Falls Curch, Va.). These four vendors dominate the marketplace for fourth-generation DBMS-based languages, which are now featuring a complement of statistical and analytical tools.

In spite of marketing literature to the contrary, the financial modeling and planning system is distinguishable from the fourth-generation DBMS-based language. Financial modeling and planning systems analyze alternatives using conditions set up in models. These systems typically perform complex operations on relatively small sets of data. The fourth-generation DBMS-based language optimizes inquiry, management, validation and especially reporting of large amounts of data.

As users confront requirements in 1985 and beyond, they will find they need to both manipulate *and* manage data. Two factors make this issue more urgent, especially in view of the rapid expansion of the user population. Those factors are the increasing acceptance of the information center and the distribution and sharing of corporate information resources, embodied for the time being by the micro-to-mainframe link.

The quantity and detail of data available for users of spreadsheets and modeling systems is skyrocketing. Users, looking to external sources like the on-line data base services vendors, are simultaneously expecting MIS to make available information residing on production systems.

Professionals supporting in-house clients have always been challenged by the need to control, coordinate and secure the corporate data resource. As a result, they have been very receptive to the strategies leading data base management systems (DBMS) vendors have evolved for developing and safekeeping the information center data base. More often than not, the information center is the organizational entity through which end-user requirements are managed at large sites. At yearend 1983, for example, almost 60% of U.S. sites supporting an IBM 3080 series had implemented or were in the process of establishing an information center, according to IDC data.

The impetus behind the DBMS shops' effort to exploit new opportunities in end-user markets is threefold: the commercial viability of relational data base technology; the long-term attraction to users of integrating the piecemeal solutions that have characterized the business environment in the early and mid-1980s; and the additional revenues they can generate from multiple DBMS licenses.

Vendors offering relational DBMS or software that supports relational views of data include IBM, Cullinet Software (Westwood, Mass.), Applied Data Research (Princeton, N.J.), Oracle Corp. (Menlo Park, Calif.), Relational Technology (Berkeley, Calif.), Data General, Cincom Systems (Cincinnati, Ohio) and a host of others.

Software shops are accommodating the requirements of end-user data base management in two different ways. Independents like Cullinet and Applied Data Research believe users are best served by one DBMS capable of supporting production and end-user applications. Others — IBM, for example — would have MIS support one type of DBMS for production systems and another for end-user and OA systems.

The introduction of DBMS technology into the information center and the demand of end users for organizational data have spawned the implementation of micro-to-mainframe links. These links allow host computers to support decision support applications on personal computers; quite frequently they provide the user with an alternative to mainframe- and mini-based planning or spreadsheet systems. The resounding success of companies like Lotus Development Corp. (Cambridge, Mass.) in corporate America has brought new opportunity to large systems software houses that are complementing their products with micro-based analytical tools.

By and large, two kinds of link products are available. The first — probably the one that will predominate over time — is the broad-based generic link that supports a wide variety of file structures. Informatics (Woodland Hills, Calif.), Cullinet and a host of new entrants like Carleton Corp.'s CQS-Infolink (Cambridge, Mass.) are representative examples of this type. Cullinet has gone so far as to strike up agreements with Data General and Digital Equipment which allow their customers access to data residing in end-user files on IBM mainframes for manipulation on (typically) DEC or DG workstations.

The second type of link is delivered by vertically niched companies like McCormack & Dodge (Natick, Mass.), Management Science America (Atlanta, Ga.) and Software International (Andover, Mass.). These products allow users access to the transaction data generated by the applications each software house has installed for downloading to the personal computer.

The implementation of micro-to-mainframe links has been slow, in part because of maintenance, security, and cost considerations. Their implementation over the next year will cement many advantages the micro has already brought to the development of the user interface. A large proportion of local computing resources will become dedicated to turning the workstation into a front-end unlike those that currently exist for decision support. Software developers constantly monitor the evolution of touch screen technology, the mouse, natural langauge queries and more sophisticated Help facilities.

Use of information centers at IBM sites, year-end 1983

The major challenge faced by users grappling with the promise of decision support technology is the integration of discrete computer-based activities into an institutional information resource. As the above analysis makes clear, no single approach currently comes close to serving diverse user groups. Although tremendous strides have been taken by software vendors trying to marry new technologies with old, significant challenges remain. Management scientists, for instance, voice concerns about organizational productivity while software developers attempt to leverage advances in communications architectures and standards and the possibilities inherent in expert systems, portable operating systems and the like.

How these issues will be resolved for market consumption will be the subject of endless speculation. One thing, however, remains absolutely unquestioned: users have had a phenomenal impact on the economics of information processing. OA

Morley is senior software consultant in the Professional Services Group at International Data Corp. Statistical data in this article are from two of her more recent efforts: "Trends in Decision Support" and "The IBM Software Environment."

Teach your word processor to read.

Whether you have a CPT, Exxon, IBM, Lanier, NBI, Wang or Xerox, we can make it smarter. The compact Dest WorkLess Station™ lets you enter typewritten pages of different typestyles into your word processor automatically without using the keyboard.

For immediate information and the name of your nearest dealer call Mary Thorpe at (800) 538-7582. In California, call (408) 946-7100. Or fill out and mail this coupon to Dest Corporation, 1201 Cadillac Ct., Milpitas, CA 95035.

FOCUS

on UNIX.

Love it or hate it, UNIX™ is one of the most controversial topics of the day. And that's just the way we'll be presenting it in January's premier issue of Computerworld Focus.

Everyone with any interest in UNIX will be sure to read the January 16th issue of Computerworld Focus, where we'll really dig deep into today's issues and answer some of the toughest questions. Which version is best for what operations? How do you implement applications software? Is UNIX truly portable? How to make UNIX user friendly. With pages chock full of user opinions. Expert views. Tutorials. Investigative reports and other information.

Whether you have a UNIX compatible service or product, or a UNIX alternative, there will never be a better place to make your case. You'll get over 126,000 Computerworld paid subscribers for starters. Plus our high pass-along readership. Plus bonus circulation at the UniForum show on January 21-25 in Dallas, Texas.

But hurry, January's Computerworld Focus closes December 7. So act now. To reserve your space or for more information, call Ed Marecki, National Sales Director, at (617) 879-0700. Or call your nearest sales office listed below.

INFORMATION CENTERS: SOLUTION OR PROBLEM?

BY NAOMI KARTEN

While information centers are busily attending to users' micro needs, programmers are feeling their security being pulled out from under them by rampant end-user computerism. And, at the same time they are becoming an increasingly potent user tool, personal computers seem to be accentuating the rift between users and data processing.

Given the exploding demand for user access to computerized information, DP senior management and information center planners had predicted that transferring some of the load to users would help relieve the burden on DP. This, in turn, would help reduce the adversarial nature of the user-DP relationship. Yet, if anything, the conflict is increasing. Information centers — intended to be part of the solution — may inadvertently be contributing to the problem. Expanding the information center scope to support both users and DP may be a worthwhile strategy.

In providing services to both users and DP, information centers could stay on top of the issues and concerns of both sides. Rather than contributing to the conflict, information centers would help improve overall data resource management through increased understanding of the data needs of users and DP.

Information centers thus far have been the key to fourth-generation and personal computer technology in many companies. Neither users nor DP can go it alone. Expanding the scope of the information center would permit a unified approach to training and support and might help ease DP into the new reality in which both users and DP have a piece of the technical action.

This approach would also help ease DP's antagonism toward information centers. Initially, DP departments largely ignored the single-minded orientation of centers toward the support of users in the newest technological tools. IBM recommended that information centers promote this concept to DP in order to gain acceptance, but many tended to forget DP in the eagerness to get users up and running.

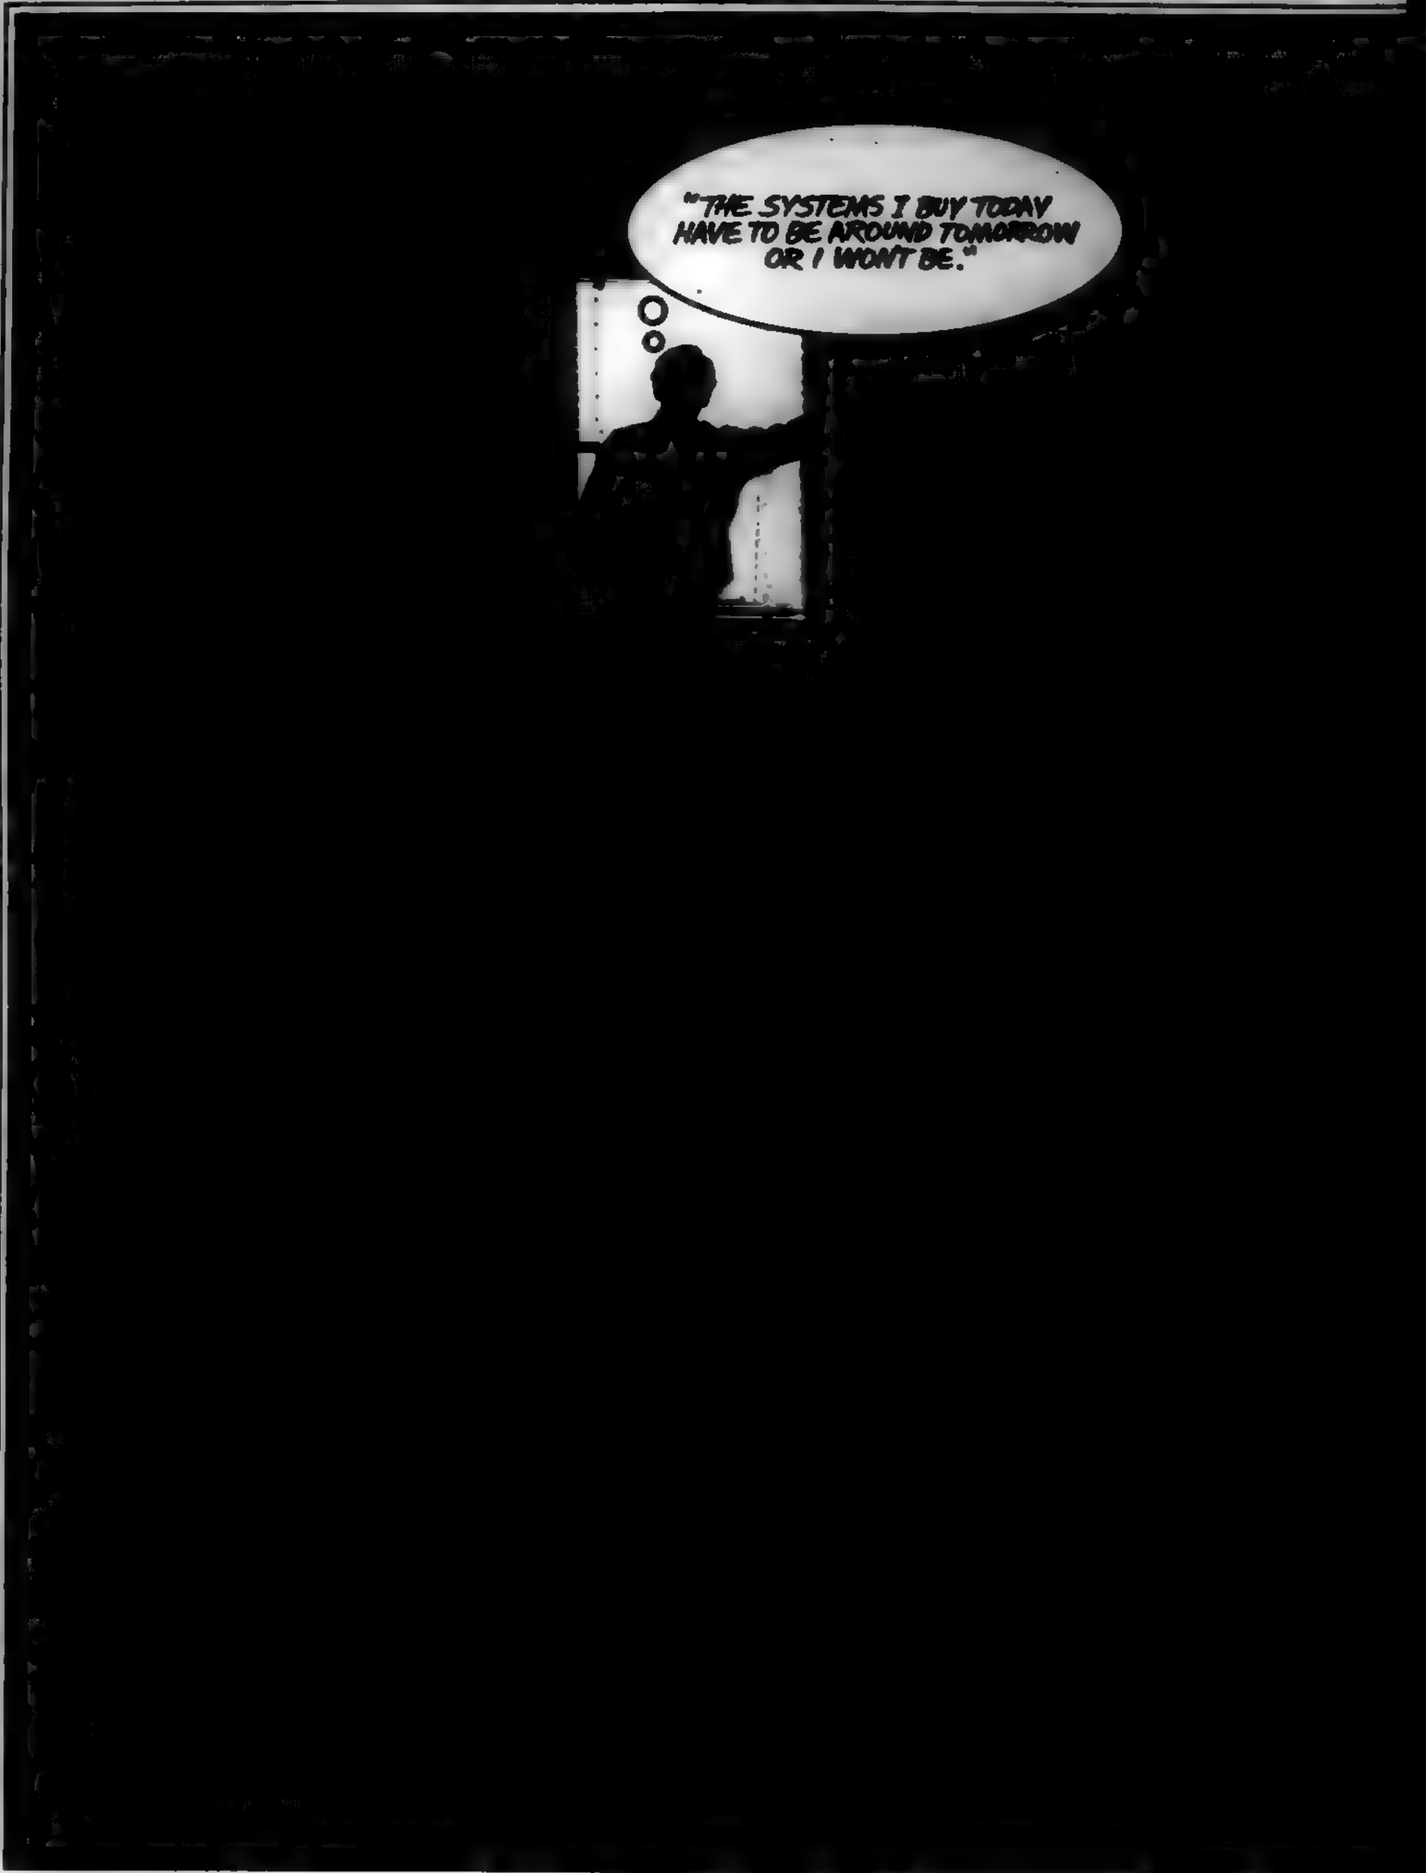
Information center personnel, selected for their service orientation and patience, tended to thrive on this dedication to users. Ask such personnel why their company has an information center. Most will talk about user needs for access to data. They'll describe user productivity. They'll refer to users' needs for decision support capabilities. And — not to be forgotten — they'll remind you of the ever-growing application backlog, which, at least in theory, users can help to reduce.

Ask these people whom they support, and they'll say the financial, or planning, or marketing people or whichever segments of the user community they've been working with. Rarely will they list DP as a recipient of their services, even if they do in fact provide a modicum of support to their DP peers.

It's not surprising that in pre-micro days this "pure user support" approach was successful. From the beginning, information centers attracted corporate users eager for computer skills. Users learned to prepare analyses and generate reports within hours and days, compared with typical DP timeframes of months, years — or never. In spite of mainframe software that, in its infancy, was often user-hostile at best, users demonstrated an ability to use fourth-generation languages to an extent unanticipated by DP user-watchers.

DP departments graciously accepted the fact that information centers were teaching users to do things DP didn't really want to do — boring reports and repetitive analyses of analyses. Centers took some heat off DP and reduced the interruptions in DP's day (incidentally making it more difficult for DP to blame project slips on user demands for ad hoc support). DP was able to get on with its business of developing and managing production systems and — overall — being in charge of computer technology and the use of computers in the corporation.

As more and more users took on mainframe programming responsibilities, however, it became apparent that DP was no longer completely in charge. Users were being encouraged to learn the newest mainframe languages, the graphics packages and the full range of micro spreadsheets, data managers and word crunchers — and DP



"THE SYSTEMS I BUY TODAY HAVE TO BE AROUND TOMORROW OR I WON'T BE."

wasn't. As DP's total responsibility for all things in corporate computerdom diminished, the user-DP relationship headed simultaneously in opposite directions.

In some DP departments, terms like "partnership" and "synergy" started to be heard. With information center training, users were able to describe their business needs to programmers in accurate technical terms. Programmers, in turn, were able to report on project status in terminology meaningful to users. Users and programmers were working together better than ever.

In other DP departments, the relationship worsened. Using fourth-generation languages, users were turning out programs faster than their third-generation Cobol-bound DP peers. Instead of a partnership, a strong sense of turf politics emerged. Many of these programmers — and their managers as well — began to perceive the information center as responsible. Included in that perception was a view of information centers as part of the DP organization, but working to aid and abet users to encroach on DP's territory.

As personal computers stormed onto the corporate scene, the situation took a plunge for the worse. Regardless of whether DP support has been generously offered, rigidly implemented or totally withheld, users have been able to become computer-savvy. No DP policy can prevent a user from using a home computer, reading a personal computer magazine or visiting the corner computer store for a demo of the latest dazzler.

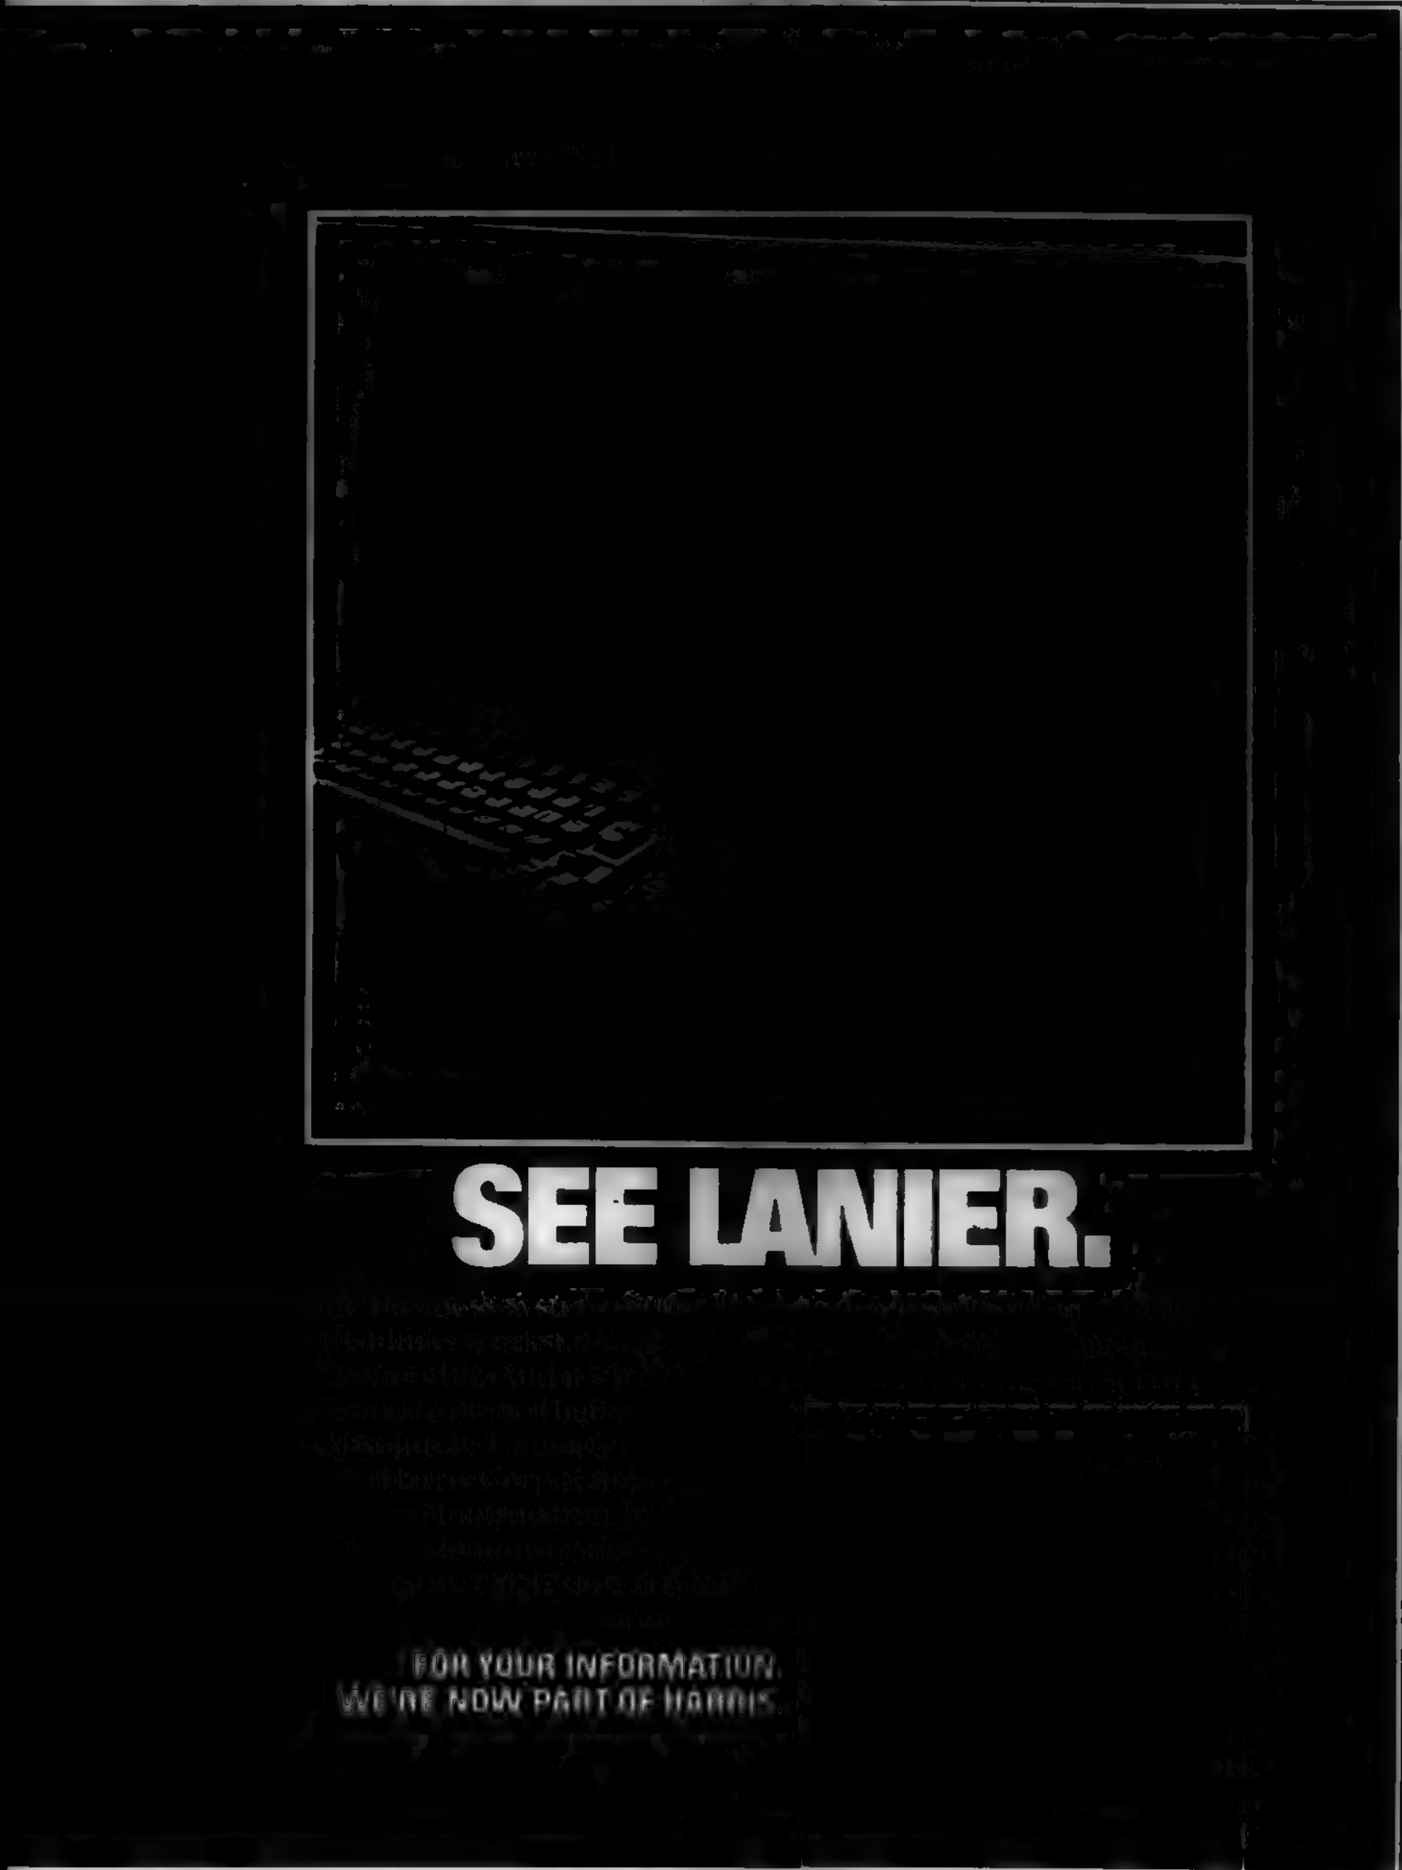
To make matters worse, users find personal computers exciting: a new, different and often better way of getting the job done. Many programmers, immersed in the development of mainframe systems, are either uninterested in "moving down" to personal computers or are prevented by their management from taking time to learn this new technology. Some programmers, amazingly enough, are intimidated by personal computers and anxious about their ability to use them properly. The result is that many programmers are less familiar than their users are with micro technology.

Of course, it's not personal computers per se that DP resents; rather, it's what this technology represents. Personal computers symbolize to DP the loss of power and authority and control over users. And this situation is absolutely irreversible: DP will never again be completely in charge of the use of computer technology in the corporation.

Given the fragile nature of the DP ego, this situation is difficult at best. But it can be turned into an opportunity by information centers. Information centers can expand the scope of their mission and their mode of operation to support both users and DP. The modifications in training, support, staffing and overall management are small, relative to the potential benefit in the user-DP relationship.

The first step is to examine the center's original mission, goals and objectives. A new term — referring to both users and DP — is needed. Almost every option seems sure to offend someone. An information center that can come up with an all-encompassing designation will be a step-and-a-half ahead. In one center implementing this expanded model, statements of mission, goals and objectives include the following:

Mission: to provide user and DP personnel with training and support in proven mainframe fourth-generation and micro technology which will aid them in carrying out their respective responsibilities.



SEE LANIER.

FOR YOUR INFORMATION, WE'RE NOW PART OF HARRIS.

Goal: to assess new hardware and software which provide productivity aids for business analysis or systems development and to make recommendations to management for acquisition and implementation.

Objective: to provide, during the first six months of operation, a formal overview of micro fundamentals to at least three representatives of each major functional area of the company.

Goals and objectives still revolve around tools, training, support and consultation, but they now explicitly take into account both user and DP needs and responsibilities. When objectives have been formulated, the impact on existing support activities and staffing requirements can be assessed.

The types of training generally offered to users — computer-based, classroom or one-on-one — are equally appropriate for DP. DPers also benefit from more technically oriented training, and many vendors offer courses geared specifically to DPers.

For group-oriented training, initially users and programmers can be trained separately. This prevents new users from being intimidated by "techies," and keeps programmers from feeling slowed down by users. Equally important, it spares programmers from embarrassment in the presence of users who may know the subject area better.

Staffing implications of extending services to DP are obvious. Just as no one understands a user's business problems better than a user, information center support to DP can be provided best by people technically experienced and familiar with the DP environment. Information centers that have drawn their staffs heavily from user areas may need to increase their technical strength. However, because most centers have been at least partially staffed by people from the DP ranks, the balance between representatives of DP and user areas may be able to remain exactly as is. A technically-oriented person capable of delivering training to programmers would be a major plus. Management of an information center supporting DP as well as users requires close contact with both DP and user management. The extensive overlap of the needs of both groups often exceeds what may be anticipated at the outset.

With computers of all sizes now in the corporate domain rather than under the exclusive responsibility of DP, several companies have found joint planning to be effective.

Under information center direction, a joint committee of user, DP and information center representatives meets regularly to work out the most effective approach to responding to the common needs of both groups, while ensuring that each gets adequate attention to its unique needs. This approach often results in a pooling of resources, resulting in a level of overall support beyond that generally feasible through information center resources alone.

The situation is absolutely irreversible: DP will never again be completely in charge of the use of computer technology in the corporation.

A benefit already emerging in some centers is the development of technical aids to improve the functioning of the tools in use. Programmers frequently complain about the CPU-intensive nature of fourth-generation software. Although users have developed workable — necessarily efficient — technical solutions to their business problems, programmers are eager to devise techniques to maximize efficiency.

A hoped-for benefit is that users and programmers will begin to view each other as peers. By jointly attending company user group meetings, product demonstrations and planning sessions, users and programmers can learn more about each others' responsibilities. In the days of second-generation technology, users and programmers shared a sense of mutual respect and worked closely to solve business problems with technical solutions. Perhaps, after a trying third generation, the fourth generation can once again experience this type of working relationship. **OA**

WITH RAMIS II ENGLISH, THE COMPUTER HAS FINALLY LEARNED YOUR LANGUAGE.

Now, you can talk to your computer the way you talk to a colleague: in plain English.

Even if you've never been on speaking terms with a computer, RAMIS II's advanced knowledge-based technology lets you ask questions, obtain answers, even create reports in only a few minutes. As a result, you can work more effectively and productively—without having to learn a specialized computer language. You just use English.

RAMIS II: ARTIFICIAL INTELLIGENCE THAT DELIVERS REAL PRODUCTIVITY.

RAMIS II English combines years of research by Mathematica in linguistics and artificial intelligence with proven expertise in developing practical, easy-to-use software products. The result is maximum fluency with minimum demands on support staff. In fact, while other systems require days or weeks of dictionary setup for each application, the *extensive built-in knowledge base* of RAMIS II English provides immediate access to most data.

RAMIS II English enables you to access data directly, without costly and time-consuming downloading or reformatting, so the latest information is always available.

Wherever your data is stored—in RAMIS II databases; in ADABAS, IMS, TOTAL, or IDMS databases; or in VSAM or sequential files—there's only one language you need to know: English. And, because English comprehension is an integral part of RAMIS II, you have full access to all of its fourth-generation capabilities, from powerful reporting and analysis to full color business graphics.

THE BENEFITS OF RAMIS II ENGLISH SPEAK FOR THEMSELVES.

Teaching the computer to speak your language is the best way to put the vast power of today's computer systems directly into the hands of *every* user from *every* department. RAMIS II English is one more powerful demonstration by Mathematica of the increased productivity available through RAMIS II—the real leader in complete software for business.

RAMIS II ENGLISH MAKES IT EASY TO UNDERSTAND WHY WE'RE THE REAL LEADER IN COMPLETE SOFTWARE FOR BUSINESS.

Let RAMIS II English speak for itself. See it in action at one of our regional Product Demonstration Centers. For more information, contact your local Mathematica office, call toll free (800) 257-5171 or return the coupon below.

MATHEMATICA
P.O. Box 2392, Princeton, NJ 08540

RAMIS II...THE LEADER BY DESIGN

TIGHTENING CONTROLS ON MICRO-BASED SOFTWARE

[illegible]

There
is nothing
like a noose
to concentrate
a man's
mind.
Samuel Johnson

W [illegible]

leaving themselves open to disaster, and when trouble occurs, it will often be MIS that is called in to untangle the mess.

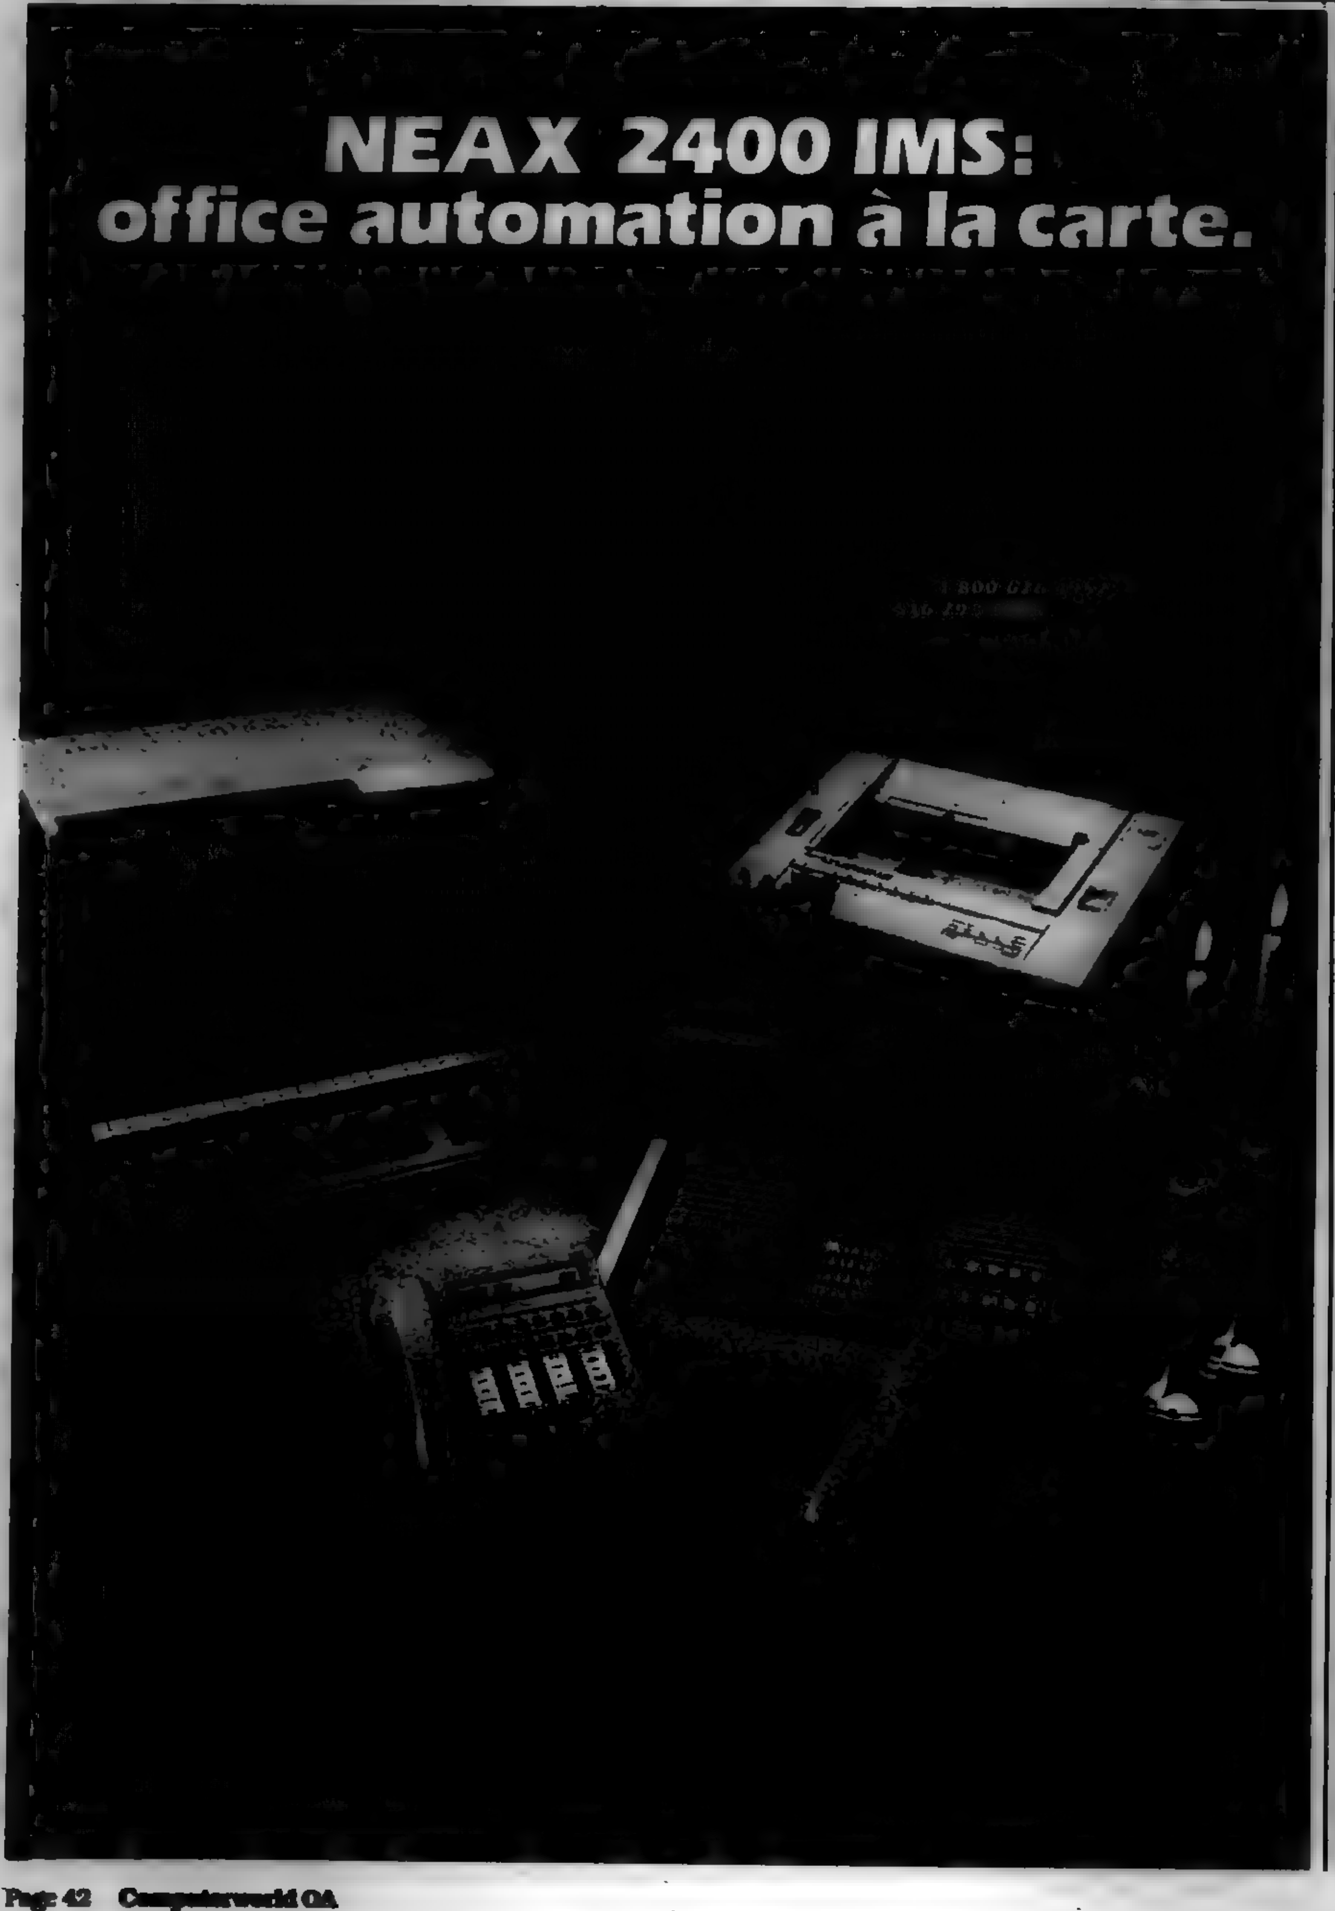
"Probably a majority of corporate PC users are quite lost in the use of DBMS [data base management systems]," said David Ferris, president of Ferrin Corp., a San Francisco-based personal computing consulting firm. "There's a whole class of important applications for which micros are not really appropriate. Data base systems are, in some cases, grotesquely misused. These small systems can evolve into rather insidious monsters."

Ron Ross, editor of the "Data Base Newsletter," added, "It's a very critical and highly dangerous problem. It represents a real dilemma for people planning the data resources within an organization. Do we keep hands off and let people discover their own limits or do we try to help them with standards, training and other areas?"

Experts agree there is probably little MIS can do to deal with mistakes that have already been made. It can, however, be aware of the most common flaws with end-user developed programs and the steps that can be taken to avoid them.

For one thing, most applications that become critical do not start out that way. As a result, they are rarely designed with the idea of widespread use in mind. "The users may just start using [the application] themselves," Ferris said. "Then they start their bookkeepers using it and maybe later their sales people, and it follows from there. The data base becomes embedded into the operations of the department."

As the program grows in scope and importance, it is often modified with little regard for the future. "Like a newspaper, it's a lot of information thrown together with no systematic organization," said Chris Rivers, president of



NEAX 2400 IMS:
office automation à la carte.

WHEN SHOULD YOU WORRY?

How can a nontechnical end-user know if he is over his head when setting out to develop an application? David Ferris, president of Ferrin Corp., a San Francisco-based personal computing consulting firm, recommends five questions you can ask before you begin writing a program.

1. Will more than one person use the program? If so, you have to consider issues of documentation, training and verification of data.

2. Will people need concurrent access? This is especially critical on multiuser machines such as Unix-based systems and the new IBM Personal Computer AT. Concurrency presents the delicate issue of record locking and backup.

3. Does a lot of money ride on this application? Critical programs should be written more carefully than ad hoc programs.

4. If the system were to stop working for any reason, would it force several people to stop working? Such applications must be debugged thoroughly to prevent snags.

5. Does the application involve transaction processing or formatted screens? If so, it requires structured implementation.

Ron Ross, editor of the "Data Base Newsletter," commented, "If the data supports a kind of decision making, then the application is not particularly dangerous. But if the data and systems work on a bread-and-butter level of data, then you had better stop and think twice about how you develop it."

Software Synthesis, Inc., a consulting firm in Oakland, Calif. "When it's time to add on to it, [the user] simply tacks on pre- or post-processing until it becomes unmaintainable. And this doesn't show itself until two or three years later."

Most experts agree users make two other common mistakes: they rarely document and they don't back up data and programs. Of these, the documentation and its related training problem is the worst. "It's the number one problem," Rivers said. "When a system has evolved from nothing, it is usually completely undocumented. I see enough problems in a mainframe shop and they have manuals three inches thick."

Some companies face the spectre of users' demanding the leeway to maintain departmental data bases separate from corporate information. This could lead to duplicate data bases and incompatible data.

The issue often becomes apparent only when staff turns over, noted John M. Thompson, a vice-president at the consulting company of Index Systems, Inc. in Cambridge, Mass. "A program quite often becomes an integral part of how a function works," he said. "You get to rely on something and then the person leaves and nobody knows what the heck he did."

Even those who were using the system often know little else about it. "Users sort of teach everybody in the office, and that's how they get others using it," said Nunzio Guarnieri, vice-president of systems planning and product design at Chase Manhattan Bank in New York. "We ask what happens if somebody new comes in and it turns out they're being taught by the department secretary."

Backup is also sloppy with most user-developed applications. Whereas DP departments are accustomed to copying their entire disk library weekly, departmental users often forget or ignore the need for backup. Like Dr. Johnson's noose, the need for such procedures rarely becomes apparent until it is too late. "When they've got a scratched diskette and you tell them there's no way you can read that data for them, then they start thinking about backup," Guarnieri said.

Ferris added that inattention to backup can lead to making decisions on the basis of wrong data. "On systems that don't have adequate backup, there are all kinds of problems with data getting out of date," he said. "The manager winds up using that data for critical company operations."

Most experts agree that, although the situation is increasingly coming under control, the problems presented by hidden applications have not yet begun to manifest themselves. An unscheduled new player in the game is the micro-mainframe link, an emerging technology that allows users to access the corporate data base and, in some cases, maintain data locally for uploading to central files.

Whereas critical reports have long been produced on the mainframe by applications written under rigid standards, users are now asking that they be allowed to download data to their spreadsheets or data base managers and create those same essential reports. Even if the data contained in the documents is wrong, it is generally accepted as accurate because it is produced on a computer, Thompson noted.

Furthermore, some companies face the spectre of their users' demanding the leeway to maintain departmental data bases separate from corporate information. "If we allow people to write on the corporate data base we've got a whole new set of problems," Thompson said. "You're asking for duplicate data bases and incompatible data and who knows what else. This is a mess that is about to hit and it's one I haven't got too many answers to yet."

In situations in which data is being entered locally for uploading later, overlap and contention issues will arise before the data even gets to corporate headquarters, Rivers said. "You'll get multiple information from the same data and you'll run into conflicts where the data doesn't balance," he said. "It's not pulling the data down that's a problem. It's putting it back together that creates chaos."

What can MIS do to get a grip on these emerging problems before they get worse? The first step is to find out where the critical applica-

Announcing

The one-stop, international advertising service for micro marketers.

You'll reach microcomputer buyers all over the world with *Computerworld's* International Marketing Service (CWIMS). Because we have the microcomputer market *covered* with an international network of publications. And what a market!

As the need for computerization in government, industry and educational systems all over the world becomes more acute, countries look to the cost-effective, adaptable microcomputer to bring them into the computer age. This means a very lucrative market for the U.S. micro marketer, since international product demand exceeds product supply.

Now, with the help of *Computerworld's* International Marketing Services, you can advertise in twenty magazines devoted exclusively to supplying information to microcomputer users in: Australia (*MicroWorld, Australian PC World*), Brazil (*MicroMundo*), Canada (*PC World Canada*), Denmark (*Micro Verden*), Finland (*Mikro*), France (*Golden, OPC*), Japan (*PersoCom World*), Mexico (*Compu Mundo*), Norway (*Mikro Data, PC Mikrodata*), Sweden (*MicroDatorn, Min Hemdator*), Spain (*Micro Sistemas*), Sweden (*Svenska PC World*), The Netherlands (*Micro/Info*), West Germany (*MicroComputerwelt, PC Welt, Run*). And your advertising message can reach buyers of microcomputer products and services around the world through special micro sections in any of over 40 publications in 25 countries.

Act now—and take advantage of this international demand for microcomputer products. Whether you want to test the market—or locate a distributor or representative—our publications will put you in touch with the right people around the microcomputer world.

For more information on getting international micro coverage, call Diana La Muraglia, General Manager, International Marketing Services, toll-free, at 800-343-6474. In Massachusetts, call 617-879-0700 or return the coupon below.

USERS TRY THEIR HANDS AT STANDARDS

HARTFORD, Conn. — Sometimes it is the microcomputer users themselves who enforce standards for reliability and maintainability of programs. At United Technologies Corp. headquarters here, Bill Johnston, manager of the corporate reporting department, has set up a system that imitates those of many DP development functions.

Johnston manages a department of six accountants, all of whom work on IBM Personal Computers. The department's procedures help to ensure against duplication of effort and provide a library of available applications upon which the accountants can draw.

Before an accountant starts building an application, he meets with the manager and discusses what he wants to do and why. "If they can use something else that's already been built we try to identify that to avoid duplication of effort," Johnston said. He also keeps an eye out for programs that will actually create work, such as those that merely replicate on the computer reports that are easily produced manually.

Accountants are free to build programs as they like. When the application is ready to enter production, however, the user is required to prepare a written document showing what the application is for, why it was written, what environment it uses, a description of procedural logic and macros and any other information that would be important to a new user, Johnston said. The documentation is submitted to Johnston's review.

"Upon approval, the program becomes a production diskette," Johnston said. "The diskettes are all backed up and stored centrally. We have a cross-reference book listing which applications are on which diskettes."

The department has employed these procedures for about eight months, with such success that other United Technologies groups have come from as far away as Fort Wayne, Ind., to observe the procedures. Johnston admitted that there was some initial resistance to the standards among the department's accountants, but said that as the scope and organization of the group's library has grown, so has acceptance.

Noting that the use of formal procedures is second nature to him, Johnston nevertheless added that he is somewhat of a maverick in this area. "Part of my review of different subsidiaries involves looking at how other accounting departments are doing this," he said. "I've been pretty shocked by it."

The major problems he sees are poor documentation and lack of backup. "The concept of backing up a disk is foreign to many people," he said. "In many cases, there's no documentation at all."

---

tions are within the company and whether they need help. At United Technologies Corp. headquarters in Hartford, Conn., the corporate auditing staff is charged with identifying such applications in subsidiary companies and making sure that corporate standards for security and documentation are applied. "I don't think there are many department-critical applications and the really big ones we are aware of," said Jerry Kelly, manager of MIS.

The thornier issue is how to balance the demands of a data-hungry user audience with the security and integrity issues vital to corporate information. Data base authority Ross, who admits to teaching a "Machiavellian" approach to data base administration, believes users will eventually seek guidance of their own volition. "There's no question that these people sooner or later will bump up into the limits of unintegrated data base design," he said. "It's just [unfortunate] that with the more powerful machines they're going to bump up against these limits even harder."

Perhaps the most important issue is that MIS must learn to tap into the informal networks that have sprung up among users who are developing applications. "We need the kind of partnership such that the users will come to the MIS departments as coaches rather than as the controlling enemy," Thompson said. "What happens now is that some guy puts through a financial projection program and mentions it to some other guy in the canteen. They form their own little user club-type networks, and they don't call up the MIS department if they have a problem. They call up the guy who showed them the program in the first place."

For users writing really critical applications, Rivers recommended an even stronger approach. "I think that person should be transported to the main location and given an overview of how systems are developed in large shops," he said. "Show him how to document, organise and keep to schedules. It may take a month or two; it's going to cost a lot of money. But if the application is important, it's worth it." OA

NEWS, *Continued from Page 5*

plane ride is taking off. That's fine, but once you're up there, you really want to do things right."

NOT FADE AWAY

It seems that it is better to be a jack of all office trades than the master of one. According to a report published by International Data Corp. (IDC) of Framingham, Mass., dedicated word processors are being squeezed out of the office both by low-priced electronic typewriters with enhanced memory and by multifunctional micros with WP capabilities.

IDC reports that, especially in the managerial marketplace, the appeal of dedicated machines is fading. This is happening even though these machines still are better at text editing, are easier to use and have more extensive vendor-supplied training programs than micros with add-on WP software. The compound growth of shipments of clustered WP systems will slow from about 35% this year, to 13% in 1988. Shipments of stand-alone systems are expected to plummet by 1988.

Clustered systems can still be justified for paper-intensive departments in large organizations such as government and in the legal and insurance industries, according to Douglas Gold, a senior research analyst at IDC. He said that clustered WP systems are becoming more sophisticated in order to have a shot at the integrated office market. For smaller companies, however, a personal computer integrating WP as one application is the most cost-effective way to go. "Word processing is a software application now. It is no longer a box. People go out and buy a disk," Gold said.

IBM dominates the stand-alone market, with a 30% share of the shipments and 39% of the installed base. Companies such as Digital Equipment Corp., Exxon Corp., CPT Corp. and NBI, Inc. are nibbling away at that lead. Wang Laboratories, Inc. dominates the clustered market, controlling about 50% of the installed base; IBM is number two with 10%.

OA TURNAROUND

What a difference a year makes. In late 1983, both Data General Corp. and Digital Equipment Corp., the Massachusetts' minimakers and neighbors, were feeling the sting of a tightening market. Both had disappointing earnings figures as well as less than favorable reviews from industry analysts. DEC's fourth-quarter numbers were so bleak that the stock fell more than 30 points in a matter of days.

A little more than a year later, the picture for both companies is vastly brighter, with strong revenues and earnings figures for the year. Though the turnaround can be attributed to a number of factors (such as internal reorganizations and tighter controls), both DG and DEC point to successes in the OA market as the key.

Although DEC is much larger than DG, the companies have followed similar strategies to success in the office. Both have created umbrella office packages of software and communications capabilities (DEC's All-In-One and DG's CEO) based on their high-powered superminicomputer technologies.

David Lyons, vice-president and general manager of DG's Information Systems Division, pointed out that just as OA market was shifting its focus from word processing to integrated systems for the manager and professional, DG began shipping its CEO product. According to Lyons, DG was the first with such a package and it provided "a leadership position."

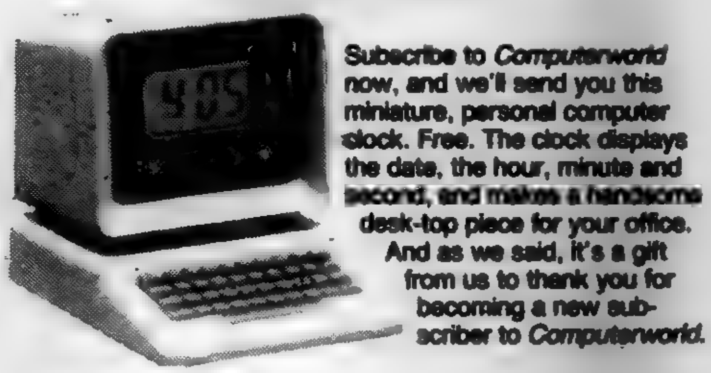
At DEC, the Office Information Systems Division has played a "key role" in the company's recent successes, according to Henry Ancona, product group manager of the division. Ancona echoed Lyons' picture of the OA market. He pointed to the strengthening of DEC's VAX supermini line as a key to the turnaround and said the recent introduction of the long-awaited VAX 8600, the company's new top of the line mini gives DEC strong positioning in that market.

Consultants are more willing to credit OA as the key factor at DG, but tend to be more hesitant to say the same about DEC. George Colony of Forrester Research credited DG with making a quick internal transition from being a strict OEM dealer to a strong marketing-oriented enterprise. He said DG has successfully leveraged its minicomputer positioning along with CEO to offer "a very homogenous solution" in the office.

According to Colony, "If you dug deeply at DEC, I don't think you'd find that the office has keyed the turnaround." He believes DEC's traditional OEM business, along with products like the Microvax and VT200 terminals, are fueling the new found successes. "All-In-One has helped, but not that much," Colony said. Though he wouldn't disclose figures, Ancona refuted Colony's analysis and stated that All-In-One sales have been "the largest in the industry, including IBM Profs offering, CEO and Wang's WPPlus." OA

Why the time has never been better to get your own subscription to Computerworld.

FREE CLOCK WITH YOUR SUBSCRIPTION



Subscribe to *Computerworld* now, and we'll send you this miniature, personal computer clock. Free. The clock displays the date, the hour, minute and second, and makes a handsome desk-top piece for your office. And as we said, it's a gift from us to thank you for becoming a new subscriber to *Computerworld.*

51 ISSUES OF *COMPUTERWORLD*

In addition to the free timepiece, of course, you'll receive our regular 51 issues of *Computerworld.* So you won't have to wait for a co-worker's copy to keep up-to-date on what's taking place in the industry.

YOU'LL ALSO RECEIVE SPECIAL FOCUS ISSUES

As a *Computerworld* subscriber, you'll also receive our highly-acclaimed COMPUTERWORLD FOCUS issues — at no extra charge. Published once a month (except July and December), these bonus issues focus on a single topic. Here is a sampling: UNIX™, Office Automation, Microcomputer Software, Business Graphics, Applications Software, Manufacturing, Networks, Systems Software, Microcomputer Hardware. COMPUTERWORLD FOCUS helps you plan, purchase, and save money. And these bonus issues are sent only to *Computerworld* subscribers — it's like getting a subscription to a second magazine FREE!

As you can see, there are plenty of reasons to subscribe to *Computerworld.* So don't rely on someone else to lend you theirs. Be well-informed — with 51 issues of *Computerworld* plus the COMPUTERWORLD FOCUS issues — without having to wait.

Now you know why the time has never been better to subscribe to *Computerworld.*

UNIX is a trademark of AT & T Bell Laboratories.

☐ **Yes!** Please enter my subscription for one full year (51 issues) of *Computerworld* at $44. Plus all 10 COMPUTERWORLD FOCUS issues at no extra charge . . . plus my FREE gift with my paid subscription. (Please allow 6-8 weeks for shipment of your free gift.)

DEC's LQP03

MAYNARD, Mass. — **Digital Equipment Corp.** introduced a series of software packages that link Decnet local and wide-area networks with IBM Systems Network Architecture networks and run on the full range of VAX-11 computer systems.

DDXF, a document exchange facility, costs $1,500 ($750 for a Microvax version). DHFC, a distributed host command facility, costs $1,500. A printer emulator, PRE, is available in VAX ($1,000) and Microvax ($200) versions. Micro VMS routines for remote job entry, 3270 terminal emulation, application program interface, and gateway network management are priced from $10 to $400. DEC also introduced a word processor that can function as an integrated office terminal, and a low-end letter-quality printer.

The $2,695 Decmate III comes with the same keyboard and monitor as the Decmate II Office Workstation, a smaller system unit including two 5.25 in. floppy diskette drives and WPS software. The software allows Decmates to communicate with other Decmates, Dec multiuser systems, and external data bases. Options include a $595 integral modem for communications at 300 or 1,200 baud, a $395 auxiliary Zilog Z-80A microprocessor for adding Decspell and CP/M-based office applications and foreign language versions of WPS software costing $500 for the Decmate II and included in the Decmate III.

The LQP03, a 130-petal daisywheel printer, is priced at $1,395, prints 24 char./sec in 10-pitch Shannon text and 34 char./sec in 12-pitch triple-A text. It is available with an optional $695 sheet feeder or $245 tractor feeder from Digital Equipment Corp., Maynard, Mass. 01754.

MOUNTAIN VIEW, Calif. — **Vitalink Communications Corp.** and **Digital Equipment Corp.** announced a joint agreement to market a hardware and software product that transparently connects local-area networks via satellites and/or terrestrial lines.

Transian connects several Ethernet or IEEE 802.3 local-area networks so that they appear as one large network providing transparent interconnection of all local-area network stations regardless of their specific higher level protocols. The product has eight satellite channels or terrestrial link ports and a port capacity of 224K bit/sec.

Transian will be serviced and supported by Vitalink and is available for $19,450 from Vitalink Communications Corp., 1350 Charleston Road, Mountain View, Calif. 94043.

PALO ALTO, Calif. — **Hewlett-Packard Co.** unveiled two enhanced versions of its 150 Touchscreen Personal Computer featuring double-sided 710K-byte microfloppy disk drives.

The $3,495 HP Touchscreen Personal Computer, with two double-sided 3.5-in. disk drives, provides 1.4M bytes of total storage. The HP Touchscreen Personal Computer Max comes with a single double-sided drive and a 15M-byte Winchester disk drive and costs $5,495.

HP's 150 Touchscreen

HP introduced a number of other storage devices as well as two software products, HP Advance-Link ($245) and HP Message ($300), which reportedly make it easier for HP and IBM personal computer users to exchange files and communicate via electronic mail.

HP also unveiled two entry-level bundled systems featuring the HP 3000 Series 37 computer and five software packs for the bundled systems. The four-user systems configured with 1M-byte memory and either one or two 55M-byte disk drives are priced from $45,310 to $57,615. The software packs are priced at $300 to $32,500.

For more information, contact HP, 1820 Embarcadero Road, Palo Alto, Calif. 94303.

SAN JOSE, Calif. — **Keyword Office Technologies, Inc.** introduced a disk-to-disk conversion device that reportedly enables diskettes created on one word processor to be used on an incompatible word processing system.

The Keyword 7000, a menu-driven hardware and software system, works as a peripheral to IBM or IBM-compatible personal computers. The product reportedly can convert text processed by IBM's Displaywriter, Xerox Corp.'s 820 and Digital Equipment Corp.'s Decmate II and others. One page is converted in about 13 seconds, the vendor said. Keyword 7000 is available for $9,995 from Keyword Office Technologies, Inc., 2047 Hamilton Ave., San Jose, Calif. 95125.

LOWELL, Mass. — A multitasking computer specifically designed for secretaries was unveiled by **Wang Laboratories, Inc.**

Wang's Office Assistant

The $2,395 Wang Office Assistant features a 12-in. nonglare tilting monochrome monitor, detached keyboard, 256K bytes of random-access memory, a 5.25-in. 360K-byte diskette drive and software, including Wang's proprietary multitasking operating system, text editing, WP Plus and unique forms generation. Options include a second diskette drive and a print sharing device, from Wang Laboratories, Inc., One Industrial Ave., Lowell, Mass. 01851.

RYE BROOK, NY — **IBM** introduced a series of office programs for IBM Personal Computers and System/36 and System 370 computers along with its most powerful 4300 series processor, an entry-level 3080 series machine and enhancements to the Personal Computer line.

The IBM Office Systems Family consists of enhanced Displaywrite text processing programs and programs that reportedly permit the exchange of documents and messages among networks of Personal Computers, System/36 and System 370 gear. The programs will be available in the second quarter of 1985 for $250 to $3,000.

IBM also announced 31 software packages aimed for small and medium-size offices. The IBM Business Management Series, an accounting system, enables users to maintain information on sales, inventory and vendor and financial status.

The IBM Personal Decision Series generates spreadsheets, models, graphs, calculations and text processing and allows Personal Computer users to share information with IBM System/370; 30 series, 4300 and System/36 processors.

The primary programs of the Business Management Series cost $695 each. Core packages of the Personal Decision Series cost from $150 to $300.

The 4381 model group 3 features dual central processors, 256K-bit dynamic random-accesss memory chips and an internal throughput rate of up to 1.7 times that of the model group 2. The 4381-3, with 8M bytes of main storage and 12 standard channels, will be available in the second quarter of 1985 for $825,000. A channel and memory upgrade from the 4381-2 costs $249,000.

The IBM 3205, a 14-in., 7-color display console for 4381 and 4361

FORUM, *Continued from Page 4*

the application and file levels. If a local-area network is to link different manufacturer's equipment to share peripherals, software and files, all operating systems on the network must interact. The most common way to accomplish this is to initiate an emulation task that allows one system on the network to emulate another system's operating system.

The process of emulating another operating system gives the user the ability to execute all functions of the system being emulated. His workstation looks like any other dumb terminal attached to the emulated system. Therefore, he can access the file manager, application software, printers and disk storage and can even send messages to other users on that system.

One disadvantage of terminal or task emulation is that when the user is in emulation mode, he must forfeit the functionality he has on his own system. In addition, when he creates a file in emulation mode, he cannot easily store that file in his own file system without first copying it or executing a conversion utility. Operating commands will also be different and system performance will sometimes be sacrificed.

Of course, what we are all waiting for are gateway developments to allow equipment from many manufacturers to coexist in one network. Transferring files from one operating system to another has to some degree been resolved. What is now lacking is the ability to access applications that are supported on one operating system on the network, but that may not be available from our system.

Integration is still in its infancy, and the important role it will play on all future product developments is just beginning to be understood. For some user organizations, it may mean the products they have installed may never evolve into an integrated system. For some vendors, it may mean that their only choice may be to declare obsolete a product line that was once profitable. - OA

Rossi is associate editor of the Seybold Report *and is a senior consultant at the Seybold Co., a major office automation consulting and publishing company based in Boston.*

TECHNOLOGY

processors, costs $2,895.

The 3083 model CX configured with central processing unit, 3082 processor controller, 3087 model 1 coolant distribution unit, 8M-bytes of main storage and 8 channels, will be available for $830,000 in the second quarter of 1985, the vendor said.

The IBM PC AT/370, with 1.2M-byte diskette drive, 20M-byte fixed disk drive and 512K bytes of main memory is priced at $9,795, and will be available in January, IBM said.

Enhancements to the 3270 PC include an application program interface allowing users to send data directly into a PC session without making programming changes in the host, and a $3,695 plasma display.

Two 3270 PC models with 5271 keyboard adapter and API are priced at $5,990 and $7,550 from IBM Information Systems Group, 900 King St., Rye Brook, New York 10573.

Banyan's Network Server

WESTBORO, Mass. — A virtual networking system, which handles file and peripherals management for up to four local-area networks, was unveiled by **Banyan Systems, Inc.**

Vines consists of the Banyan Network Server — a Motorola 68000-based, 32-bit computer running proprietary Unix-based system software. A low-end Vines system, with 512K bytes of main memory, 43M bytes of disk storage, a 60M-byte tape drive and software costs $16,900 from Banyan Systems, Inc., 135 Flanders Road, Westboro, Mass. 01581.

BILLERICA, Mass. — **Davox Corp.** introduced four color workstations and enhancements to its Davoxnet local-area network.

The 2900 and 3900 series workstations feature multiprotocol capability, seven-color graphics and APL/Text capability. The 2911 and 3911 data-only workstations cost $5,600 and $5,915 and the 2921 and 3921 feature integrated telephones and are priced at $5,700 and $6,015.

Davox also announced software options for Davoxnet. A $995 PC file server makes an IBM PC-XT the repository for all software in the network, allowing multiple users to run the same software simultaneously. A $600 to $800 PC file transfer package expands cross-controller transfer capabilities for the net and is available from Davox Corp., 4 Federal St., Billerica, Mass. 01821.

BOULDER, Colo. — **Vianetix, Inc.** announced a local-area network software product that reportedly links all MS-DOS, PC-DOS and Unix-based microcomputers together.

Vianet offers a fully distributed architecture, application software compatibility and hardware independence, according to the vendor, and allows users access to all resources on the network. It is available for $125 from Vianet, Inc., 5766 Central Ave., Boulder, Colo. 80301.

BILLERICA, Mass. — **Honeywell, Inc.** unveiled a Unix-based workstation targeted at engineering administration and support environments and a family of packaged office systems.

The Microsystem NX runs the Uniplus operating system, a licensed port of the Unix System III, with Berkeley 4.1 extensions. The 12M-byte version costs $8,895; the 18M-byte model costs $9,495.

The Office Management System 40, based on Honeywell's 16-bit mini, and the OMS 90, based on their 32-bit superminis, run under the Gcos 6 operating system and are compatible with the DPS 6 line. The systems feature the company's menu-driven Office Automation Systems software and support from four to 34 users.

An OMS 40 configuration with eight terminals, four letter-quality printers and software costs $80,000. An OMS system with 34 terminals and 14 printers is priced at $222,200 from Honeywell, Inc., 300 Concord Road, Billerica, Mass. 01821.

WESTBORO, Mass. — **Data General Corp.** unveiled the Data General/One, a 10-lb portable that is reportedly compatible with the IBM Personal Computer and that runs MS-DOS, CP/M-86 and Venix operating systems.

The DG/One

The DG/One features a liquid-crystal, bit-mapped 25 line by 80 col flat display, up to 512K bytes of user memory and up to two 3.5-in. micro-floppy disk drives of 737K bytes each and a full-size keyboard with 79 keys. The base system with 128K bytes of memory and a single disk drive costs $2,995. The CEO Connection software package which allows users of the portable to access DG's Comprenaive Electronic Office system costs $295 from DG Corp., 4400 Computer Drive, Westboro, Mass. 01580.

FOLSOM, Calif. — A voice mail system targeted for small and medium-size businesses was introduced by **Genesis Electronics Corp.** The Cindi 400 series consists of four models offering from four to eight ports, four to 16 hours of message storage and 128 to 512 user mailboxes.

The system is accessed via any Touchtone phone and gives offices with 50 to 500 telephones voice mail capabilities starting at $83 per user, the vendor said.

More information is available from Genesis Electronics Corp., 103 Woodmere Road, Folsom, Calif. 95630.

DALLAS, Texas — **Uniplex Integration Systems** introduced an integrated software package for Unix-based systems consisting of WP, spreadsheet, relational data base and electronic mail.

Uniplex II, aimed for both OEMs and end users, is a menu-driven system written in C; it reportedly has been ported to most major Unix hardware. The product also includes print spooling and a screen builder and costs from $600 to $4,000, depending on the processor, Uniplex Integration Systems said from Suite 500, No. 1 Galleria Tower, 13355 Noel Road, Dallas, Texas 75240.

NEW YORK — **RCA Global Communications, Inc.** unveiled an electronic mail service with access to the firm's Globcom domestic and international telex network.

Reportedly operating on almost any type of computer, RCA Mail uses simple one-word English commands and allows users to be assigned different security levels. Charges for the system include a 5 cent per kilo-character transmission fee; a $4 to $14 per-hour usage fee (depending on the time of day) and a $140 monthly fee for each user organization, RCA Global Communications, Inc. said from 60 Broad St., New York, N.Y. 10004.

ROCKVILLE, Md. — **General Electric Information Services Co.** announced its Disaster Recovery Services, aimed to protect Fortune 500 companies whose own computer facilities have been destroyed or disabled.

The Schenectady, N.Y., service facility contains Honeywell, Inc., IBM and Hewlett-Packard Co. mainframes, peripherals, telecommunications links and office space. Subscribers can use the facility within 24 hours of notification of a disaster, the vendor said.

Monthly fees range from $1,000 to $12,000 from General Electric Information Services Co., 401 N. Washington St., Rockville, Md. 20850.

Net/One Local Bridge

SANTA CLARA, Calif. — **Ungermann-Bass, Inc.** introduced a network bridge that reportedly increases the rate of data transfer between Net/One communications systems in the same geographical location by more than 600%. The Net/One Local Bridge forwards information from network to network or channel to channel on a per-packet basis at rates in excess of 1,000 packets per second, according to the vendor. The product consists of network access hardware, a Motorola M68000 microprocessor and is priced at $9,850.

Software costs $1,000 per bridge from Ungermann-Bass, Inc., 2560 Mission College Blvd., Santa Clara, Calif. 95050.

Kodak's CRT Print Imager

ROCHESTER, N.Y. — A full line of 8-in., 5.25-in. and 3.5-in flexible disks was introduced by **Eastman Kodak Co.**

The 8-in. disks will sell for $6 single-sided and $5.80 double-sided. The 5.25-in. disks cost $3.85 single-sided, $4.85 double-sided and $6.60 double-sided with quadruple density. The 3.5-in. microfloppies cost $8.25.

Kodak also announced a line of instant slide products allowing users to make color slides from most CRT terminals. The Slide Cat line includes a $339 slide film back, adapter cones for 9-, 12-, 13- and 19-in. monitors ($40 to $50), and a $75 slide mounter. The 35mm, Instagraphic color slide film can be processed and mounted in 15 minutes and costs about $1.30 per frame from Eastman Kodak Co., 343 State St., Rochester, N.Y. 14650. OA

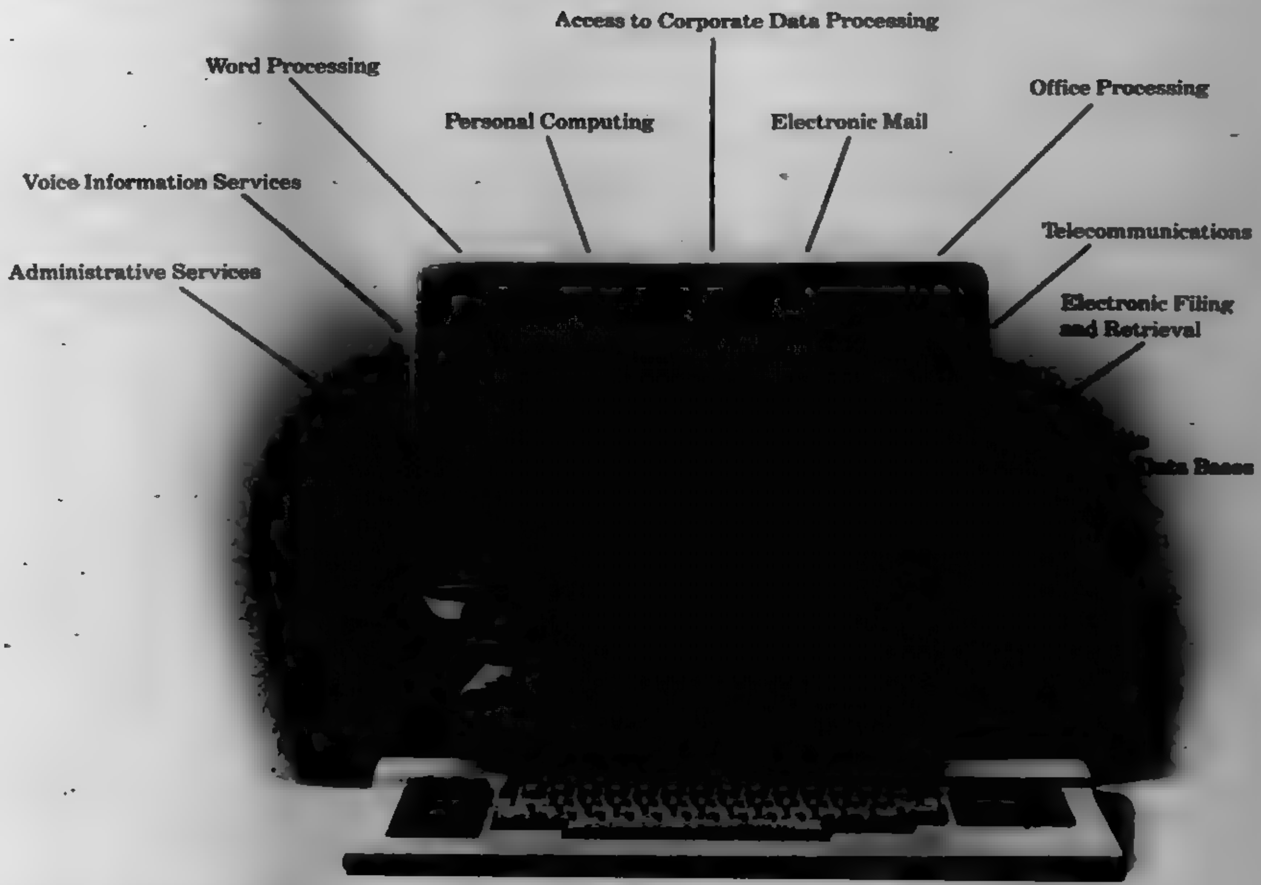
SPERRYLINK™

OFFICE SYSTEM



No job too big, no job too small.

SPERRYLINK. The one office automation system that can do just about everything around the office. For just about everyone, from top management on down.

It ties into a central computer for mainframe information and mainframe support.

It's a personal computer that does all of the things you'd expect of a personal computer. And a few that you wouldn't.

It's a telecommunications terminal for electronic mail and digitized voice messages.

It's a word processor and a data processor. Both at once, if need be.

It handles filing and retrieval with startling efficiency.

And, with access to outside data bases, it's your window to the world.

But most important, any desk station in the system can be any or all of these things. With the right amount of intelligence for whatever jobs it has to do.

No matter how big or how small.

SPERRYLINK.

"Nothing works together," they cried out.

"It will now," said Alis.

With Alis,™ everything works together. Text, spreadsheets, drawings, business graphics and database information work together in a single, always editable document.

Alis combines the advantages of integrated PC applications with the information-sharing benefits of communications-based OA systems. It offers the most advanced total office solution ever.

Alis makes it easy for people to work together. It provides integrated electronic mail, calendar and meeting scheduling, and revolutionary Automatic Office Assistants™ to aid management information monitoring and decision making.

Written in "C," Alis is initially available on UNIX* to large OEMs. It's destined to bring sanity to the mad tea party world of office automation.

*UNIX is a trademark of Bell Laboratories. Applix, Alis and Automatic Office Assistants are trademarks of Applix Inc.

Cobol-micro barrier falling

Speedier application development, superior screen-handling facilities cited as advantages

By Paul Korzeniowski
CW Staff

When business microcomputers evolved in the late 1970s, corporations drew a dividing line for application development: Microcomputer programs were written in Basic and Ashton-Tate's Dbase II; Cobol was reserved for mainframe program development.

A few corporations have crossed this dividing line and have designed Cobol applications for microcomputers. "The application development system we use now is far superior to writing programs with Cobol and [IBM's] MVS on mainframes," said Jerry Purcell, system manager for Fluor Corp. in Irvine, Calif. "We can develop an application in one-fifth the time it previously required. Our present screen-handling facilities are much better than those with CICS."

Purcell supervises a staff of 10 people who have worked with Micro Focus, Inc.'s Cobol on IBM Personal Computer XTs and ATs to develop a number of in-house applications, including payroll, labor distribution and construction programs.

Most applications are new, made possible by the micro's performance abilities and low cost.

These applications are used primarily in stand-alone mode at various Fluor construction sites. Once a week, the payroll information is sent to an IBM 3033 mainframe, and other application data is transmitted monthly. "We consolidate so little data that we use modems rather than direct connections to the mainframe," Purcell noted.

While a few of these applications have replaced mainframe applications, most are new, made possible by the performance capabilities and low cost of microcomputers.

Purcell's group began searching for the best method of utilizing microcomputer tech-

Persistence is her key to success

DP MANAGER PROFILE

By Paul Korzeniowski
CW Staff

CLEVELAND — Vivian Wilson, Input System Output manager at Ohio Bell Telephone Co., is not afraid to knock on a second door when she is turned away from the first.

In 1967, she was an AT&T central office reporting clerk here, taking steps to enter the data processing field. Wilson had enrolled in a technical school after reading an advertisement on a bus on her way home from work. "The industry was very young and rapidly growing," she said. "I also thought I could make a lot of money."

While she attended data processing classes, AT&T expanded and moved its DP department from downtown Cleveland to a suburb. The department needed additional workers, and Wilson applied for a job in computer operations. "I was told that no blacks were allowed," she said. "I was shocked. It was really the first time in my life that I felt my skin color made me different from other employees."

After she talked to a few of her friends, she reapplied for the position. The results remained the same, but the reason given for her rejection changed. "I was told that there wasn't any room in the new department for me," she stated. "I knew that a few of the people assigned to the new facility did not want to go. They were older women, set in their ways and afraid of working with computers. I was quite

PRODUCT SPOTLIGHT

Do tools help find DP gold?

Users say application generators no cure-all for programming woes

"There comes a time when a programmer wants to spend more time with the user and less time coding and recoding the same programs. These [application development] systems shorten the coding process and get the user involved early on."

— **Donald Jones, manager of programming and procedures, Amana Refrigeration, Inc.**

"The users of the products are like the fat guy who is full of enthusiasm and spends a great deal of money on an exercise bike. He starts to use the bike, but he soon finds that it is lots of work to lose weight. After six months, the bike is unused and collecting dust — just like the productivity tools."

— **Vaughan Merlyn, vice-president and general manager of the systems software division of Walker Interactive Products, Inc.**

By John Gallant
CW Staff

In many ways, the often inexact science of application development today is similar to the ancient black art of alchemy. Analysts and programmers, laboring in the recesses of a corporation's computer facilities, must turn the lead of user requirements into the much-sought-after gold of high-quality, useful application systems for their end-user royalty. And, like their alchemy counterparts, application developers often fail in their quest for gold.

The development of efficient, effective computerized application systems, which have automated many formerly tedious manual tasks, remains a primarily manual, inefficient process. Hand coding programs is still the norm in the majority of development houses, and designing and maintaining applications continues to be a time-consuming and costly undertaking.

Most in-house development organizations share a number of nagging and increasingly worrisome problems — growing backlogs, user dissatisfaction over poorly designed and implemented systems and a staggering maintenance work load. Despite the adoption by many shops of advanced design methodologies and structured programming techniques, the problems show little sign of abat-

FCC begins tariff review

Commission to consider local telephone companies' revised proposals for private-line user charges

By Bryan Wilkins
CW Washington Bureau

WASHINGTON, D.C. — The Federal Communications Commission has begun what could be the final review of special-access charges that will be faced by private-line users in January if the rates submitted by the local telephone companies last week are approved.

Special access is a class of local exchange access service that will be provided by local telephone companies to connect interstate, private-line customers with long-distance carriers and will heavily affect large-volume communications users of private lines.

Earlier this year the FCC twice rejected proposed special-access tariffs filed by the local exchange telephone companies, saying the companies did not apply a "consistent, building block tariff" approach to users whom it wanted to assume the burden and discretion of assembling services that, in the past, were bundled by long-distance carriers.

Last month, the FCC ordered new special-access tariffs to be filed by Dec. 3 to take effect Jan. 17. The latest tariffs will have to meet the FCC's demand that they be reasonable, cost-justified and relatively uniform from one local telephone area to another.

In this regard, the National Exchange Carriers Association (Neca), representing the majority of local exchanges across the country, has complied with the special-access rate restructuring ordered by the FCC to disaggregate two- and four-wire communications channels, as well as voice-grade channels from telegraph-grade channels previously bundled together.

Additionally, the exchange carriers made adjustments in interoffice channel charges that connect to a private-line link to reflect direct differences in distances.

The Neca tariffs have proposed five rate elements of special access:

- First, a local channel, defined as a channel between two customer premises or between a customer and a local telephone company hub office where multiplexing is performed.
- Second, a connecting channel, defined as a channel between a customer and a telephone company hub where bridging or linking to three or more other sites in a multipoint, private-line network is accomplished.
- Third, channel mileage, reflective of the actual channel mileage for transmission between two customer facilities, a customer and the local telephone hub office or two telephone company offices.
- Fourth, channel interface, defining the technical characteristics associated with the type of signaling and type of facilities used at each point of termination.
- Fifth, optional functions and features that a special-access user requires, such as multiplexing, bridging and conditioning.

Additionally, the Neca tariffs have proposed eight different channel types: narrowband, voice grade, program audio, video, wideband analog, wideband digital, digital data and high capacity.

One of the major objections raised by the FCC to the special-access rates was the different charges for essentially similar rate elements: the local channel and the connecting channel.

To avoid the "rate shock" alleged by the competitive long-distance industry, which will also be covered by special access, the FCC has proposed a phase-in of the special-access tariff rates over a one-year period.

Reagan sanctions U.S. satellite competition

WASHINGTON, D.C. — Competition in international satellite communications is in the nation's interest, President Ronald Reagan has concluded.

However, under new U.S. policy, private-sector competition to the International Telecommunications Satellite Organization (Intelsat), the global consortium of countries supporting satellite communications, will be limited to providing intracompany voice, data communications and video transmissions.

The private-sector satellite firms will be barred from offering public-switched communications and will be required to consult with Intelsat on their business plans.

A second condition facing private-sector satellites will be foreign administration authorization, which will ensure technical compatibility with Intelsat.

Intelsat has strenuously opposed private-sector competition, particularly in the North Atlantic region, where current service proposals before the Federal Communications Commission are still under consideration.

Reagan's statement of national interest also instructed the U.S. Department of Commerce and the Department of State to formulate new satellite communications policies that are supportive of the Intelsat agreement, to which the U.S. is currently bound.

Five firms have announced plans to construct private-sector satellite communications routes — Orion Satellite Corp. in New York; International Satellite, Inc., based in Alexandria, Va.; Pan American Satellite Corp., located in Washington, D.C.; Cygnus Satellite Corp. in Rockville, Md.; and RCA Americom, which is a subsidiary of RCA Corp., in Washington, D.C.

ADR® WARE™

ADR/IDEAL®

Introduced just last year and already more than 200 major companies are using it to break their application backlogs.

ADR's 4th generation application development system, IDEAL, has been receiving rave reviews throughout the computer industry. But none is better praise than the fact that in the one short year since its introduction, more than 200 major companies have chosen IDEAL as the way to break their application backlogs. And for some very good reasons.

First and foremost, because in current, everyday use, IDEAL is improving the productivity of programmers in a major way. Real productivity gains of up to 10 times are not unusual with IDEAL. Even larger gains, while not as usual, are occurring too.

IDEAL is the only true functional replacement for COBOL. It integrates with DATACOM/DB® our high performance relational data base management system, and our active DATADICTIONARY® to provide the first system with full interactive facilities for prototyping, development, testing and maintenance of on-line and batch programs—including large commercial applications—using a high level language. IDEAL's easily understood language simplifies the maintenance of programs and enables applications to be updated in a matter of hours—rather than days.

And since IDEAL automates most of the application development life cycle, it reduces the programmer training while increasing programmer expertise. Not only that, but IDEAL also gives non-programmers an opportunity to tailor applications, data entry screens and other systems to suit their individual and departmental needs.

More than 200 major companies have already found that by using IDEAL they are significantly reducing their application backlogs. Just call 1-800-ADR-WARE or mail us the coupon and we'll show you how to help your company's computers do everything they promised.

Before you make a software decision mail in the coupon below.

M. Bryce withdraws support of Pride users group

By Maura McEnaney
CW Staff

CINCINNATI — M. Bryce & Associates, Inc., vendors of the Pride product line of systems design methodology, has discontinued its support of the Pride User Association, Inc. (PUA) and plans to rely on "user weeks," similar to those conducted by other large software companies, as the medium for product discussion.

M. Bryce President Milt Bryce said the move to abandon support of the 10-year-old PUA was the result of an evolving difference in philosophy over the function of the users group and of what he termed was a deteriorating interest on the part of PUA members.

In a letter to PUA President Peter Burtch last month, about four months after the company officially severed its relationship with the independent users group, M. Bryce rescinded a 1975 agreement that reportedly allowed the PUA to discuss Pride and other proprietary information belonging to the software company. Tim Bryce, director of customer services and former PUA liaison, said the move essentially blocks the approximately 50 PUA members from discussing Pride products.

'Know-how, not software'

"Pride is know-how, not software," hence, it is proprietary, he said. "They can talk about whatever they want within the PUA, but they can't talk about Pride." According to Tim Bryce, because each Pride purchaser signs a proprietary information purchase agreement with the vendor and because the group is no longer permitted to discuss that proprietary information, group members who discuss the product will be in violation of their agreement.

While "I can't sit behind every rock and every corner" to enforce the contracts, Bryce said blatant contract violations could result in M. Bryce revoking the product license and removing product materials from the premises.

PUA members, both past and present, said problems with the group began when M. Bryce executives, who perceive their users as managers, objected to the technical direction that the group was taking. Others put the blame on the poor planning of meetings.

Burtch told *Computerworld* that the vendor was often critical of users at PUA meetings, and as a result, "[PUA] could never get discussions going." Criticism was often steered away from the product and toward the organization, he said.

The vendor was also involved in selecting speakers for the users group meetings, Burtch said. Sometimes this type of support was very welcome, but, he said, "lots of times they took responsibility upon themselves."

According to Milt Bryce, that was not the case. "We no longer want to support the organization because we were doing all the work," he said. "The users group did not do [its] homework. We didn't want to get into the position of running it for them, but we were forced to do it."

> *'We no longer want to support the organization because we were doing all the work. The users group did not do [its] homework.'*
>
> — Milt Bryce, M. Bryce and Associates, Inc.

Bryce also said that the sessions became too technical. "The people we were addressing our product to were no longer attending," he said.

Russ Travis, a Pride manager at the Compuware Corp. in Birmingham, Mich., joined the PUA in February. As a new data manager working with the Pride products, Travis attended his first PUA meeting in May. "I went to make contacts and get exposure," he said. At that meeting, Travis said he was recruited and subsequently elected treasurer of the board of directors. Two months after that meeting, the PUA was notified that vendor support was being withdrawn.

In September, a PUA board of directors meeting in Cleveland addressed the PUA's future. "We felt there was still some value in users getting together to share ideas, and we went ahead and planned the next meeting," Travis said. But when he returned from that meeting, he said, he changed his mind.

Strong vendor relationship needed

"I needed a strong relationship with the vendor," said Travis, whose company has served as a beta test site for an M. Bryce project management software package. "I didn't feel I could spend my time being on a board that didn't have the support of the vendor." He added that he has volunteered advisory services in the past for M. Bryce users weeks.

Bill Enright, assistant director for administrative systems at the University of Western Ontario in London, Ontario, served as PUA president from 1982 to 1983. "The vendor has always felt that the association wasn't that effective," Enright said. "He [Milt Bryce] felt maybe it wasn't servicing his best interests."

PUA membership consisted of a variety of users, Enright said, including systems analysts, program analysts and, "to a certain extent, managers." While he was involved with the users group, several suggestions on product enhancements were forwarded to M. Bryce. As a result of those suggestions, data entry methods were improved, he noted. However, without the independent users group, "open discussion doesn't occur."

Since Burtch received Milt Bryce's letter rescinding the proprietary information authorization, it is unclear whether the group will continue operation. "It's pretty hard to have a users conference and have people afraid to talk about the product," Burtch said.

Questions unanswered

But the legal limitations of exactly what the group is prohibited from discussing, and the basis on which Bryce can withdraw that authorization, are questions that remain unanswered. Burtch said he was forwarding Milt Bryce's letter to legal counsel for an interpretation.

Miles Gilburne, a Los Angeles-based attorney who specializes in high-tech companies, said part of the problem lies with exactly what aspects of the Pride products are considered proprietary.

Through an enforceable contract, a vendor can require a user to keep confidential the information on a product's source code, object code and functionality. However, the proprietary clause would not apply if information on the product was given out at a trade show, for example.

Despite these questions, Milt Bryce said the decision to withdraw PUA support is a good one, he maintained. "No company is a charitable business; if [the users group] does not promote our products, we do not want to be involved."

Amdahl dual-system hardware runs to mixed reviews

Multiple Domain Feature sparks interest, but some users question option's purpose

By Jeffry Beeler
CW West Coast Bureau

Users and analysts appear sharply divided in their assessments of a recently announced hardware option that reportedly allows two operating systems to reside simultaneously in the same Amdahl Corp. mainframe.

Some industry professionals consider Amdahl's Multiple Domain Feature (MDF) conceptually interesting and expect it to find assorted applications, especially among customers planning to convert to IBM's Extended Architecture or wishing to combine time-sharing and batch jobs under one processor.

But others give the hardware feature lukewarm reviews, question the desirability of some of its target uses and wonder aloud about the product's ultimate purpose.

Support of like, unlike pairs

Introduced late last month [CW, Dec. 3], MDF consists of printed-circuit boards and microcode that reportedly enable Amdahl's 580 series mainframes to concurrently support IBM's MVS/370, MVS/XA and VM/HPO in any combination of like or unlike pairs.

Under MDF, each operating system occupies its own logically separate domain, which alternately turns on and off at intervals defined by the user.

When one domain shuts down, the other is automatically activated and gains full access to its resident mainframe's internal memory, channels and other processing resources. Although the constant switching between domains creates some overhead, each operating environment reportedly provides at least 95% of native-mode performance.

Relevance for users

But what does the product mean for users, and to what extent might MIS organizations find it useful?

Val Gremillion, manager of automation planning for the Federal Reserve System's Board of Governors, said that because it works solely with 580 series mainframes, MDF is currently inapplicable to the Federal Reserve Board, which uses no Amdahl CPU larger than a 470V/8.

But if the board someday were to upgrade to a 580 machine and convert to an Extended Architecture system, the hardware option and its ability to support two operating systems simultaneously might suddenly come in handy, he said. As an Extended Architecture conversion tool, MDF would probably merit consideration alongside IBM's VM Migration Aid, which basically does in software what the Amdahl product does in circuitry, he said.

MDF might also appeal to user organizations that would like to run their time-sharing applications under VM and their batch-production jobs under MVS. Such corporations, Gremillion said, "could support both environments on a single processor rather than having a separate machine for each."

Some users 'exceptionally nervous'

Not everyone, however, sees the consolidation of unlike operating environments as desirable or wise. Some users, fearful of putting all their eggs in one basket, would become "exceptionally nervous" if they placed their production and test systems on the same mainframe, according to Jack Hart, director of professional services at International Data Corp., a Framingham, Mass.-based research firm.

Hart also sees another potential disadvantage of having two dissimilar control programs running on the same processor.

If, for example, one of the operating environments in an MDF-equipped machine was running time-sharing applications under VM, users would periodically have their service interrupted as control shifted to the other domain, he said.

On the other hand, Hart added, users who now have different copies of the same operating system on separate machines might save "a significant piece of change" by using MDF to consolidate programs and eliminate redundant software licenses. If the mainframe supporting the dual environments has the capacity, a consolidation of like operating systems could also eliminate unnecessary hardware and its attendant costs.

In general, though, MDF appears to be "no big deal, no barn-burner," Hart said. "Unless we're overlooking something, we're not sure what problem Amdahl was trying to address with this product.

"My guess is that their intent is to persuade users to turn in their existing IBM systems and buy a big Amdahl machine instead of a second IBM processor."

William Easterbrook, vice-president of the brokerage firm Kidder-Peabody & Co., claimed to have little familiarity with MDF but described it as a potentially good feature for users who want to "unhook" and replace an existing system.

Only INNOVATION (not even IBM) supports a STAND ALONE BACKUP program or provides a STAND ALONE program that supports XA mode

WHEN DISASTER STRIKES while your processor is running in XA mode or 370 mode . . .

- SAR automatically determines running mode (XA or 370)
- XA mode support saves critical time in a disaster/recovery mode
- XA mode support makes operator procedure simpler and less error-prone
- XA mode support eliminates the need to maintain an alternate IOCDS to use in 370 mode for SAR

INNOVATION's SAR provides the fastest RECOVERY.

SAR supports dumping of disk volumes, data sets, or tracks when no operating system is available.

STAND ALONE BACKUPS Since you can use the DUMP feature of SAR to backup the volume before the system, STAND ALONE BACKUPS eliminate the need to keep a spare volume to do restores in case the system pack goes down.

VM USERS SAR backup and restore functions are supported under VM.

Retailer opts for interactive system to train buyers

Inventory control specialists to use system to get quick order response, cut inventory

By Edward Warner
CW Staff

NEW YORK — With 1,400 employees to train on its mainframe-based Buycom merchandise purchasing program, the retailing giant J. C. Penney Co. could have hired a crew of teachers and cleared out an office at its headquarters here for classroom space.

It didn't.

Instead, it bought personal computers, laser disk players and touch-screen terminals, the key hardware ingredients in a self-paced instructional program developed for the Buycom program by Interactive Training Systems (ITS) of Cambridge, Mass. The hardware will run ITS software and laser disks to provide instruction in a system that J. C. Penney buyers and inventory control specialists will use to get what the retailing firm hopes will be quicker responses on orders and a reduction in inventories.

The training program, which is currently in pilot testing, is distinctive, ITS President David Barber said, because of its interactive features. It quizzes students as they use the system, records and graphs their answers and refers them to review lessons when their errors become too numerous. It even lets students run "what-if" simulations on Buycom itself, testing the potential outcomes of their buying strategies and recording their decisions on the training program. The students use a nonproduction portion of the system set aside for the simulation.

Full-scale training use

J. C. Penney will begin full-scale use of its Buycom training in April 1985, using 36 learning stations in the firm's newly established learning center at its headquarters here. Each learning station, which will run the program's training modules, consists of an IBM Personal Computer, ITS controller, touch-screen color monitor, laser disk player and Buycom terminal. Each of the program's 15 modules, a full 36 hours of study, is stored on a diskette and a companion laser disk.

Barber said the Buycom training program is the largest single program designed by ITS. His firm spent eighteen months studying the Buycom system and authoring the course's first three modules, he said. At the same time, however, ITS also trained several J. C. Penney employees, drawn from four departments, in Authority, the ITS courseware authoring language. The J. C. Penney employees eventually produced the remainder of the course.

Some 24 J. C. Penney employees were involved in the course's development, explained Ted Boggio, the retailer's manager of merchandise systems training. The Buycom system, which has dial-up connections to several J. C. Penney suppliers, took three years to develop and controls the purchase of about $13 billion worth of merchandise annually, Boggio noted.

It will be accessed via terminals by 1,400 J. C. Penney employees, 1,200 of them at headquarters.

Most Buycom users will be divisional merchandise managers, buyers and inventory control specialists, Boggio said. However, he noted, upper-echelon managers will not need to take the entire course; instead, they will learn about the portion of Buycom that is relevant to them. "The beauty of interactive training is [that] you can develop this huge, comprehensive course and tailor it to those who are to use it," he said.

Two other advantages of the training program, Boggio added, are that it "does not rely on whether the instructor is having a good day," and that it provides continual testing and feedback to students. The course administrator, meanwhile, can generate a bar graph based on a student's performance on different modules.

Though Boggio said that J. C. Penney has no plans to disseminate the Buycom training program to its 1,200 stores, ITS' Barber pointed out that J. C. Penney's new in-house program developers and ITS program development equipment could allow the firm to develop future training programs specifically for store employees.

"You've got the engine there," he said. "All you have to do is send out the video disks."

Training [illegible]s programs aim to manage [illegible]dent's attention

By [illegible]
CW Staff

CAMBRIDGE, Mass. — Video-based training programs should combine the best in television advertising and children's educational television, said David Lubin, one of the cofounders of Interactive Training Systems (ITS), a producer here of video-based learning programs in everything from Unix programming to landing jet fighters.

As an example of good educational television, Lubin cited *Sesame Street*, a program for which he and ITS partner Harry Lasker served as consultants. "The basic concept behind the *Sesame Street* adventure was that the attention issues were what you had to focus on," he explained in a recent interview. "Education had [traditionally] focused on content; [it had] forgotten that the real issue is 'How do I manage the attention of my students?'"

ITS programs combine color video scenes with instructional software running on an IBM Personal Computer.

To manage student attention, ITS programs combine color video scenes — a manager talking, a pilot landing a jet, a concept moving through a flowchart — with instructional software running on an IBM Personal Computer. The computer, which asks the questions and presents the lesson, and a laser disk player, which runs the video images, are linked using an ITS controller.

The student, meanwhile, interacts with the training program by touching the appropriate point on a touch-sensitive screen or by entering information — a line of Unix program code, for example — on the Personal Computer's keyboard.

So far, [illegible] the U.S. Army and Bell Laboratories have contracted with ITS for custom-designed training programs.

Most recently, ITS signed its biggest contract ever for a computer-based training program with the J.C. Penney Co. in order to bring that firm's employees up to speed on a nationwide computerized merchandise buying system.

ITS, however, is hoping to expand out of the custom-designed world and become a supplier of packaged off-the-shelf products for self-paced training, according to ITS President David Barber. The firm has a 27-module introduction to Unix, which has been sold to both Perkin-Elmer Corp. and IBM for training their sales and marketing staffs. A multimodule course in basic computer literacy is under development.

What may be the most exciting ITS program to date, however, is its training course on flying a U.S. Navy reconnaissance plane. The course familiarizes Navy fliers with the instrument panel and flight characteristics of the aircraft before the pilots begin flight simulation training.

At the program's start, the prospective pilot is shown a display of the plane's instrument panel. Any part of the display that he touches activates an explanation of that switch or instrument. By the end of the training, the student pilot sees on the [illegible] panel [illegible] the aircraft [illegible] land.

Houston

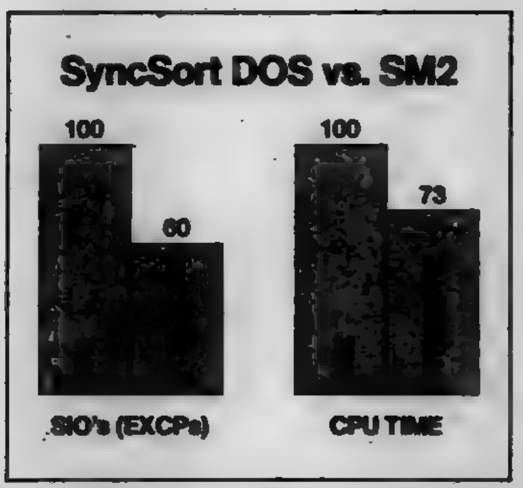
In Dallas, stay at The Westin Hotel, Galleria.

SMART COOKIE

Like you, SyncSort DOS is cut from a special mold.

Call (201) 568-9700.

It's healthy for your system.



One thing about smart cookies, they can spot each other a mile away.

While they don't flaunt their derring-do, they quietly know they're the best at what they do. Because substance shows through. Every time.

Especially when the going gets tough. And rough. As it often does in a DOS environment.

For example, a smart cookie doesn't crumble under the pressure of too many programs and too few programmers.

A smart cookie doesn't waste dough — but picks and chooses the right ingredient to keep production on the rise.

And sometimes, even, a smart cookie has to be a mighty tough cookie. That means being on the job constantly. Keeping things running and humming. Without draining vital resources.

All of which brings us to our smart cookie: SyncSort DOS. A cut above the rest if you ever saw one. Check these delicious advantages.

Better Performance

Pop one into your system and you'll see a mouthwatering difference. Immediately. SyncSort DOS will give you performance improvements like those shown in the chart on the left.

And performance features such as:

- Automatic Secondary Allocation. With this feature your sorts will never run out of disk space, i.e., no "sort capacity exceeded" messages.

Better Features to Improve Programmer Productivity

As you begin to digest SyncSort DOS, you'll find it more and more to your liking. With ingredients that cut down to size the amount of programming time going into applications.

- **SortWriter** — A powerful tool that can produce extensive reports as a by-product of your normal sorting — without user exits and the associated programmer investment. Headers, trailers, total and sub-total capabilities provide flexible formatting.
- **Record Formatting** — Powerful features like INCLUDE/OMIT, INREC/OUTREC, SUM and others — with capabilities like data conversion, editing, insertion of literals.
- **Multiple Output** — From a single sorted file, you can create multiple files and reports. Each can include the same or different data as determined by INCLUDE, OMIT, OUTFIL or OUTREC parameters.

Better Customer Service

Still another sweet advantage of SyncSort DOS: help is always there when you need it. 85% of all requests for service are resolved within 24 hours. We always rise to the occasion.

The moral to this story: smart cookies are quick to reject half-baked solutions in favor of SyncSort DOS. Call us for a demonstration. Once you get a taste you will be hungry for more.

SyncSort DOS
One smart cookie deserves another.

Syncsort Incorporated 560 Sylvan Ave., Englewood Cliffs, N.J. 07632

Manager's on-line design keeps New Yorkers rolling

By Charles Babcock
CW New York Bureau

NEW YORK — If you were responsible for the bus fleet here and had 850 buses that were prone to catch fire or suffer cracked frames, what would you do?

Computerize the repair records, said William C. Fortunato, mainframe manager for the New York Transit Authority's Surface Transit Information Division, and fortunately, that is what his department began to do in August 1980. Those records now serve as a frontline defense for the authority's decision to mothball its fleet of Grumman Flxible buses. (Grumman sold its Flxible division in 1983 to General Automotive Corp. in Ann Arbor, Mich.)

The federal Urban Mass Transit Administration, which helped purchase the buses, challenged the mothballing. The buses have been sitting in the Brooklyn Navy Yard since one of them caught fire in midtown Manhattan in February. The case is still in litigation, spokesmen said.

The Flxible incident helped justify the effort to create an on-line record structure for the bus fleet, said Cary B. Peskin, deputy director of the bus division of the Transit Authority and Fortunato's supervisor.

Regular maintenance intervals

Maintenance intervals for each bus are now part of an extensive fact-collecting process. If a bus breaks down, maintenance supervisors can go to the system and find out when the bus was last serviced and inspected, who did the previous repairs and what the problem was, Peskin said.

Through terminals hooked to an IBM System/38 minicomputer, mechanics in the Transit Authority's 22 service depots can find out when the engine coolant was last changed in each bus and how many miles have been put on each tire, he added.

Fortunato and his staff of 20 programmers frequently joke about the mundane details that are the objects of their programming efforts, but they are part of the support system that allows 1.5 million people to ride city buses each day.

'Learned to love diesel fumes'

Fortunato, 29, said he "just happened to be in the right place at the right time" for the post, and as for his qualifications, he said, "I rode the buses to school when I was five" and "learned to love diesel fumes", while working in a programming job at a bus repair depot.

He was a computer methodology major at Baruch College in Manhattan and joined the Transit Authority when he graduated in 1978. He recently finished a master's degree in business administration at the same school.

In Fortunato's Brooklyn office, light from a lamp floods his desk while the windowless surroundings remain in semidarkness. His big ceiling lights are too bright for the small space, so he keeps them off. From this place he supervises the collection of information on the 4,500 buses that make up the city fleet. It is fed into IBM 3081 and 3032 mainframes in Manhattan.

Analyzing records for manufacturer liability

By analyzing records, his staff can determine whether there is any pattern to repairs that might indicate the manufacturer should be held responsible. If 20% of the dome lights break on a shipment of new buses, for example, the problem might constitute a fleet defect, he said, which the manufacturer would have to correct.

"The city is pretty big. . . . We have millions of records out there. In the past, things would get fixed [on an individual basis], and no one would be the wiser," he said.

The computerized record system also allows the use of spectrochemical analysis. Samples of fluids are taken from a bus and burned, and measurement of the resulting light waves indicate what elements are in the fluids; if engine coolant is detected in the engine oil, it is a sign of a broken seal. Metal particles in transmission fluid indicate a working part is deteriorating.

Fifty percent gain in fluid life

Without the spectrochemical analysis and computerized records, the maintenance crews had to replace engine oil and coolant every 6,000 miles. With them, the two fluids are replaced in most buses every 9,000 miles — a 50% gain in fluid life.

Each bus requires 32 quarts of oil and 36 quarts of coolant per change, so the savings have been considerable, but transit officials cannot say how much yet.

Mainly, however, the estimated 100-program record system helps system reliability, Fortunato said. When a bus breaks down, six months of service records are available quickly on a screen at the repair depot.

"The people who really need the information are getting it," he said.

Nynex, DG join forces to integrate voice/data switches with OA systems

NEW YORK — Data General Corp. and Nynex Corp. last week announced a $65 million agreement calling for Nynex to integrate voice/data switches with DG office automation systems.

Under the agreement, Nynex's unregulated subsidiary, Nynex Business Information Systems, will package DG Eclipse MV superminicomputers running DG's Comprehensive Electronic Office (CEO) with various switches already marketed by Nynex. CEO is an OA package that includes spreadsheet, filing, calendar, word processing, decision support and calculator applications.

A Nynex spokesman said the systems, which will be tailored to the individual customer's needs, are intended to provide a complete OA and voice/data communications package.

Customers can choose from a line of switches now marketed by Nynex, including those made by GTE Business Communications Systems, Inc. and Tie Communications, Inc, according to the Nynex spokesman. He added that packages can be configured to provide all communications services except Inter-Local Access and Transport Areas service.

Nynex to use DG equipment

Nynex, which serves a market area of six million businesses in New England and New York, also will install the DG equipment and CEO software in its own sales and business offices.

The Nynex spokesman said pricing will be set this week and will vary according to the Eclipse system chosen. The Eclipse series supports up to 128 users but allows for interconnection of multiple Eclipse systems.

Nynex also will sell DG's 16-bit Desktop Generation microcomputers and DG/One portable computers.

CICS.Help™

Does your net work the way it should?

Are you lost in a forest of hardware or tangled networks? Let Computerworld's February Special Report on communications networks update you on network architectures, communications software and industry standards.

The Special Report will focus on corporate networking choices including the feasibility of satellite bypass and private line networks.

Contributions to the Special Report should take one of two forms: tutorial articles discussing issues or trends or applications stories outlining a particular user firm's experience.

Articles may range from four to six typed, double-spaced pages. Artwork, such as charts, graphs and photographs, is also welcome.

Authors should include a brief biography and a telephone number at which they can be reached.

The submission deadline for the February Special Report is Dec. 28.

If you have a story you would like to tell, an issue you would like to speak out on or any questions you would like to ask, contact Janet Fiderio, Special Reports Editor, Computerworld, Box 880, 375 Cochituate Road, Framingham, Mass. 01701.

MCI Mail to adjust prices

WASHINGTON, D.C. — MCI Mail, a service of MCI Digital Information Services Corp., announced pricing changes and discounts for its electronic mail customers effective Jan. 1, 1985. An annual fee of $18 will be charged to MCI Mail subscribers — the first time such a fee has been assessed.

Prices for MCI Mail letters sent short distances will be reduced 55% to 45 cents for up to 500 characters. New prices and a higher capacity will be applied to MCI Mail courier deliveries.

New volume discounts, ranging between 10% and 30%, will take effect for MCI letters and overnight mail. A new Executive 50 discount package for customers with more than $50 per month in charges will provide a 5% discount as well as a free Advanced Mailbox that provides all MCI Mail services.

COBOL

from page 1

nology a few years ago. "We looked at some canned packages, but they were not flexible enough for us," he said. "They could not provide us with features such as a 22-digit cost center."

The group experimented with and rejected three application development options: Basic, Dbase II and Microsoft Corp.'s Cobol. The system manager said that Basic and Dbase II did not possess powerful features. "Microsoft Cobol was not compatible with Ansi 74 standards, so it was difficult to determine what features were available," the system manager [illegible]

A major computer manufacturer, which did not want to be identified, has been teaming Cobol and micros for more than four years. The company's central programming department develops and tests applications on the micro and uses a Ryan-McFarland Corp. cross-compiler to send the applications to an IBM 3083 mainframe, where they are compiled.

A system analyst at the company listed two reasons why programs are compiled on its mainframe: speed and data integrity. "To compile a 4,000-line program on a microcomputer can take as long as 45 minutes," he claimed. "To be productive, a person would need two or three microcomputers. That would be ridiculous."

> *'We can develop an application in one-fifth the time it previously required.'* — Jerry Purcell, Fluor Corp.

Fluor alleviates response time problems by limiting most programs to approximately 1,000 lines of code and through the use of a syntax checking program. "We do most of our debugging with a syntax verification program," Purcell said. "Whenever a programmer compiles a program, he is fairly certain that it will run to completion."

Consequentially, response time is not a major problem at Fluor. "With an [IBM Personal Computer] XT, four to six minutes are needed to compile a program, and 30 to 60 seconds are used for the syntax check," he noted. "With an [IBM Personal Computer] AT, this time is cut significantly."

The manufacturer stores Cobol source and object code on the mainframe. "There are control and security procedures available on the mainframe that the microcomputer does not have," the analyst said. "With the micro, one has to work with 150 floppy diskettes as backup."

The computer manufacturer has written a number of applications, including a program for its manufacturing plants. "Microcomputers control a number of activities at our plants, which are located throughout the world," the analyst said. "We wrote a general program for all our plants. Since it was written in Cobol, it can be altered in each country."

The next step at Fluor will be running the Cobol programs on a local-area network. "We would like to be able to have one person entering data while a second is testing a program," Purcell said.

WILSON

from page 1

willing to take their place, yet I couldn't. That rejection really hurt."

The pain was so great that she asked for a transfer from AT&T to Ohio Bell. "Initially, I was told that transfers were not allowed, but in three weeks I went to work for Ohio Bell," Wilson said.

Her first position was as a third-shift computer operator. Although interested in computer technology, she aspired to a management position. "I have always been more interested in people than machines," Wilson said.

To increase her knowledge of Ohio Bell's system and hone her managerial skills, she studied. "I am the type of person who always has her head in a book," Wilson claimed. As she advanced in her studies, she was given more responsibility. In 1973, Wilson became an assistant manager, with four people reporting to her.

Wilson

Her management style has been marked by a willingness to change policies even when change creates problems. "The operations function grew so that it was difficult to complete the work in six days," she said. "There was talk of a seven-day schedule that no one really wanted. I was assigned to implement it. As you might guess, that was not a popular change, but it was needed, and it was implemented."

As an Input Systems Output manager, Wilson also altered the company's training program for operations personnel. "My area was responsible for [Sperry Corp.] and [Honeywell, Inc.] equipment," Wilson said. "New employees were first trained on IBM equipment. We had to wait a few months before they would even begin to work with our system. I just did not see the rationale for that process, so I had the training department develop introductory Honeywell and Sperry courses."

Wilson's ability to communicate helped her accomplish tasks without alienating coworkers. "You always know where you stand with Vivian," said Richard W. Gostlin, assistant manager for site planning at Ohio Bell. "She defines what she wants and tells you point-blank when you don't deliver it."

Wilson credited her entry-level experience with aiding her managerial skills. "Some people go right into management and never understand the needs of nonmanagement employees," she said. "With my experience, I can find something in common with any employee."

Two years ago, she recalled, one of her workers retired from Ohio Bell. Upon retiring, the woman sent Wilson a card thanking her for always taking the time to communicate. The former employee claimed that Wilson's cheerful demeanor was more important to her than anything else at the company. "She signed the card 'P.S. I hated you when I first worked for you,' " Wilson related.

Another asset is the wealth of experience she gained during her tenure at Ohio Bell. "Whenever there was an obscure problem with the system, she would correctly analyze it," Gostlin noted.

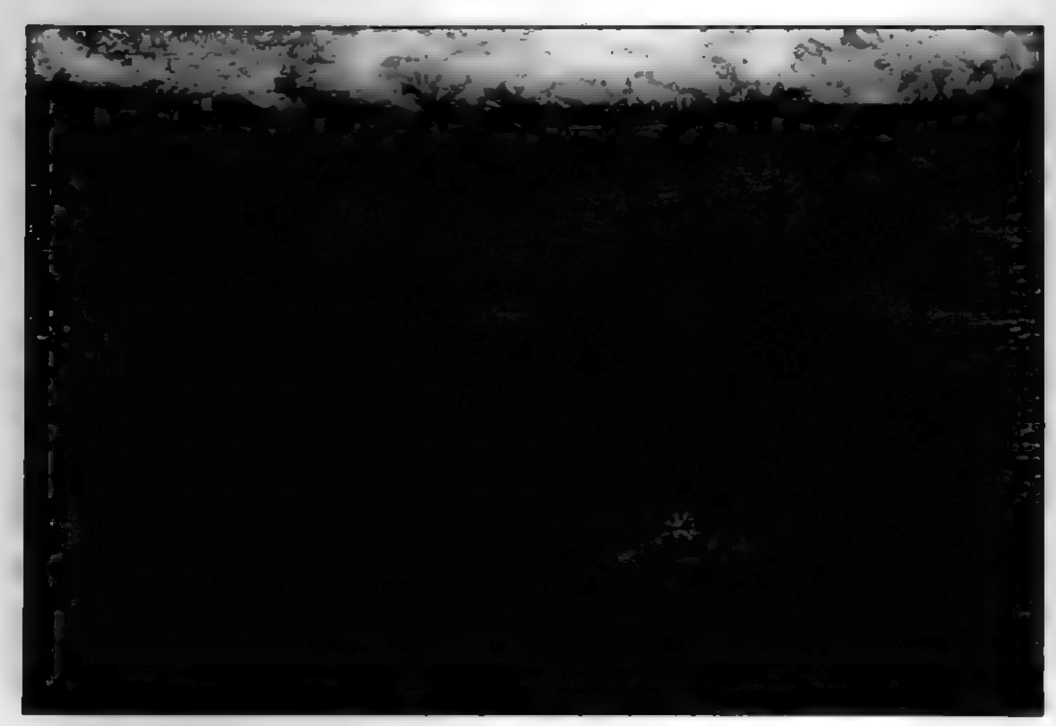
'I rely on her experience'

Her supervisor, Robert L. Windle, district manager of Input Systems Output, added, "I really rely on her experience. I would hate to think of working without her."

Wilson's experience and outgoing nature have landed her a job in which she now directs 71 employees and six managers responsible for the company's 2.5 million-bill-a-month billing system, billing data entry for the Northern Ohio area and the corporate microfiche system.

She has placed her unpleasant early AT&T experience behind her and reported only one minor problem at Ohio Bell. "There was tension between one supervisor and me," she said. "It reached the point where we had to have a closed-door meeting to air our feelings. The problem was not that I was black but that I was a woman. He didn't believe that women should work. Even though initially we had problems, I can't complain about the way he treated me. He gave me the best review I ever had."

Wilson has been active in the Cleveland chapter of the Black Data Processing Association, serving recently as its recording secretary. She has also found time to attend college, raise six children and work as bookkeeper for her husband's business.



Before VM Magic, embarking on a migration from one disk type to another was a formidable undertaking.

At last, an effortless path for DASD migration.

Now you can migrate to the new, faster disk device types in only the time it takes to copy your files—a matter of hours, instead of months or years consumed by program and job control conversions.

VM MAGIC bridges the distance between incompatible disk device types and guest operating systems running under IBM's Virtual Machine Facility (VM) *without* conversions or program modifications.

That's right. VM MAGIC enables your system to store and retrieve data from any type of disk device, regardless of operating system, access method or software.

Get greater economy and performance without waiting.

With VM MAGIC you save more than the manpower expense of a long, labor-intensive conversion effort. You also reduce hardware and energy expenses, because with VM MAGIC you can respond to *any* of the disk device requirements of guest operating systems using *any* DASD. Save thousands of dollars in disk rental, maintenance and operating costs by eliminating outmoded or unnecessary disk device types.

Expand your options under VM.

VM MAGIC also lets you:
- increase system performance by migrating to, and taking advantage of, new technology disk hardware.
- select disaster recovery and backup sites without regard for disk configuration.
- prolong the life of your current software by eliminating its dependence on a specific disk environment.
- make decisions about hardware upgrades, program modifications and conversion efforts in a logical, orderly way.

For more information on the time and money-saving applications of VM MAGIC in your installation, call SDI at (415) 572-1200.

SDI®

SDI, 1700 SOUTH EL CAMINO REAL, SAN MATEO, CALIFORNIA 94402, TELEPHONE (415) 572-1200

Data security topic of meet

LONDON — Experts in computer crime will speak here at the 1985 International Data Security Conference, Feb. 18-19. Sponsored by Open Computer Security Ltd., the conference is geared toward consultants, security system planners and senior executives of financial institutions.

Speakers will include Carl Meyer, Ph.D., codesigner of IBM's Data Encryption Standard, and Dorothy Denning, Ph.D., associate professor of computer sciences and specialist in cryptography and data security.

More information is available from Maxine Gordon, Open Computer Security Ltd., 31-32 High St., Brighton, East Sussex, England BN2 1RP.

Five-year Ansi effort yields data exchange standard

By Bryan Wilkins
CW Washington Bureau

BALTIMORE — Incompatibility of hardware and software is most familiar to system planners who are prone to exclaim, "I'm tired of this, and I'm not going to take it anymore." The electronic exchange of interindustry information regarding purchases and orders probably conjures up nightmares. If handshaking won't work within the industry, forget the external transactions.

However, with the publication this month of draft standards by the American National Standards Institute (Ansi) X12 committee, a five-year effort by users to establish peaceful coexistence in an incompatible hardware environment has borne fruit.

The draft standards for electronic business data interchange (BDI) were designed to facilitate order placements, the processing and receiving of information, shipment and receiving information, invoicing, payments and cash applications.

According to Ed Fischer, chairman of the Ansi X12 committee and director of 3M Corp.'s information center, the number of industry groups that have joined in the effort to develop BDI standards has increased as the work has neared completion. "It's been hard. How do you satisfy that many people who all want to keep their own formats and designs?" asked Fischer, who recently reported on the work to the annual convention of the Transportation Data Coordinating Committee (TDCC) here.

Fischer told the convention that support for the draft standards has been expressed by associations representing the metals, banking, electronics and computer industries.

The Ansi X12 committee work has centered primarily on following the structure of the International Standards Organization's (ISO) Open System Interconnect architecture with its seven-layer communications protocol.

Specifically, the BDI draft standards comply with ISO layers six and seven only, according to Fischer.

The standards consist of transaction-set standards to define the procedural format and data content requirements for specific business transactions, such as purchase orders, a data dictionary that defines the precise content for data elements in building a transaction set and the transmission control standards.

Fischer said the successful adoption of the draft standards would depend primarily on their use by suppliers and vendors of various products. He predicted, however, that third-party vendors, such as value-added communications companies, would probably be the logical choice for small businesses that want to perform data interchanges and avoid added costs of implementing hardware and software changes.

TDCC is acting as the secretariat of the X12 committee, and copies of the draft standard can be obtained for $85 by writing to TDCC at 1101 N.W. 17th St., Washington, D.C. 20036.

Delaware succeeds in second try at automating bond sales

By James Connolly
CW Staff

DOVER, Del. — The state of Delaware's second attempt at eliminating paper in state and municipal bond sales last month succeeded where the first try failed.

State Treasurer Janet C. Rzewnicki tried to eliminate paper bond certificates earlier this year [CW, Feb. 6] by assessing a $50,000 handling fee on bidders who did not agree to use book entry or electronic registration of bonds. In that $60 million sale, four of five bidders, including the low bidder, opted for paper and the surcharge.

But in the latest $50 million general revenue bond offering, where the surcharge was quadrupled to $200,000, three of the five bidders agreed to the book entry requirement. Those offers included a low bid of 8.69% annual interest by the winning bidder, Merrill Lynch & Co.

The sale was the largest book entry bond deal in the U.S., surpassing the $10 million sale by the state of Utah in July, and will help make book entry the standard for state and municipal bonds, according to Rzewnicki.

"It was an education process. There was a feeling that the individual wanted a paper certificate," Rzewnicki noted. She said she ordered a study of bond buying patterns and found that almost all bonds were being purchased by institutions such as banks and insurance companies, often on behalf of individuals who never received or desired certificates. She said she also found that the financial industry misunderstood state regulations on book entry bonds and that there was no requirement for paper.

Under the book entry system, sales will be recorded under a single certificate at a depository. Merrill Lynch and the depository will then keep electronic records of the institutional and individual purchases. She said courts will accept as proof of ownership records such as canceled checks and monthly statements.

According to Rzewnicki, the benefits of book entry go beyond the state's saving printing and processing costs for certificates. She said the customer benefits by interest being paid automatically and because the state can easily break down large bonds for several buyers.

"Because we are doing it through the computer, we can change denominations of bonds from $5,000 to $1,000, which means letting people get into the tax-exempt market for a lot less money," Rzewnicki said.

BIM-EDIT vs. IBM ICCF:
Higher productivity is the better deal.

When you compare program editor capabilities, there's no comparison between BIM-EDIT and ICCF. BIM-EDIT has more than 25 features that ICCF can't match. Time-saving, productive features like:

- fast, automatic recovery after CICS failure
- library backup without interrupting on-line users
- concurrent library member addition and deletion from batch and on-line
- immediate logoff from any point, including mid-edit session
- logon returns immediately to logoff point and status
- log session maintained per user of commands and responses
- line block group commands — copy, move, delete (cc-cc, mm-mm, dd-dd)
- easy switching between concurrent edit and display sessions
- access to all system commands from any screen or session
- high-speed, highly functional, POWER spool queue access
- spool access, edit, other session types, all use same scrolling commands
- multiple commands for one or multiple sessions may be entered at any time regardless of session type or position
- may end an edit session without permanently affecting the member
- edit lines up to 256 characters wide
- support for 3270 models 2, 3, 4, and 5
- statement change auditing, and change backout
- character string search across library
- Help screens
- library directory always in alphabetical order

Compare the features. Compare the price ($4000 purchase, $2000 yearly, or $200 monthly). You'll agree, the higher productivity of BIM-EDIT is the better deal.

BIM has more than a dozen other DOS/VSE system software products, also performs systems programming consulting, and provides computer time services on a 4331-2 system.

CCA EMACS. THE MOST POWERFUL SCREEN EDITOR FOR UNIX AND VAX/VMS.

No other text editor gives you so much power, speed, and functionality as CCA EMACS.™ Or makes editing so easy. Close to 400 built-in commands let you do any task with only a few keystrokes. Even things that are impossible on other editors. And with our Common Lisp based extension language, Elisp,™ you can customize CCA EMACS to meet your program requirements.

Multiple windows are another important plus. So you can manage concurrent processes and move information from one window to another. And CCA EMACS is supported by a full online documentation package that includes a novice tutorial. So any user can quickly utilize all the power of CCA EMACS.

CCA EMACS runs on Berkeley Unix™ (4.1BSD and 4.2BSD), Bell Unix (System III and System V), and VAX/VMS.™

Prices for a binary license range from $350 to $1900.

For more information, or to find out how to get a trial copy, call Gwendolyn Whitaker at (617) 492-8860.

NEWS

IBM readies to meet predicted large systems demand

CW AT
IBM LARGE
COMPUTER MARKET

By John Desmond
CW Staff

TARPON SPRINGS, Fla. — IBM's own customer surveys show that host processing, or millions of instructions per second (Mips), rates will grow at a compound rate from 45% to 47% in 1984 instead of the 35% that IBM previously projected.

So said Daniel M. Culhane, IBM's manager of large systems in the national accounts marketing division, who spoke last week to an IBM Large Computer Market Conference sponsored by the Gartner Group, Inc., a market research and consulting firm.

Since IBM began the customer surveys in 1979, actual Mips installed have consistently outstripped projections, Culhane said. Among the application areas most strongly driving growth today are graphics and image processing and engineering and scientific markets, he added.

'Dramatic business case'

"Those areas are probably growing enough so that even IBM could make a very dramatic business case" for getting into them, said Culhane of markets traditionally dominated by IBM competitors.

Also driving the market are projections that, by 1990, 70% of the white-collar labor force will be dependent on computers to do their jobs and that 13% of the gross national product will be spent on data processing-related expenses, Culhane said. "An inexhaustible amount of corporate money will be spent on DP," he said.

Most DP-related spending was once on mainframe-class systems, he explained. In 1980, 60% of DP spending was for mainframes, vs. a projected 35% in 1985, Culhane said.

Spending for desktop processors and minicomputers is up; desktop spending is rising from 6% of DP budgets in 1980 to a projected 20% in 1985, and minis from 17% in 1980 to a projected 21% in 1985, Culhane said.

More sophisticated end users are fueling the change, and growing DP markets are concentrated outside the host processing area, he suggested. "Real growth is achieved by tying the external areas back to the host," Culhane said.

Addressing system design, Culhane said IBM is designing CPUs with more field-replaceable units that can be plugged in and out quickly for faster servicing.

Self-diagnostics will be increasingly used to indicate which components are not working, and the defective component can be simply replaced in the field and repaired elsewhere, Culhane said.

'Settle for someone in a white shirt'

With such designs, service in the field becomes simplified; "Maybe you don't need a graduate engineer anymore," Culhane said, adding, "Maybe you can settle for someone in a white shirt who can replace a card without getting electrocuted." He also added, "I'm not saying that field engineers are going to go away."

Another design feature for water-cooled systems that has helped control CPU maintenace costs is the Thermal Conduction Module (TCM), Culhane said.

Dissipating heat is critical in systems that operate with cycle times below 27 nsec, such as the 3080 series, since excess heat can affect cycle timing, he said. A total of 133 microprocessor chips together can generate 300W of heat, Culhane said, noting the TCM was designed to remove up to 1,400W of heat.

Other areas addressed by Culhane included:

- *Chip technology.* IBM's research arm recently announced a chip with 10,000 bipolar circuits. When used in a personal computer, the chip could push micro Mips ratings to 2.5, Culhane said. While it would not appear practical now for micros to have that much power, the excess power could be consumed by protocol conversion, especially for communicating between processors, he suggested.
- *The 1M-byte chip*, also recently announced by IBM. This could be used to increase main memory on CPUs in the field, he said, suggesting, "Productivity would go through the roof."
- *Market strategy*, in which IBM uses price to try to move users to the top of a CPU line. "We've developed what we consider a mousetrap. Once you buy one of these things, we're going to continue to try to adjust prices to get everyone to go all the way up . . . to the top of the line," Culhane said.

He noted that IBM saves money this way, because it is easier for salesmen to move customers up processor lines than to different processors.

- *Operating systems.* IBM is committed to MVS/XA, VM and DOS/VSE through 1989, Culhane said. OF MVS, Culhane said, "MVS isn't going to be functionally stabilized; it's going to be functionally stranglized. Less and less function, more and more to extended architecture," he said, noting

Who costs more ...a President or an MIS Director?

When it comes to search—you know the higher salaried candidates cost you more. Headhunters play the percentages and go home in fast cars to big houses. It's a lucrative game when you place high powered executives at a 30% (or more), of salary fee.

But think about it from your angle. It takes just about as much time and effort to come up with the right MIS names as it does with presidential material. Actually, the top names can be easier to find as they are more visible. It seemed to CORS that it makes little sense to tie a fee to salary rather than to the amount of work involved... unless of course, you're into Ferraris.

We thought there was room in this business for a better approach to search based on a rational fee structure.

And let's face it, as a Personnel Executive you're ready for some changes in the recruiting area—it has remained pretty much the same over the last couple of decades while the world changed around it.

You're up on your ESOP's and your 401k's and you learned cost containing, downstreaming and outplacing. But when it comes to recruiting it's still a matter of getting the headhunter on the phone or processing and screening hundreds of ad responses.

The process is the same as it's always been, the only difference is that now it all costs even more.

Enter CORS—the human resource services firm that has developed and refined a new approach to recruitment that has now produced substantial cost savings (well over 50%), and quality hires for over 500 clients during the past 3 years.

We offer a system as new as the newest computer technology—and as effective as only step-by-step, call-by-call, painstaking research can be.

Utilizing state-of-the-art technologies and a research department that would be the envy of even the biggest search firm, we can compile a list of candidates that meet your specifications and deliver that list to you in just 1 week.

On the way to getting that kind of detailed information we pick up facts on your competitors, opinions on your image in the marketplace and a pretty good assessment by candidates on what you have to offer. We package all this information into The CORS Report for which we charge $2290. (Telephone and travel expenses additional.)

Take the list of candidates for your position and run with it. Hire 3, 5, 7 —the fee remains the same.

We think that no matter how many Chairmen, Presidents, Engineers, Marketing Professionals, Controllers, Systems Analysts, and Sales Representatives you hire, you should only be responsible for a fee that reflects the amount of work done.

Don't you agree?

If you'd like to receive more information, or would just like to talk about how CORS may be able to help meet your current needs, please call Tom DeBourcy, Director of Marketing, 1-800-323-1352. (Within Illinois, (312) 773-8555.)

IBM seen moving from 370 to System/38 architecture

CW AT IBM LARGE COMPUTER MARKET

By John Desmond
CW Staff

TARPON SPRINGS, Fla. — IBM will move away from the 370 architecture in a "gradual if not graceful transition toward the evolutionary target" architecture of the System/38.

That was the view of David L. R. Stein, general partner of Julian, Cole and Stein, who spoke at last week's IBM Large Computer Market conference here sponsored by the market research and consulting firm of the Gartner Group, Inc., of which Stein was a cofounder.

According to Stein, "the crystal ball is rather clouded" as to when this movement will occur in earnest. One reason is that the plug-compatible market has not performed well of late, he said.

"IBM now has some options it probably didn't expect to have; [the company is] not being forced to move as quickly," Stein said. Stein predicted that when IBM announces the Sierra, its so-named successor to the 3080 series of mainframes, certain features will be withheld at first since IBM has no pressing need to announce them. Sierra features announced in late 1985 could encompass fiber-optic channels and new channel protocols, Stein speculated.

IBM, Stein claimed, learned a lesson in the early 1970s after announcing the 370 to succeed the System/360, with the 370 being "the same machine for half the price," Stein said. IBM did not offer the block multiplexer channel feature of 370 on the 360, so plug-compatible manufacturers (PCM) developed a controller to keep the 360s current, he said. "The entire installed base of IBM was incompatible with IBM's new standard," he said. PCMs took advantage of that to sell more of its own disk drives. "In a sense, IBM abandoned its installed base" to the PCMs, Stein said.

IBM today tends to retrofit new system features to most recent systems, so the installed base can support the same peripherals, making it harder for PCMs to compete, Stein indicated. Beyond PCMs, the real issue in Stein's view is how IBM can continue to carry on with its 370 architecture. "No one would be so brash as to suggest that 370 architecture will be here forever, he said.

IBM learned a lesson in the early 1970s after announcing the System/370 to succeed the System/360, with the System/370 being the same machine for half the price.

In 370 architecture's evolution, Stein predicted, "DOS will die; it has no reason to exist. It was designed for small memory environments."

Quoting Gene Amdahl, the entrepeneur who started Sunnyvale, Calif.-based Amdahl Corp., Stein said end-user investment in software is "so enormous that it forces gradual architectural evolution."

If IBM made radical departures in architecture, it would benefit IBM's competitors by forcing unwanted conversions on IBM users, Stein suggested.

IBM instead will continue to rework its 370 architecture toward object-oriented architecture, in which the operating system generates I/O actions to handle transfers transparently to the user, as in System/38 architecture, Stein said. "That clearly has to be the objective for the 370." This process of evolving to System/38-type architecture may take two decades to reach completion, Stein said. The change requires a machine-independent interface between systems software and applications programs and abandoning device-dependent data, he stated. "The risk is enormous. If one makes too large an architectural change, the software can come down like a house of cards," he said.

To migrate customers to another architecture, IBM intends to support two environments simultaneously, Stein said.

SURVEY

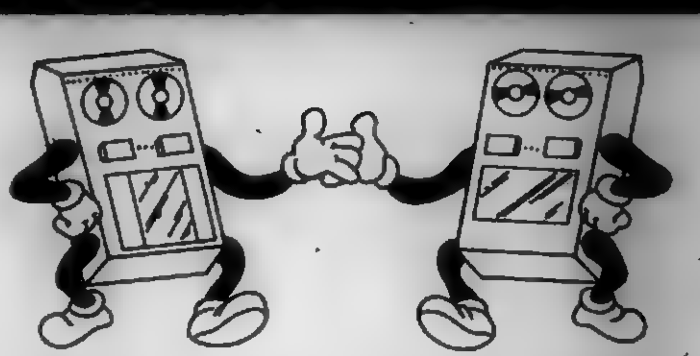
from page 12

the transition would be slow.

■ *Sierra.* In an apparent reference to what the Gartner Group is calling a delay in the announcement of the Sierra series, the top-of-the-line IBM mainframes expected in early 1985, Culhane said, "The X models haven't been out there that long yet. You've got to recover that development expense before you can really make your profit numbers."

■ *Microcode.* The hardware, software integration called microcode is misunderstood because it is complex and engineering-oriented, Culhane suggested. Loaded on a mainframe via a floppy disk, microcode provides software assistance and better performance, he said. For an MVS function, according to one test, a CPU with software only required 56 instructions and 332 cycles to process. With microcode, that function required one instruction and 70 cycles.

OUR SWITCHES MAKE YOUR IBM SYSTEMS WORK LIKE A TEAM!



If you have more than one IBM or plug compatible processor, Digital can help you get the most for your hardware investment. Our switches allow you to achieve backup and peripheral configuration flexibility at a fraction of the cost you're probably thinking.

Whether you have two processors or more, Digital has a switch to suit your requirements.

- Model 4101 The lowest priced matrix switch on the market.
- Model 3421 The only manually operated channel switch in the industry.
- Model 3403 A remote controlled channel switch designed for underfloor installation.

Data base system plays cupid for business expansion

By David Gimes
CW Staff

In Durham, N.H., the creators of a computer "dating service" are bringing together lonely heart investors with entrepreneurs, hoping to attract more investment to the state.

In Atlanta, the Associated Builders & Contractors of Georgia, a trade association, is using a computer data base to match builders with contractors and to create more business for association members.

These are just two of the various organizations that have enlisted computers to promote business opportunities and improve their competitive advantage over rivals.

At the University of New Hampshire (UNH) in Durham, the directors of a nonprofit network are trying to match entrepreneurs with investors. Information about investors and applications for investment from entrepreneurs are being stored in a customized version of Ashton-Tate's Dbase II data base program running on an IBM Personal Computer.

Network to help attract business

The project, called the Venture Capital Network, is operated by the Small Business Development Program at the university. Organizers of the network hope it will help New Hampshire compete with other states in attracting new business.

"The level of activity has been well in excess of our expectations," said William Wetzel Jr., a UNH business professor and one of the network's directors. "It's been growing fairly rapidly."

Wetzel said about 100 investors throughout New England are participating in the project, which is centered on equity investment opportunities in the $50,000 to $750,000 range. Start-up investments of that size are usually too small to attract the attention of professional venture capital firms or the public equity market, he said.

Start-up companies have usually had to turn to the informal risk capital market to finance their ventures, Wetzel said. But entrepreneurs often have difficulty locating these "informal investors." In the past, he said, the two parties have usually met "through a series of random events or the 'old-boy network.' "

An entrepreneur fills out a questionnaire with basic information about his business plan. The computer is then used to match the entrepreneur's plan with the investors' requirements, Wetzel said.

Confidential process

When both parties' criteria match, the investor is provided with additional information about the plan. The process is confidential until such time as the investor asks to meet the entrepreneur, Wetzel said.

"We couldn't do this without computers," he noted.

Although the network has already matched a number of potential investors with entrepreneurs, only one deal has been consummated, Wetzel said. Although he declined to disclose the identities of those involved, he said the entrepreneur of the high-technology venture is receiving $100,000 to $200,000 in start-up funds.

The Associated Builders & Contractors computer service was begun in May 1984. One of its main purposes is to give association members a competitive edge over a rival AFL-CIO-affiliated construction union in winning building contracts, according to Robert Graham, executive director of the Atlanta association.

Graham said the Construction Buyers Service Center is an offshoot of a similar computerized data base kept by the association's national headquarters.

"We got a little more specific with it and tried to tailor it to our contractors, to the type of projects that typically are built in Georgia," Graham said.

The data base program, called Fileman, was custom-written for the association by Compuwork, an Atlanta software development firm specializing in insurance applications. The software runs on an Ohio Scientific, Inc. personal computer.

Association members complete questionnaires providing information about their firms, including the type of construction in which they specialize, their largest clients, recent projects and bonding capacity. That data is entered into the computer and matched with information about specific construction projects.

Matching builders with contractors

"What we try to do is match up the needs of builders who are looking for contractors with those contractors" who fit the builders' requirements, Graham said. Builders are sent a profile summary of potential contractors, and the rest is up to them.

"It doesn't do anyone any good to be talking to someone about a job that may involve $2 million to $3 million of electrical work on a project if all the contractor does is small residential electrical work," he noted.

The matching effort would have been impractical without the computer, Graham explained. "We would have had to keep [paper] records on every contractor, then when we got a request, manually go through each and every one of 370 companies to try and match them up."

IBM forms organization to handle Rolm acquisition

ARMONK, N.Y. — As part of a realignment of its three major business groups, IBM last week formed an organization to oversee recently acquired Rolm Corp. and related telecommunications businesses.

The new Telecommunications Products organization will be responsible for coordinating IBM's efforts in voice and private branch exchange (PBX) telecommunications and for marketing those products. The new group also will direct IBM's joint marketing program with Satellite Business Systems (SBS), a company in which IBM recently raised its ownership stake to 60%. Aetna Life & Casualty Co. owns the remaining 40% of [redacted]

IBM's $1.26 billion acquisition of Rolm was approved last month by Rolm shareholders and the U.S. Justice Department. IBM and Rolm have agreed to a Justice Department proviso requiring the divestiture of Rolm's military computer business [CW, Nov. 26].

In a statement, IBM Chairman John R. Opel said the changes "will enhance our focus on several key areas of the business and better position us for future growth."

IBM said it is realigning the Information Systems and Communications Group and forming an Information Systems and Products Group. The changes are effective Jan. 1.

Under the realignment, the Information Systems and Communications Group will oversee the Communications Products and Entry Systems divisions, the Industrial Systems organization and the new [redacted] sion. Its responsibilities include the Personal Computer line.

Stephen B. Schwartz, formerly president and chief executive officer of SBS, has been named assistant group executive in charge of the [redacted] Schwartz will be succeeded at the satellite company by Marvin L. Mann, an IBM vice-president and general manager at IBM's products business unit in Lexington, Ky.

However, the Information Systems and Communications Group will no longer be responsible for the Information Products and Systems Products divisions, which will now come under the wing of the new Information Systems and Products Group. This group will be responsible for low-end information processing systems, including the System/36 minicomputers, copiers, automated teller machines and typewriters.

Frank Metz Jr., an IBM vice-president, has been named group executive in charge of the Information Systems and Products Group.

MIS director role redefined

Spread of desktops, expansion of duties change function of information managers

By Charles Babcock
CW New York Bureau

NEW YORK — The year 1984 was a transitional year in which the role [redacted] mental changes, according to the executive director of the Yankee Group, [redacted] porate data base have spread far beyond the walls of the data processing center. The MIS director, instead of serving as the high priest of information systems, is now subject to multiple demands for information ser- [redacted] recent annual briefing of the Yankee Group here.

Kutnick emphasized service. The proliferation of desktop computers and end-user computing "forever changes the role of the MIS director," [redacted]

"We see MIS changing through the end of the decade. . . . We see management information services enabling end users to get access to the data that they need," he said.

Today's end users are "fundamentally different from the programmers and techies" that MIS departments tended to deal with in the past, he [redacted]

A second major responsibility that was passed on to many MIS departments in 1984 was overseeing the company's communications as a replacement for the broken-up AT&T. Kutnick said that as MIS departments assume a stronger role in communications, they will start building combined voice and data transmis- [redacted]

Growth of micros

The growth of microcomputers, departmental minicomputers and networks has increased, not lessened, the demands on the corporate mainframe, Kutnick said. A Yankee Group survey showed that users' large system millions of instructions per second (Mips) requirements are expanding at an annual rate of 35% to 45%, the equivalent of a new IBM 3081 mainframe every six months at a large site, Kutnick said.

The increase is being generated by use of information centers, fourth-generation languages, application generators, end-user data base management systems (DBMS), query facilities, more complex applications and networking. "Networking is not cheap," he noted.

The Yankee Group estimated that about 1 Mips of mainframe power is consumed for every seven to 10 concurrent personal computer users tied to it.

Financial skills let DP execs speak corporate language

By Kathleen Burton
CW West Coast Bureau

SAN FRANCISCO — Why do computer professionals need to develop financial planning as well as data processing skills?

This question was the subject of a management tutorial at the 15th annual International Conference on the Management and Performance Evaluation of Computer Systems here last week.

According to Anthony M. Abowd, tutorial chairman and founder of Data Strategies, Inc., a financial consulting firm based in Chicago, many DP professionals are technically proficient but lack the basic financial skills and jargon necessary to bring their future hardware planning and computing needs to management's attention effectively. Consequently, management often fails to make effective business decisions based on the DP department's real needs.

Another problem, according to Abowd, is that computer managers are often isolated from the corporate mainstream. To change this, he said, computer managers must start speaking the language of corporate managers, rather than a confusing "Tower of Babel" computer jargon. This is especially important at budget decision-making time, Abowd said, when corporate managers are often inundated with myriad projects needing approval and often rank them quickly according to arbitrary financial measures.

Computer managers must speak the language of corporate managers.

Another factor for MIS managers to remember when pushing for project approval or additional equipment is understanding the corporate psyche, he said. Corporate managers are like owners of sports teams preparing to draft new talent, he said, with each new proposed project akin to a draftee's being considered for the prospects of corporate success next season.

Two basic questions

Abowd said there are two basic questions to answer when proposing increased DP needs to management, namely: How will the increased computer capacity fit in with the overall business of the company? And, how will it impact the company's bottom-line return on investment?

MIS professionals have become expert at measuring costs, but they are not strong at measuring bottom-line returns, added Hershel Pearl, a Data Strategies partner who cochaired the session.

DP professionals are also proficient at factoring in direct project costs, such as hardware, programmer requirements and software development charges, Pearl said, but are lacking in estimating trickle-down, indirect costs, such as unforseen overhead, support staff and electricity and air conditioning expenses. This serves to undermine the credibility of DP managers who, based on these omissions, often submit incorrect financial figures to upper management.

Two simple methods can turn computer proposals into financial proposals, Pearl said. The first method is to show how additional computing power can increase sales. The second method is to show how computing can reduce company expenses. Both methods, he said, talk about dollars, not computers, relate computing to the primary business and take into consideration the bottom-line company profits.

Appeals court refuses to throw out MCI case

CHICAGO — The U.S. Court of Appeals has refused to throw out the antitrust case won by MCI Telecommunications Corp. over AT&T four years ago, setting the stage for a trial on the extent of damages next month. The appellate court previously threw out a $1.8 billion award.

MCI has filed a new claim that it has suffered $5 billion in lost profits, which it said were the result of hindered connections to AT&T legally required by Federal Communications Commission policies. MCI said that due to the lost revenues, it was unable to expand its public-switched long-distance voice business that it was in the process of establishing.

MCI has stated in court documents that $2.5 billion of the damage claim is attributable to lost regular public-switched service and $2.5 billion attributable to lost private-line revenues.

MCI has completed an internal study that makes the case for the additonal lost revenues and has presented it to the court.

AT&T failed in an attempt to bar the new study.

Columbia computers–we give you more than you pay for!

No other IBM™ compatible has more value to offer than we do–more hardware, more free software and more dealers coast to coast to serve you better.

While most computer companies are treading lightly today, Columbia's taking giant steps into '85. We've added a 10 MB hard disk portable at $3,495, that gives you three portable choices. We've got four desktops to choose from and for the demanding executive, we've recently introduced two fixed drive professionals with internal tape back-up. At Columbia things never looked better.

Look at Compatibility. Columbia's superior compatibility extends across the boards and across the spectrum of thousands of available software packages.

Look at Expandability. We offer more expansion slots and built-in ports. Our expansion slots give flexibility to add memory, data communications, multi functions and networking with IBM compatible PC boards. With our built-in ports you can add peripherals like modems, printers and plotters. We allow you to keep expanding as your needs expand.

Look at Performance. Our new 30M byte hard disk model with its 40 millisecond access time gives you performance where it counts, and we back it up with an internal tape system as well. Our new portable also features a hard disk giving it, too, peak performance.

The entire Columbia family of nine computers is field-proven with the most popular local area networking and data communication products on the market today, i.e., 3-COM ETHER SERIES,™ CORVUS OMNINET,™ IRMA,™ NOVELL NETWARE™/OS and NESTAR.™

Look at what you get if you buy by December 31st. Buy any one of our family of Columbia computers by December 31st and you'll get with it a $2,500 software library which includes MS DOS 2.1, BASICA 2.0, word processing, spelling checker, filer, spreadsheet, database manager, home accounting, communications, colorgraphics, diagnostics and four ATI tutorials.

Plus when you buy any Columbia with at least 256K and two disk drives, you'll get free, OPEN ACCESS™ integrated software. OPEN ACCESS from SPI is a leading integrated software package that retails for $595.00. But for you it's absolutely free. You'll get information management, communications, spreadsheets, word processing, 3-D graphics and time management. This offer is available only at participating, authorized Columbia dealers.

Contact the nearest Columbia dealer in your area while he has Columbias in stock. With what we're giving away, he won't have it long.

DP alchemists in quest for applications gold

PRODUCT SPOTLIGHT

DEVELOP from page 1

ing. For example, in the July issue of its monthly journal "System Development," Phoenix-based Applied Computer Research, Inc. (ACR) released the findings of a survey of 125 large development shops that showed an average applications backlog of more than 27 months. Similar shops surveyed three years ago indicated a backlog of only 19 months.

"So in spite of the rise of information centers and end-user computing, it appears that backlogs continue to get worse instead of better," the ACR report stated.

Into this environment, enter application development systems — those software tools designed to simplify and standardize application development and improve programmer productivity:

- Some application development systems work by actually generating code on the basis of input requirements.
- Others provide for the automated functional linkage of individual programs coded in traditional languages.
- Still another class provides a higher level language — so-called fourth-generation languages — housed in a development environment intended to speed the development process.

But defining what exactly constitutes an application development system is the rub. This article looks at the following three main product types:

- Program generators.
- Application generators.
- Fourth-generation language-based, production-quality application development tools, as opposed to the more end-user-oriented fourth-generation language products.

Not considered are the multitude of other productivity tools that address more specific and limited tasks in the development process.

Drawing a dividing line between program generators and application generators is not done without difficulty. A report prepared by Framingham, Mass.-based International Data Corp.'s (IDC) Information Systems Planning Service described program generators as products that produce standalone programs, typically in Cobol or PL/I.

Application generators, the study said, produce programs that continue to require software support from the generator, usually from a runtime monitor, to execute the programs. They generally interface with a data base management system (DBMS), often the vendor's own product, and a data dictionary and generally feature a fourth-generation language.

> *'In spite of the rise of information centers and end-user computing, it appears that backlogs continue to get worse instead of better.'*
> — Applied Computer Research, Inc. statement

"In general, program generators are more appropriate for an application that will consume a lot of computer power, the bread-and-butter applications that are run all the time. But a large portion of an organization's applications use a much smaller portion of computer resources — the one-time reports or ad hoc applications. The application generators are suited for those," said Ellen Staelin, senior software consultant for IDC's Information Systems Planning Service.

A problem many prospective users face is that a variety of products fall under the heading of application generators, a relatively new industry buzzword. "Within the mainframe world," Merlyn said, "I am not sure there are any true application generators. That is a term that covers a number of different products that assist in developing major application systems. The term may once have had a precise meaning, but you will find some very different solutions all under the application generator heading." Merlyn's firm, Walker Interactive Products, headquartered in San Francisco, expects to release its Strategic system application development system in approximately one year.

Even IDC's definition is not without opponents. Steven Pfrenzinger, president of Encino, Calif.-based IMS Consulting, Inc., said, "I cannot agree to [IDC's] delineation. It is just not workable. I know several products that do the same thing, but some have runtime monitors and others do not. I would call them all application generators. An application generator is a tool used by a programmer to develop applications. I understand the semantics problem, but I do not think that distinction is a proper one."

Thomas O'Flaherty, principal consultant for the market research firm Input, Inc. in Mountain View, Calif., echoed Pfrenzinger's dissatisfaction with IDC's product breakdown. "In reality, there is not all that much difference between program generators and application generators. The application generators, in principle, allow you to map out entire applications within the context of the generator, as opposed to individual programs. But I am not certain many users know how to utilize that aspect of the product in practice."

Whatever the definition, the market for professional programmer-oriented application development systems is certainly viable and growing. IDC estimated that large-scale systems users spent some $126 million on independent vendors' program design/development tools this year, an increase of nearly 50% over last year's expenditures

** For purposes of this report, a program generator is defined as an application development system that produces stand-alone programs. An application generator is defined as an application development system that produces programs that continue to require software support from the generator in order to execute the programs. A fourth-generation language application development system is defined as a development environment/methodology based on the vendor's fourth-generation programming language.

CW CHART

Tools aid appliance firm's applications development

PRODUCT SPOTLIGHT

Despite the fact that the application backlog continues to grow at Amana, Iowa-based Amana Refrigeration, Inc., Donald Jones feels that Pansophic Systems, Inc.'s Gener/OL has simplified much of the software development effort there.

"It seems that the backlog would keep growing no matter what type of tool we had," said Jones, who is manager of programming and procedures for the home appliance manufacturer. "Much of the backlog consists of batch programs, so Gener/OL won't help us. But it has helped us a great deal with our on-line applications development. In addition, it has speeded up debugging and testing. There are many on-line programs that we would otherwise have spent four or five days on that we can develop with Gener/OL in one day."

Jones said about half of his 13-member development staff works with the Gener/OL application development system, which runs with IBM's DL/I under DOS/VSE and CICS on an IBM 4381 Model 2 at Amana Refrigeration's headquarters in Amana. The firm brought Gener/OL in-house in early 1983 and has since used the product to develop several software systems that Jones described as production-quality applications. One is a marketing information system linked to a data base that provides terminal users with inquiry capabilities to sales information by such levels as product class and model.

"The marketing system application is a fairly large-scale one that includes a number of batch portions," Jones said. "I estimate that it would have taken us 20% more project time to complete the on-line portions without Gener/OL. There have also been no noticeable efficiency problems due to Gener/OL."

At John Hancock Mutual Life Insurance Co. in Boston, the use of Pansophic Systems' Telon for IBM's IMS/DC and CICS has also aided system development on the company's IBM 3080 series mainframes under MVS/XA. Telon was formerly a product of Christensen Systems, Inc., which was recently acquired by Pansophic [CW, Nov.19]. According to Robert Mongell, senior technical programmer in Hancock's Technical Services Division, Telon has reduced hand-coding requirements, facilitated high-level prototyping of applications and provided testing facilities that aid in debugging.

"Basically, we have used Telon to develop a number of standard insurance-industry-type applications.

See PANSOPHIC page 22

IBM maintains stronghold despite product weaknesses

By John Gallant
CW Staff

In a 1982 study of IBM CICS application development systems conducted by the Merlyn Corp. consulting firm [CW, Oct. 11, 1982], 33% of IBM Development Management System (DMS) users said they would not recommend that product to others. In addition, users queried by the Merlyn Corp. ranked DMS poorly in terms of overall capabilities. The study findings were supported by industry analysts interviewed by *Computerworld* who also criticized both DMS and IBM's ADF-II for lack of functionality. Yet both products continue to be leaders in rankings of installed application development systems.

"As the song goes, it's just three little words — International Business Machines," said Thomas O'Flaherty, principal consultant for Input, Inc., a Mountain View, Calif.-based market research firm. "The first thought of many users is to go with whatever IBM offers. They know IBM will never let them down completely, so it is a safe bet. However, despite the dominance of those products, IBM has not been as strong in this [productivity tools] area as it has been in some others, simply because its products are not that good."

Ann Morley, senior software consultant for International Data Corp., a market research firm based in Framingham, Mass., agreed with O'Flaherty. "People use a lot of IBM software simply because it comes from Big Blue. It has that *Good Housekeeping* seal of approval on it. In addition, their application development products have been on the market longer than many of those supplied by the independent vendors."

"To be fair," Morley continued, "many of the products we compare [DMS and ADF-II] to are newer and embrace more advanced architecture. That is not a fault of IBM. But IBM does not have to be the best to win market share, they just have to have something adequate. Many users know there are better tools out there, but they stick with IBM anyway."

That situation may be changing. Analysts agreed that independent vendors are gaining ground in the application development system marketplace, though not always at IBM's expense.

"I think the business is big enough so that there is room for everyone to gain ground," said T. Capers Jones III, manager of the application management practice at

Micro as workstation queried

Most vendors do not support off-loading to micro

While microcomputer-based development — or programmer — workstations have become a hot topic in software organizations, whether or not the current generation of application development systems adequately supports the off-loading of development tasks to micros is debatable.

More than two-thirds of the vendors interviewed by *Computerworld* said they currently do not support micros as workstations. Some experts even wondered whether in-house software development centers are prepared to use micros as workstations.

"A lot of companies are betting that they can make use of workstations," said Steven Pfrenzinger, president of IMS Consulting, Inc. "It is an issue that is getting hotter, but it has not been addressed by most shops yet. . . . All the vendor companies are looking to micro versions of their products, and I have seen some functions moving out to the micro. But the actual generation portion of development still takes place at the host today."

Others complained that today's application development systems do not address the development of systems designed to operate across processor types.

"The [productivity] tools for the mainframe industry do not integrate the micro into the development scenario," said Vaughan Merlyn, vice-president and general manager of the systems software division of Walker Interactive Products, Inc.

"They also do not accommodate the reality of the future integration of mainframes, minicomputers and micros."

IBM from page 18

the industry research firm of Nolan, Norton & Co.

What is Big Blue planning for the future? Many insiders predict that IBM will announce an application development system to support its recently announced DB2 data base management system or at least extend the functionality of one of its products to service that environment. But the industry giant may have other moves in mind.

"I am anticipating that IBM will put its stamp of approval on one of the independents' products, as it did with [Artificial Intelligence Corp.'s] Intellect," said Steven Pfrenzinger, president of IMS Consulting, Inc.

"My suspicion," O'Flaherty said, "is that IBM may leapfrog the competition and come up with the first product that addresses applications that extend over microcomputers, minicomputers and mainframes. . . . Users are building these cross-machine applications, and they are asking for support."

BECOME A CICS CONSULTANT IN JUST TWO WEEKENDS.

We know that it's tough for consultants to fit a weekday course into their hectic schedules. That's why SysEd offers special CICS training courses for consultants that you can complete in only two weekends.

Our intensive weekend courses in Command Level, Macro Level, Internals, Application Design and VSAM are designed to make even non-CICS programmers immediately productive in a CICS environment. Each SysEd course provides a true-to-life learning experience with "hands-on" use of the computer; up-to-date, practical information; a solid foundation in CICS fundamentals and insights into advanced materials, and individual attention from highly qualified in-[illegible].

SysEd's special weekend courses for consultants are held regularly at our classroom/computer facilities in New York City, Chicago, San Francisco and Dallas. Because class size is limited, applications are on a first come, first served basis.

DEVELOP

from page 17

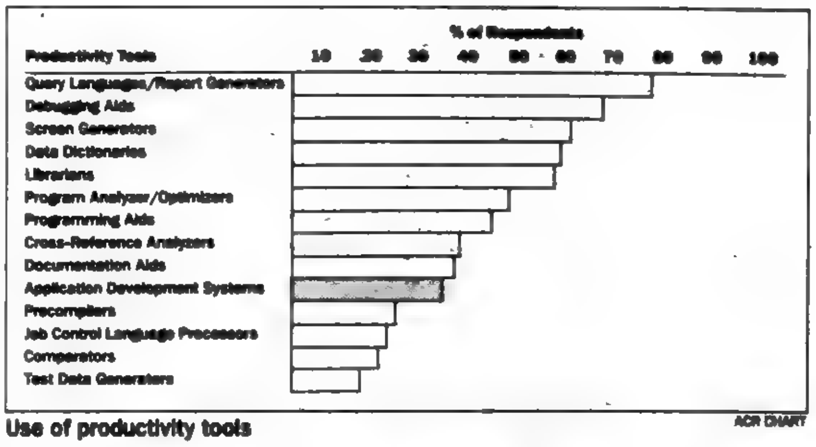
(see chart page 26). By 1986, that figure will more than double to $268 million, IDC predicted, and will reach more than half a billion dollars by 1988.

In a user survey conducted for its "IBM Software Environment" report, IDC found that approximately 28% of the 1,100 IBM sites polled use an application development system. That number correlates roughly to ACR's research, which indicates that nearly 35% of the shops studied use an application development system (see chart page 22).

"I think it is interesting to take note of how many shops are using these products," Staelin said. "There is not yet an accepted technology. It is clearly still in the adoption phase."

Despite the growing number of application development systems offered, users often face a very narrow range of options in adopting the technology. "Users don't have as wide a choice as it may appear, in the sense that the products are very environment-specific," said Ann Morley, senior software consultant for IDC. "If you are in a DBMS environment, you are pretty much confined to a product that supports the data types you have. There are more options available than last year, but users still face some real limitations of choice."

According to Morley, vendors are beginning to provide more general, less environment-specific tools as the application development technology gains user acceptance. But even as the products make inroads into DP shops, vendors must be cautious in targeting potential users.



Use of productivity tools

ACR CHART

Earlier this year [CW, March 12], Analysts International Corp. in Edina, Minn., pulled its Corvet application generator out of beta testing mainly because the company had failed to identify the final audience for the product. "We found," a spokesman said, "that although users were influencing the sales cycle, it was programmer/analysts . . . who would use it. That was unexpected." Corvet was intended to enable nonprogrammers to develop production applications.

As professional programmer tools, perhaps the single biggest reason application development systems are brought in-house is to improve productivity. Some products boast 10:1 improvements over coding in conventional languages, but whether users achieve such gains is questionable.

"The actual productivity gains with these systems, as far as I can tell, have been limited to relatively small applications. I do not know what the world record is for the largest application ever generated, but I am sure it is fairly small compared with the really large applications that have been conventionally developed," said T. Capers Jones, manager

See DEVELOP page 26

PANSOPHIC

from page 18

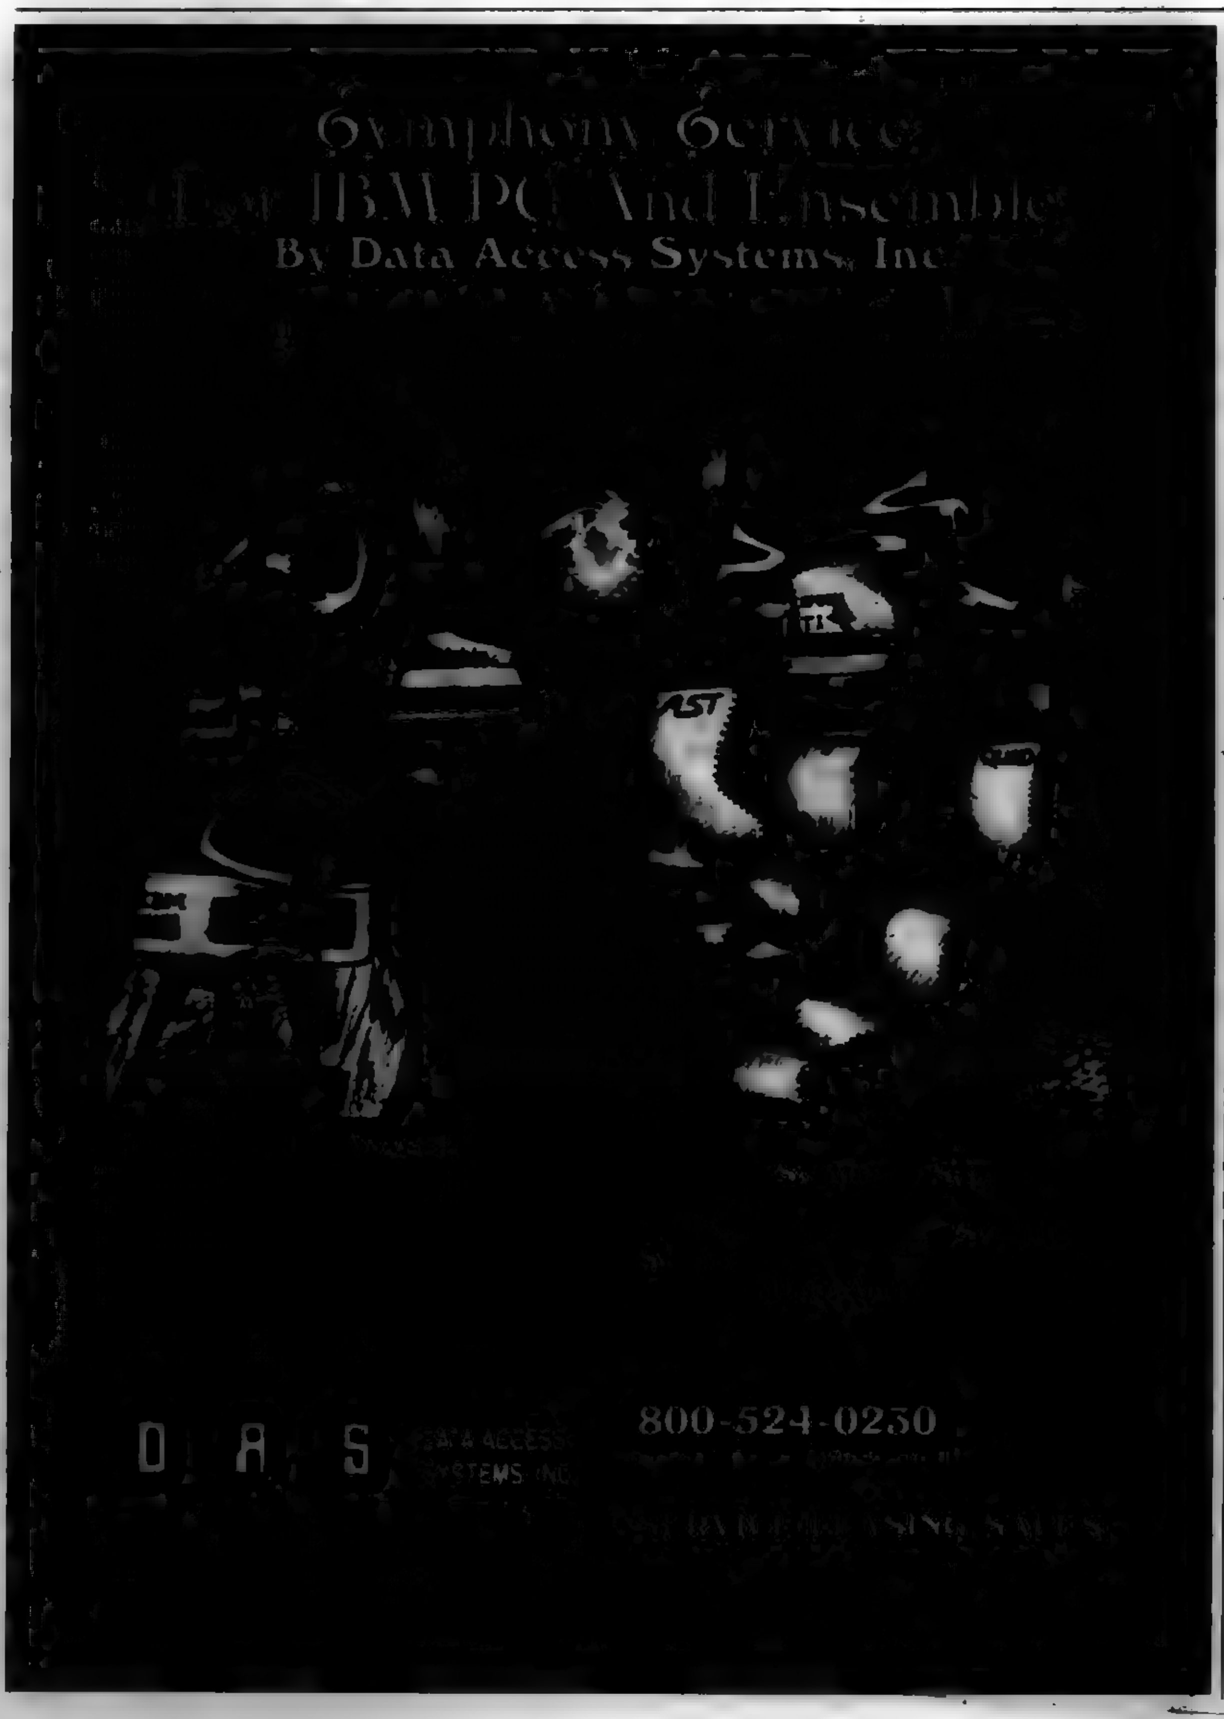
Also, we developed a corporatewide human resource system that maintains information on all employees. The product is definitely useful for constructing large-scale business applications," Mongell said.

About 20% of Hancock's approximately 450 applications programmers use Telon, although Mongell said the percentage of Telon users grows constantly. Hancock has used the application development system for nearly three years.

"Certain types of systems can be developed under Telon, but it is not a panacea," he said. "It is a simple online system that allows you to isolate complex processing. It has taken a lot of the detail work out of coding, and it allows you to concentrate more on design. But intricate, complex systems are not so suited to development with Telon."

Both Jones and Mongell said their shops faced no resistance from programmers when the products were acquired, although many experts said programmer rejection of productivity tools is a common problem (see story page 23). And, at both Amana Refrigeration and John Hancock, development management encourages the use of the development systems.

"We have a general policy here," Jones said. "Any native [IBM] CICS program will be written with Gener/OL unless someone can prove a very good reason why it should not be."



[illegible]

Prototyping: Does use match investment?

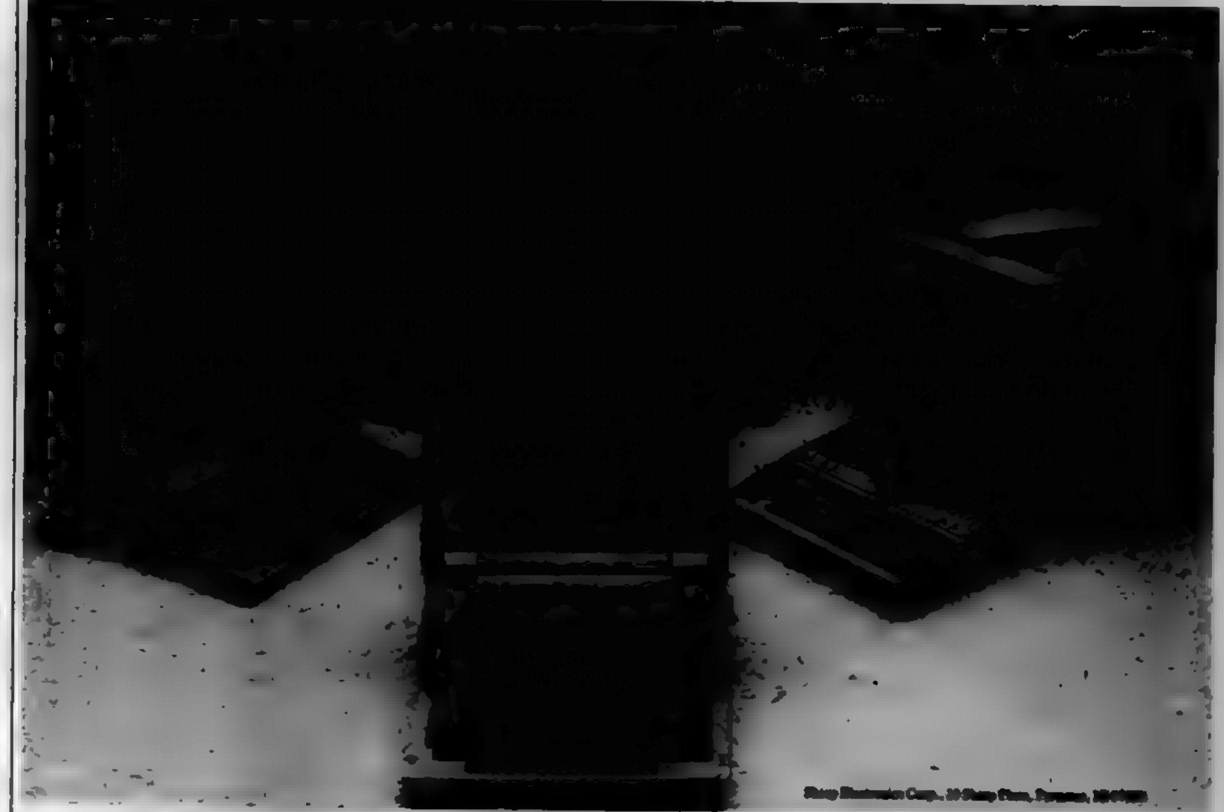
Using an application development system to prototype new applications — allowing analysts and programmers to work more closely with end users — is often one of the most important reasons an organization invests the considerable time and money needed to implement such a system. But to what extent are development systems being used for prototyping?

"Prototyping is probably one of the most common uses of application development systems today," said T. Capers Jones III, manager of the application management practice at Nolan, Norton & Co. "I also think it is one of the more important reasons for having one. The ability to do high-speed prototyping, even if that is all it does, usually makes the product valuable."

But Roger Philips, president of Iconics, Inc., disagreed. "I think that, in principle, the tools are good for prototyping, but the current products are not really supporting that. They help you write code faster, but it still takes quite a long time to design an application. They do not really provide for the rapid prototyping necessary during development."

And, said Thomas O'Flaherty, principal consultant for the market research firm Input, Inc., whether or not a development organization prototypes has little to do with the ownership of an application development system. "The value of prototyping lies along an independent path from the value of an application development system. "Prototyping has more to do with your design approach. [It] is more a state of mind; it is not tied to an application generator."

WHAT THEY CALL A PORTABLE, WE CALL A LOAD.



Today, almost everyone claims to have a portable computer. The problem is, almost no one does. Most portables have a separate data storage device, separate printer, separate modem, and some even require a separate monitor or bulky battery pack that can make them a liability on the road.

The Sharp PC-5000, on the other hand, is a true portable. It's a compact 16 bit microprocessor, 128K RAM (expandable to 320K) with 192K of ROM, an 80 character display screen, removable bubble memory storage, built-in rechargeable power source and bundled software. It's also available with options like an integrated modem that lets you connect with your mainframe and an integrated correspondence-quality printer which doesn't increase the size of the system. And even with all these features, the PC-5000 fits neatly into a briefcase and weighs under 14 pounds. Almost 25% less than its nearest major competitor. At a price that's lighter, too.

Of course, there's one thing about the PC-5000 that isn't small. Its working capacity. It functions as a desktop computer. And is compatible with a wide variety of MS-DOS* software.

So if you need a truly portable computer, look into the Sharp PC-5000. The one that may be the smallest, lightest—and the best value for the money. In short, a computer that will lighten your work load. Not add to it.

Vendors discuss large-scale applications development,

In an effort to address the issues of operating efficiency and the usefulness of a particular application development system for production environment applications, Computerworld *asked each vendor to respond to the following questions.*

1). Do you recommend your product for the development of large-scale, transaction-oriented applications?

Applied Data Research, Inc.
Ideal

"Ideal is a functional replacement for Cobol. There is virtually nothing you can develop in Cobol that you cannot also develop with Ideal."

Cincom Systems, Inc.
Mantis

"The major problem in transaction-oriented applications is I/O, and Mantis handles data movement quite well. Our customers at nearly 2,000 sites worldwide are using Mantis to develop just such applications."

Cullinet Software, Inc.
Application Development System/ On-Line (ADS/O)

"ADS/O automatically generates pseudo-conversational, fully reentrant and fully compiled code that is ideal for a production environment."

Hogan Systems, Inc.
Umbrella

"Umbrella is the technology that we [Hogan Systems] used to develop all of our banking industry applications, some of which involve more than 600,000 lines of code. Each of those banking systems is a heavy transaction-oriented application."

IBM
IMS Application Development Facility II (IMSADF II)

"IMSADF II is recommended for most [IBM] IMS/VS applications. User experience indicates that IMSADF II can support a majority of applications in the typical IMS/VS installation." (product literature)

Development Management System/CICS/VS (DMS/CICS/VS)

"DMS/CICS/VS is an advanced application generator designed to improve productivity in the implementation of [IBM] CICS/VS applications. [It] can be used to develop on-line, interactive applications where terminal operators interact with files or data bases." (product literature)

Informatics General Corp.
Mark V

"Mark V automates all file access and allows you to go easily from one transaction to another with a simple building block approach. Our users' experience indicates that you can develop applications designed for heavy daily transaction volumes with Mark V."

Leading Software Technologies Corp.
The Intelligent Assistant

"The Intelligent Assistant was designed for the development of just such applications. In addition, CPU resource consumption during the generation process is almost negligible. The product can generate a system involving 50,000 lines of code and documentation in less than a CPU second."

McCormack & Dodge Corp.
Millenium System Development Tool (M:SDT)

"All of our [McCormack & Dodge] financial applications were developed with M:SDT. So, clearly the product is useful for developing heavy production applications."

Multiplications, Inc.
Accolade

"We [Multiplications] used Accolade to develop our mainframe Imagine [on-line query and report generator] system. Accolade is very efficient, and it significantly decreases the time required to implement a secure, reliable and efficient user-oriented application under [IBM's] CICS." (vendor spokesman and product literature)

Nixdorf Computer Software Co.
Hibol

"Any time savings during application development is critical. Thus, as a tool for productivity, Hibol is definitely applicable to the development of large-scale applications. If Hibol does not generate 100% of the code needed, the user must only insert whatever unique logic is required."

Oxford Software Corp.
UFO

"We have users running UFO-generated applications involving up to 400,000 transactions a day. I think on that basis we can recommend UFO for the development of production applications."

Pansophic Systems, Inc.
Gener/OL

"Gener/ol can be used for anything that you would normally develop with command-level Cobol. In dealing with our users, we have never encountered any problems with the development of large-scale applications."

Telon

"The performance of a Telon-generated application will be as good or better than a hand-coded system. Telon produces good-quality applications for a production environment. Our customers have developed numerous high-volume [IBM] IMS/CICS applications under Telon."

Sage Systems, Inc.
Application Productivity System/IMS (APS/IMS)

"The more complex the application, the more applicable our product is to the development of that application. Our product can leverage the skills of senior project leaders in areas such as building reusable code segments and program skeletons and allowing them to utilize fully the [IBM] IMS/DB/DC environment without a great deal of training."

Software AG of North America, Inc.
Natural

"We have users of our product who have developed applications that involve an extremely high number of data base calls daily. Some [development] shops have completely abolished the use of Cobol in favor of Natural."

James Martin gives you the method…now DDI gives you…

the tool for structured

rate their products against Cobol-developed packages

8). How would you rate the efficiency of an application developed with your product to a similar application developed in Cobol by a programmer?

Applied Data Research, Inc.
Ideal

"Whenever you look at a high-level language, one of the considerations is efficiency. Cobol runs slower than assembler, but productivity during development is greater. Ideal is more productive than Cobol because it is a higher level language. Ideal may run slower than Cobol, but that loss is offset by the efficiencies of the underlying [ADR/Datacom/DB] data base environment."

Cincom Systems, Inc.
Mantis

"It's a matchup. Mantis uses fewer CPU cycles, but the I/O is a little higher. Mantis has outperformed similar applications in some cases and has not performed as well in others. Generally, it is a one-to-one comparison. In a large network, with a large number of users, you will see a difference in the sense that the Mantis application will require more resources. But we feel that the increase in productivity during development offsets that."

Cullinet Software, Inc.
ADS/O

"The ADS/O application would be comparable in resource usage efficiency. In some situations it is more efficient and in others it would be less. It is designed for multiuser applications, so in that environment it is very efficient. In a one-on-one, transaction-by-transaction comparison, a Cobol program may be more efficient. With ADS/O, there is a lot of overhead involved for just one user. But as you add users, the additional overhead, compared to a Cobol program, is minimal."

Hogan Systems, Inc.
Umbrella

"Our clients have found between zero and a less-than 4% increase in overhead. If the increase has been more than that, we have been able to help the user straighten out the problem involved — we find in those situations that they are usually doing something wrong. That is for a total application system. Individual programs are as efficient as the user writes them."

IBM

Vendor not available for comment.

Informatics General Corp.
Mark V

"If it is a one-to-one situation, a Mark V application would be comparable. In terms of execution time, the two programs would be equal. For the average program, our statistics have shown that CPU cycles would be similar to a hand-coded system. It depends on the type of program under development."

Leading Software Technologies Corp.
The Intelligent Assistant (TIA)

"A TIA-generated system will consume fewer resources to accomplish the same amount of work compared to a handwritten system. Depending on the application, the user should expect an improvement in resource usage efficiency in the range of 10% to 30%."

McCormack & Dodge Corp.
M:SDT

"The product is essentially as efficient as running Cobol."

Multiplications, Inc.
Accolade

"We have undertaken studies in this area. If you talk about an average program, we are identical. The average programmer doesn't do things as efficiently as possible. We estimate that a highly skilled programmer would write a program more efficiently by about 10%. But for an average program, we are about dead even."

Nixdorf Computer Software Co.
Hibol

"The difference would be very minute. Hibol generates only the code you request; it does not utilize a program skeleton. The difference in machine requirements would be unnoticeable compared to a handwritten program."

Oxford Software Corp.
UFO

"Any comparison such as this would vary with the complexity of the application being developed. On the average, however, a UFO program would utilize anywhere from 1.2 to 1.5 times the resources that an average Cobol program would."

Pansophic Systems, Inc.
Gener/OL

"A program developed with Gener/OL would be comparable in efficiency to a program developed in command-level [IBM] CICS. However, a Gener/ol program does not require a compile or table changes and additions."

Telon

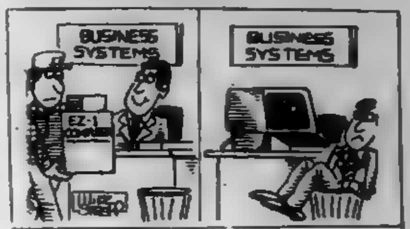
"The flexibility of the product and its use of Cobol and PL/I allows for performance as good as any hand-developed application. We have had comments from customers that their Telon-developed applications are the best in their shops in terms of performance monitoring. As with any application, an expert could come in and do a better job, but performance using Telon will be as good or better than with an average handwritten program."

Sage Systems, Inc.
APS/IMS

"In benchmarks conducted during Texas Instruments, Inc.'s product evaluations [of application development systems], results showed that APS/IMS-generated code was virtually identical in efficiency to handwritten code."

Software AG of North America, Inc.
Natural

"[Use of the product] is going to cost you something. You have to pay for the productivity gains you achieve during development. There may be up to 20% added CPU utilization, but you will get a 20% to 25% increase in productivity during development."



---

programming.

While doing research for their recent book,* James Martin and Carma McClure reviewed seventeen diagramming techniques and came to one overwhelming conclusion:

Action diagrams are the simplest and best method of representing structured programs.

Action diagrams combine graphic and narrative notations in a rigorous but easy-to-understand technique. The method is applicable to any size program. In almost any language.

When used to sketch out program logic, action diagrams encourage correct structured thinking. Logic errors become more apparent. Communication improves among programmers, analysts, and end users. And top-down design is enhanced, because action diagrams handle any level of logic, from systems overview to detailed program code.

**Diagramming Techniques for Analysts and Programmers* Prentice-Hall, 1984

Fast, full-screen editing with ACTION DIAGRAMMER™ and an IBM PC.

Working closely with James Martin, DDI has developed an action diagram editor for the IBM Personal Computer and 100% compatibles. The Action Diagrammer™ editor lets you create and update action diagrams right on the screen. You draw brackets with a single keystroke. Manipulate text with all the power of a visual editor. And expand or contract to focus on any level of detail you choose.

The net result: faster application development

With Action Diagrammer you can develop designs and programs faster, and with fewer errors. Maintenance is easier too, because Action Diagrammer enforces logic structure and provides excellent documentation.

The price is easy too — only $495

The Action Diagrammer software package sells for $495 and comes with a complete user guide, which includes a thorough overview of the action diagramming method. No serious programmer or analyst with access to an IBM PC or compatible should be without it.

Even more features

Represents logic hierarchy with nested brackets for all constructs such as sequence, selection, case, and repetition. Can also represent database actions and subprocedures

Automatically supplies control-structure syntax in English, COBOL, PL/I, FORTRAN, C, Pascal, and many 4th generation languages including FOCUS, RAMIS, NOMAD, MANTIS, IDEAL, NATURAL, and ADS/O

Offers one-stroke commands and user programmable function keys

Shifts mainframe software development to PC's

Allows color coding of diagram sections through user control of text and bracket colors (for users who have a color monitor)

Includes ample help messages and other on-line documentation

Produces hard copy of action diagrams on any IBM PC-compatible printer. Graphic output on IBM graphics printer or HP7470A plotter

of the application management practice at Nolan, Norton & Co. a consulting firm in Lexington, Mass.

"According to research we have undertaken, developers on some application systems projects realized great productivity gains. But programmers on others didn't achieve similar increases. The projects that did not exhibit those gains seemed to be those where the developers did not understand how the [application development system] product worked or where they tried to undertake things that were too complex for the system," said Robert Mongell, a senior technical programmer in the Technical Services Division of Boston-based John Hancock Mutual Life Insurance Co., which uses Pansophic Systems, Inc.'s Telon system.

In a recent survey of sites using application development systems, IDC's Information Systems Planning Service found that users perceived the greatest strength of the products to be the increased programmer productivity they realized. But, according to Merlyn, the emphasis on improved productivity may be misguided.

"What problem are you really trying to solve? Programmer productivity is a very difficult thing to understand. The focus should be on application development productivity, not just programmer productivity. The time it takes to code in Cobol gets people searching for tools or higher level languages. But coding is only a minor phase in the development life cycle. Increased programmer productivity only means that we can generate the wrong application 10 times faster," he said.

While many products profess to aid in the entire development process — from design to maintenance — they often support only the actual coding portion of development, a portion that may comprise as little as 5% to 10% of the cycle. Considering that most problems with applications stem from poor design, and in light of the fact that maintenance now takes up more than 50% of staff time for most organizations, many experts feel the products fail to address two of the three major problems facing in-house development shops today.

Design mistakes

"Most of the bugs in large systems come out of mistakes in requirements and design," Jones said. "You can make the same mistakes with generated code that you can with conventional code. The probability that coding errors will not be as great is not critical because coding errors are not the main contributor of bugs. It is misunderstood requirements or poor design."

Richard Foudy, vice-president of the fourth-generation language consulting firm, National Decision Systems, Inc. in Monroe, Conn., agreed with Jones. "Very little, other than intelligence, can help in the design phase. These systems cannot really help you design better. If they claim to, they can get you into real trouble. No software product can help poor design."

But according to Pfrenzinger, the disciplined, structured methods some products impose on developers can improve application design and quality. "These tools can enforce structured, standardized techniques on programmers. That forces the creation of a maintainable product."

"A real problem with the current generation of application development products is that they don't really address maintenance. While you can generate applications more quickly, in the end, you are faced

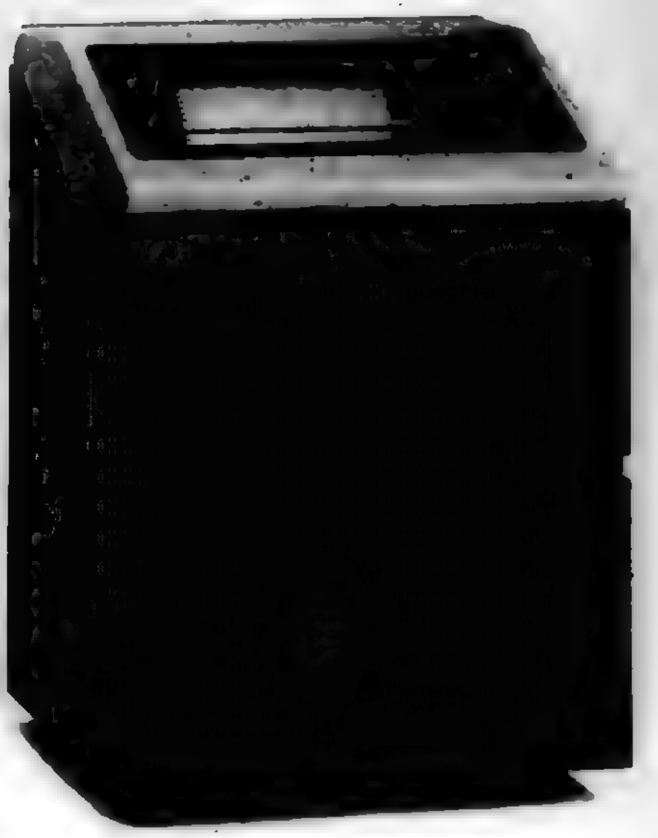
From

, to



Nobody puts ideas on paper so many ways.

If you're using your printer with a personal computer, you probably need one that can handle a variety of functions.

At the same time, the price should be in line with the computer itself. Low.

The pint-sized Dataproducts printer in the picture costs about as much as one good software package.

It prints spreadsheets, graphics and illustrations, labels, multi-part forms—even letters that look like they were typed.

But let's say you're running a big computer and it's hundred-page reports you need. Pronto. Or documents by the millions.

The printer on the right finishes a full computer printout page in less time than it takes to sneeze. At 2,000 lines a minute, it prints much faster than you can see. Three shifts a day. Year after year.

In between these two special-duty Dataproducts printers are whole families of other Dataproducts printers—daisywheel printers, non-impact printers, high-security printers for the government, and more.

In fact, we make more different kinds of computer printers than any other independent printer company in the world.

Very likely we make one that fits your needs exactly.

Write us at 6200 Canoga Avenue, Woodland Hills, CA 91365. Or phone (818) 887-3924. In Europe, 136-138 High Street, Egham, Surrey, TW 20 9HL England.

Super Stars

[illegible]dia Manage[illegible] [illegible]netics [illegible]ur computer tapes p[illegible]

Graham Magnetics' leadership position in computer tape technology has led to the development of three remarkable devices, each designed to do a specific job to reduce drop-outs, tape damage, stoppages and resulting system downtime:

The Inspector IV* MPC—This microprocessor-controlled tape evaluator/cleaner locates and isolates error-prone and damaged tape in your library. It can clean and evaluate a 2400′ tape in just 3.6 minutes.

The Detector II*—Also microprocessor-controlled, this tape cleaner uses proprietary vacuum-grid cleaning technology to remove most error-causing contaminants. It can clean, retension and rewind a 2400′ reel in 3.3 minutes.

The Protector*—This patented cleaner employs vacuum technology to remove error-causing debris, including micron-sized particles, from the inside of self-loading cartridges. It automatically adjusts to clean most cartridges in two minutes or less.

Graham Magnetics' position is simple: Put Epoch 480* computer tape in your library, then utilize our Media Management Program© to keep it in top shape. With Graham "Super Stars" in place, your media will last longer and run virtually error-free.

Act Now!—to improve your data center's productivity:

Personnel costs make development tools worthwhile

By John Gallant
CW Staff

One of the weightiest charges leveled against application development systems is that the applications they produce are inefficient resource hogs — a claim most vendors deny. With personnel costs rising and hardware costs dropping, however, some insiders said the point may be moot.

"You generally give up some efficiency with these tools," said Thomas O'Flaherty, principal consultant with the market research firm Input, Inc. "But that should not be a primary concern with hardware costs falling compared to people costs. The benefit is good quality systems produced much more quickly."

But the performance vs. productivity trade-off may not be quite that simple, said Steven Pfrenzinger, president of IMS Consulting, Inc. "People used to say 'Oh, we'll just add another CPU.' But performance is back as a solid issue. A lot of products that fit into this category have to be doing something pretty inefficient to perform their magic. It won't be long before people see that the costs are just too heavy to pay for this magic."

People costs rising

Vaughan Merlyn, vice-president and general manager of the systems software division of Walker Interactive Products, Inc., echoed Pfrenzinger. "Everyone acknowledges that hardware costs are falling and people costs are rising. They say that applications on time and on budget justify additional machine requirements. But when it comes time to buy additional horsepower, people start asking questions and hedge about making purchases. There are a lot of response-critical applications, where throwing hardware at the problem would not alleviate the performance constraints."

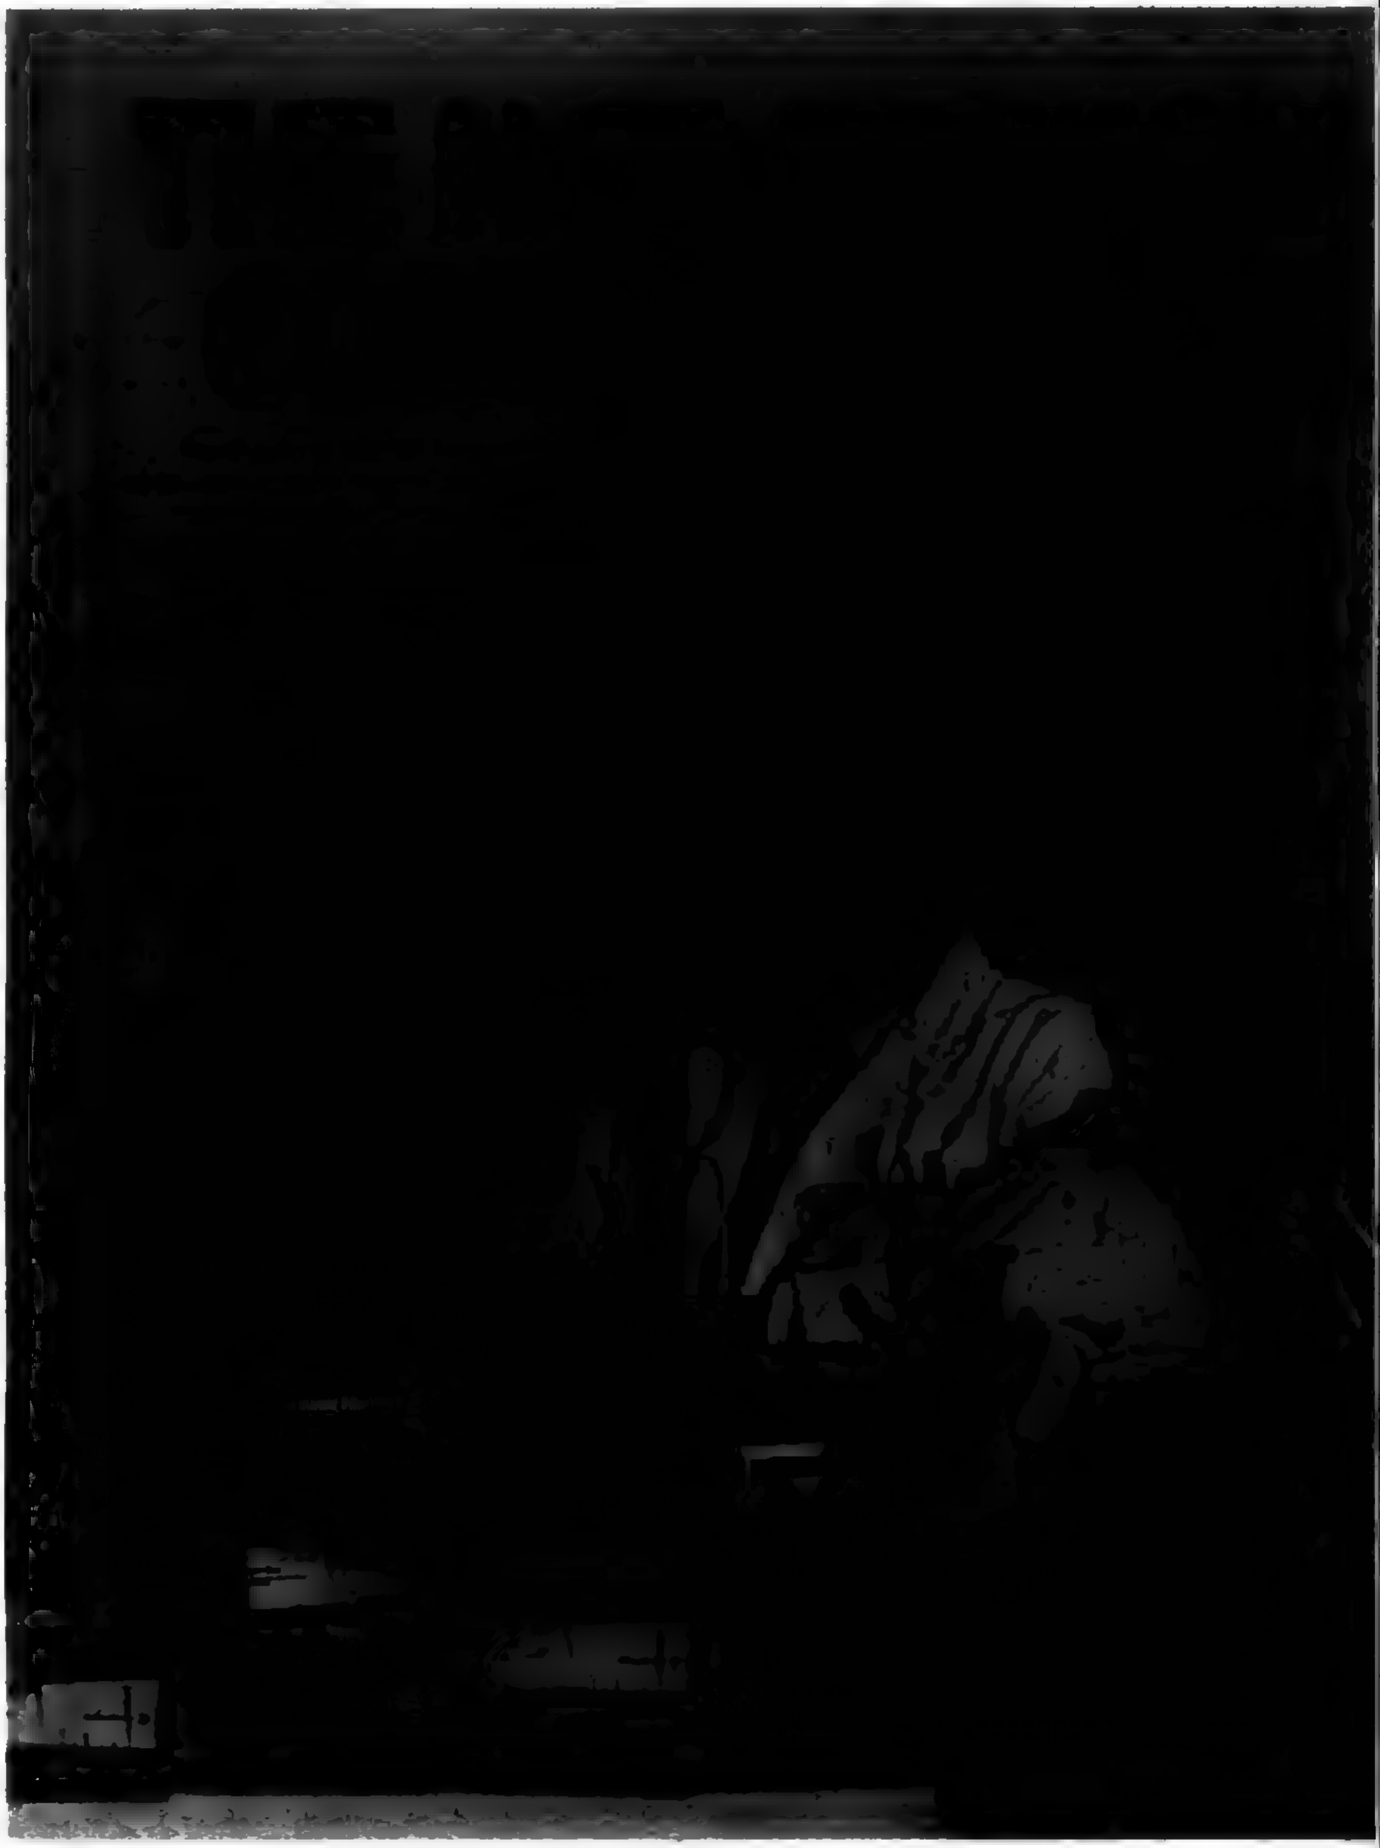
Performance problems and other complaints lead many to question whether today's application development systems are useful for the entire range of applications that a business needs to develop. Vendors of the systems certainly claim they are, but not everyone agrees.

"I think the products are applicable for classic, host-based applications," O'Flaherty said. "Vendors like [McCormack & Dodge Corp.], [Cullinet Software, Inc.] and [Hogan Systems, Inc.] have been using their products internally for years to develop applications for their customers. I see no reason why they cannot make the claim that the products are useful for developing traditional business applications."

But Jones said the application development systems may be better suited for smaller, peripheral applications rather than high-volume, transaction-oriented systems. "The performance of both application and program generators, on [the] average, is not up to customized coding. But for many applications, that does not even matter," he said. "Short-lived applications traditionally use more computer cycles during compilation than they do in execution mode during their whole lives. They pay for themselves with shorter development. But for high-volume production applications, the high use of [millions of instructions per second] and the slow response time of generated applications make them a less optimal choice."

Everyone, though, seems to agree that application development systems are becoming less environment-specific, more powerful and flexible and more attuned to application performance. They are also seen as becoming something of a necessity for cost- and quality-conscious development shops.

"Eventually," Merlyn said, "all applications will be developed with some or many forms of application development technology.



Microcomputer helps artificial heart keep its beat

By John Desmond
CW Staff

LOUISVILLE, Ky. — The mechanical heartbeat of William J. Schroeder, the 52-year-old artificial heart recipient at Humana Heart Institute here, has been monitored since the heart began its work with the help of a microcomputer from Compaq Computer Corp.

Computer technology from Hewlett-Packard Co. and Apple Computer, Inc. also played a role in the Nov. 25 operation, which was the second artificial heart implant ever performed.

According to Brent Mays, the assistant technical director at Humana, the Compaq micro sits atop the 323-lb, refrigerator-size unit that drives the artificial heart. "What we process with the Compaq is the air exhausted from the artificial heart," Mays said.

Electric signals measured

HP transducers in the artificial heart system convert air pulses, generated through air lines connected to the patient, to electrical signals that the Compaq can measure. "The signals tell us the rate of airflow exiting the heart as the heart fills with blood before the next beat," Mays said.

The Compaq, calibrated to the volume of air that should be present, multiplies the air volume by the heart rate to yield a cardiac output, a standard physiological measurement. The Compaq produces a flow curve of cardiac output based on every second or third beat of the artifical heart, Mays said.

Mays, who was present in the operating room during the 6½-hour operation, along with Humana technical director Larry Hastings and the medical team, estimated that the artificial heart drive would have to stay connected to Schroeder for approximately a month. But a portable drive weighing only 11 pounds may be substituted if Schroeder's recovery progresses.

Three days after the operation, the outlook was optimistic. One of Schroeder's doctors said he was amazed by his patient's progress.

Chosen for portability

The Compaq was chosen for its portability in the operating room and for its IBM compatibility, since Humana uses an IBM Personal Computer AT for data storage, Mays said.

"The micro made the operation more practical because it gives us a noninvasive measure of blood pumped," Mays said, meaning the measure can be taken without inserting a separate catheter into the patient.

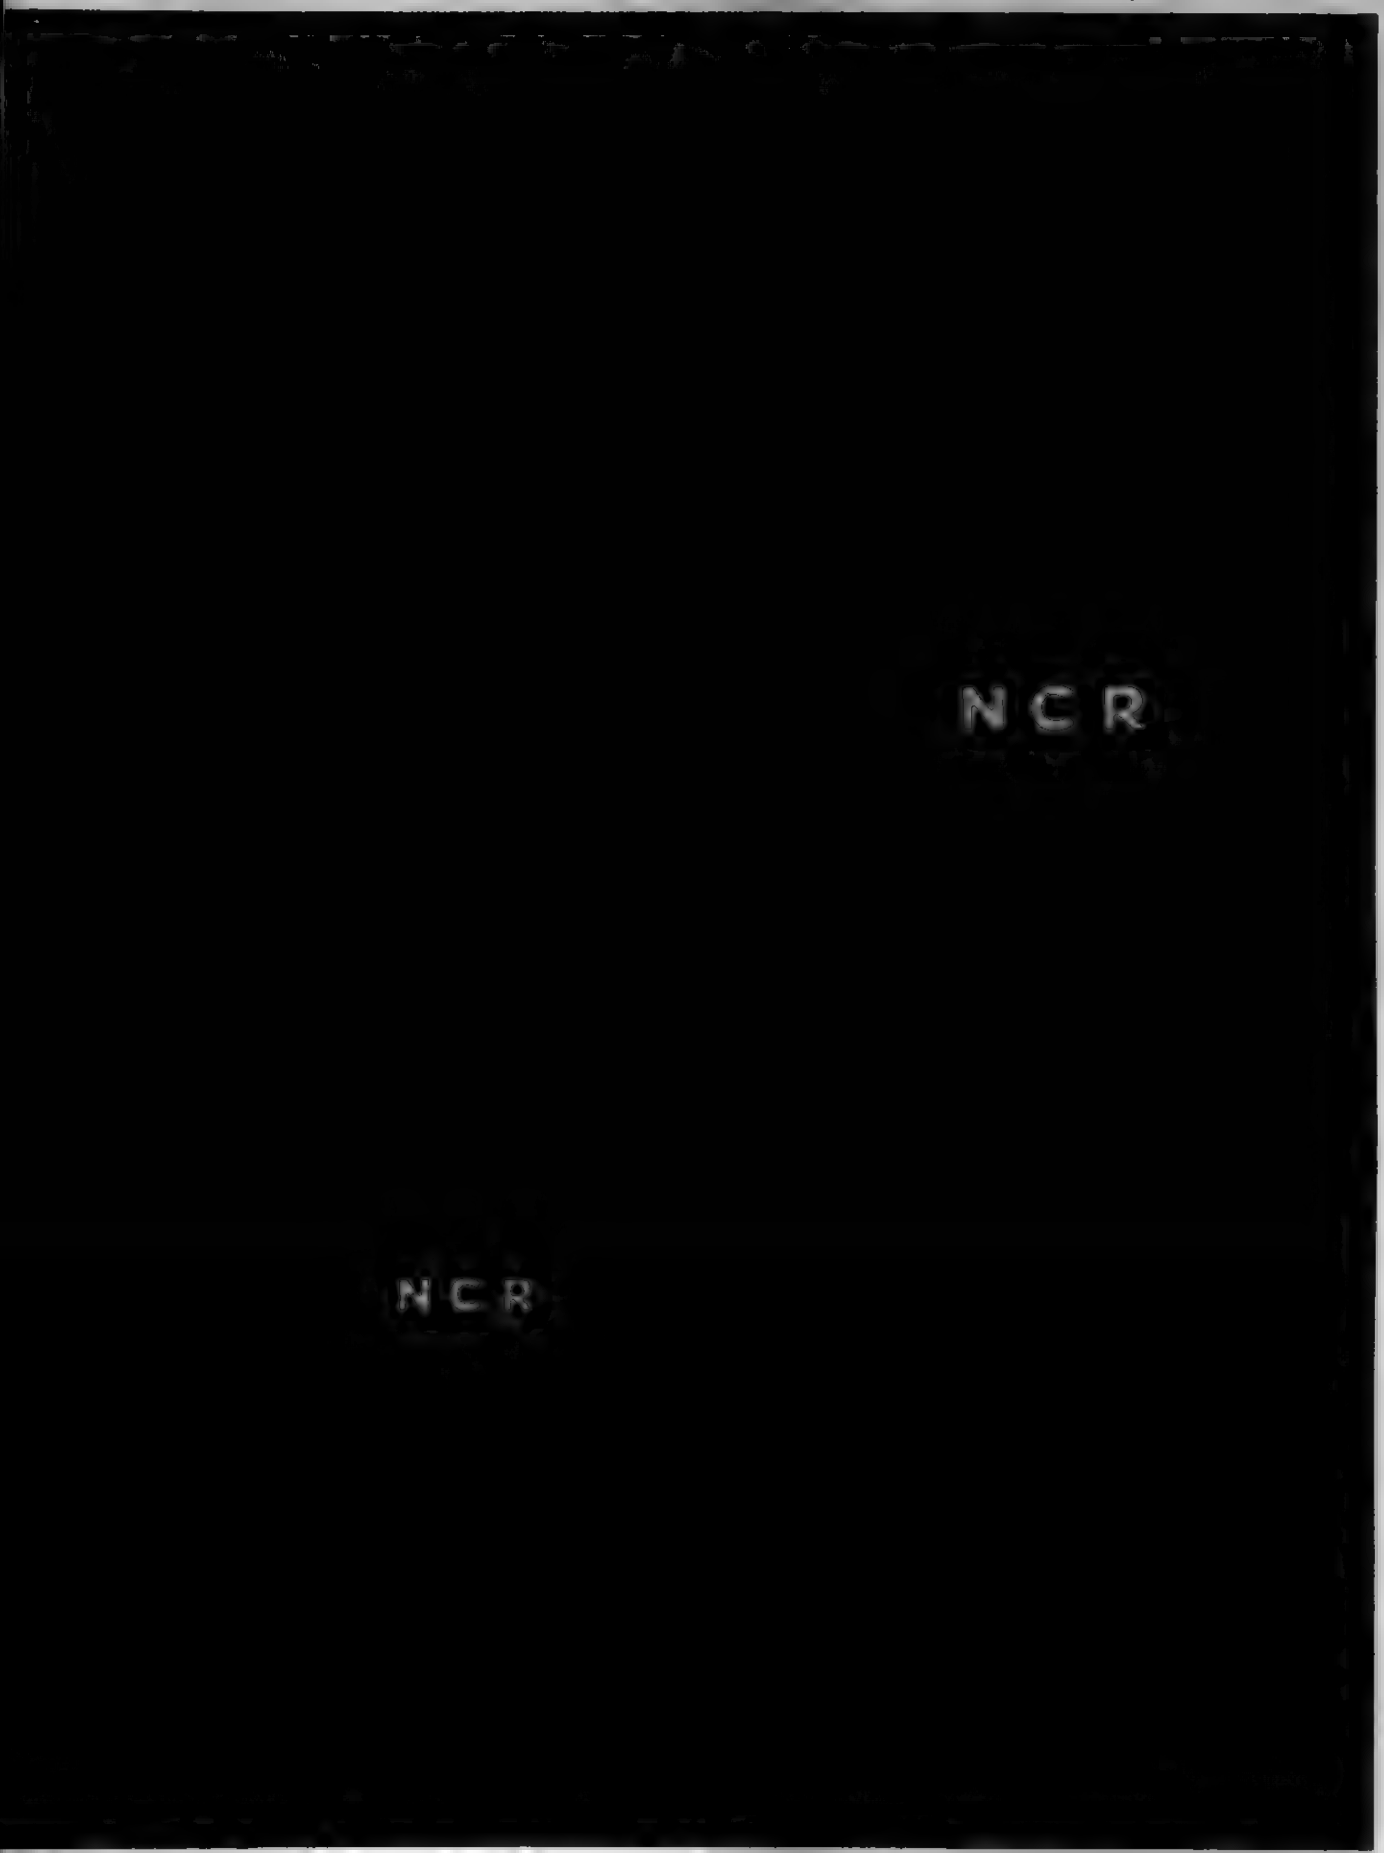
Software for the Compaq was developed by Symbion, Inc. of Salt Lake City, developers of the artificial heart. Laurence Bennet, artificial heart project manager at Symbion, said the software was written on an Apple IIe, but the Compaq was considered more convenient for the operating room.

Micro a needed diagnostic tool

Bennett described the microcomputer's role in the operation as "the thermometer of the artificial heart. It's a needed diagnostic tool."

HP had several products involved in the operation, including its Monitor terminal, Data Management Module, Universal Quartz Pressure Transducers, Patient Information Center, Pressure Modules and a hard-copy printer, according to HP spokesman Scott Marber. "Basically, what this instrumentation does is monitor vital signs," including the pulse rate, blood pressure and calculations on the pumping efficiency of the heart, he said.

"What's interesting is that the artificial heart does not give off electrical signals like the human heart, so we're not taking electrocardiograms," normally used to measure heart abnormalities. The HP instruments, when not being used in artificial heart implants, are used in hospital coronary care and intensive care units, Marber said.



Medicaid system recovering from painful conversion

By Donna Raimondi
CW Staff

ATLANTA — The State of Georgia overwhelmed its Medicaid payments system — leaving medical service suppliers unpaid, paid doubly or rejected for payment — as officials here learned the hard way that conversions should be kept as simple as possible.

When the expenses incurred by Georgia's Department of Medical Assistance (DMA) in processing Medicaid claims climbed too high and provided too little management information, the state decided that contracting the work out could save money, said Cal Calhoun of the Georgia Hospital Association. Georgia enlisted the Computer Co. of Richmond, Va. to develop and run the state's $650-million-a-year Medicaid program, he said.

Within four months of the new system's implementation, approximately 10 thousand eligible recipients were categorized as ineligible, communications breakdowns prevented hospitals from receiving clearances on eligibility and some categories previously kicked out of the old system for manual review — such as one-day hospital stays — were just plain kicked out, said Calhoun.

Routine management reports from the system were useless because of inaccuracies, Calhoun said. As of the first week in November, $20 million in back payments had stacked up, he said, and $6 million had been erroneously paid out.

Dale Groenenboom, director of patient financial services at the Medical College of Georgia hospital, said "We had a few thousand claims that we rushed to get in by June 15, and we thought the DMA would process them." The claims were submitted on forms using the old (UB16) federal reporting requirements, because the new (UB82) requirements did not become mandatory until July 1, he said. When the claims using UB16 were actually entered into the new system, they were rejected. "My impression was that all we submitted to DMA would be on the regular old program, and all that we would submit to [the Computer Co.] would have to be on UB82 forms. Some of the problems were the result of faulty software, Calhoun said, and others were related to providers' methods of filling out forms.

> *We decided to convert and make changes in the old system . . . we should have changed the old system as it stood and then converted."*
>
> —Aaron Johnson, Commissioner of Georgia's Department of Medical Assistance

The state formerly had two systems that processed Medicaid claims: Paris, which stored eligibility information, and the Medicaid system, which picked out the recipients to pay, DMA Commissoner Aaron Johnson said.

There were files in Paris that did not exactly correspond with the Medicaid system files, he said. "When we converted, since the Medicaid system would not be needed for determining eligibility, we had to reconcile the two files and the two were out of sync," he said.

"We decided to convert and make changes in the old system at the same time. We should have changed the old system as it stood and then converted," Johnson said.

The Computer Co. was not responsible for the problems, according to Johnson. It was Georgia's poor conversion that caused the mess, Johnson said.

The company has sent all available staff to Georgia to clear up the glitches, and Johnson thinks it is "100% straightened out" as of the last week in November.

Medicaid system saves Massachusetts $56 million

By [illegible]
CW Staff

BOSTON — Computerized payments lopped $56 million off the commonwealth of Massachusetts' $1.2 billion worth of Medicaid payments in the past year.

Until October 1983, the state's Medicaid payments were processed manually — some out of shoe boxes in the overflowing files at the commonwealth Public Welfare Department's office here, a department spokesman said. The average payment time was 45 days, said Gene DeLucia, assistant for systems to the commissioner of the welfare agency. According to the agency, Massachusetts was the last state to computerize Medicaid payments.

The system processed 17 million Medicaid claims for hospitals, nursing homes, physicians, pharmacies and other medical services in the past year and completed 95% of the claims within 21 days, DeLucia said.

The Medicaid Management Information System (MMIS), designed and operated by Systems Development Corp. (SDC) of Somerville, Mass., comprises two IBM 4341 Model Group 2 machines running under IBM's OS and VS operating systems, DeLucia said. SDC receives, enters and processes all claims under its contract as fiscal agent for the welfare department.

On-line inquiry

Terminals in the main office allow for on-line inquiry by the department's staff. IBM's IMS data base controls recipient eligibility data, with all other data stored in Vsam files, he added. The system sends each claim through a series of more than 100 checks to detect incorrect or fraudulent claims. Because of MMIS, Massachusetts Medicaid expenditures rose only 3% this year, compared with an average of 10% for each of the previous five years and a 6% national growth rate last year, the welfare department said.

Information entered into the new system enables the MMIS to identify clients who have private insurance or other agencies responsible for payment, said Lee Chelminiak, director of communications for the commonwealth. This ensures that Medicaid is the payer of last resort, she said. Other large savings have resulted from a decrease in overbilling or duplicate billing, Chelminiak said. For example, the system rejects a chest X-ray charge on a bill for a broken finger, which gets checked manually, she said. The same is true for "gang visits," where a doctor might examine all four of the children a mother has with her on a visit for one sick child, she said. The system keeps records that show if a particular physician has a long record of such visits or if there is a valid reason for such treatment.

SDC designed two subsystems specifically for management information, DeLucia said. The Management and Administration Reporting Subsystem includes operations reports and financial information, and the Surveillance and Utilization Reporting Subsystem provides recipient profiles, utilization patterns, practice patterns by provider category and diagnosis-related patterns.

"We implemented UB82 [federal claims reporting requirements] right from the beginning," DeLucia said. The welfare department also changed dental and other reporting codes and ran intensive one-day training sessions for providers on a regular quarterly basis to ease providers into the new system, he said.

The biggest source of grief in implementing the MMIS has been related to Medicare/Medicaid crossover claims, DeLucia said. Medicare pays 80% of the bills of the eligible elderly, with Medicaid picking up the coinsurance and deductible portion (20% minus a $90 quarterly deductible). Miscommunication among the welfare department, SDC and Blue Cross/Blue Shield — the fiscal intermediary for Medicare — led to confusion about format and edits that apply to that data, he said. That problem has finally been resolved, DeLucia said.

The state expects to save another $36 million next year and $153 million by the end of fiscal 1986, the welfare department said.

Firms support IPI standard

ANAHEIM, Calif. — More than 40 firms announced recently their support for the Intelligent Peripheral Interface (IPI) standard being developed by the American National Standards Committee X3T9.

The standard would provide a common protocol for communications with peripherals such as magnetic and optical disk storage units, said a spokesman for AMP, Inc.

According to the spokesman, IPI provides for two types of command sets; the device-specific command is said to be geared to meet critical timing constraints, while the device-generic command set isolates the host from the timing-critical and device-unique considerations of a specific product.

Data Design's Financial Software Tops Datamation Survey

Finance and Accounting Managers Use Data Design's Financial Software Because They Can't Afford Anything Else.

They can't afford to use anything but the best. The price is too high not to. They need financial systems that provide all the information they need when they need it. They need systems that meet their company's demanding financial control requirements. They need systems that allow them to easily produce the reports necessary to manage their business...that's why they use the systems provided by Data Design.

Our Financial Applications Software Packages —all of which are developed by Data Design—are given the most extensive reliability testing in the industry, guaranteeing ease of use and trouble-free installation.

No wonder, then, that Data Design was rated so highly in the latest *Datamation* software survey. In fact, in the ratings of General Accounting packages, Data Design's Fixed Assets and Accounts Payable/Purchase Control finished above all other packages studied. Ahead of MSA, McCormack & Dodge and Software International. Our General Ledger and Capital Project Management Systems were too new to be included in the survey. We're dedicated to achieving the same results with these systems.

Data Design was rated higher in terms of overall satisfaction with product performance as well as service and support. The service and support ratings are especially significant in that they polled user votes in the categories of vendor responsiveness, training and documentation—areas critical to trouble-free system operation. Data Design has consistently been rated the best in these categories in nationally recognized independent software surveys.

Our reputation for excellence has been built on providing the highest quality mainframe software for:

☐ General Ledger Financial Control
☐ Accounts Payable/Purchase Control
☐ Fixed Asset Accounting
☐ Capital Project Management

To learn how these systems work for a broad range of medium to large size companies on most major computer systems, call today at [illegible] ([illegible] in California), or complete and mail the coupon below.

DP link next step in decision-support system growth

CHICAGO — The next growth step for decision-support systems will be a linkup with data processing, as the border between the two groups breaks down, according to a decision-support systems (DSS) specialist.

DSS and DP drifted apart throughout the 1970s, with DSS emphasizing user control and adaptive designs and DP focusing on architectures and large-scale projects, according to Peter G.W. Keen, Ph.D. and chairman of London-based Information Technology, Inc., during a speech here last month at the Worldwide Users Conference of the Evaluation and Planning Systems, Inc. (EPS) Users Group International.

Keen said DSS once was a warning signal to DP that the world was changing and that today, artificial intelligence provides the same warning to DSS.

"Those of us involved in the [DSS] field viewed DP as a sort of inferior form of blue-collar worker," Keen said, adding that such an attitude was inexcusable. "That split has taken a long time to fuse, and now what's coming through is that, surely, DP needs DSS as badly as DSS needs DP," he said.

Flood of new technologies seen

Keen predicted a flood of new technologies, presenting opportunities to apply decision-support methods to expert systems. "It's going to be the DSS people who build expert systems that work," he said, noting that the next two years will see DSS attacking the question of what being an expert manager means.

DSS software has been underexploited, partially because development has focused on small applications that react to immediate needs rather than to people building career paths and mandates, Keen said.

"DSS is in danger of getting blurred with end-user computing," he noted. "We've got to get away from personal computing and look at organizational computing, organizational productivity and organizational decision making. DSS should be a key part of the overall computing resource," he added.

Use of technology to improve creativity

"The old definition of DSS has always been to take any available and suitable technology and use it to help improve managerial decision making. I suggest that DSS is about the use of any technology — analytical, financial and computer — to help improve creativity in decisions that really matter."

Keen urged the 200 conference attendees to find a better target market. "Who are the people in your organization you would really like to influence?" he asked. "The next opportunity is to start thinking of DSS as a new style of corporate thinking and planning. That's what DSS is really about; [it's] a service, not a product."

He said the keys for DSS software were integrability; architecture — a blueprint for gradually integrating DSS, MIS and office technology; shareability of processes and data; communications connectability; and transportability, as applications are moved into new operating environments.

DEVELOP

from page 26

with the same maintenance requirements as with a hand-coded system. Maintenance remains tedious and error-riddled," Roger Philips said. Philips is president of Iconics, Inc., a Scottsdale, Ariz.-based firm that manufactures the Transform application development system.

However, according to IDC's Staelin, the application prototyping abilities that the products impart to users aid in design by involving users in an iterative relationship with analysts and programmers (see story page 23). In addition, the automatically generated documentation that many such products provide facilitates maintenance, she said.

"Many of these things completely automate documentation, which is the keystone of maintenance," Staelin said. "The products also enforce modularity, which simplifies subsequent maintenance. They allow users to use tried and true code [reusable code blocks or segments] that a programmer would have to rewrite, with the possibility for errors, for each application."

"Even if the application generated initially meets user needs," Merlyn said, "it won't for long. There are no static applications; needs change. Programmer productivity is not the problem, application architecture is. We need to change the way we develop systems. Today, applications are produced like cars with the spark plugs welded into the engine block. Any future change means complete reworking of the system. What we need are tools for earlier in the development life cycle that will help us in designing systems that can be adapted to changing requirements in the future."

Realia COBOL.
Migration without migraines.

Until recently, you had to abandon the business computer language when you developed microcomputer application software. The available micro COBOLs were inadequate—too limited, too slow. The best alternative—the XT/370 or AT/370 using IBM's COBOL—was very expensive and still too slow. To get acceptable performance, you had to retrain your programmers in Pascal or C.

Realia COBOL is the cure for such headaches.

Realia's compiler supports most IBM VS/COBOL and VS/COBOL II features, such as:

- COMP and COMP-3 data
- SELECT assignment names
- Multiple entry points
- GOBACK, EJECT, and SKIP statements
- Structured programming extensions of VS/COBOL II.

You can download mainframe systems for development, maintenance, and testing. Productivity will soar.

You can compile faster with Realia COBOL than in most mainframe environments, even on floppy-based systems. Compile-time options allow cross-reference, brief and full code listings, and helpful features like subscript and decimal value checks.

Our interactive debugger lets you follow the program source, display and modify data, and set breakpoints using the normal optimized machine code.

The results are startling.

Our users report that their systems run up to 20 times faster when compiled by Realia COBOL. That's compared to our nearest micro competitor. The ratio is up to 100 times faster when compared to any of the others.

On the IBM PC AT, your programs can run at 370/148 to 370/158 speed. Realia's file system really makes your machine deliver, giving it a distinct edge over Pascal or C. Our indexed file system even has full key compression and buffer controls just like VSAM. The generated code is pure MS-DOS, so it can be run on most of the 8088/8086 machine family.

And you can sell your programs without paying us a royalty fee.

Realia COBOL is priced at $995, including one year of maintenance and upgrades. Subsequent maintenance and upgrade contracts are currently priced at $125/year/copy. Available for the IBM PC, PC XT, 3270 PC, PC AT, PC-compatibles, and the TANDY 2000.

Realia COBOL. What a relief.

IBM, IBM PC, PC XT, 3270 PC, XT/370, PC AT, and AT/370 are registered trademarks of International Business Machines Corporation. MS-DOS is a registered trademark of Microsoft Corporation.

Rhapsody in blue.

In today's office automation environment, Wang realizes that simply making better products is no longer enough.

Because in today's office automation environment, the products of one company must often work in harmony with the products of another.

And that's why Wang's entire line of computers are not only compatible with each other, but work just as easily with most IBM products.

Wang. Maybe we're more competitive simply because we're more compatible.

China looks to high-tech future

LONDON — China is a land of computer contradictions and extraordinary computing opportunities, according to Prof. C.S. Tang, one of that nation's most prestigious computer experts.

Speaking to the London branch of the British Computer Society recently, Tang announced that all of China's universities have been given permission to buy large computer systems in order to establish computer centers and promote computer literacy there.

"The universities are providing a unique marketing opportunity, opening the doors to something like 200 or 300 sites," remarked Tang, as he cautioned his audience that this presented a chance the UK cannot afford to miss.

Tang gave many examples of the existing cooperation between the UK and China, which serves as the foundation for a link between the two countries. He also noted that the UK's University of Edinburgh — alleged to have more Chinese computer students than Scottish ones — is expected to play an important, although as yet undefined, role in China's plans.

Many of China's plans call for both the implementation and wide-scale domestic production of computer technology, Tang continued. The majority of China's micros have been and continue to be imported, however, although a number of foreign companies have factories in specially zoned areas around Hong Kong, according to Tang.

Tang spoke highly of ICL Co.'s contribution to early Chinese computing efforts, which were, until recently, severely hampered by the country's comparative isolation.

The ICL/Chinese joint venture in many ways paved the way for other foreign vendors to work in China. "China is determined to continue building its own computers," Tang maintained, implying that joint ventures are China's hope for the future.

Major thrusts

The major thrusts of Chinese computing in the near future will be in the areas of Chinese character information processing, information systems, software tools, programming development environments, expert systems and logic programming, Tang said. The Japanese, equipped with a common written language with the Chinese, have the decided advantage in this marketplace, he added.

Tang also said that in the area of fifth-generation computers, it is likely that Japan will be China's main source for these machines, "partly because of proximity and partly because the Japanese Big Five — Hitachi Ltd., NEC Information Systems, Inc., Mitsubishi Electronics Corp., Fujitsu Ltd. and Okidata Corp. — have all made huge investments in Kanji character processing and voice input," he pointed out.

At the same time, U.S. Department of Trade figures indicate that China imported $71 million worth of computers in 1981 from the U.S. and an estimated $500 million worth of U.S. machines in [illegible]

IDMS/R is proving to be what most people expected it to be:

Simply the best.

For nearly a decade, in survey after survey of the data processing community, one database management system was consistently rated first in user satisfaction—IDMS.

So when we announced IDMS/R in April of 1983, expectations naturally were high for a versatile database management system that would combine the ease-of-use of a relational architecture with high performance.

That was the promise we made. And that, in fact, is the product we've delivered.

With IDMS/R, people whose only data processing experience is an encouraging "you can do it" from the dp department are finding themselves able to create their own customized applications. They're doing it quickly, easily and, best of all, *independently*. And that comes as a welcome relief for overburdened dp personnel.

As for complex, high-volume production applications, IDMS/R is without peer. With an exclusive Cullinet feature called "Relational Fastpath," data processing can tune the database and thereby benefit from a dramatic boost in performance. Moreover, IDMS/R has the most sophisticated back-up and recovery capability of any dbms—an absolute must for on-line applications.

And when one considers that IDMS/R is the cornerstone of the only information management system available today that fully integrates database, applications and decision support software, choosing a relational dbms becomes a very simple decision.

UK users question value of donated OA equipment

By Lisa Israel
Special to CW

LONDON — Gordon Ross wonders whether $300,000 worth of free computer equipment was worth all the bother. Ross, data processing consultant with the UK's Department of Trade and Industry (DTI), recently spearheaded 21 separate office automation pilot projects with donated equipment.

"If the sites had known what they were letting themselves in for, I'm not sure they would have wanted to do the pilots," he confided. "Installing the systems always turned out to be much more difficult than anticipated."

The DTI's four-year pilot scheme got under way in 1982 and is now at the halfway mark. The initial plan was to identify the benefits of advanced integrated OA systems — the sort of systems that suppliers would be unlikely to attempt at commercial sites, Ross said. Twenty-one office automation suppliers were paired with a corresponding number of public sector users, and the results have been closely monitored over the past two years.

"Some suppliers saw the pilots as a chance to win an easy sale," said Ross, "but they have lived to regret that decision. In some instances, suppliers have been forced to learn about OA in spite of themselves."

For all the talk, Ross argued, OA is still an untested technology, and existing equipment is not always geared to support advanced office needs.

Many of Ross' pilot users were far from satisfied. Mike Bickers, who managed the pilot that relied on Systime equipment at the National Economic Development Office, has a long list of complaints with his system, which he thinks will take ages to resolve.

"We have still a pretty basic system. We have no filing apart from personal wastepaper bins, which our users dare not empty. We have no integration at all between word processing and spreadsheet and electronic mail," he said.

Chris Whiley, who managed the British Broadcasting Corp.'s (BBC) project with equipment from Racal-Milgo, Inc., maintained that computer manufacturers have not yet faced up to the different equipment requirements of inexperienced end users. He argued that while the data processing staff might be accustomed to computer breakdowns, with office workers, Whiley said, "anything other than total reliability is a problem." Unreliability became a "big barrier" to end-user acceptance of the new technology at the BBC, Whiley said.

Digital Research, Inc.'s CP/M operating system also gave Whiley trouble because, he claimed, "it is [not user-friendly]," a problem that was cited by another pilot project manager, David Marshall-Wright at the Brighton Health Authority in Brighton, England.

Although Brighton was paired with Allied Business Systems, Ltd., which is a smaller company than Racal, both manufacturers had offered CP/M as part of their solution.

Marshall-Wright said, "Most large organizations still think of office automation in terms of distributing large numbers of micros and CP/M applications packages." But CP/M can create networking problems, Marshall-Wright argued. CP/M software packages are not user-friendly, and some, he said, are so complicated that they turn off end users.

Delayed releases

A large number of users also complained about delayed product releases. At the Department of Transport, Philips Information Systems, Inc.'s inability to come up with networking software upset finely tuned plans for introducing end users to information technolology. By the time the intranode software to link workstations to central files appeared from Philips, users were so attached to their stand-alone floppy disk files that they were reluctant to access the central system.

British Gas had a similar experience. The utility was paired with videotex specialist Aregon International under the scheme and installed Digital Equipment Corp. VAX-based videotex software and graphics terminals from Aregon at offices scattered throughout London. But several bugs in the videotex software and delays in hardware and software deliveries put off some of the users that pilot project manager Peter Ashdown was introducing to the system.

Were the pilots worth the trouble?

According to some users, the answer is a resounding "no," from a financial viewpoint. Both the Department of Transport and the BBC admitted that cost justification over the two years of the pilot project was unlikely. Spokemen for both agencies said it would take at least three years for the savings to become apparent.

But for Ross and the DTI, the projects have not been failures. Ross said, "One could be disappointed with all the projects because of the gap between potential and reality. But the pilots have provided lessons for both users and suppliers."

Goal Systems Offers Special Discount On ALERT/CICS™

Goal Systems is offering current SECURE/CICS customers a 15% discount off the price of its ALERT/CICS security product until March 31, 1985*.

When you acquire ALERT/CICS, you get the best of both worlds. First, you get a solid company (over 6000 installed products) that has a reputation for providing superior products and technical support. Second, you get a top notch security product for less than the maintenance costs of a popular competitive security product.

ALERT/CICS is also completely menu driven. There are no batch jobs to run and no rules language to learn. A auditing facility is also provided. These facilities make comprehension very easy and quite fast. [illegible]

INTERNATIONAL REPORT
CW International News Network

AUSTRALIA

HOBART — The Island State Credit Union will beat the Commonwealth Bank to the punch with Australia's first home banking system this month, according to sources here.

The system is said to be fully operational, and its public release is only awaiting the implementation of an advertising campaign.

The credit union, which developed its banking system from scratch, will reportedly provide bank customers personal computers with such dial-up services as bank inquiry, bill payment, loan applications and other account services. Project leader Mark Ashton said the system will run on an Ultimate Corp. minicomputer under the Pick operating system from Pick and Associates, Inc.

■

SYDNEY — Users should demand superior solutions from vendors, and because of intense market competition, users should expect their demands to be met, said Joe Henson, president of Prime Computer, Inc., during the recent International Spectrum Pacific Conference here.

Henson maintained that users should ensure they get the systems they want, claiming that vendors must now be sensitive and responsive to users' growing, realistic concerns. "Our success lies in listening to you," he told his audience.

■

SYDNEY — Telecom Australia jumped on the computer bandwagon last week when it released its telephone/personal computer. The Computer Phone, which was designed in the UK by ICL and Sinclair Research Ltd., will be sold for $2,465.

FRANCE

PARIS — CII Honeywell-Bull-Sems has introduced a range of high-end 32-bit superminicomputers called the Bull SPS 9 systems. The products represent the joint development effort of Bull and Ridge Computers, Inc. of Santa Clara, Calif.

The product is intended to handle real-time industrial applications, scientific applications, computer-aided design and interactive image processing, according to a spokesman.

The Bull SPS 9 system, which is now being produced, will feature a reduced instruction set that enables extremely high processing performance, according to the vendor.

THE NETHERLANDS

AMSTERDAM — IBM Netherlands sent letters to Dutch universities last month, offering a 40% discount on all Personal Computers. IBM invited universities here to sponsor joint purchase policies to assure maximum discounts, much to the dismay of major local dealers, sources said. There appears to be only one catch: The universities will be responsible for installation, support and maintenance.

■

AMSTERDAM — Privacy legislation is still lacking here, despite a high level of public interest and activity on the subject. The Netherland's National Alert Foundation Chairman Jan Holvast has been publicly pleading for more decentralized control over individual privacy, which is largely controlled by the Dutch Minister of Justice's Register Chamber. Several proposals to decentralize this chamber have been offered to the Dutch parliament, but none have been acted upon to date.

ENGLAND

LONDON — Warren Werblow, chairman of the Computing Services Association, last week attacked British government plans to license software exports along with its moratorium on grant applications for software development. "We will push and shove and battle against the encroaching bureaucracy. We need to know what the rules are, how they are generated and how they can be modified," he said. Werblow expressed specific concern over the limits on technology exports to friendly countries, as well as those imposed on Eastern bloc nations.

TURNAROUND TIME

Larry Long

Q What is the best way to teach integrated microcomputer software packages? We decided to standardize on a microcomputer and on an integrated software package. In support of our decision to standardize, we held three all-morning training sessions, each with about eight people (one to a micro). Using several predefined spreadsheet templates, we walked through two examples showing the major features of spreadsheet, word processing, data base and graphics.

A month later, the micros we purchased for the various departments, as well as those that already existed, are basically unused. The managers are blaming us for their lack of use. They contend that the material was covered too fast and that they forgot everything they learned. We had hoped that these sessions would have given them a good start and that they would continue to learn through their own initiative. Apparently, they made no further progress. Should we encourage them to learn on their own, or should we repeat the sessions?

Contrary to advertisements espousing the user friendliness of integrated microcomputer software, very few people, even computer specialists, can hope to gain much proficiency in a four-hour training session. Moreover, it is unlikely that they will retain much, if what they learn is not applied shortly thereafter.

Plan to conduct another round of training sessions; however, this time, allow more time. If your objective is to present these four software elements at a useful level of depth, plan on at least 16 hours, equally divided between formal presentation and supervised practice.

As a follow-up, set up an information center so that advice and assistance are just a question away. If no help, or motivation, is available, all of the training will go for naught, and your new micros and software will continue to be unused.

Q We have been debating whether to use the "of" convention or a prefix to qualify data elements, such as "JOB-LOCN of HISTORY-FILE" vs. "HF-JOB-LOCN." JOB-LOCN could be the same in many files. Which do you prefer? Why?

Neither. Your need to qualify data elements implies the use of a traditional flat file environment and all of the costly disadvantages accompanying it. To anyone still fighting the troublesome problems that accompany a traditional file environment, I would recommend that you begin planning your conversion to an integrated data base environment — as soon as possible.

'Confound it, Figgons, when a customer asks the difference between a $1,900 model and a $3,900 model, you don't say $2,000!'

At last you needn't fear marrying the old and the new.

NEC's intelligent new 300/1200/2400 full duplex modems are the latest in our DSP (Data Signal Processor) series. They let you greatly increase your data interchange by supporting old and new terminals. Both model DSP2420 and DSP 2430 transmit to newer data terminals at 2400/1200 bps synchronous or asynchronous, doubling throughput and minimizing line costs. When talking to older terminals, they automatically drop back to 300 bps asynchronous. And that's only one of the fine qualities both bring to the marriage.

DSP2420 High-performance modem.
- 2400/1200 bps synchronous and/or asynchronous; 300 bps asynchronous.
- Automatically adapts speed and modulation to the remote calling modem.
- Operates on 2-wire DDD lines.
- Powerful diagnostics include local and remote loopbacks, bit error test.
- Stand-alone or rack-mounted versions.
- DTMF or rotary dial.

DSP2430 Auto Dial and Logon modem.
- Includes all features of the DSP2420.
- No telephone handset needed. Originate calls by entering a one or two character code from the terminal keyboard.
- Stores 12 phone numbers in non-volatile memory along with logon sequences for easy dial-out.
- Password entry of up to 8 characters prevents unauthorized use of modem.
- User-friendly menu—easy to operate.

Each of these high-performance, low-cost NEC modems have many more features that make them ideal partners in any network marriage. For more information on how you can boost productivity and minimize line costs with the DSP2420 and DSP2430, contact NEC America Inc., Data Communications Products, 1012 Stewart Drive, Sunnyvale, California 94086 (408) 737-7711, or (800) 538-8166.

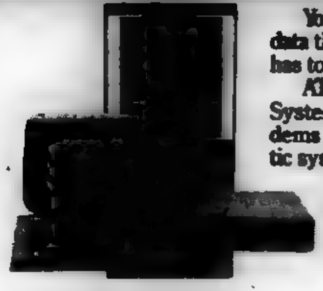
C&C Computers and Communications



THE AT&T FAMILY OF DATAPHONE MODEMS. WE MAKE WAVES.

You need to move more data than ever before. And it has to move fast.

AT&T Information Systems can help, with modems and advanced diagnostic systems—all designed to keep your data coming loud and clear.

A full line of fast-talking modems.

We offer a full line of asynchronous and synchronous modems. They make waves over private or switched lines at speeds of 300 to 9600 bps.

We keep an eye out for trouble.

You need more efficient, reliable network management. Our DATAPHONE® II Service meets that need.

It combines synchronous analog data transmission at speeds of 2400 to 9600 bps with a network diagnostic system on four upgradeable levels.

On all levels, diagnostics are separated from your host computer. You save costly processing time. Malfunctions are detected automatically, isolated and repaired without disabling your network.

Level I utilizes stand-alone data sets that monitor signals on a low-end frequency band. Level I modems are the backbone of all levels of our service.

Level II centralizes network control and testing through a Diagnostic Controller. It monitors up to 256 control modems.

Level III adds a Network Controller, CRT and printer for expanded diagnostics, control and hard-copy reporting.

Level IV offers eight times the capacity of Level III. A System Controller is added. A color CRT provides fast, graphic displays of fault and test reports.

A unique benefit of DATAPHONE II Service is remote 24-hour monitoring at an AT&T Data Maintenance and Operations Control Center.

We bring you outstanding credentials.

For over a century AT&T products have set the standards for performance and reliability. Today, 4,000 scientists from Bell Laboratories are working full time to develop and design new business products at AT&T Information Systems Laboratories. Products we continue to support with the largest, most experienced sales and service force in the industry.

Our DATAPHONE products incorporate Information Systems Architecture, the design principle that integrates our products so they perform as one system. As you grow, the flexibility of Information Systems Architecture allows for easy system expansion.

To learn how our family of DATAPHONE modems can increase your profits and productivity, call 1-800-247-1212, Ext. 328.

WHEN YOU'VE GOT TO BE RIGHT.

Information Systems

Coors taps telephone data system to handle growth

GOLDEN, Colo. — Coors beer once was available only to beer drinkers in the Rocky Mountains and the West. Now, the brew is distributed throughout 39 states from coast to coast, with nationwide distribution a short-term goal for Adolph Coors Co.

Coors' products are shipped cold from a single brewery on the day of bottling. Therefore, Coors' distributor ordering system must be fast, reliable and accurate to ensure freshness as Coors expands.

When the brewer recently chose an ordering system for its distributors, it selected a telephone information processing (TIP) system developed by General Electric Information Services Co. (Geisco). The system connects the distributors with Coors headquarters here over Geisco's Mark III remote computing service.

"As we grew, we had to develop a faster ordering system. With more than 540 distributors, the old, less automated ordering systems would never be able to effectively handle the volume," said Don Van Buhler, director of physical distribution for Coors.

> *'We had to develop a faster ordering system. . . . The old systems would never be able to handle the volume.'*
>
> — Don Van Buhler, director of physical distribution for Coors

Coors initially collected distributor order data by mail, a system that was replaced by a TWX-based system as Coors' Western distributors grew in number. When the decision was made to market Coors' products nationally, the TWX system was examined closely.

"We needed a system that the distributors would accept and like. We also wanted a system that allowed distributor personnel to input data directly, but we couldn't count on all of our distributors having suitable terminals for this purpose," Van Buhler said. Another reason to switch was cost, as TIP was more cost-effective in collecting order data.

"Geisco had considerable experience with TIP systems, and it had a suitable network operation. It offered a package that fit our needs very closely," Van Buhler recalled.

Geisco also developed the order entry software with input from Coors on its specific order entry needs.

Automated data gatherer

The TIP system is an automated data gathering system that uses standard AT&T Touch-Tone telephones as input terminals. A synthesized voice from the Mark III service prompts the distributors and guides them through the order input sequence.

The distributor keys numbers into the telephone, such as identification numbers and commodity numbers, in response to user prompts. Distributors also can use an adapter attached to any rotary dial telephone.

The Coors TIP system is available to the distributors 24 hours a day, seven days a week. A typical report will take from five to 10 minutes to file, Van Buhler said.

The Coors TIP system tracks weekly sales and sales forecast information as well as weekly order data. For each Coors product the individual distributor carries, the TIP system asks a series of questions about sales, inventory, new order amount and sales forecast data for several weeks in advance.

Coors distributors, who order weekly rather than monthly because of Coors' freshness policy, call in their information on Monday or Tuesday each week. The information is stored in Geisco's host computers. Late Tuesday afternoon and again on Wednesday morning, Coors' in-house computer system picks up the information for processing.

To minimize errors, the system accepts only valid information. The computer voice tells distributors what information to enter and points out obvious errors. Each information field must be filled with the proper number of characters.

The system also automatically checks for arithmetic errors and allows distributors to compare batch totals to ensure further the accuracy of the data.

"The system works well for us because it doesn't require our distributors to purchase hardware, and it is easy for people unfamiliar with computer systems to learn to use," Van Buhler said.

Coors uses information from the system to schedule production, plan marketing and promotional efforts, track the success of advertising campaigns, project packaging and materials needs and schedule transportation.

"As we continue to expand and compete with other breweries, the level of service we provide becomes extremely important. The TIP system is part of Coors' commitment to service," Van Buhler said.

MEET
THE SYSTEM
THAT MAKES
BORDERLESS
FACT.
NOT FANTASY.

INFORMATION
EXPERT™

Borderless. ■ You've heard the word enough. And until now, that's all it's been. A word. Not reality. ■ But Management Science America has changed that for good. ■ Introducing Information Expert™ (I.E.). The new mainframe software tool that gives you the level of system integration that some companies have been promising. But not delivering. ■ I.E. is truly borderless. ■ It removes the barriers between systems. Between the individual user and accounts receivable. And accounts payable. And general ledger. And more. So that the individual user can retrieve information and design reports from several application programs at once, even if they aren't all MSA programs. Simply and quickly. At one online terminal. ■ And I.E. is designed to

Manufacturing system speeds GE's shop production

SCHENECTADY, N.Y. — At the world's largest manufacturer of steam turbine generators here, an extensive program has been under way to automate manufacturing operations.

Since 1980, General Electric Co. has been installing a computer integrated manufacturing system that has significantly increased efficiency at several manufacturing shops, said Robert Schmitz, manager of manufacturing systems applications.

According to Schmitz, GE's manufacturing system consists of six Data General Corp. Eclipse MV/10000 systems and two MV/8000 systems. The systems are said to provide approximately 6.4G bytes of data storage, using mostly 190M- and 354M-byte disk systems.

Additionally, GE has six DG Eclipse S1140 systems integrated into its Calma Corp. computer-aided design and manufacturing systems.

GE manufactures replacement parts for the turbine engines, filling more than 350,000 orders for studs, bolts, packing rings and spill strips.

Part of the project consists of a Factory Management System, which has cut down on production time at several of the company's large manufacturing shops. According to Schmitz, before GE implemented its system, job and parts information was input via punch cards and batch processed on a Honeywell, Inc. DPS 8 mainframe. "Several days to a week later you got a report back, and by that time it was out of date," he said.

With the Factory Management System, a customer's parts order is entered through a direct-order-entry system and converted on-line into an order, which is then transmitted to GE's mainframe computer.

An Automated Process Planning System running on a DG MV/10000 system receives the order from the mainframe and matches it to a Part Recognition Code. The system determines the most efficient routing of the part through the shop and selects the proper material.

At the company's Small-Parts Shop, the Factory Management System, residing on another MV/10000, consists of several modules: shop floor control, which monitors all phases of control between parts and operators; factory communications control; and distributed numerical control. According to Schmitz, the part is dispatched to the appropriate workstation via the shop floor control module.

When the machine tool finishes the part, the Factory Management System and then the operators enter labor vouchering details in real time. The factory communications module then notifies an inspector that the part is awaiting inspection at a specific station, Schmitz said.

The inspector, after approving the part, enters his certification at the terminal. Factory communications then notifies the materials handler that the part is ready to be moved from one machine tool area to another or to the shipping area. When the part is shipped, appropriate information is entered into the terminals.

Eliminating punch cards

"The shop floor communications module alone boosts our productivity substantially," Schmitz said. "Volume in the Small-Parts Shop is so heavy, with more than 15,000 orders a year, that the savings are substantial. For example, we eliminated the need for 500,000 punch cards with this system.

"Another thing we can't afford is excessive queue time — the time raw material sits around before an operator can get to it.

"This system not only solves those problems, but does it without using paper. Additionally, all of the information is automatically entered into the other elements of the system, keeping our data base current and precise.

"We also use the Factory Management System for other types of communications. Should a machine tool malfunction, the operator [goes] through a menu-type display to generate a service call. The operator can also talk to his foreman [or methods, quality control or other people who] he would otherwise have to physically track down."

Parts design is another area that the steam turbine generator business has integrated into its overall system. Engineers design parts at Calma CRT-based workstations, which are based on DG Eclipse S/140 computers. The designs are assigned a Part Recognition Code, and then they are entered into the data base.

When selecting the system, GE examined a range of minicomputer processors with the same capability, Schmitz said. To test each system, the company did "application runoffs," writing up transactions similar to those the company would use. DG performed best in the areas where GE was most interested: data base systems, data base recovery, future software and architectural upgrades and utility packages. According to Schmitz, the process took about six months.

With the system now in place in three major GE shops, the company hopes next year to begin installing it in its Rotor Generating Shop, and by 1987, to have the system installed in its Diaphragm Manufacturing Shop, Schmitz said.

MSA WE ADD THE GENIUS TO COMPUTERS.™
The Software Company

meet the needs of a broad cross section of users. It's easy enough for first-time users—because commands are in plain English. And powerful enough for the most advanced DP specialist. ■ And I.E. also gives you higher levels of security than most other systems. ■ Only MSA gives you I.E. ■ It's a giant technological step into the future from the company that has quietly led the way in application software development. It will now be a part of all software MSA provides. The result of 3½ years of intense research and development, it's the tool that has taken the concept of total "system integration" out of the realm of theory and into the realm of fact. ■ To find out more about I.E., contact Robert Carpenter at (404) 239-2000. ■ Management Science America, Inc., 3445 Peachtree Road, N.E., Atlanta, Georgia 30326. ■ I.E. from MSA. ■ It's one more way we're adding the genius to computers. ■ Today and tomorrow. ■ ©1984, Management Science America, Inc.

Office automation system propels Air Force research

ARNOLD AIR FORCE STATION, Tenn. — It is often said that an army travels on its stomach. But the Arnold Engineering Development Center (AEDC), a U.S. Air Force-managed research and test facility located here, appears to travel on its office automation system.

The AEDC consists of physicists, engineers, metallurgists and other aerospace scientists engaged in various research projects. For instance, when the organization's Aeropropulsion Systems Test Facility is completed in 1985, AEDC will be able to subject 100,000-lb thrust jet engines to simulated subsonic and supersonic flight conditions.

In addition, the AEDC has been involved in many aerospace programs ranging from Minuteman intercontinental ballistic missiles to the space shuttle. The organization's clients include the Air Force, the National Aeronautics and Space Administration, the U.S. Army, the U.S. Navy, private industry and other organizations.

But while AEDC's technical community wrestles with complexities such as simulating flight conditions at 1,000-mile altitudes and Mach 20 velocities or measuring temperatures of components superheated to 7,600 degrees Fahrenheit, the organization's management has been tackling communications and administrative challenges.

Each day, information must be shared inside AEDC on budgets, project schedules, tests and instrumentation advances. The AEDC community includes 180 Air Force officers and enlisted personnel and about 3,500 contractors and 190 civil service employees. Test results and other data on 200 to 300 annual test projects must be compiled and distributed to sponsors who need fast feedback to choose among competitive designs and to proceed with product development.

However, distributing information internally and externally is complicated by AEDC's organization, noted Jack Broerman, AEDC director of management systems for the Air Force.

Collaboration

One reason the research unit's system works is the successful collaboration of the Air Force and contractors on an OA program, Broerman said. Solutions to common administrative headaches are now being implemented across the board, he added.

"As of May 1983, we had eight Ethernet communications systems in eight separate buildings," Broerman said. "These local communications networks are all interconnected by an underground 9,600 bit/sec interfacility cable that removes communications barriers from among people belonging to different organizations and located in scattered facilities.

"For example, it used to take two to three days for the model shop to mail an activity report to an administrative office three buildings away and get its revised and massaged copy back," he noted. "Now, it can be sent over Ethernet, reviewed, revised and returned in about six minutes."

Broerman pointed out that the eight Ethernet networks are viewed as AEDC resources rather than organizationally independent tools. When the final Ethernet interconnections were made, the networks linked approximately a dozen Xerox Corp. 8010 workstations, 50 Xerox 860 information processing systems, 25 Xerox 820-II and 16/8 microcomputers and two optical character readers, and they shared resources such as laser printers and file servers. Broerman noted, however, that each of the eight networks can support up to 1,000 devices, and more equipment is being added.

"We started our [OA] efforts at the clerical end. Then we addressed upper management needs. Now, we're closing the gap, bringing [OA] to the middle-management level," Broerman explained.

SOFTWARE

Interactive system helps firm meet growth challenges

PARKERSBURG, W. Va. — Since its founding here in 1980, an equipment manufacturer for the life science industry has seen its sales steadily climb past the $5 million mark, with sales during the current year projected to grow at about 75%. Such rapid growth, however, has not been without its problems.

As Queue Systems, Inc. has expanded its business, its management has had to face challenges in scheduling, pricing, cash flow, employee record keeping and accounting. To meet these challenges, Queue relies on an on-line computer system that provides management with access to information such as the total cost of a product's bill of materials and the ability to schedule production runs automatically to fill orders.

In 1981, the company decided to enlist the aid of a computer system to help manage its growth. Chuck McKinney, a founder and secretary-treasurer of Queue Systems, said the firm seriously considered an IBM system but finally selected a system from NCR Corp. "We chose [the NCR] system because we thought it was a little easier to run for our novices," he recalled.

Queue Systems, Inc.'s Sammy L. Daly works on an NCR Corp. 9300 system.

The system the company chose was NCR's IMCS-II Interactive Manufacturing Control System inventory and bill of materials software modules running on an NCR [illegible] computer. Today, the company runs these IMCS-II modules and other interactive modules to handle accounts payable, sales analysis, order processing, purchasing and receiving and material requirement planning.

In addition, Queue Systems has upgraded to an NCR 9300 computer system that boasts 1M byte of main memory plus 162M bytes of memory on one removable and five fixed disks. Installed in December 1983, the 9300 system supports four on-line data display terminals and a 200 line/min printer, according to McKinney.

Queue Systems employs only one part-time programmer, who was hired recently to customize reports produced by IMCS-II for company executives. The absence of a large DP department at Queue Systems is no accident, the company said. When the firm began searching for computer solutions, management sought to buy rather than build sophisticated capabilities — even though management recognized that no off-the-shelf software would fulfill its needs.

"We also knew it would cost us several hundred thousand dollars and take a lot of years to actually design our own software for inventory and production control and other manufacturing activities," McKinney said, noting that time and spare development funds are items that most young firms find in short supply.

McKinney said that IMCS-II software appealed to Queue Systems because it operated on-line, offered a manufacturing package and was easy to use. "It wasn't one module that interested us but the fact that all the modules worked together," he said.

"Before the system was installed, we had shortages all the time," McKinney said. "We don't today. The on-line system lets us manage our inventories far more efficiently. Given the sheer volume of orders we're filling now and the complexity of product bills of materials, it would be impossible to manage inventory [manually] and meet production schedules efficiently."

The software package's accounts payable module works together with a purchasing module to help manage cash flow for the company, which deals with more than 500 vendors.

"The software helps us pay vendors in time to get discounts and automates check writing," McKinney said. "But, in addition, it lets us review how much is owed each vendor, the age of invoices and forward commitments for purchases in given time periods. All of this information has helped to improve cash flow."

McKinney also credited the interactive system with reducing Queue Systems' overall labor requirements. In such areas as bookkeeping and production control, he estimated that Queue Systems would need twice the number of workers it now has if it still relied on manual methods.

McKinney said the company has experienced no major problems with the system. He added, however, that the company recently had to replace a faulty NCR disk drive.

What Lear Siegler Does Best We Also Do Special.

As standard products or OEM specials, Lear Siegler video display terminals convey the look and feel of quality your systems deserve.

With Lear Siegler terminals as your primary operator interface, your products will be more attractive, more reliable, easier to use, and more marketable than ever.

We will custom tailor Lear Siegler's superior performance, ergonomic design and exclusive High Touch™ style to meet your exact requirements—from simple logo changes to completely unique terminal designs and proprietary firmware.

Our dedicated OEM sales and engineering groups are terminal experts who specialize in serving your needs. And they're backed by Lear Siegler's proven experience and reputation as an OEM supplier.

Call or write today for complete information on how Lear Siegler's OEM capabilities can work for you.

Complete OEM design, engineering, assembly and testing are performed at Lear Siegler's Anaheim, CA. facility.

CCA introduces the most effective solutions

Application development. End user computing. Office automation. These are probably the three hardest challenges facing every MIS department.

Now there's a way to crack all three. From CCA. With three of the most innovative solutions ever developed.

Only CCA could do it. Because CCA has 20 years experience in researching and developing software technology.

1. WORKSHOP/204. The single most powerful set of tools for crushing the application backlog.
Our new WORKSHOP/204 is a collection of integrated tools that is unparalleled for speeding up application development.

WORKSHOP/204 guides the developer through the entire process. Databases are designed automatically. Prototyping becomes a simple task with fill-in-the-blank forms. Screens and menus are "painted" with a powerful electronic palette. And the most complete application development language lets you add processing logic.

WORKSHOP/204 even allows a PC to be used as a development workstation. A dictionary drives the entire process and provides complete control and integration.

WORKSHOP/204 does all this in a fourth generation environment. And because it's interactive and menu-driven, it's also easy-to-use.

If you want to get complete applications online 5 to 50 times faster, WORKSHOP/204 is the way to do it.

2. INTELLIGENT INFORMATION CENTER. An integrated system for giving executives access to the database.
Business managers need useful information, not meaningless data. The INTELLIGENT INFORMATION CENTER is a complete set of tools that allows them to get what they need themselves. Without having to understand anything about mainframe technology.

The INTELLIGENT INFORMATION CENTER includes an easy-to-use PC/mainframe link that downloads data and creates spreadsheets automatically. There's also a powerful, menu-driven query and reporting system and a completely automated application generator. Plus interfaces to tie into other decision support systems. And a utility to quickly load data from commercial databases to your own. In addition there's an administrative tool that controls data access and documentation.

The INTELLIGENT INFORMATION

to today's three toughest MIS problems.

CENTER is the smart answer to automating corporate end-user computing needs.

3. PROD/NET. The only OA system that can integrate PC's, word processors, LAN's and hosts using existing hardware.

PROD/NET is the first and only system that lets you totally integrate office automation equipment and host computers into a single communications system. Using the hardware and technologies you already own.

No other product comes close to the completeness of PROD/NET. For one thing it lets you connect PC's into efficient local networks so they can communicate with each other, handle multi-tasking, and share expensive peripherals. It also allows documents to be translated automatically from one type of word processor to another. And host-based SNA communication transfers data between host terminals, word processors and the PC networks.

PROD/NET can give everybody in the office direct access to the corporate database. Probably no investment you could make will make your company more efficient and effective.

MODEL 204 DBMS. The kernel of a complete corporate information environment.

CCA's relational MODEL 204 is the fastest growing DBMS for IBM mainframes. It gives you productivity with performance, plus ease-of-use, efficiency, flexibility and capacity. Qualities that make it the perfect foundation for your corporate information system.

WORKSHOP/204. The INTELLIGENT INFORMATION CENTER. PROD/NET. MODEL 204 DBMS. Only CCA offers the total solution to managing the corporate information environment.

A Crowntek Company

Software helps retail shoe chain step up productivity

COLUMBUS, Ohio — A retail shoe chain here has used a series of software products to reduce applications backlog, providing faster access to more information.

When the Kobacker Co., a national self-service retail shoe chain headquartered here, brought its West Coast terminals on-line under IBM's CICS, it wanted remote and local access for program development, according to William Hart, senior telecommunications analyst.

To service its 320 retail shoe stores, Kobacker employs an IBM 4381 mainframe operating under Vtam and CICS, as well as two on-line automated warehouses.

In 1980, Hart selected Applied Data Research, Inc. (ADR) software products. Today, Kobacker uses five ADR products, including ADR/Roscoe, Roscoe/Extended Time Sharing Option (Etso), Roscoe Programming Facility, the Librarian and ADR/Look. All, he said, increased automation and monitored system performance in real-time while helping the end user become more self-reliant in working with applications development.

The central tool of Kobacker's information processing system, according to Hart, is ADR/Roscoe. Kobacker uses Roscoe Programming Facility (RPF) as an interactive procedural language, ADR/The Librarian in library control and management, Roscoe/Etso as an interactive applications development tool and ADR/Look in hardware and software measurement on a real-time basis.

Kobacker chose Roscoe/Etso in 1982 as a partial alternative to the RJE link between the IBM 4341 mainframe under VM and the company's West Coast warehouse. Hart said he wanted programmers to handle minor changes while they were on-site for user training, but this was not possible under VM.

Roscoe serves as an interactive application development system for IBM OS environments. It is said to provide immediate access to data during programming, extending the computer to the general user. Programmers at the West Coast warehouse call up Roscoe to produce reports, develop applications and generate spreadsheets.

From the start of the project, Kobacker's mainframe had been experiencing routine CPU crunches while operating under CMS. But, according to Hart, the problems disappeared when users were switched to Roscoe. "CMS was siphoning off 15% to 20% of our CPU cycles, which we recovered by shifting to Roscoe," Hart said.

In addition to the Librarian, Kobacker uses RPF, a high-level structured procedure language that can be executed interactively by the terminal user. Originally installed as a programmer productivity aid, RPF has been virtually taken over by end users, Hart said.

"We have several people in our accounting and general ledger areas who know Basic," he said. "Once they found out about RPF, they began to develop applications using RPF that many times completely took care of their requirements." Hart added, "I was also surprised that, working with only the Help function and without even manuals, the users could use RPF to write some fairly sophisticated programs." Some of the user-generated programs are over 600 lines in length, he said.

RPF can access Roscoe facilities for data entry and editing, library storage, syntax checking, job submission, output review and data set management.

Electronic spreadsheets

A growing requirement in almost every area of Kobacker operations is the capability to generate electronic spreadsheets for trial balances, but the process under CMS and APL was inefficient, Hart recalled. "We could support three or four APL users without problem," he said, "but when we put the fifth user on, everyone came to a screeching halt."

Not wanting to put IBM's TSO on the system because of its high overhead, Kobacker installed Roscoe/Etso. Terminal users can now execute interactive applications under Roscoe. Hart also selected a packaged electronic spreadsheet that runs under TSO as well as Roscoe/Etso. The spreadsheet capability has become one of the most widely used applications. Roscoe has a single address space, and as a result, other Roscoe users do not suffer poor response time, even when CPU-intensive tasks are being run. Batch response time has actually improved, Hart said.

With multiple jobs contending for shared resources, Kobacker selected ADR/Look, a performance management tool, to keep tabs on system operation. Look offered the information systems manager a combination of real-time displays, exception reporting, historical reports and statistical summaries. "The information Look collected was used to justify our ordering the IBM 4381," Hart said. By having accurate statistics on hardware utilization, Kobacker avoided upgrading its CPU.

Look supplements RMF, an IBM performance monitoring tool, but takes a more active role. "Look does a better job of displaying visual graphics and indicating trends than RMF," he said.

DPMA chooses president

ANAHEIM, Calif. — Eddie M. Ashmore, director of information resources management at Southern Baptist Theological Seminary, was elected international president of the Data Processing Management Association (DPMA) during the association's recent annual business meeting.

Ashmore, the 33rd international president of DPMA, succeeds Carroll L. Lewis, the 1984 president and founder of Commercial Data Systems, Inc.

Ashmore has worked with the Louisville, Ky.-based seminary for 19 years and manages that institution's information resources, including data processing, word processing, telephone services, postal services, printing and duplication.

The DPMA business meeting preceded DPMA Anaheim '84, the 47,000-member association's annual computer conference and business exposition.

Systems management meeting set for April 21-24 in Nashville

NASHVILLE — The Association for Systems Management (ASM) will hold its 1985 annual conference April 21-24 at the Opryland Hotel here.

The conference will feature a two-day miniconference on managing information centers, a full-day program on communication skills and a one-day seminar entitled "Executive Support Systems."

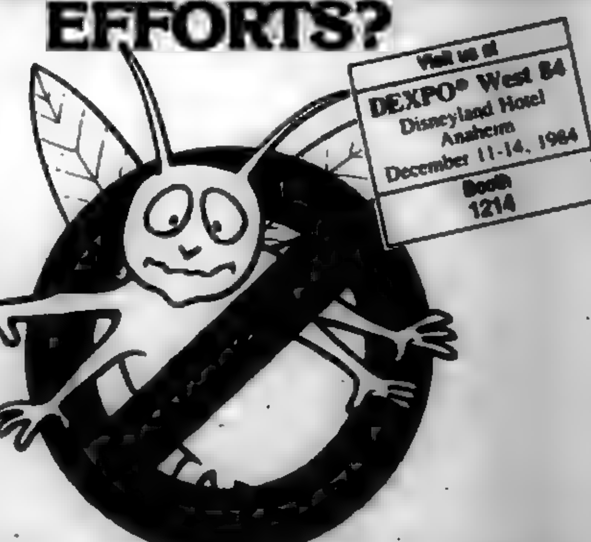
The conference will also include a pair of study tracks titled "Managing Interpersonal Relationships" and "Integrating Systems Technologies — 1985."

Registrants can structure their own educational paths from seminars on office productivity, systems techniques, information resource management and personal development.

Cost of the program is $475 for ASM members and $575 for nonmembers.

More information is available from ASM International, which is located at 24587 Bagley Road, Cleveland, Ohio 44138.

ARE BUGS PLAGUING YOUR PROGRAMMING EFFORTS?



RXVP80™ IS A BUGBUSTER

RXVP80 finds bugs in your FORTRAN programs before you do!

It also documents your programs for you and tells you what parts of your programs aren't executed when they run. All this in terms of your source code. RXVP80 is as easy to use as your compiler and is available on most superminis and mainframes including DEC VAX and IBM equipment.

RXVP80 has an established track record for increased productivity, quality error-free software, on-time software deliverables, and decreased maintenance costs for large and small companies around the world.

Firm hits happy medium with electronic printer

SEATTLE — For a consulting actuary, the clarity of a printed page is an important aspect of business strategy.

The product of Milliman and Robertson, Inc., an actuarial consulting firm here, is information based on complex mathematical data and projections, said Marty McCune, data processing manager for M & R Services. M & R Services was formed in 1968 to provide computer services for Milliman and Robertson's national network of 19 offices, as well as to service outside clients, McCune said. M & R Services also develops and sells software for life insurance companies to use in their own DP operations, he said.

"Anything we can do to improve [continually] the quality of our hardcopy output is to our advantage," McCune explained. "And page printing — 8½ by 11 in. — offers a look that's superior to continuous form." McCune said.

McCune's problem during his year-and-a-half search for an appropriate page printer was to find one with a capacity of 200,000 pages per month, he said. He was stepping up in quality by replacing his 1,000 line per minute impact printer with a nonimpact printer, and he also needed a step up in volume, he added.

"The laser xerography printers, geared for 50,000 pages per month output, were too slow, while the next level in volume offered by that printer technology was a system geared for 500,000 pages per month. The higher volume printer was not a practical expense for us. We needed a system geared for our middle range in volume," McCune said.

McCune found his solution in an alternative technology — ion deposition electronic page printers, he said. The Mercurion 1 from Southern Systems, Inc. of Clearwater, Fla. offered 60 page per minute electronic output at a purchase price under $70,000, he said. The printer gave the company the 8½- by 11-in. format it wanted and a price within its budget.

There were other advantages beyond the printout quality that was McCune's primary goal — direct connection and plug compatibility with the company's IBM 370/148 system were chief among those, McCune said. "Mercurion 1 directly attaches to the multiplex channel on our IBM and looks like an [IBM 3203 Model 5] impact printer," McCune said. "In contrast, the xerographic machines required a communications link that would have restricted us to 9,600 bit/sec," he added.

The small physical size of the printer was a secondary benefit, McCune said.

CA/CICS.
FIVE WAYS TO GET CONTROL OF YOUR CICS NETWORK AND MAKE IT MORE USEFUL, MORE RELIABLE, MORE SECURE, AND MORE EFFICIENT.

CA-FLEXISCREEN
The industry's most efficient screen generation tool—fast, flexible, easy to use. Will greatly ease your programmers' work load.

CA-RAPS
Eliminates major system bottlenecks by allowing printing of power queue files at remote sites. Speeds report distribution as much as 10-fold.

CA-EZTEST/CICS
Automatic online testing and debugging facility that will save not just hours, but days. Menu-driven, self-teaching, and usable by even the most inexperienced programmers.

CA-JARS/CICS
Monitors CICS performance and provides complete job accounting. Pinpoints problems and lets you maintain maximum efficiency.

CA-SENTINEL
Provides both batch and online CICS protection in one product. Maintains data integrity. The proven effective way to achieve total data center security.

Get control of your CICS environment—call 800-645-3003 or (in NY) 516-333-6700 and ask for Dave Williams.

Software gives scientist crystal ball to weather events

VICKSBURG, Miss. — Back in 1906, a violent storm striking the California coast was reported on a wire service. If the account had been accurate, the storm would have been a true meteorological anomaly — one of those phenomena that scientists might expect to see once in a century. On the other hand, the wire reporter could have been swept away in an attempt to re-create the storm's violence for newspaper readers around the country.

About 80 years later, an electric power utility was building a nuclear power plant in the area once devastated by the big storm. The firm planned to construct a breakwater to protect the facility, but needed to know the historic storm's magnitude to design a marine structure strong enough to withstand similar weather conditions. So how bad was the storm?

Donald Resio, president of Offshore & Coastal Technologies, Inc. here, solved this problem by developing a software model to post-analyze the 1905 storm. Resio now conducts postanalyses as well as meteorological and oceanographic forecasts for a wide range of customers, including shipbuilders, offshore structure manufacturers, oil rig operators, marine construction companies and government agencies. With a high degree of accuracy, Resio's software predicts marine variables like wave dimensions, coastal flooding, storm surges and coastal currents for his clients.

Resio calls Offshore & Coastal Technologies a "numerical modeling company" whose computer-based measurements produce results that are as valid as data gathered by field instruments. Resio's software, housed in a Boeing Computer Services Co. data center in Bellevue, Wash., has an advantage over meteorological measurement devices: It does not sink to the bottom of the sea or get blown away like traditional field equipment, Resio pointed out.

"We have found over the years that we can predict weather about as well as other companies can measure it," Resio said.

Resio holds a doctoral degree in earth sciences from the University of Virginia, and his area of expertise is environmental fluid dynamics. His interest in the interplay between the elements eventually led him to challenge the conventional wisdom of wave modeling.

"I really thought all the answers in wave modeling had been published in the Miles-Phillips Theory. And I wasn't alone — that was the prevailing view in oceanography," he recalled.

Resio's assumption changed when he began running a numerical code he had developed for a problem involving the Great Lakes. "The Miles-Phillips Theory didn't work. And at the time, I thought the theory was correct and my numerical code was wrong," Resio confided.

During the year that followed, Resio worked on developing a wave model that applied to "anything from a mud puddle to the Pacific Ocean."

To solve the equation for particular meteorological or oceanographical events, Resio used a variety of computing tools. For every case, "the winds act as a wildcard, determining the character of the event. Wave generation is pretty much a matter of how much energy comes into the wave field from the wind," Resio maintained.

> *'All the technology we use is simply a numerical tool for getting a very specific answer at a competitive price.'*
>
> — Donald Resio, president of Offshore & Coastal Technologies, Inc.

Resio uses small models to determine wind fields. These software programs can run in 10 seconds on Offshore & Coastal Technologies' C-10 System One computer from Cromemco, Inc.

The more sophisticated Offshore & Coastal Technologies models, such as those involving wave behavior and coastal currents requiring large amounts of storage, run on a Cray Research, Inc. Cray-1S supercomputer at Boeing's data center. Resio optimized his code for the big machine, enabling the Cray to process an entire day's global predictions in 20 seconds. This computing efficiency means extremely competitive rates for Offshore & Coastal Technologies' clients, Resio added.

"Our customers want a certain product: They want to know how high the waves are going to run up on their structures or if they're going to get inundated up on the working deck of an oil rig or the chances of waves damaging their ships. All the technology we use is simply a numerical tool for getting a very specific answer at a competitive price."

What about that big blow back in 1905? "Nothing special," according to Resio. It turned out to be a very typical Pacific storm, re-created 80 years later by a businessman in Vicksburg, Miss.

The International Software Market for the world's Software Industry

The Montreal International Software Market (MIM) is the first truly international exhibition and conference exclusively for the world's software trade.

Montreal, Canada June 3, 4, 5, 1985, is the setting for this unprecedented global interaction of software professionals — buyers, sellers, importers, exporters, authors, distributors and volume end-users.

EXHIBITIONS
- Software for micro, mini, mainframes
- Products & related services

CONFERENCES
- Product design & development for export
- Export profitably
- Software & copyright protection

Package addresses credit union's financial modeling needs

WASHINGTON, D.C. — The Pentagon Federal Credit Union is in the business of serving the people in uniform who serve the U.S. But Pentagon Federal needed software to serve the financial modeling requirements of its management team.

An independent thrift institution headquartered here, Pentagon Federal is regulated by the National Credit Union Administration and has nearly 25 U.S. and overseas branches. The nation's second largest credit union, Pentagon Federal maintains accounts for more than 275,000 Air Force, Army and Department of Defense employees and their relatives and dependents.

Formerly, Pentagon Federal relied on outside service bureaus for its data processing needs. But, according to Comptroller Roger Kase, handling such a large volume of accounts on time-sharing systems was costing the company more than $250,000 annually. So Pentagon Federal began looking for a less expensive, in-house system. The company's research culminated in the installation of an IBM 4341 equipped with IBM's MVS operating system.

At the same time, Kase said, Pentagon Federal began setting up an information center to provide efficient systems for budgeting and account tracking for the company's managers and executives. The Pentagon Federal information center was closely modeled on the IBM information center concept. More than 100 IBM 3279 terminals were linked to the 4341 from executive offices and other central locations. The company also built up a library, staffed the center with consultants and installed a hot line to field user questions.

But, Kase said, "we needed a software tool with 'what-if' capabilities that our management team could use."

Pentagon Federal evaluated about 35 modeling languages and eventually chose Comshare, Inc.'s System W decision support system as its first major information center software installation. According to Kase, the software dovetailed nicely with Pentagon Federal's information center plans.

"We had a long list of requirements," Kase explained. "They included forecasting, inflation adjustments, technical support, multiple-user support and local service support from a stable company. We needed software that would be maintained and enhanced and that would grow with the industry." System W met those requirements.

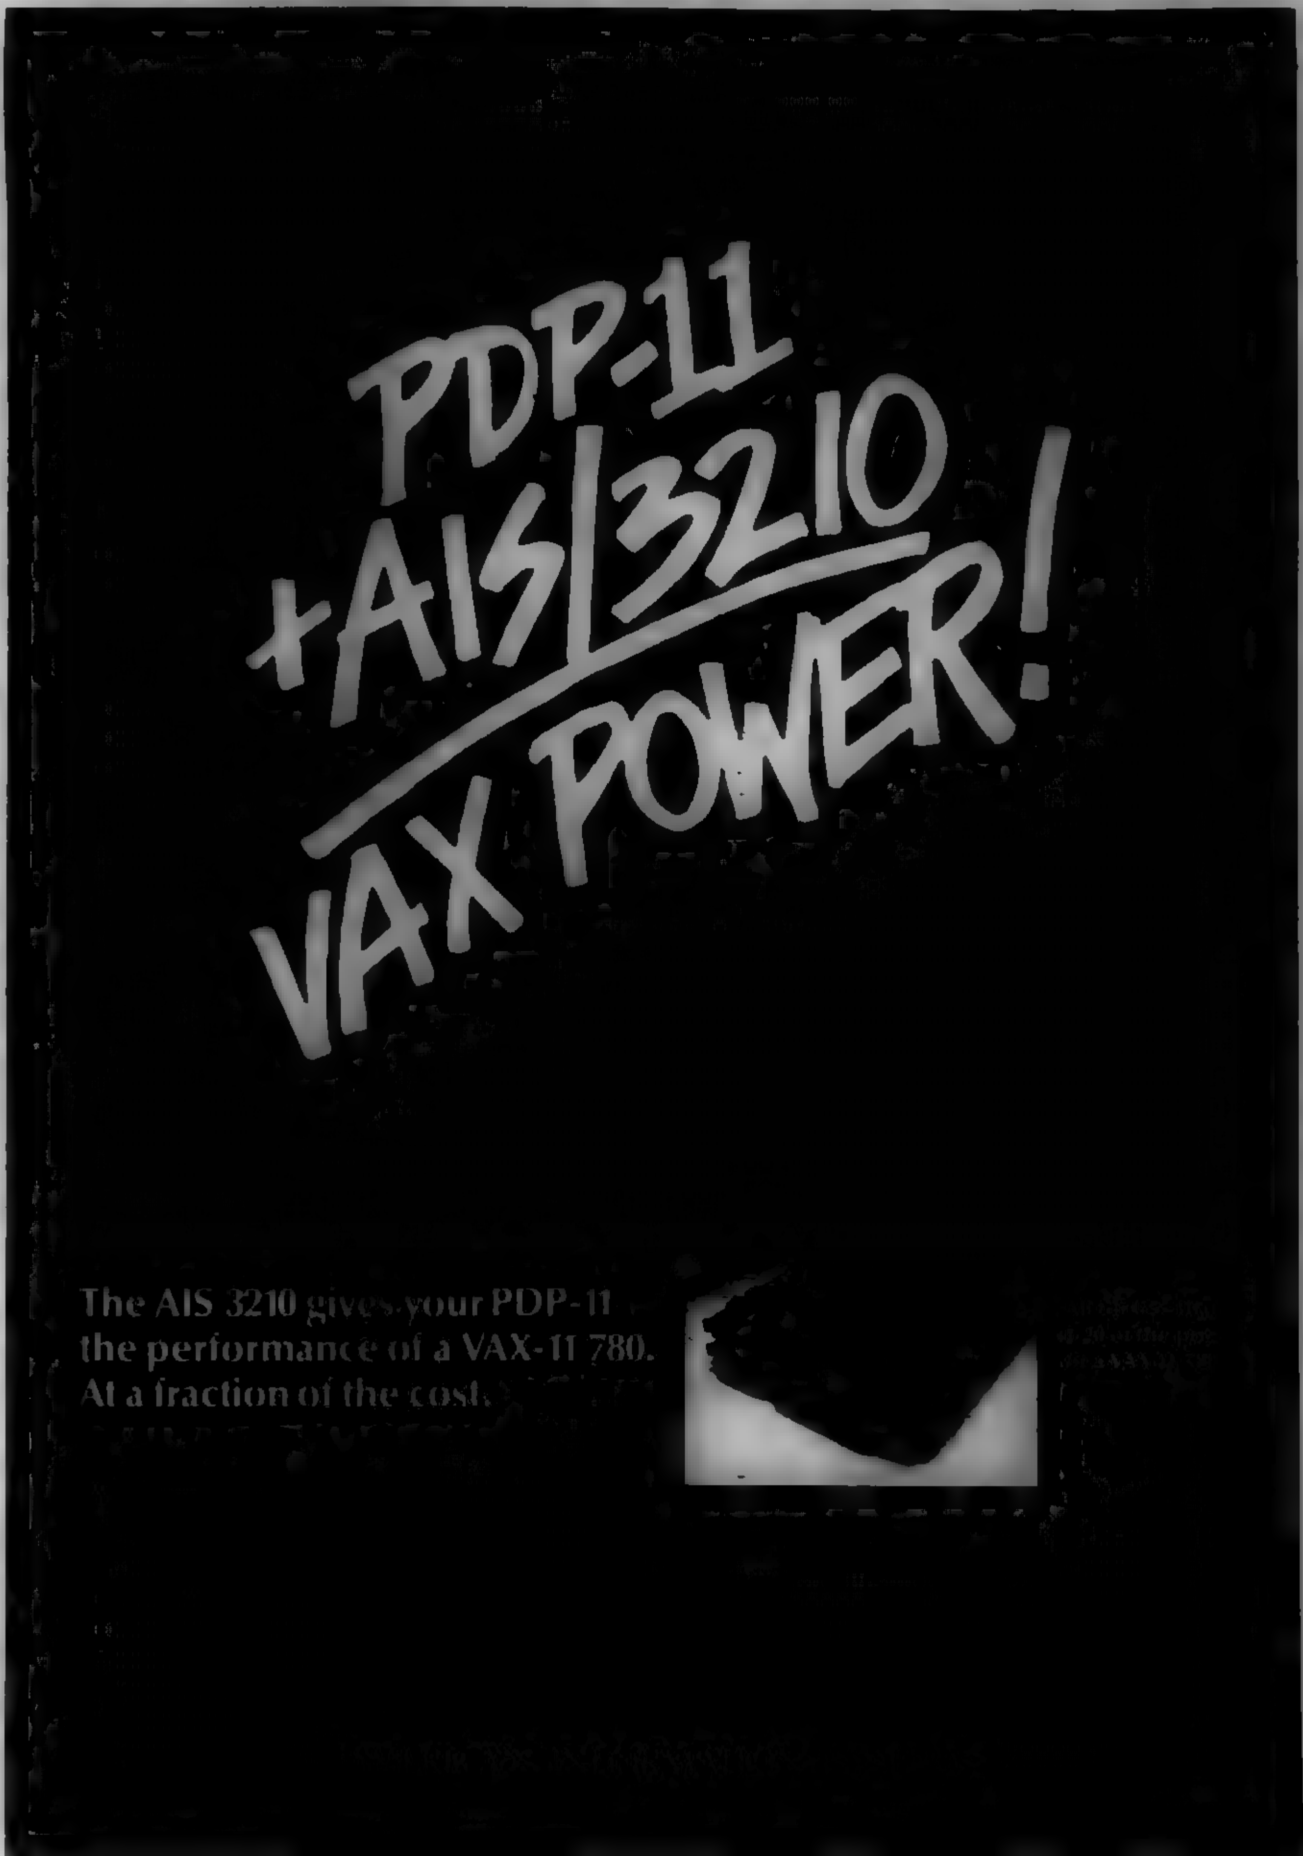
Priscilla Roach, manager of Pentagon Federal's managerial accounting department, said she and other users were impressed with System W's English syntax and comprehensive forecasting capabilities and the software's use of variable names instead of line numbers.

"With System W, I could sit down with our managers and go over calculations, and we would all understand them," she said. "In some modeling languages, the rules are so complex that using them is like learning how to program."

Pentagon Federal's initial application of System W was building an annual budget model that consisted of loan, share and expense history and developing tracking models with information on member accounts, such as loans, daily transaction data and certificate, checking account and individual retirement accounts data. Other business data included assets, liabilities, utility costs and personnel expenses.

System W's Window feature, with full screen capability, was particularly useful, Roach said. "It . . . [debugs] any kind of input data," she said. "You can get an immediate look at the bottom line or scroll through details looking for key numbers."

Pentagon Federal's future plans include using System W as a data acquisition link to existing in-house software and installation of System W color graphics for presentations to the firm's board of directors and officials.



The AIS 3210 gives your PDP-11 the performance of a VAX-11 780. At a fraction of the cost.

Electric firm brightens productivity with net revamp

JACKSON, Mich. — Consumers Power Co. began evaluating its data communications network in early 1982.

"Until two years ago, Consumers Power relied entirely upon conventional 2,400-, 4,800- and 9,600 bit/sec modems supplied by [Michigan Bell Telephone Co.] and AT&T," recounted Daniel Mandreger, telecommunications engineer in the communications systems department. "An upgrade in the network was necessary to accommodate increased traffic and prospective users. Further, transmission problems were becoming evident. We, therefore, decided to evaluate the entire system."

Consumers Power is Michigan's largest electric and gas utility. Its data communications system ties regional offices and power plants to an IBM 3033 mainframe here. Customer records account for 50% of the data transmissions, and the remainder consists of employee information, time-sharing, materials management and text management. The network is also called upon to transmit data from remote computerized meter reading equipment to Jackson.

'An upgrade in the network was necessary to accommodate increased traffic. Transmission problems were becoming evident. We decided to evaluate the entire system.'

— Daniel Mandreger, telecommunications engineer

For the evalution, Consumer Power initiated laboratory testing of modems supplied by several vendors, including Racal Milgo, Inc., Codex Corp. and IBM. In addition to modem performance, circuit diagnostic capabilities were evaluated.

Modem checks were made with an impairment generator and bit error-rate tester. Devices were first exposed to the line impairment maximums tariffed in Michigan, with more than one error in 10 million bits transmitted considered the failure point. Additionally, the equipment was subjected to excessive impairment levels and multiple impairments.

"The important differences between modems were seen in the circuit diagnostic information each manufacturer offered," Mandreger said. "The Codex CS modems and DNCS [Distributed Network Control System 300] gave specific information on a large number of [Electronics Industry Association] digital and voice frequency analog impairments at central and remote ends — from 19 to 23 status points, depending upon the particular model of modem. Also, the DNCS was the only system that would permit us to set our own alarm trip values for each impairment.

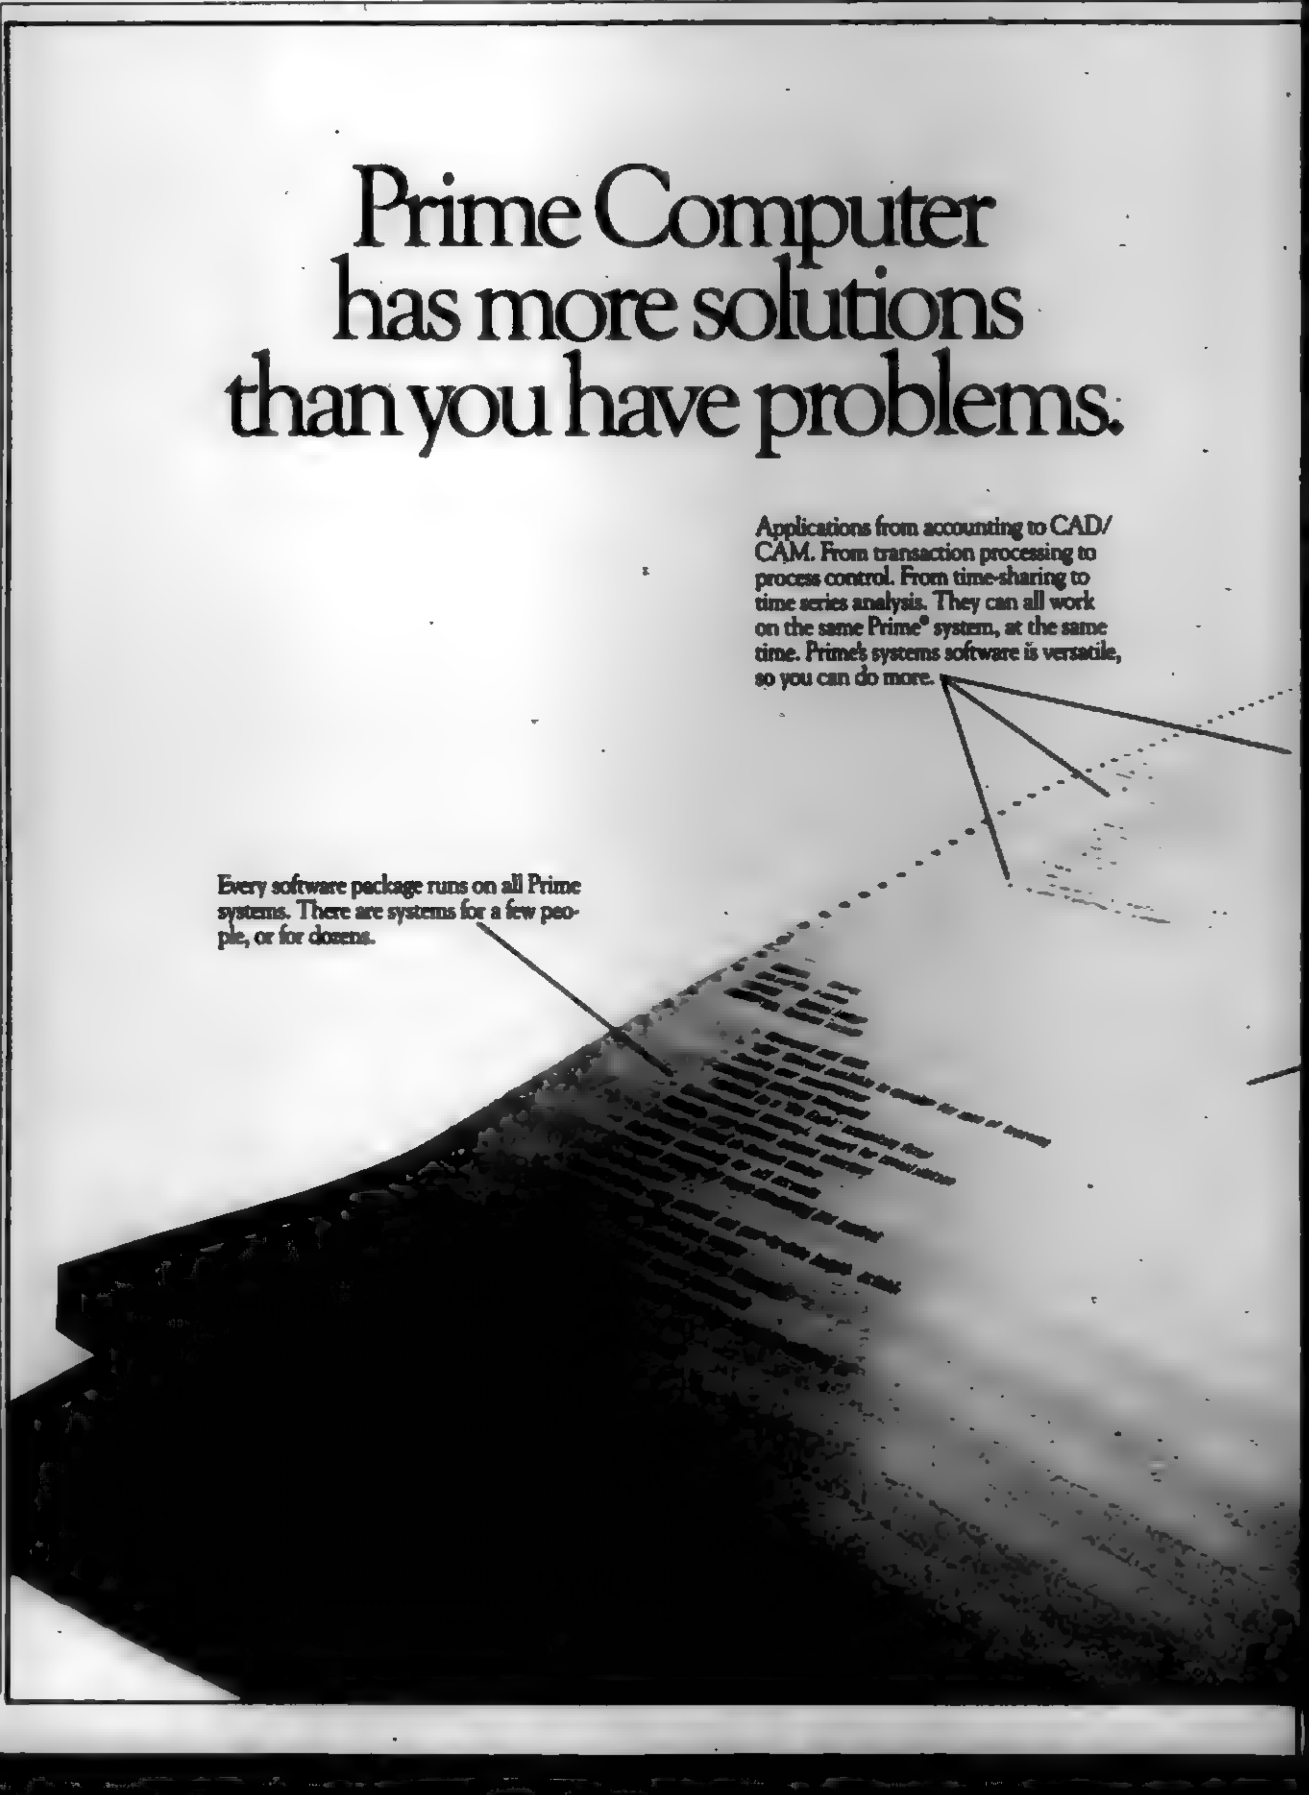
'This particular unit has a sense of humor.'

Consumer Power decided to lease the Codex equipment, which currently supports 118 CS 9600s for 59 point-to-point lines; 10 Model CS 4800s for five point-to-point lines for terminal equipment with maximum speeds of 4,800 bit/sec; 80 Model CS 48FPs for 17 multipoint lines; 22 Model MX 2400s for 11 point-to-point lines for the text management system's ink-jet printers; and 25 Model CS 9600s for seven high-speed multipoint lines.

Consumers Power has made extensive use of the DNCS 300 for testing and making benchmark lines prior to bringing them up. Mandreger said the system helped diagnose problems that probably may have otherwise been overlooked. Most line impairments involved impulse hits, low signal levels and low signal-to-noise ratios. Supplementary manual test equipment has been valuable for occasionally expanding upon DNCS leads, such as when a circuit is down or for carrier loss.

Although Mandreger said he was generally pleased with the equipment, there have been problems. "Some of the modems has been defective, and we have been continually replacing some system cards," he said.

The telecommunications manager would also like to see the system enhanced. "I would like to be able to run a diagnostic program without operator intervention," he said. "It would allow me to set a test run at night and have the results the next morning — something we can't currently do."



Prime Computer has more solutions than you have problems.

Applications from accounting to CAD/CAM. From transaction processing to process control. From time-sharing to time series analysis. They can all work on the same Prime® system, at the same time. Prime's systems software is versatile, so you can do more.

Every software package runs on all Prime systems. There are systems for a few people, or for dozens.

Scientific workstation net expands Yale's capabilities

NEW HAVEN, Conn. — When Yale University decided to increase its computational power to handle the burgeoning number of computer science students and the university's commitment to computer research, it looked to a distributed network of scientific workstations.

The number of undergraduates enrolled in computer science courses at Yale doubled over the past three years, said John H. Goodman, director of operations and development for the computer science department. About 1,400 undergraduates are taking introductory computer courses this year — in fact, 90% of all undergraduates now take at least one introductory course in the subject.

Yale's computer science department had a collection of 24 computers from a variety of vendors to support computer science education and research, Goodman said. Some computers, such as the university's 16 Digital Equipment Corp. VAX-11s, were used for introductory courses; others, such as its five Symbolics, Inc. Lisp machines used for artificial intelligence research, were dedicated to a single purpose, he said.

As the rate of student enrollment in computer science courses grew, these facilities were not enough, he added. At this time, Yale was also expanding the experimental segment of its ongoing research programs in AI, scientific computation and systems.

The school needed a network of machines with substantial computational power that could accommodate about 130 users simultaneously, Goodman said.

The computer science department researched a number of companies and realized that present time-sharing systems could not offer the consistent performance or the transparent resource sharing that they required, Goodman said. The department next researched several companies that manufactured distributed systems, he added.

The university chose Apollo Computer, Inc.'s Domain line of 32-bit scientific and engineering workstations, which operate in a high-speed local-area network and support network-wide, demand-paged virtual memory, Goodman said. "In choosing the distributed system, we were allowing for unlimited growth in our educational and research network," Goodman added. "Since each workstation has its own dedicated CPU and main memory, adding units to the network in no way decreases power or response time," he said.

In June 1981, the first Apollo computers were up and running. Over the next two years, Goodman said, Yale installed a total of 80 DN300s, 17 DN420s and two DN600 full color graphics workstations.

The total configuration is broken down into two separate rings: one for computer science education and the other for special research projects. The network also has the ability to communicate, via an Ethernet gateway, with other computers within the department, Goodman said.

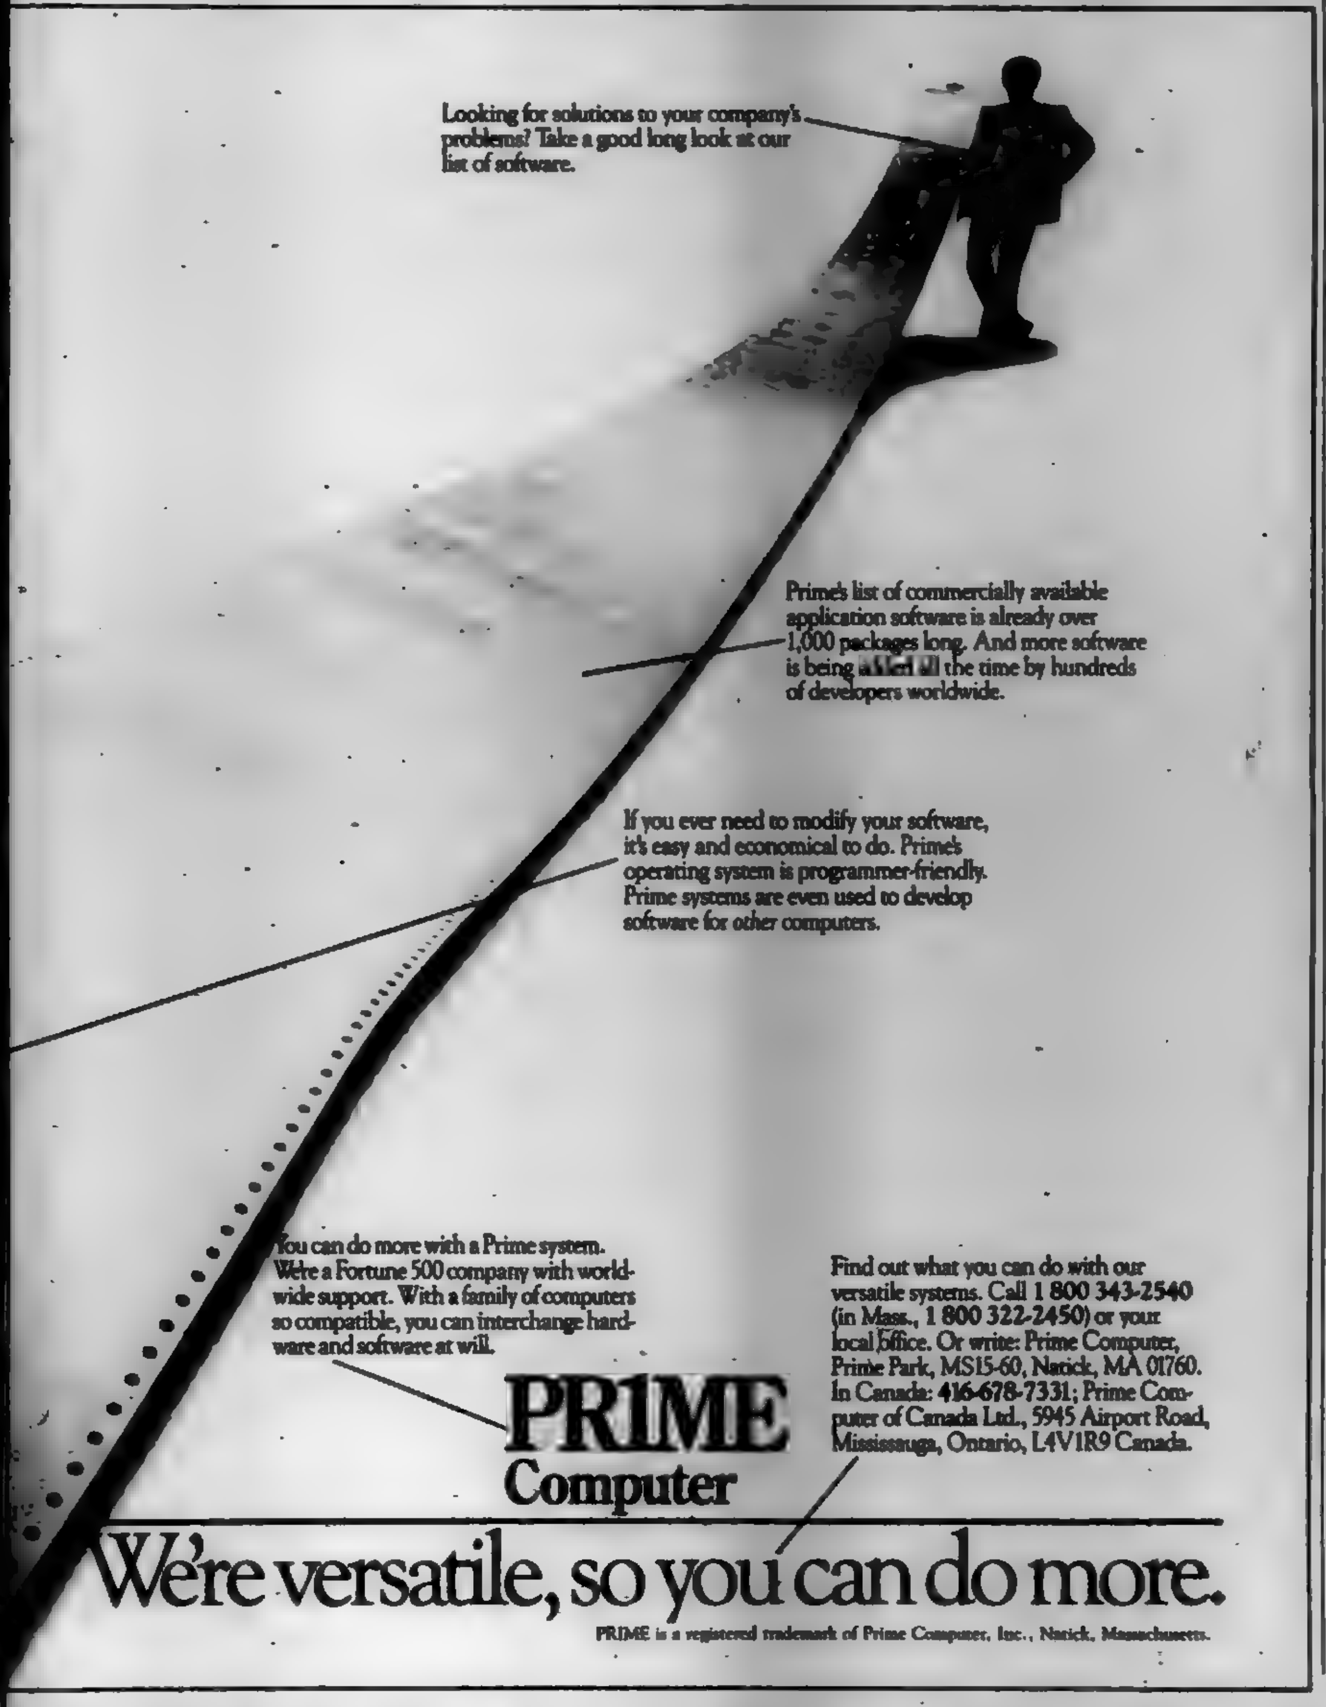
The educational systems, used primarily for advanced undergraduate and all graduate-level computer science courses, are comprised of 40 DN300s and two DN420s, which are used as file servers because the DN300s run diskless, sharing mass-storage facilities across the network, Goodman said. Each DN420 is configured with a 159M-byte Winchester disk, he added.

The research group consists of 40 DN300s and 20 DN420s with 34M-byte and 158M-byte Winchester disks, respectively. In research, however, the DN420s are not used as file servers, Goodman explained. They offer enhanced graphics capabilities and increased power for programs requiring more main memory. For this reason, each is equipped with an Apollo Performance Enhancement Board, he said. In addition, the research network has two DN600 color graphics stations, used specifically for scientific computation and electrical engineering, he said.

Each workstation offers both the Apollo Aegis operating system and AUX, Apollo's implementation of AT&T's Unix software with University of California at Berkeley extensions, Goodman said. The Apollo systems each provide a multiwindow multitasking environment, which allows up to 24 programs to run simultaneously on the same display, he explained. Given these capabilities, a student can be in the process of running a number of given programs while accessing another program or file from another workstation — all at a data transfer rate of up to 12M bit/sec, he said.

In addition to the research and basic computer science education that had been the department's original focus, the new systems provide the computational power for such applications as numerical analysis, computer architecture and attached processor research, oil reservoir simulation, geophysical acoustics, computational fluid dynamics and structural analysis, Goodman said, which are now an integrated part of the university's educational and research efforts.

In addition, the new system is used for AI research and systems research, which involves the study of languages, programming environments, operating systems and network technology, he added.



Looking for solutions to your company's problems? Take a good long look at our list of software.

Prime's list of commercially available application software is already over 1,000 packages long. And more software is being added all the time by hundreds of developers worldwide.

If you ever need to modify your software, it's easy and economical to do. Prime's operating system is programmer-friendly. Prime systems are even used to develop software for other computers.

You can do more with a Prime system. We're a Fortune 500 company with worldwide support. With a family of computers so compatible, you can interchange hardware and software at will.

The New Cincom: 10
the only software ve

Finally, there's one software vendor offering a single family of integrated products capable of meeting all of your corporate, departmental and personal information software needs—The New Cincom Systems. Our TIS™ family of integrated products is improving performance and productivity in major organizations around the world. Here are just 10 of the many reasons why your organization should be considering TIS:

#1 Relational Data Management Technology

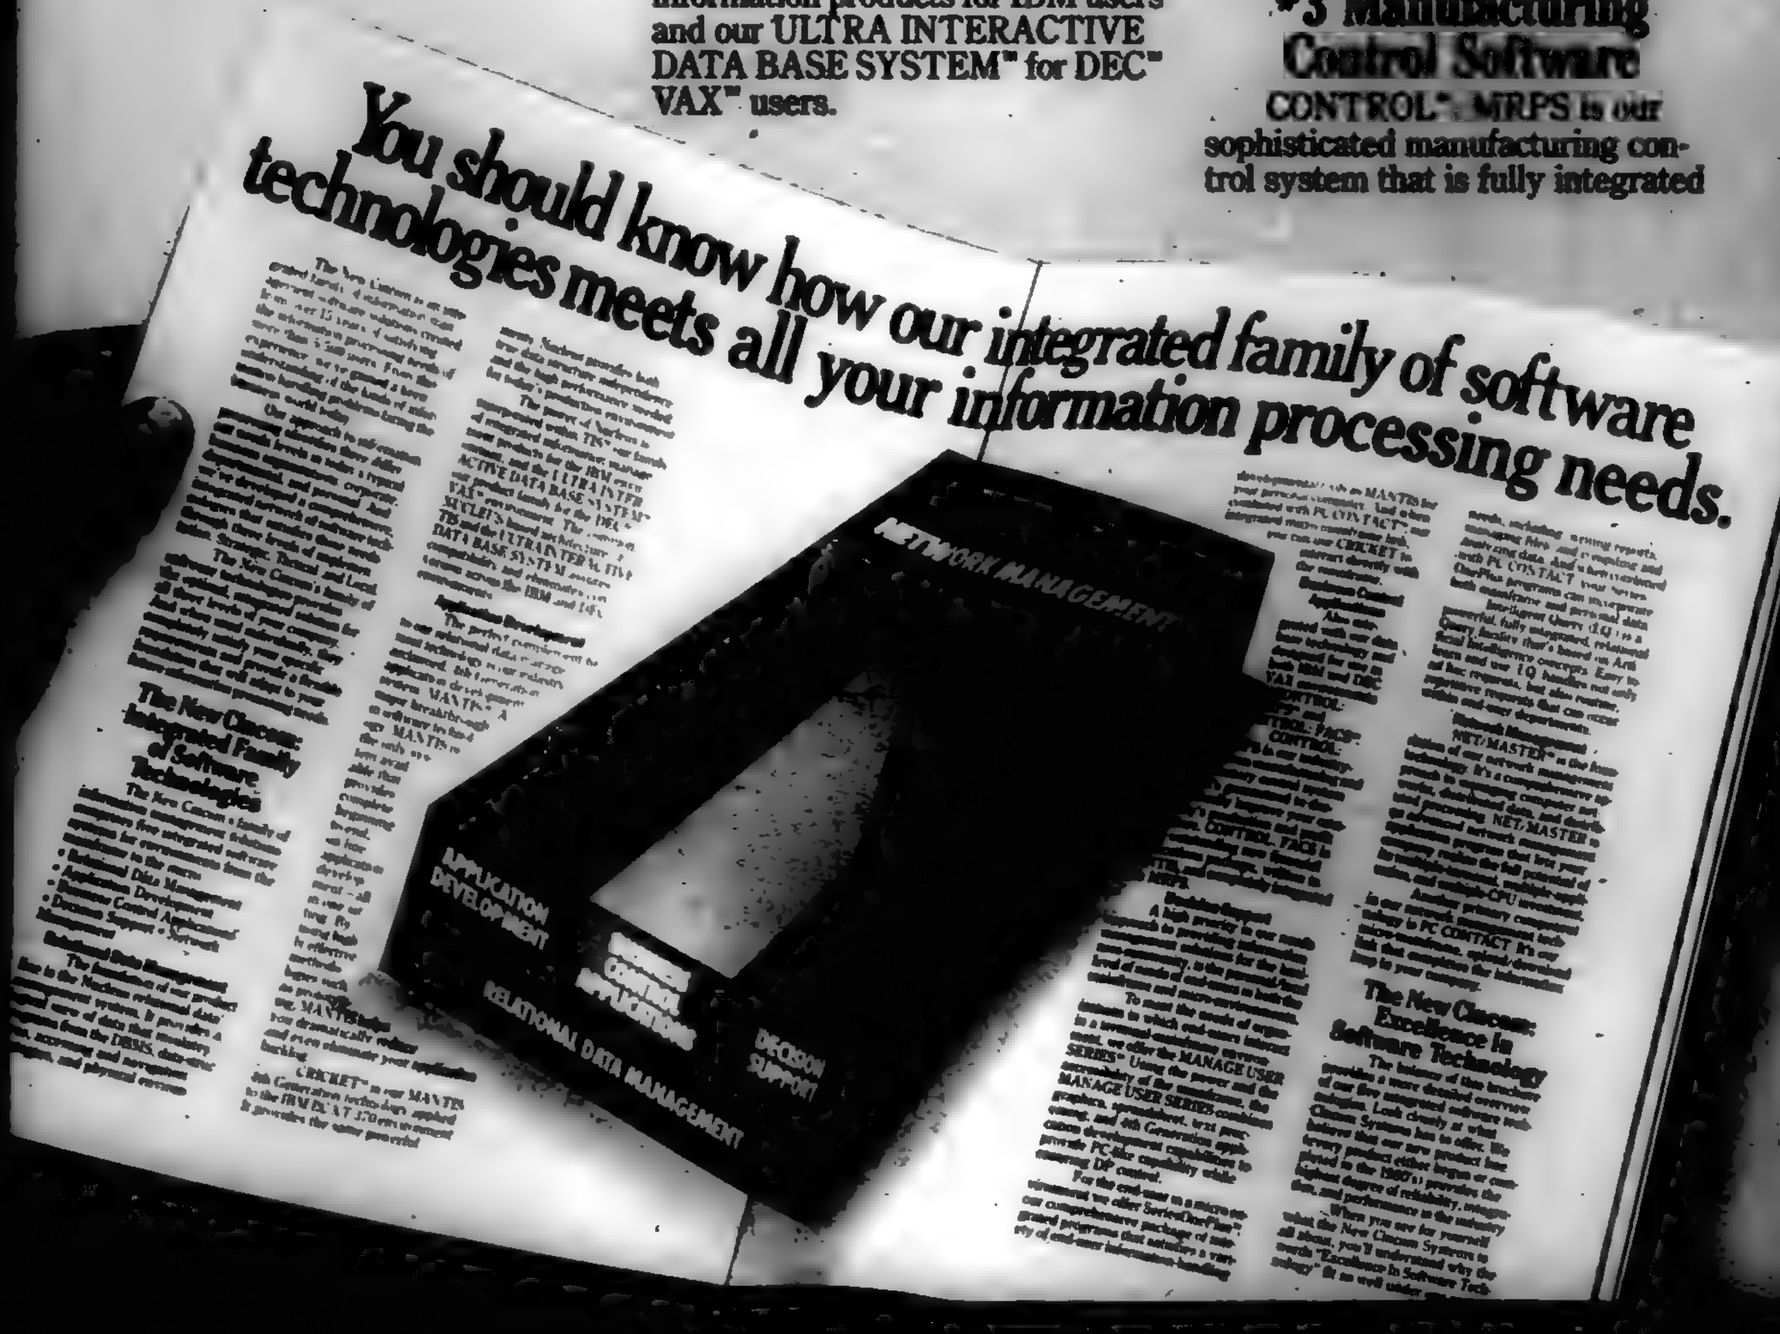
Powerful relational data management technology forms the "nucleus" of our integrated software family. Using a unique "Logical View" concept, all applications operate directly with "derived relational tables." As a result, we can provide complete data structure independence, as well as the high performance needed for today's production environments. This relational technology is the nucleus of both our TIS family of information products for IBM users and our ULTRA INTERACTIVE DATA BASE SYSTEM™ for DEC™ VAX™ users.

#2 Fourth Generation Application Development

The perfect complement to our relational data management technology is our industry acclaimed 4th Generation application development system, MANTIS™. In more than 1,500 complex production environments, MANTIS is dramatically reducing the application backlog through its powerful ability to "prototype", refine and commit the application to production in one interactive sitting.

#3 Manufacturing Control Software

CONTROL™: MRPS is our sophisticated manufacturing control system that is fully integrated



You should know how our integrated family of software technologies meets all your information processing needs.

NETWORK MANAGEMENT
APPLICATION DEVELOPMENT
MANUFACTURING CONTROL APPLICATIONS
RELATIONAL DATA MANAGEMENT
DECISION SUPPORT

reasons why we're ndor you'll ever need.

with our relational data management technology. A complete closed-loop system, MRPS is improving the productivity and profitability of over 125 IBM and DEC VAX manufacturing environments around the world.

#4 Financial Control Software

CONTROL: Financial is our sophisticated financial accounting and control system which molds to the way you do business. Integrated directly with MRPS, CONTROL: Financial includes Accounts Receivable and Credit Management systems with Accounts Payable soon to follow.

#5 Advanced Network Management

NET/MASTER™ is one of the most recent additions to the TIS family of integrated products. Very simply, NET/MASTER is an advanced network management system that takes the complexity out of managing a sophisticated IBM computer network and lays the groundwork for distributed data base processing.

#6 The Integrated Mainframe—Micro Link

Further expanding the capabilities of our software [illegible] network is PC CONTACT™, our mainframe-micro link which enables users to [illegible] download [illegible] frame and [illegible] gives the PC user the [illegible]

access multiple file types stored in the corporate data base for Decision Support manipulation.

#7 Micro Decision Support Software

For comprehensive micro-level Decision Support we offer SeriesOnePlus™*. SeriesOnePlus includes file management, spreadsheet, graphics, reporting and word processing components that are all integrated through a unique "BUS" architecture. Because the system is designed exclusively for business situations, SeriesOnePlus complements any mainframe-micro network strategy.

#8 Mainframe Decision Support Software

The recently introduced MANAGE:USER SERIES™ provides powerful Decision Support capabilities for the mainframe user. The MANAGE:USER SERIES combines graphics, text processing and application development tools to enhance the use and display of corporate data.

#9 Client Support

The one thing that [illegible] about [illegible] is our [illegible] service, support and user education. When you [illegible] can be assured of the [illegible] of support.

integrated technologies has been released since 1981. And, quite frankly, we believe TIS provides the highest degree of reliability, integration, performance and value in the industry.

But don't take our word for it. We invite you to personally compare TIS with what our competitors are offering. Then you'll understand why the words "Excellence In Software Technology" fit so well under our name.

To Learn Even More About the TIS Family of Integrated Products, Call Or Write For Our Brochure: "THE NEW CINCOM: WHAT EVERY INFORMED SOFTWARE BUYER SHOULD KNOW."

Hospital's flexible accounting tool a healthy asset

PHILADELPHIA — The teaching hospital at Thomas Jefferson University here is happy that in 1981 it chose a general ledger software package for its flexibility, because changes in the government's Medicare reimbursement formula will now require updated software.

The Health Care Financing Administration of the U.S. Department of Health and Human Services changed its Medicare reimbursement plans as of July 1984. Thomas Jefferson University plans to merge its financial software with a cost accounting software package to form an integrated accounting system.

The changes were needed to respond to the new Medicare reimbursement plan, in which all illnesses and treatment patterns have been classified into diagnosis relation groups with a fixed price for treating each patient. Medicare reimburses hospitals for the allotted expenses, but if the hospital exceeds the fixed price, it must cover the remaining costs on its own.

"For Thomas Jefferson University, this means we must achieve reimbursements from Medicare with a minimum of disruption to our hospital's budget," said Erik Ostergaard, associate controller at the hospital.

With an annual operating budget of more than $300 million, Thomas Jefferson University functions as a business as well as a hospital and a university. In addition to maintaining a private medical college and supplying health care services, Thomas Jefferson University accounts for 450 grants from sponsors and operates three student housing facilities as well as a building for office rentals.

Prior to buying the general ledger program from Software International Corp. in 1981, the hospital was summarizing payroll, accounts payable and inventory manually. "It was very ineffective because it was not detailed enough or accurate enough to provide the reports we needed for management and accounting," Ostergaard said.

The university considered general ledger packages from 12 vendors at first, according to Patricia Iberer, project manager at Thomas Jefferson. The 12 vendors were narrowed down to six, which were invited in to make presentations. From those, Software International's package was chosen for its on-line capabilities as well as its flexibility, Iberer said. The hospital's data center runs an IBM 3083 and 3033 on the MVS operating system. Iberer said packages from IBM were not considered.

Visited user site

Ostergaard said the hospital staff's visit to a Software International user site was also a decisive factor in the move to purchase the Software International general ledger. "We were impressed that a user at that site had only been operating the software for three months and was already using it successfully. For an accounting department with almost no computer experience, that was important."

He added, "We wanted a software package that could handle our wide range of accounting functions — from project and research accounting to encumbrance and cost accounting." Iberer said, "The primary objective was to find a way to provide management with timely and accurate reports that would be useful to all levels of management." The software can generate reports on balance sheets, income statements and various management analyses.

Minor problems were experienced when the package was first installed. "Nothing's perfect," Iberer said. But Software International responded well in correcting the problems, she said.

Reports will now become more detailed to meet diagnosis relation group requirements, Ostergaard said. "Now we will have to assume the risk for differences between our cost for providing a service and the fixed price," he said.

IEEE selects next president

NEW YORK — The Institute of Electrical and Electronics Engineers, Inc. (IEEE) has elected Dr. Bruno O. Weinschel as president of the institute.

Weinschel, president and chief engineer of Weinschel Engineering Co. of Gaithersburg, Md., will serve as IEEE president-elect during 1985 and will assume the title of president in 1986.

Current IEEE President Dr. Richard J. Gowen, president of Dakota State College in Madison, S.D., will be replaced as IEEE president in the coming year by Charles A. Eldon, manager of capital equipment for Hewlett-Packard Co. in Palo Alto, Calif.

Merlin G. Smith, technical assistant to the vice-president of logic and memory at the IBM T. J. Watson Research Center in Yorktown Heights, N.Y., was elected IEEE executive vice-president for 1986.

The IEEE is located at 345 E. 47th St., New York, N.Y. 10017.

"How I helped my DP department reach for greater productivity."

"I'VE FOUND A WAY TO IMPROVE PRODUCTIVITY AROUND HERE."
"IT'S THESE DEVELOPMENT CENTER SOFTWARE TOOLS FROM HONEYWELL."
"THEY'RE HELPING MY ENTIRE STAFF BE MORE PRODUCTIVE."
"BECAUSE THEY CAN MAKE ALMOST ANY DP JOB A LOT EASIER AND FASTER."
"AND THAT'S REALLY CUTTING INTO OUR APPLICATIONS BACKLOG."
"NOT TO MENTION OUR COST OF CREATING AND MAINTAINING INFORMATION."
"SO NOW IMPROVED PRODUCTIVITY IS WITHIN EVERYONE'S REACH."

Introducing Development Center tools from Honeywell.

For data processing departments that want to improve productivity, Honeywell has the answer. Development Center software tools.

These GCOS 8 tools can reduce applications backlog, improve data base management, and optimize staff and equipment resources. And that's bound to help reduce the cost of producing and maintaining information.

Reduces applications backlog and improves resource control.

Development Center tools like SYSTEM-80* and Syntax Directed Editor can reduce backlog by facilitating the design, prototyping, development, testing, and maintenance of COBOL applications. Specialized tools like the Personal Computing Facility and Personal Data Query provide new development methods that allow novice programmers to do some tasks that usually require the attention of senior programmers.

Development Center tools like the Performance Analysis Reporting System and the Software Disk Cache Buffer feature software advancements to keep your Honeywell large system running at optimal levels and to allow you to respond more quickly to the demands of your organization.

In short, Development Center tools enable data processing departments to accomplish more, in less time, while giving better control of corporate data bases.

Why not call to find out how you can put tools for better productivity within the reach of everyone in your DP department. Call toll-free 800-328-5111, extension 2726. In Minnesota, call collect 1-612-870-2142, extension 2726.

Another Big Idea from Honeywell Large Systems.

Look to Honeywell Large Systems for solutions to information management problems and for products ranging from powerful computers to comprehensive networking capabilities.

Together, we can find the answers.

Honeywell

OUTDRAW THE COMPETITION FOR ONLY $500

With DFDdraw you can expand your IBM PC-compatible terminal's capabilities by drawing and editing Data Flow Diagrams, using an automated template of all data flow diagrams graphics symbols and comprehensive diagram manipulation features.

DFDdraw features include scaling and sizing for changing diagram dimensions, and pan and zoom for easy editing and viewing. DFDdraw simultaneously moves data flows and text. Hardcopy support includes the Epson FX80 or FX100, and the Hewlett-Packard desk plotters.

The DFDdraw system operates on an IBM PC, XT or AT having at least 256K memory, with standard IBM color monitor and color graphics monitor adaptor. Compatible products are also supported.

DFDdraw's most impressive feature is its price—just $500.

So expand your PC. Order DFDdraw today.

To see what DFDdraw can do before you buy, a demonstration disk is available for $15. Send check or money order to McDonnell Douglas Automation Company, Dept. K277, Box 516, St. Louis, Missouri 63166. Or ask us to bill you.

You can also order by calling us at 1-800-325-1087. In Canada, call (314) 233-8997.

"The computer is down."

It is ironic that when we become dependent on computers, we are at their mercy. As more and more companies go on line, the industry reliability standard of 98.5% becomes unacceptable because it means your computer is liable to go down once every two weeks, on a statistical average.

So, if you are a broker, banker, manufacturer, or businessman who relies on your computer more and more, take note: Stratus Computers are designed not to fail; not once every two weeks, or once every 200 weeks, or once every 2,000 weeks!

Debunking The Myth That All Fault Tolerant Computers Cost More.

It is a common and reasonable assumption that because there is redundancy (extra programming, or extra components) in fault tolerant computers, that makes them cost more. Where the redundancy is in expensive software, this is true. But Stratus has hardware-based fault tolerance that takes advantage of the extraordinary advances in chip technology. The result – price drops. The fact of the matter is, our hardware redundancy adds a mere fraction to our cost, and absolutely nothing to your purchase price. What's more, in overall price/performance comparisons against the top computer names, including IBM, DEC, and Hewlett Packard, Stratus was at the front of the pack, despite the fact that it included fault tolerance, while the others didn't.

	STRATUS XA400	IBM 4381	HP 3000 68	DEC VAX-11/782
RELATIVE PERFORMANCE*	125	100	64	109
PRICE	$446,350	$707,897	$437,754	$656,889
PRICE PERFORMANCE	$ 3,571	$ 7,079	$ 6,840	$ 5,999

Relative Price Performance Index
**Computerworld, August 20, 1984*

All systems are comparably configured with identical amounts of memory, disk space, and communication lines. But, only the Stratus price includes fault tolerance.

Why Stratus May Be The Best Computer For The Times, For The Money.

Considering its showing in overall price/performance comparisons against the most successful computers, Stratus must be considered. And when you take into account the added efficiency and security of fault tolerance, and the fact that it is the world's most powerful fault tolerant transaction processing computer, Stratus truly becomes impossible to ignore. In the 1980's Stratus simply is the right computer, at the right price. For information, contact your local Stratus sales office, or call Keith Johnson in Massachusetts at (617) 460-2188, or toll-free at 1-800-752-4826.

Stratus®
CONTINUOUS PROCESSING™

Now that the world relies on computers it needs a computer it can rely on.

Series is here. Spread the word.

In 1980, IBM introduced the Displaywriter System. Today, it's become the best-selling stand-alone text processor in the world. One reason for this success is the Displaywriter's function-rich software.

If you're looking for software like that, but working on an IBM personal computer, you don't have to look any further. Because the IBM DisplayWrite Series is here.

And it will put many of the features and capabilities of a dedicated word processor to work for you when you're writing.

It runs in the family.

You'll find two word processing programs in this series: There's DisplayWrite 1, for IBM personal computers—including PC*jr*. And DisplayWrite 2, with added functions for your PC, PC/XT or *Portable* PC.

You'll also find DisplayWrite Legal, a dictionary of about 16,000 words that a lawyer might need to check.

And you'll find DisplayComm, which lets your IBM PC send and receive text to and from other IBM PCs. If you're writing at the office, this program could also let you send text to an IBM Displaywriter down the hall. (From there, it could be sent on to an IBM host computer for distribution.)

Some words on high function.

The DisplayWrite word processing programs give you the time-saving features you'd expect from IBM. Justified margins, centered lines and pagination, for example. You'll even have prompts and messages to help guide you along.

But there are also some features in DisplayWrite 2 you might not expect. Like easy column formatting, four-function math capability *plus* a spelling checker based on a dictionary of about 100,000 words.

Yet the biggest surprise of all may be the price.* DisplayWrite 1, $95. DisplayWrite 2, $299. DisplayWrite Legal, $165. DisplayComm, $375.

Where you can find all four.

Get more information about the IBM DisplayWrite Series at your authorized IBM Personal Computer dealer or IBM Product Center. To find one near you, call 800-447-4700. In Alaska or Hawaii, 800-447-0890.

Stop there first and get the last word.

Personal Computer Software

EDITORIAL

Say good-bye to Hollywood

As the Orwellian year of 1984 speeds to its conclusion, it is interesting to reflect upon the barrage of general media coverage to which we were all subjected 12 months ago.

Countless social critics set about to remind us that Big Brother is alive and well. To many of them, the computer was the manifold expression of Big Brother — all leering, much too all knowing.

Actually, the seeds of distrust of our poor, dumb computing machines have been sown in the gardens of the masses for years. Ask any number of people for the greatest symbol of evil in Stanley Kubrick's 1968 classic *2001*, and most will answer HAL, the nefarious system that conspired to kill the astronauts.

But that was 16 years ago, and even the general public now knows a computer only does what it's told, right? So then, what accounts for the box office success of last year's movie 'classic' *War Games*, in which a mainframe called Wopr (as in whopper) — even more dangerous than HAL — was triggered by a phone call into a rampage that nearly precipitated a thermonuclear war. Now that's entertainment. But the admonitions of the social critics generally focused on more serious topics and abuses, namely the great threats to our cherished constitutional rights of privacy posed by the mass computerization of personal records that begin at the moment of birth of every native-born American. In this sense, too, the public has been fed a lot of conflicting information from the general media.

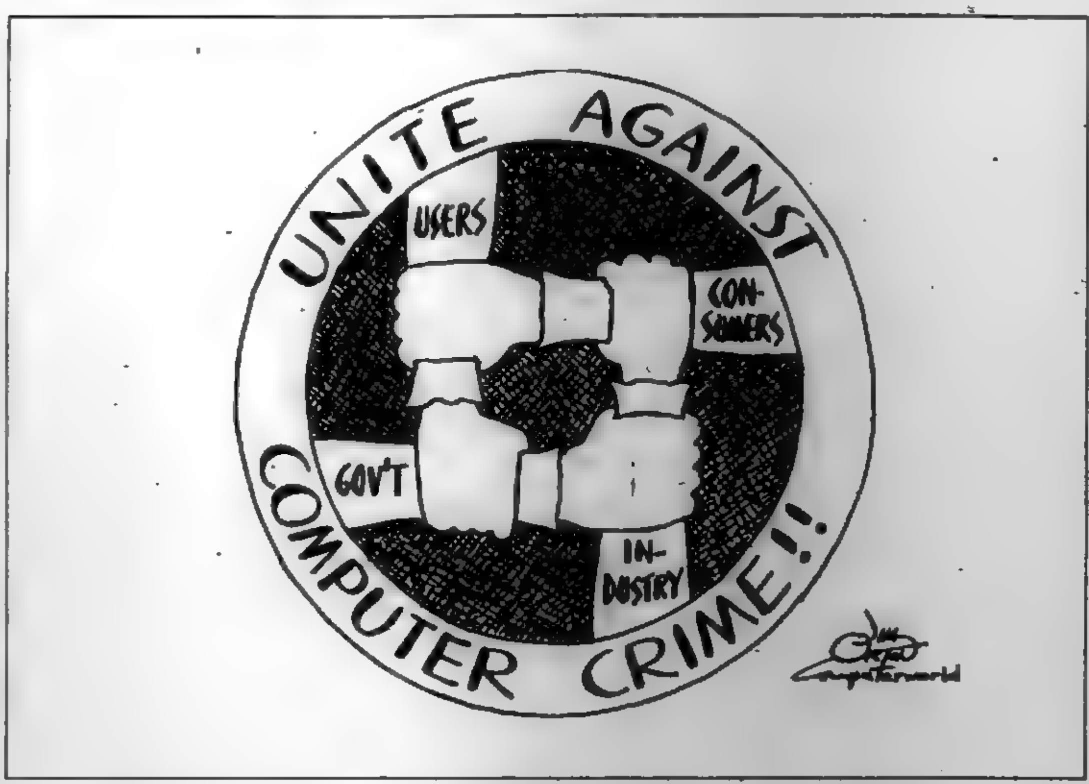
For example, most taxpayers want the government to spend their tax dollars prudently, and that includes dispensing transfer or welfare payments only to those entitled by law to get them. In the past 10 years, mass computerization and computerized cross-matching of various personnel employment records by the U.S. Department of Health and Human Services has enabled the government to cut welfare fraud by as much as 75% by some estimates and has likely greatly curtailed the temptation to defraud.

The same can be said for the computerization of criminal investigations. Early last month, a simple computer cross check of Connecticut drivers' license files by Massachusetts State Police enabled Federal Bureau of Investigation agents to locate and arrest a group of long-wanted, suspected terrorists in Ohio [CW, Nov. 26]. Indeed, the modern day embodiment of Big Brother is ubiquitous, just as Orwell said. But that doesn't necessarily spell trouble, except to those who look for it.

The point here is that, while the price of our civil liberties is eternal vigilance, the track record of mass computerization of personal records has, to this point, been pretty good.

It can be argued that there were a lot more abuses of civil rights by government agencies in the 1960s — abuses not aided by mass computerization — when various government bureaus sought information every which way but loose on suspected subversives, including civil rights and antiwar activists. Those governmental abuses gave birth to the Freedom of Information Act, whereby Americans are entitled to be told most information the government has on them, computerized or not.

Computerworld, and certainly the media at large, will continue to scrutinize carefully the evolution of mass computerization within the government, with a watchful eye toward whether they are building adequate security against abuse into their systems. In the meantime, we'd all do well to take a lesson from recent history, Hollywood notwithstanding.



LETTER

Kudos for Cobol-80

How wonderful to finally see comments of those who have had actual experience with the new Cobol-80 language as reported in "DEC users get head start implementing Cobol-80" [CW, Nov. 19]. After years of persistent criticism and fears of Cobol-80's negative impact overshadowing its positive impact, we can begin to understand the frustrations of many in the international Cobol community (particularly outside the U.S.) over the delayed new Cobol language.

It is clear that the data processing community has been denied this productivity-improving Cobol-80 language for too long. It is time to expeditiously finish all procedural matters required to release the official new American National Standard Cobol language and to pay attention to the new advances in the Cobol language that are waiting in the wings. These advances of which I speak are not futuristic Cobol features that are solving hypothetical problems of tomorrow; they are features that have been under consideration for some years and solve problems we have today.

Few things in this world are perfect. Cobol-80 is no exception (nor is any programming language that I know of). Even with its imperfections, however, Cobol-80 represents a vast improvement over previous versions of Cobol.

VIEWPOINT

Striking DP hardware/budget balance a delicate task

THE DATA CENTER
John P. Murray

How much information processing hardware is the right amount for a given installation? There is no one correct answer, of course. But, there is a method we can use to develop a rational discussion about the issue with senior management.

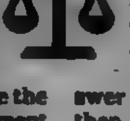
Sooner or later, the issue of too much or too little information processing hardware will arise. Too much hardware represents excessive expense; too little may raise questions about a perceived failure to use information processing technology agressively.

The best approach is to alert senior management to the expense associated with information processing hardware before the subject becomes a critical issue. The appropriate expense for an organization is an issue relative to the expectations of senior management regarding the goal of the information processing function.

Criteria must be developed to determine the correct balance between information processing hardware capacity and expense. One method is to determine what level of overall information processing service senior management considers appropriate. When that has been determined, a plan should be developed that will deliver that level of service.

The approach sounds very straightforward, and it is, which may be the reason why it is not used more often. It may also be the case that although senior management members agree, they do not fully comprehend the implications of the proposed plan.

How then, might the process work?



The first step is to consider the various components that will determine the level of service the information processing department offers to the client community. Some of those components might include adherence to the data center schedule for production of reports, agreement to process all incoming orders within a given amount of time, maintaining a certain level of processing network availability and providing a selected maximum CRT response time across the network.

An additional consideration might be guaranteeing a certain level of systems and programming test terms within a given period of time. Ultimately, this will determine the amount of progress made toward enhancing existing systems or developing new ones.

Perceived needs of organization

The list of potential components can encompass a number of items, depending upon the perceived needs of a particular organization. The mix will be different in every organization, based upon senior management's view of the mission of the information processing department.

The issue of the right amount of hardware to install can be reduced to a question that asks, "What do you want to do; what do you want to pay?" Conversely, the question might be rephrased as, "How much pain are you willing to endure?"

If the information processing department can obtain an answer to the above question, it should then become possible to provide the right amount of hardware.

Yet, even though it seems straightforward, the issue is not quite that simple. To come to some reasonable position, the potential for growth of demand must be taken into consideration.

Pain-sharing exercise

This can be viewed as a pain-sharing exercise between information processing and the rest of the organization. The trick is to judge the growth in the processing demand accurately so that neither the pain of the expense nor the reduced levels of service as the hardware reaches its saturation point are excessive.

This is, of course, a very difficult proposition, particularly if the time span is several years. It is not easy to foresee the items to accommodate; any radical change in the needs of the organization will have a negative impact on the hardware configuration.

An unanticipated increase in the work load will decrease the service level from information processing, indicating that too little hardware is in place. Conversely, a decrease in the anticipated work load may lead to an improvement in the service level response time, but the expense associated with the service level, in terms of too much hardware, may then become an issue.

The concern here is not only with appropriate planning but also with coming to an agreement about the correlation between information processing hardware, the overall information processing service level and the acceptance of the associated expense.

The results will never be perfect, but improvements can be made that may help forestall the difficulty that arises from too much or too little information processing hardware.

The eventual course may be somewhat smoother if information processing staff and senior management can understand and agree on the issues prior to expending funds on hardware or raising clients' expectations relative to their service level.

Murray is director of management information services for Rayovac Corp., Madison, Wis., and author of Management Information Systems as a Corporate Resource, *published by Dow Jones-Irwin.*

Electronic data systems: Public service or federal crime?

HUMAN CONNECTION
Jack Stone

If you want to get your Monday morning juices flowing in a hurry, run through this scenario: A few minutes after your arrival for another tranquil week at the computer center, there is some heavy-handed knocking at the machine room door. You casually mosey over to open it, thinking that the visitor is one of the more irascible users who is missing some output.

What you find instead is a cadre of heavily armed, highly intimidating police whose spokesman flashes a legal looking document past you and loudly proclaims, 'We have a complaint against this business that alleges that it is using computing and communications equipment in the commission of a felony. This is a search warrant that entitles us to enter your premises and confiscate any and all equipment which may be involved in this illegal act. We demand that you shut down power immediately, and show us where the loading ramp is so that we can back up our trucks and haul off your system.'

Impossible, you say? I'm not so sure, particularly in light of what happened to one Tom Tcimpidis of Los Angeles. If you haven't heard about the case, let me brief you on it.

This man is one of hundreds of electronic bulletin board operators who run an informal network for the communication of electronic mail over personal computer systems, something loosely akin to what ham operators do in the amateur radio arena.

Earlier this year, Tcimpidis' home was invaded by Los Angeles police armed with a felony search warrant who preemptively removed some equipment (later returned) after a complaint was issued against him. The complaint alleged that he was involved in the distribution of illegally obtained private information — namely telephone credit card numbers and network access codes — through his system. He later stated that he was unaware that such information was present.

> *The basic issue in the case, one that raises interesting questions for all computer centers that support public data systems is this: To what extent is the system operator responsible for the monitoring and control of the data that flows through the system?*

The basic issue in the case, one that raises interesting questions for all computer centers that support public data systems is this: To what extent is the system operator responsible for the monitoring and control of the data that flows through the system?

One side of the issue is the fact that the system operator is performing a community service (operators typically charge the public little or nothing to sign up, as long as the telephone charges are prepaid). The service is similar to that of a bulletin board at a college social center, and the operator has no control over what the users post. On the other side, one can view the system operator as an information publisher and disseminator, operating under legal constraints, and responsible for ensuring the legality, as well as the accuracy, of data.

I can't help wondering — and perhaps you should as well — to what extent computer centers are vulnerable to such complaints and about the prospect of having a mainframe shipped out the back door while the system manager watches helplessly.

Now I grant that there was a special factor in the Tcimpidis case that encouraged the police to act; the complaint was made by a billion dollar organization (Pacific Telephone company) and the defendant-to-be was a private consultant with few resources to fight back. But there has been a considerable amount of publicity attached to the case that has extended well beyond the computer community and may easily encourage legal action in any issue pertaining to the validity, sanctity and/or legality of records in public data system files.

After all, these days there are powerful activist organizations in the consumer, industrial and government sectors who are willing to take legal action against anyone or any company if they believe their cause is just.

And one case of an ill-begotten charge code number or a substantive error in a credit rating or the release of private information without authorization may be just the spark that sets one of them off crying "Felony!" or "Libel!" or "Invasion of privacy!", with the resulting possibility of equipment confiscation. ‡

Academia must study benefits, costs of high-tech gifts

READER'S PLATFORM
Fritz H. Grupe

The pull of technology has brought many colleges and universities into the computer age. Institutions of higher education are keenly aware that their status as a "computing power" affects, among other things, their ability to attract and retain students and faculty, their capability for managing their resources and their standing in the public mind as an up-to-date place to study.

Grupe is the coordinator for Campus Computing Services at the University of Nevada Reno.

It is not surprising, then, that colleges are aggressive in their pursuit of corporate gifts of computing equipment.

Many high-technology corporations have responded with gifts of equipment and money to support research and teaching. Indeed, many corporate contribution programs have been initiated by the corporations to foster growth in specific developmental areas. Without these gifts, higher education would be much poorer.

Corporations clearly benefit from donations such as these. At times, saleable products are realized that boost sales. Donations in support of research are recognized with federal and state tax credits that are sometimes in excess of the dollar value involved.

Association with a local university beneficially affects the corporation's image. Students who learn on particular brands of computers can establish a brand loyalty that stays with them when they become purchasers of computer equipment in the commercial world. Maintenance contracts will also benefit the donor.

University personnel, tantalized by the very visible support provided by computer companies, look for donated support whenever they can. They must meet the growing demands of students within the constraints of their university's budget.

Despite the symbiotic relationships at play, some issues need to be considered by university and industrial personnel alike.

■ Equity. A major question for the public schools is whether more affluent districts, able to afford large numbers of microcomputers, are providing a better education for their students than is possible for less wealthy districts.

Faculty in less prestigious institutions watch with envy as some universities and colleges that are already exceptionally well supported receive added equipment and gifts.

Breaking the cycle

And these faculty members know they are in a cycle in which poor equipment and facilities make attracting and developing faculty difficult. In turn, students with an interest in computing look elsewhere for an education. How does the cycle get broken?

■ Maintenance and support. Many institutions that find themselves caught in the pressures of a less than booming economy accept whatever computer equipment they can from any source they can obtain it from in the expectation that the equipment will strengthen their educational program. Often it does.

However, administrators and faculty not familiar with such equipment too often overlook the costs implicit in such gifts. They underestimate the maintenance costs that are incurred. They forget to ask about staffing requirements, about facilities that need modification, about power requirements and about additional furnishings needed to make a system fully functional. They may not have the knowledge that enables them to decide whether the equipment really advances them toward their goals.

■ Obsolescence. "Never look a gift horse in the mouth," it is said. But it would be a foolish recipient who accepts and attempts to put into use every computer offered him.

When the school's own money is involved, intricate bidding procedures are usually in place to force the school to determine which bid brings the best product. This is not necessarily so when gifts are involved.

■ Product delivery. Applied research projects have had a continuing, yet uneasy, presence on campus. The "contribution" of equipment with the hook that a deliverable, marketable product is forthcoming bears review. To what extent does the development of marketable products reinforce or detract from the educational goals of the institution? What happens to colleges for which teaching, not research, is of primary importance? Are they locked out again?

The issues noted above are not cited as reasons to forgo the real capacity for industry to aid in research and education on college campuses. However, gift giving and gift receiving are things that require thought and a clear sense of values. An effort needs to be made to assist all colleges and universities to acquire satisfactory instructional computing facilities. ‡

Reactive or resourceful?

Action rather than reaction marks the resourceful and successful manager. As an MIS/DP specialist, you can anticipate the needs of your colleagues and act in your company's best interests by introducing Dow Jones News/Retrieval® into your corporation.

Dow Jones News/Retrieval can be accessed with most standard time-sharing terminals, personal computers or word processors with communications capability. . .or even integrated into your office automation systems.

It's one way to be certain any manager and staff member, in any department, can have the reliable business and financial news, corporate analyses and economic forecasts needed to anticipate and respond quickly to opportunities for growth and profits.

Dow Jones News/Retrieval is a powerful, versatile, time-saving and, above all, extremely easy-to-use information resource that has application at every level of corporate activity. It will give your entire management team an immediately accessible selection of high-quality data bases they can use to solve problems, analyze trends and increase productivity.

Only Dow Jones News/Retrieval provides instant electronic access to *The Wall Street Journal*, *Barron's*, the Dow Jones News Service *and* Dow Jones Current and Historical Quotes that are continuously monitored for accuracy by our staff.

Dow Jones News/Retrieval can even accommodate departmental usage billing if you wish.

Users may also purchase Spreadsheet Link, the Dow Jones Software package that allows you to download data from Dow Jones News/Retrieval into three of the leading spreadsheets: Visicalc®, Lotus™ 1-2-3™ and Multiplan®.

For every action there's a reaction. Call Dow Jones News/Retrieval right now and watch your colleagues applaud a very smart decision.

For full details, call Eric Bradshaw, National Sales Manager, during office hours at (609) 452-2000, Ext. 2678.

BUILT-IN PIN FEED FOR CONTINUOUS FORMS PRINTING
OVER 500 INTERCHANGEABLE DAISY WHEELS AVAILABLE
AUTOMATIC SHEET FEED BUILT IN
SHORT PAPER PATH INCREASES RELIABILITY
COMPATIBLE WITH IBM PC'S, AS WELL AS WITH MANY OTHER MICROCOMPUTERS

The new IBM Wheelprinter: A simpler path to letter quality.

The new IBM Wheelprinter is a personal computer printer with a simplified approach to paper handling.

This new IBM personal printer is the only daisy wheel printer that offers both a built-in sheet feed and pin feed capability. It's the latest example of IBM's expertise in the design and manufacture of reliable paper feeds.

Because it has a paper tray capacity of 100 sheets, large jobs can be printed without reloading. And, at the flip of a switch, you can go from automatic to manual sheet feed.

The Wheelprinter prints quietly on plain paper, letterhead, multi-part forms and even envelopes at up to 25 characters per second. And you can easily attach it to IBM personal computers and to many other microcomputers.

The Wheelprinter is just one example of the more than 70 printer models we build. But they all serve a single purpose: To make your printing as effective as your processing. To give your work the finishing touch.

Contact your IBM marketing representative or call 1 800 IBM-2468, Ext. 90/3W, for the IBM Product Center or authorized IBM dealer nearest you.

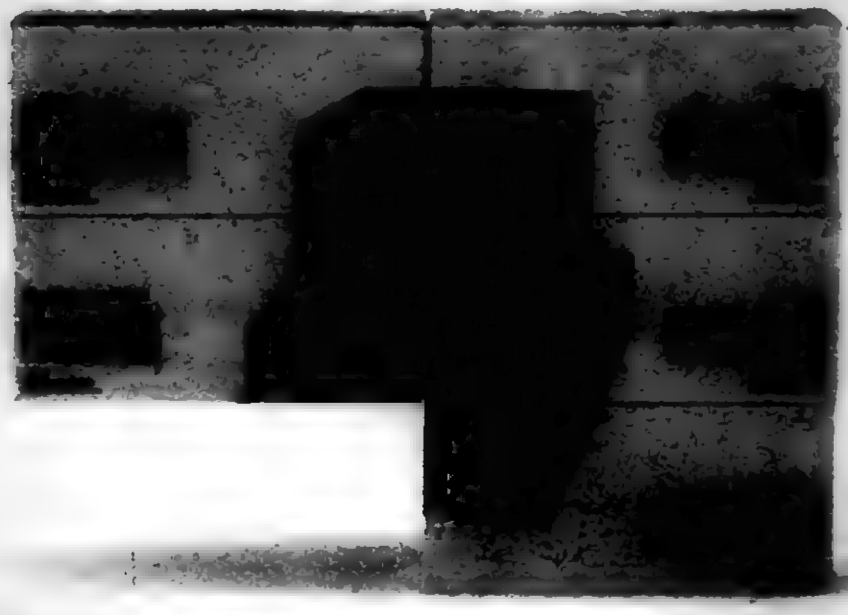
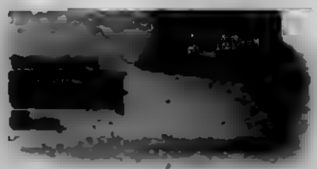
IBM PRINTERS

The Finishing Touch

We have a missing piece for your IBM PC.



Forget IRMA.
Here's IDEAcomm 3278.
The best idea in mainframe communications.



If you're shopping for PC-to-mainframe communications, you'll want to know how the IDEAcomm 3278 stacks up against IRMA.

IRMA has a reputation for being fast. But the IDEAcomm 3278's powerful file transfer moves data faster. Up to 60% faster.* Response time is nearly instantaneous.

Plus, our file transfer is real file transfer. You can spool files from the mainframe to the PC and back again by hitting just one key. One key to send a file, one key to receive a file. Try that with IRMA.

IRMA also has a reputation for being flexible. IDEAcomm 3278 is more flexible. You can specify how to change the 3278's programmable keys to best suit your applications. And our 3279 emulation mode lets you configure colors any way you want. It's up to you. With IRMA, IRMA decides.

The IDEAcomm 3278 also makes life easier for your data processing department. Included in our reference manual is a programmers' section which outlines how to automate functions which previously had to be performed manually.

Other features include:

- 100% compatible with Micro Tempus and Paramin mainframe link packages.
- IDEAcomm 3278 interfaces to IBM 3274 and 3276 controllers.
- Includes TSO and VM/CMS file transfer.
- File transfer sends all text files to the mainframe. HEX files can be sent to the host, then spooled to other users.

Best of all, IDEAcomm 3278 costs less. Only **$995** complete. Including software. There are no hidden charges.

Ask for IDEAcomm 3278 and the entire IDEA family of products at all Computer Depot, Math Box, Amerisource, and Northeast Computer stores, plus selected Computerland, Inacomp, and MicroAge locations. For the name of the IDEA store nearest you, call us at **800-257-5027**.

See why the best IDEA in mainframe communications is the piece you've been missing for your PC.

*In benchmark studies, IDEAcomm 3278 transmission speed on a local mode 3274 was up to 60% faster than IRMA.

Joint venture benefits user

Working with vendor yields better packages

By Paul Gillin
CW Staff

SAN DIEGO — There is an alternative, though little used, to the "make or buy" decision on applications software. One can develop the package in concert with the vendor, exchanging functional expertise with the vendor's technical knowledge.

Milnes (l) and Sherck

CW photo by P. Gillin

That option has worked well for CTS Corp., a diversified manufacturing firm based in Elkhart, Ind. CTS is now installing seven copies of a materials requirements planning (MRP) software package on IBM System/38 computers, each serving a different division of the corporation.

According to Mike Sherck, a programmer/analyst, and Kent Milnes, MIS manager, the experience was not without difficulties, but it did result in an MRP system that fit CTS's needs more closely than one purchased off the shelf. Sherck and Milnes were interviewed at the recent Fall User Conference sponsored by Professional Computer Resources (PCR) of Oak Brook, Ill.

The scarcity of native-code MRP systems for the System/38 prompted CTS to approach PCR, which develops native System/38 software. PCR was thinking about getting into manufacturing, and the combination of the two companies' skills seemed to be a good fit, Milnes said.

The companies were especially careful in drawing up the sales contract, Sherck said. "It was developed in large part in parallel with the design," he said. "We went through requirements definition, functional design and detailed design and signed the contract after the functional design."

The contract provides for CTS to re-

Subschema key in proper use of DBMS

Basic rules maintain independence of data

First of a two-part article

By Mike Ruggera
Special to CW

The worst thing that can happen to a data base management system (DBMS) is to use it as a file access method instead of as a data base. That this happens at all is primarily due to the data base specialist, who is concerned with arranging the data elements in a fashion that reflects the physical world but with reasonable processing efficiency.

He must concentrate on the physical representation of the data, on navigation through the data base segments and on keeping track of the currency of the data at each level in the data base.

On the other hand, the production programmer is concerned with accessing the data elements he needs in an order appropriate for his program. The vehicle to bridge the connection between the data base's physical structure and the programmer's data element needs is the subschema.

The following three basic rules can help provide data independence between data bases and the programs that use them:

- Avoid data base navigation; instead, let the subschema perform any navigation required, and let the programmer work with a flat file representation of the data.
- In record searches, express all search arguments and their keys. Let the DBMS, through the subschema, decide if there are indexes and segment keys that can be used to make the search more efficient.
- Use a DBMS to implement major systems consisting of subsystems; each subsystem has its own subschemas that refer-

IBM offers ISPF for SSX/VSE, enhances VM system version

WHITE PLAINS, N.Y. — IBM has extended the functionality and widened the operating range of its Interactive Systems Productivity Facility (ISPF) with the announcement of an enhanced version of ISPF for the VM operating system and the introduction of an ISPF version for its SSX/VSE operating system.

According to a spokesman, both IBM's base ISPF system and the ISPF/Program Development Facility (PDF) are now available for use with SSX/VSE. In addition, Version 2, Release 1 of ISPF for VM/SP environments was released with what IBM labeled as significant function and usability enhancements in the dialogue management facilities.

The announcements, in conjunction with the release of ISPF for MVS earlier this year, mean that an application developed under ISPF can now be run under any of the three main IBM operating systems in use today — MVS, VM or VSE.

The availability of ISPF for SSX/VSE is said to provide complete cross-system capability for the dialogue manager function of ISPF, which provides control and services to support the processing of interactive applications (dialogues) in different

CGA extends Top Secret package to Cullinet systems

HOLMDEL, N.J. — CGA Software Products Group, Inc. has announced that its Top Secret security software for IBM mainframes has been extended to provide protection for Cullinet Software, Inc. IDMS/DC and IDMS/CICS environments.

According to a spokesman, no modifications to IDMS will be required to install support for the security software. Top Secret IDMS will reportedly operate on any release of IDMS 10.0 and above. All users must identify themselves to the Top Secret security system through a user sign-on.

The IDMS version offers all of the security software's password features, including password masking, minimum password length, suppression of vowels, random generation of passwords, no password option, automatic password expiration and automatic suspension threshold.

The spokesman said IDMS terminal security will include distributed administration, auditor, time-of-day protection, day-of-week restrictions, facilities and source limitations. Users may be specifically excluded from certain IDMS transactions.

All Top Secret on-line administration commands are available in IDMS/DC or CICS region to provide on-line security control and maintenance capabilities on either a centralized or decentralized basis.

The extended version of Top Secret for IDMS is scheduled for release in the second quarter of next year. It will be available on a lease basis with a starting price of $10,900.

CGA Software Products Group is located at 960 Holmdel Road, Holmdel, N.J. 07733.

Ross offers micro link to VAX-11

PALO ALTO, Calif. — Ross Systems, Inc. has introduced an intelligent bridge between microcomputer spreadsheets and Digital Equipment Corp. VAX-11 superminicomputers.

According to a spokesman, Maps/Microlink allows micro-based spreadsheets, such as Lotus Development Corp.'s 1-2-3, to share data with Ross Systems' accounting and decision support applications residing on a VAX-11 supermini.

The bridge is designed to integrate with Maps/Model and Maps/General Ledger (GL), the company's general ledger and financial software.

By using a single command, financial managers reportedly can transfer data from the micro to the applications on the VAX-11. Maps/Microlink allows 1-2-3 spreadsheets to be collected and consolidated in conjunction with Maps/Model, the company's VAX-11-based financial modeling software. In addition, the bridge software provides a direct 1-2-3 data transfer to and from Maps/GL.

Communications modules within the product run independently on the IBM Personal Computer and the VAX-11 to provide error-free, two-way communications between the computers. Maps/Microlink is priced at $10,000.

Ross Systems can be reached at Suite 210, 1860 Embarcadero Road, Palo Alto, Calif. 94303.

Aide-De-Camp available for DEC's VMS

CONCORD, Mass. — Software Maintenance and Development Systems, Inc. (SMDS) has announced that its Aide-De-Camp (ADC) change control and information management system is available for Digital Equipment Corp.'s VMS operating system.

According to a spokesman, the product, which was formerly available only for the AT&T Unix operating system, helps manage software development projects by maintaining software sources and changes to the software in a data base. ADC can manage software written in any language, the spokesman said.

Changes are treated as logical units that can be added to or subtracted from a named base version. New versions can serve as base versions for future developments, the vendor said.

ADC can maintain any number of versions or changes to a project, and a single ADC data base contains all versions of the software being developed along with significant information about the software.

Information includes named entities, code, changes, versions and external documentation and can be accessed on-line or through reports, according to the vendor.

Single-site licenses for ADC start at $5,000. More information is available from SMDS, P.O. Box 555, Concord, Mass. 01742.

Intellect versions introduced

WALTHAM, Mass. — Artificial Intelligence Corp. has introduced two new versions of Intellect, its natural language query system for IBM mainframes.

Intellect/SX reportedly allows nontechnical users to create data dictionaries for building a data base. It is said to offer the same natural language capabilities as Artificial Intelligence's Intellect product and to use AI capabilities to retrieve data from IBM mainframe data bases.

Intellect Focus reportedly consists of Intellect, for data retrieval using conversational English, and Information Builders, Inc.'s Focus, a fourth-generation language and data base management system that includes presentation graphics, report formatting, statistical analysis and financial modeling capabilities.

Intellect/SX and Intellect Focus are each priced at $30,000 and run on the IBM 30 series, 4300 series and 370 series mainframes.

Artificial Intelligence is located at 100 Fifth Ave., Waltham, Mass. 02254.

SYSTEMS SOFTWARE

APPLIED INFORMATION DEVELOPMENT, INC.

JCLWTR Release 3.0

Applied Information Development, Inc. has introduced Release 3.0 of its JCLWTR software package, which is said to include enhancements that improve its on-line search capabilities and eliminate the product's dependence on catalog operation.

JCLWTR manages the storage and retrieval of system output listings from production jobs so that there is no need to print them, according to the vendor. The software is said to also scan the output to identify errors and abnormal endings so the operation staff does not have to review each job.

Release 3.0 of JCLWTR is

See SOFTWARE page 68

And we can prove it.

We put our 1200 bps modem to the critical test. We stacked it up against Hayes, one of the "smart" modems.

The Performance

Hundreds of phone calls were carefully monitored, analyzed, and verified by telecommunications engineers. After exhaustive testing, the results were conclusive: when line quality was good, our modem was one and a half times more accurate than Hayes. When line quality was bad, however, our modem was up to ten times more accurate. And when line quality was really bad, their error rate shot up to as much as 100 times ours! The errors ranged from misspelled words to incorrect numbers. The implications for modem business are understandably serious.

The Reliability

Then we went inside and did a component count. The final score: Hayes 252, us 155. This can be viewed two ways: Either Hayes has a 60% better chance of developing part failure, or our modem has a 60% better chance of delivering higher reliability.

Eliminating operator risk is as important to us as eliminating errors. With our modem there's virtually no risk of electrical damage because there are no internal switches to deal with. General DataComm modems automatically select all call parameters.

The Company

The General DataComm intelligent modem is the newest product of a company that has been designing data communication systems for 15 years. A company whose customer list is a "Who's Who" of international business. Most of the Bell operating companies, and other telephone companies in the U.S. and Canada. Major banks. Brokerage firms. And many of the Fortune "500."

We build multiplexers, modems, local area and digital network products, and the most complete networking systems on the market. Now we're applying the technology that won the respect of big business and Bell to the personal computer market. With a line of 300 and 1200 bps modems and our own communications software.

The General DataComm modem. We put it to the critical test. Now it's ready for the ultimate test. Yours. To find the dealer nearest you, contact the Personal Computer Products Dept., (203) 574-1118. General DataComm, Middlebury, CT 06762-1299.

said to enhance the IBM TSO/SPF interface, including data selection in the search for system outputs, new Help and tutorial screens, logic-to-bypass screens when needed and enhanced error analysis routines. It also provides the capability to bypass catalog operations, making it compatible with installations that use IBM's integrated catalog facility, the vendor said.

JCLWTR, priced at $12,000, operates on IBM MVS operating systems. Release 3.0 is available to current JCLWTR license holders under the vendor's extended warranty agreement.

Applied Information Development, 823 Commerce Drive, Oak Brook, Ill. 60521.

CGA SOFTWARE PRODUCTS GROUP, INC.

Version 7.5, Single Image Software

CGA Software Products Group, Inc. has announced Version 7.5 of its Single Image Software (SIS) for IBM OS installations.

According to a spokesman, the SIS software features three multiple systems products that enable multi-CPU users to run their operations without the problems of reserve lockouts, lack of data integrity, accidental tape erasures or multiple console management. The software is designed to simplify operations and increase productivity by adding a series of SIS options that automate various tasks.

Enhancements to SIS include an Automatic Requeue feature. When two jobs require the same data set, SIS prevents simultaneous access and loss of data integrity. The option automatically requeues the waiting job until the conflict is resolved and then resubmits the job without operator intervention. For tape management, Version 7.5 features an Automatic Reply option. If all tape and mountable disk devices are in use, the option will either cancel the waiting job automatically or keep it waiting, depending on site standards and the nature of the job.

Also added is the Shorthand Commands feature, which simplifies the operator command entry to reduce the chance of error, the vendor said. Version 7.5 of the SIS software is priced between $9,000 and $15,000.

CGA Software Products Group, 960 Holmdel Road, Holmdel, N.J. 07733.

IBM

Personal Banking Machine Availability Management-Batch Reporting system

IBM has announced the Personal Banking Machine Availability Management-Batch Reporting (PBMAM-BR) software system, designed to help banks and other financial institutions monitor the performance of IBM 4730 networks and identify potential problems with a specific 4730 for corrective action.

According to a spokesman, the system gathers data about each 4730 terminal and creates two types of reports: network and transaction. Network reports list all the 4730s in a network along with data to help financial institutions compare the performance of each terminal with the others in the network. Workstation reports provide detailed information about the performance of a specific terminal, the vendor said.

The PBMAM-BR system runs in batch mode under IBM's VSE or OS/VS and creates reports by processing 4730 events and command responses collected by the 4730 Personal Banking Machine Network Monitor. PBMAM-BR is available for a one-time charge of $14,000 and a monthly charge of $930.

IBM, Information Systems Group, National Accounts Division, 1133 Westchester Ave., White Plains, N.Y. 10604.

ADVANCED TECHNOLOGY INTERNATIONAL, INC.

Maple; Super PDL

Advanced Technology International, Inc., a subsidiary of Advanced Technology Ltd. of Israel, has announced that it will begin marketing two software products in the U.S. for IBM and Digital Equipment Corp. systems.

Maple is a protocol that is said to link IBM mainframes with IBM Personal Computers or compatible systems. Maple is said to be open-ended on both the mainframe and personal computer sides. The end user is shielded from viewing IBM CICS screens, the vendor said.

Prices are $15,000 for IBM OS or DOS versions for each mainframe and range between $650 and $950 for the Personal Computer.

Super PDL is an interactive design program for DEC's VAX minicomputers under the VMS operating system that is said to feature a structured design language, design analysis facility and full documentation capability.

Super PDL is priced at $15,000 per DEC VAX.

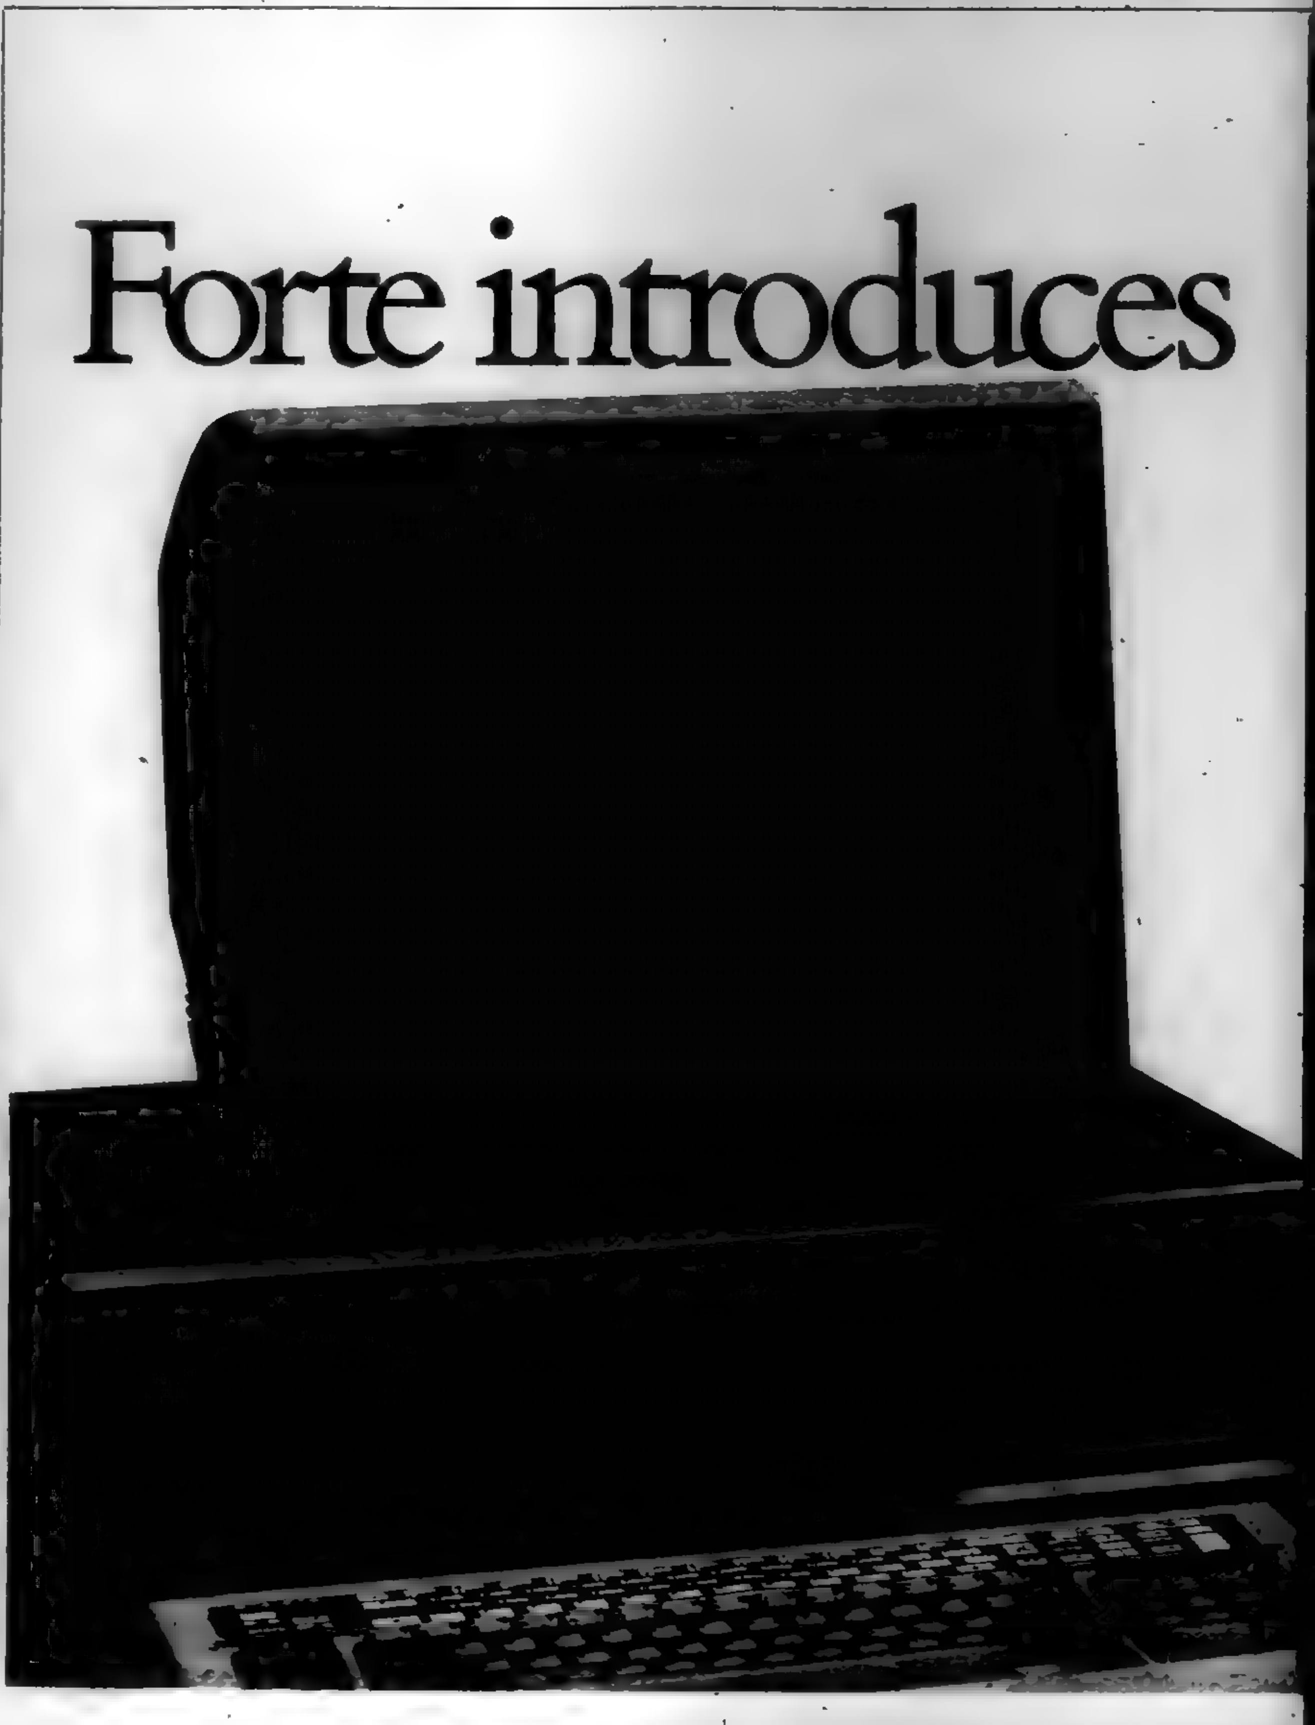
Advanced Technology International, 135 W. 41st St., New York, N.Y. 10036.

THE SYSTEMS CENTER

Network Datamover MVS Release 3.0

The Systems Center has announced Release 3.0 of its Network Datamover MVS, a network application designed to distribute applications, corporate data and documents. The distribution is carried out between an IBM mainframe under MVS and a microcomputer, between two mainframes and between a mainframe and a minicomputer.

The release features checkpoint restart for data transmission and mainframe support for LU2-type connections, including cluster controllers, IBM 3270 data stream and coaxi-



SOFTWARE & SERVICES

al connections.

The datastream support on Network Datamover is said to allow mainframes to accommodate coaxial cluster controller connections.

Network Datamover MVS Release 3.0 will be available Jan. 1 and costs $30,000 for the first CPU at a site and $20,000 per additional CPU.

Systems Center, 2988 Campus Drive, San Mateo, Calif. 94403.

INTERACTIVE SOFTWARE SYSTEMS, INC.
ADT-Reportwriter

Interactive Software Systems, Inc. has introduced an interactive report generator for use on Digital Equipment Corp. VAX-11 superminicomputers.

According to the company, ADT-Reportwriter uses a Menu/Help approach at every level and uses its own data dictionary.

It reportedly provides users with single or multiple input data files, data record selection, new field calculation, multilevel breaks, subtotals and report totals.

Licenses for the ADT-Reportwriter range from $1,250 to $5,000, depending on system configuration, according to the vendor.

Interactive Software Systems, P.O. Box 27466, Denver, Colo. 80227.

FORTH, INC.
Polyforth/32

Forth, Inc. announced its Polyforth/32 operating system, designed for use with Motorola, Inc. 68000 CPUs and Mizar, Inc.'s Mizar 9000 computer.

The multitasking, multiuser operating system has no limit on users' partition size or number of users, the vendor said. Up to 2G bytes of memory and 2G bytes of disk may be directly accessed.

The Polyforth/32 system features more than 100K bytes of available user program space in the 128K-byte configuration, according to the vendor.

The operating system, Forth compiler, 68K-byte assembler, editor and programming aids are all resident in 16K bytes without overlays, the vendor said.

The Forth nucleus is delivered in programmable read-only memory, with source, electives and utilities on disk.

The price for a single license is [illegible].

Forth, 2309 Pacific Coast Highway, Hermosa Beach, Calif. 90254.

SIGNAL TECHNOLOGY, INC.
Pacs Plus

Signal Technology, Inc. has introduced a process accounting and charge-back system for Digital Equipment Corp. VAX-11 machines using the VMS operating system.

According to the company, Pacs Plus tracks hardware and software use and includes a data management interface that can be used to access a mini data base of system resources information. The system reportedly allows a user to edit, retrieve and examine system resources data via on-screen forms and simple keypad commands. It is said to include a general report writer that allows multilevel reporting on all system resources. There are up to 30 system variables, including node, account, project, user session and image, the company said.

Base price of the system is $3,900.

Signal Technology, 5951 Encina Road, Goleta, Calif. 93117.

INFORMATION SYSTEMS CONSULTANTS, INC.
Soloman Release 3.1; MRS

Information Systems Consultants, Inc. has announced Release 3.1 of its Source and Object Library On-Line Manager (Soloman) for use on large-scale Honeywell, Inc. computer systems that use both Honeywell's Gcos III and/or Gcos 8 operating systems.

The release provides functions such as automatic regeneration of transaction processing routine (TPR) libraries when an individual TPR is changed; recompilation of programs to include new versions of copy libraries; interfaces to other systems, especially those used with Honeywell Manufacturing System software; and on-line Help and manual facilities.

The company also released an update for the Soloman Management Reporting System (MRS). MRS provides reporting functions for DP auditors, managers and operations staff on the status of each production file resident in the library. The user can create reports with different contents depending upon selection criteria specified.

The price of Soloman Release 3.1 is $10,000, and the price of MRS is [illegible].

Information Systems Consultants, 7816 N. 19th Ave., Phoenix, Ariz. [illegible]

PRODUCTIVITY AIDS

SCHONFELD & ASSOCIATES, INC.
Ingot

Schonfeld & Associates, Inc. has announced Version 3.0 of its Ingot fourth-generation language and decision support system. Ingot runs on Data General Corp.'s MV series computers under DG's AOS/VS; Digital Equipment Corp.'s VAX-11 machines under DEC's VMS; any Apollo Computer, Inc. computer that runs under Apollo's Aegis or AT&T's Unix operating systems; any Prime Computer, Inc. machine under Prime's Primos; Hewlett-Packard Co.'s HP 9000 series under AT&T's Unix; and Tandem Computer, Inc.'s Nonstop machines running under Tandem's B00 operating system.

The package uses English commands for calendar management. All

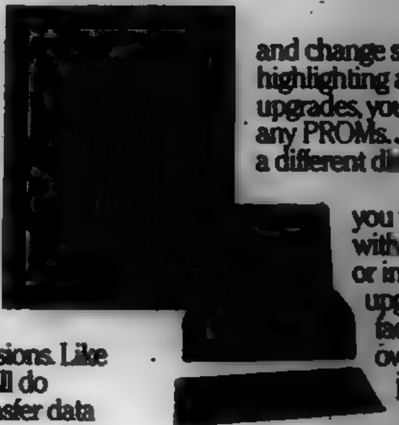
the smarter ~~desk~~ disk



You've read about the IBM® 3270 PC. Now there's a technology that gives your existing PCs and compatibles IBM 3270 PC emulation. And more.

You can run all this concurrently: an IBM DOS session, mainframe sessions with four different hosts, and two note-pad sessions. Like IBM's machine, your PCs will do windows. You can even transfer data between windows. Save your work on diskettes. Then upload to the mainframe.

Unlike IBM's system, the Forte 3270PC™ emulator is entirely soft-loaded from diskette. With high-powered, menu-driven software. You can reconfigure the keyboard and change screen colors or highlighting at will. For upgrades, you don't replace any PROMs. Just plunk in a different diskette.

With Forte, you won't get stuck with an obsolete or impossible-to-upgrade product. In fact, if you already own Forte PJ,™ just call your local distributor for a fast upgrade to the Forte 3270PC on disk.

We're faster than IBM, too. With local screen capture. Transfer of whole files instead of single screens.

So before investing in a "smart desk," see how Forte can transform the PCs you already have into something even smarter.

mathematical, statistical and financial functions of Ingot can be used in conjunction with project management.

The price of Ingot licenses range from $8,000 to $60,000, depending upon CPU size.

Schonfeld & Associates, 2550 Crawford Ave., Evanston, Ill. 60201.

SIGNAL TECHNOLOGY, INC.

Smartstar Interface to RDB

Signal Technology, Inc. has announced that its Smartstar application development and data management software has been enhanced to perform as a user interface to Digital Equipment Corp.'s RDB relational data base management system.

According to a spokesman, Smartstar offers nontechnical users a videoactive, no-programming interface for application development and data management. Command functions are assigned to a DEC VT series keypad and tied to specific video capabilities; and a user can key in design and processing commands with the keypad and see a direct real-time response on the CRT screen.

The spokesman said the videoactive attribute is said to apply across all three of Smartstar's user components — applications design and development, data updating and retrieval and general reporting. The software reportedly also supports complex applications development for more technical users and programmers. It also supports the DEC VAX/VMS RMS relational query processing facility. Smartstar is an integrated interface for both RDB and RMS.

The extended version of Smartstar for RDB will be available in January at a price between $9,800 and $19,800.

Signal Technology, 5951 Encina Road, Goleta, Calif. 93117.

APPLICATION PACKAGES

BURROUGHS CORP.

Burroughs Distribution Partner

Burroughs Corp. has announced the Burroughs Distribution Partner (BDP), a software system for manufacturers, distributors and wholesalers.

According to the company, BDP is developed with the Logic and Information Network Compiler fourth-generation language. The product runs on Burroughs B1000, B5000, B6000 and B7000 series systems as well as the A series of mainframes. BDP modules use on-line documentation and Help screens, the company said.

The BDP Base Module includes order entry, inventory control, accounts receivable, inquiry and management reporting. Price for the Base Module on the B1000 series is $22,500. Prices can range up to $50,000 for the B7000 series.

Burroughs, Burroughs Place, Detroit, Mich. 48232.

GELCO PAYMENT SYSTEMS, INC.

Travel Expense Control System

Gelco Payment Systems, Inc. has announced software that monitors and accounts for travel costs. The Travel Expense Control System (Tecs) runs on IBM IMS or CICS systems and Wang Laboratories, Inc. VS systems. A batch version is available for hardware with Ansi Cobol, and an IBM Personal Computer-compatible version is also available.

Tecs verifies the accuracy of employee expense reports and bills, analyzes expense transactions from all money or billing sources, compares expenditures with the company's budget and reports on a weekly, monthly, quarterly and/or year-to-date basis.

The vendor said the price of the software is $225/mo to lease the Personal Computer version or $9,000 to buy it; $35,000 for the CICS version; $55,000 for the IMS version; $25,000 for the Wang VS either batch or on-line versions; and $25,000 for other batch systems.

Gelco Payment Systems, P.O. Box 16069, Minneapolis, Minn. 55416.

ABSOLUT SOFTWARE

Software for 3B2 and 3B5

Absolut Software has announced that it has ported its order entry/inventory/accounting software to run under AT&T's 3B2 and 3B5 computers.

According to a spokesman, the C language package is designed for use by distributors, wholesalers, chain retailers, direct response marketers and distributing manufacturers.

The single-user version of the order entry/inventory/accounting software licenses for $2,995, and a version supporting up to four users licenses for $4,995.

Absolut Software, 2001 Beacon St., Boston, Mass. 02146.

DATA I/O CORP.

Abel 1.1

Data I/O Corp. has announced a computer-assisted estimating software tool that reportedly develops logic designs for programmable logic devices.

According to the company, Abel 1.1 supports more than 95 logic devices, including Monolithic Memories, Inc.'s Megapal and logic devices from Cypress Semiconductor and VLSI Technology, Inc.

The product is available for the IBM Personal Computer with the PC-DOS operating system and the Digital Equipment Corp. VAX-11 computer with VMS or AT&T's Unix operating system.

See PACKS page 74

Imagine.™ Expand the way you think about information retrieval. It's the only query and reporting system built for CICS with: Entirely menu-driven architecture • Integrated on-line and batch query and report writing • Comprehensive system-managed control of CPU resources and data security. • Integration of production files into an on-line informational data base. For more information, call (617) 547-8050.

MULTIPLICATIONS ✳

UCCEL has selected Imagine for use with its application software products. Multiplications has offices in the following locations: Cambridge, MA. Atlanta, GA. New York, NY. Oakland, CA. Rochester, NY. Toronto, CN.

DIGITAL BRINGS VAX TO LARGE SCALE COMPUTING.

INTRODUCING THE VAX 8600 SYSTEM.

Your applications can do exactly what you want them to on Digital's new VAX™ 8600 computer system. They can expand.

User population can increase. Scientific problems can become more complex. Transaction volume can intensify. And data storage requirements can grow exponentially.

The VAX 8600 system gives you unprecedented capacity for applications growth. It's the first of a new generation of large scale VAX processors, with memory expansion to 32 million bytes and online storage up to 160 billion bytes. Yet the VAX 8600 system maintains complete architectural compatibility with every other VAX processor – including the new desktop-size MicroVAX I™ system. Every system in the family gives you the same VMS™ operating system software, with the same set of proven development tools, communications options and data management facilities. Quite simply, there's not another computer family in the world that can match the growth path you get with Digital's VAX systems.

YOU GET UP TO 4.2 TIMES THE PERFORMANCE.

We've engineered the VAX 8600 system to deliver more than four times the processing speed and performance that the industry-standard VAX-11/780 system is known for. We've achieved this performance increase through the use of ECL gate array technology and several advanced engineering techniques.

Specifically, the VAX 8600 system incorporates four-stage pipelined processing that increases throughput by allowing the system to execute one instruction while it simultaneously decodes a second, generates an address for a third and fetches a fourth. There's also a floating point accelerator that speeds floating point operations.

Even with all its power, the VAX 8600 system conserves floor space. The CPU fits into the same size cabinet as the VAX-11/780 CPU. Power consumption and air conditioning requirements are similar, too.

VAX 8600 SYSTEM HIGHLIGHTS

MAXIMUM MAIN MEMORY SIZE 32 Million Bytes
MAXIMUM STORAGE CAPACITY 160 Billion Bytes
MAXIMUM COMMUNICATIONS LINES 512 plus Local and Wide Area Networks
PROGRAM ADDRESS CAPACITY 4 Billion Bytes
BUS SUPPORT Availability includes 6 UNIBUS,™ 2 SBI, 4 DR780, 3 CI and 4 MASSBUS™
PHYSICAL DIMENSIONS 60½" x 73½" x 30"
POWER CONSUMPTION 6.5 KW (10 KVA)
AIR CONDITIONING REQUIREMENTS 22,200 BTU/hr
ACOUSTIC LEVEL 60 dBA

© Digital Equipment Corporation. Digital, the Digital logo, VAX, MicroVAX I, VMS, VAXcluster, ALL-IN-1, DATATRIEVE, DECnet, UNIBUS and MASSBUS are trademarks of Digital Equipment Corporation.

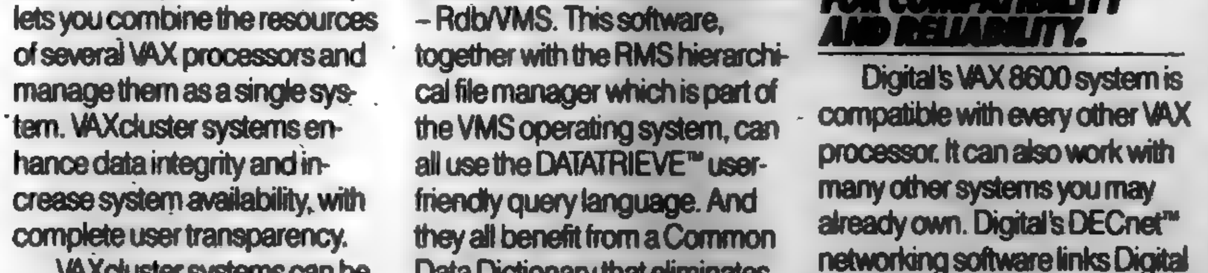
VAXCLUSTERS LET YOU SHARE THE WEALTH OF VAX RESOURCES.

The large-scale storage and multi-user support you get with Digital's VAX 8600 system can be increased many times over with VAXcluster™ systems. This multiprocessing capability, which is unique in the industry, lets you combine the resources of several VAX processors and manage them as a single system. VAXcluster systems enhance data integrity and increase system availability, with complete user transparency.



The expanding VAX family

VAXcluster systems can be configured with up to 16 processors and storage servers in a variety of combinations. You can boost computing power in an existing VAXcluster configuration by adding a VAX 8600 system. Or you can build a new VAXcluster using a VAX 8600 system as a compute server.

The wealth of resources available to all VAX systems includes VAX Information Architecture, which offers a CODASYL-compliant database – VAX DBMS; and a relational database – Rdb/VMS. This software, together with the RMS hierarchical file manager which is part of the VMS operating system, can all use the DATATRIEVE™ user-friendly query language. And they all benefit from a Common Data Dictionary that eliminates data redundancy and permits record-, field- and user-specific security controls. What's more, you can automate your office with Digital's ALL-IN-1™ software.

All VAX systems give you a complete set of program debuggers, editors, and screen management utilities to work with. You have a choice of 15 programming languages. And you can combine different languages in a single application through the common calling standard.

ENGINEERED FOR COMPATIBILITY AND RELIABILITY.

Digital's VAX 8600 system is compatible with every other VAX processor. It can also work with many other systems you may already own. Digital's DECnet™ networking software links Digital systems, users, files and applications over a variety of communication devices, such as Ethernet, leased lines, standard telephone lines, and public wide area networks. We offer protocols for communication with non-Digital environments, such as the SNA™ gateway.

The VAX 8600 system is engineered for the reliability your large-scale applications require. Self-diagnostic intelligence simplifies maintenance.

BEST ENGINEERED MEANS ENGINEERED TO A PLAN.

The VAX 8600 system, like all Digital hardware and software products, is engineered to conform to an overall computing strategy. This means our systems are engineered to work together easily and expand economically. Only Digital provides you with a single, integrated computing strategy direct from desktop to data center.

For a brochure on the VAX 8600 system, contact your local Digital sales office. Or call 1-800-DIGITAL, ext. 280.

THE BEST ENGINEERED COMPUTERS IN THE WORLD.

digital™

PACKS

from page 70

Abel 1.1 includes an equations-reduction algorithm and is said to minimize reduction time by using separate algorithms optimized for each type of device. During processing, Abel reportedly reduces design equations pin-by-pin and identifies each equation on the CRT by the output pin it represents.

Abel 1.1 for the IBM Personal Computer sells for $895; versions on the DEC VAX-11 sell for $2,495.

Data I/O, 10525 Willows Road N.E., Redmond, Wash. 98073.

META SOFTWARE, INC.

DRG Optimizer

Meta Software, Inc. has announced a software package said to help hospitals meet the record-keeping and reporting requirements of the U.S. government's Medicare Diagnostic Related Groupings (DRG) reimbursement program.

The DRG Optimizer is an expansion of the vendor's DRG Grouper, DRG Reanalyzer and Ad Hoc Report Generator software. The DRG programs are part of the vendor's Charms hospital software packages for managing medical records and utilization review.

The DRG Optimizer is said to assist in the computation of DRG by validating the assignment on the basis of the clinical data in the patient's record. It computes the DRG rating for each discharge diagnosis recorded as if it were the principal diagnosis, the vendor said.

DRG Optimizer runs on IBM 370, 4300 and 30 series mainframes in IBM's OS, DOS and PCS operating environments. DRG Optimizer costs $8,000 when purchased with the vendor's Charms records package.

Meta Software, 1860 Broadway, New York, N.Y. 10023.

LANIER BUSINESS PRODUCTS, INC.

Textway

Lanier Business Products, Inc. has announced Textway, a product that formats files created on a Lanier No-Problem or Typemaster word processor for use on Lanier's Business Processor.

The product converts embedded commands, format settings and data so that the user does not have to clean up or retype any information, Lanier said. The product reportedly works at a speed of 400 word/min.

Textway is menu-driven and consists of a hard-disk interface board and a utility program.

It costs $695, the vendor said.

Lanier Business Products, 1700 Chantilly Drive N.E., Atlanta, Ga. 30324.

CIE SYSTEMS, INC.

Payroll/680

A payroll accounting software package said to provide multicompany and multistate accounting capabilities, as well as reports and listings that produce an audit trail, has been introduced by CIE Systems, Inc.

Payroll/680 is available for the CIE 680 family of multiuser business computer systems. According to the company, the package includes a year-end closing program, federal, state and local tax table maintenance, union file maintenance and reports and tax deposit history. Workers' compensation calculations, check histories, adjustment programs, sloan transaction flexible data entry and user-defined categories are also included, the company said.

The product is priced at [illegible].

Cie Systems, 2515 McCabe Way, Irvine, Calif. 92713.

DIGITAL EQUIPMENT CORP.

VAX Decrad V2.0

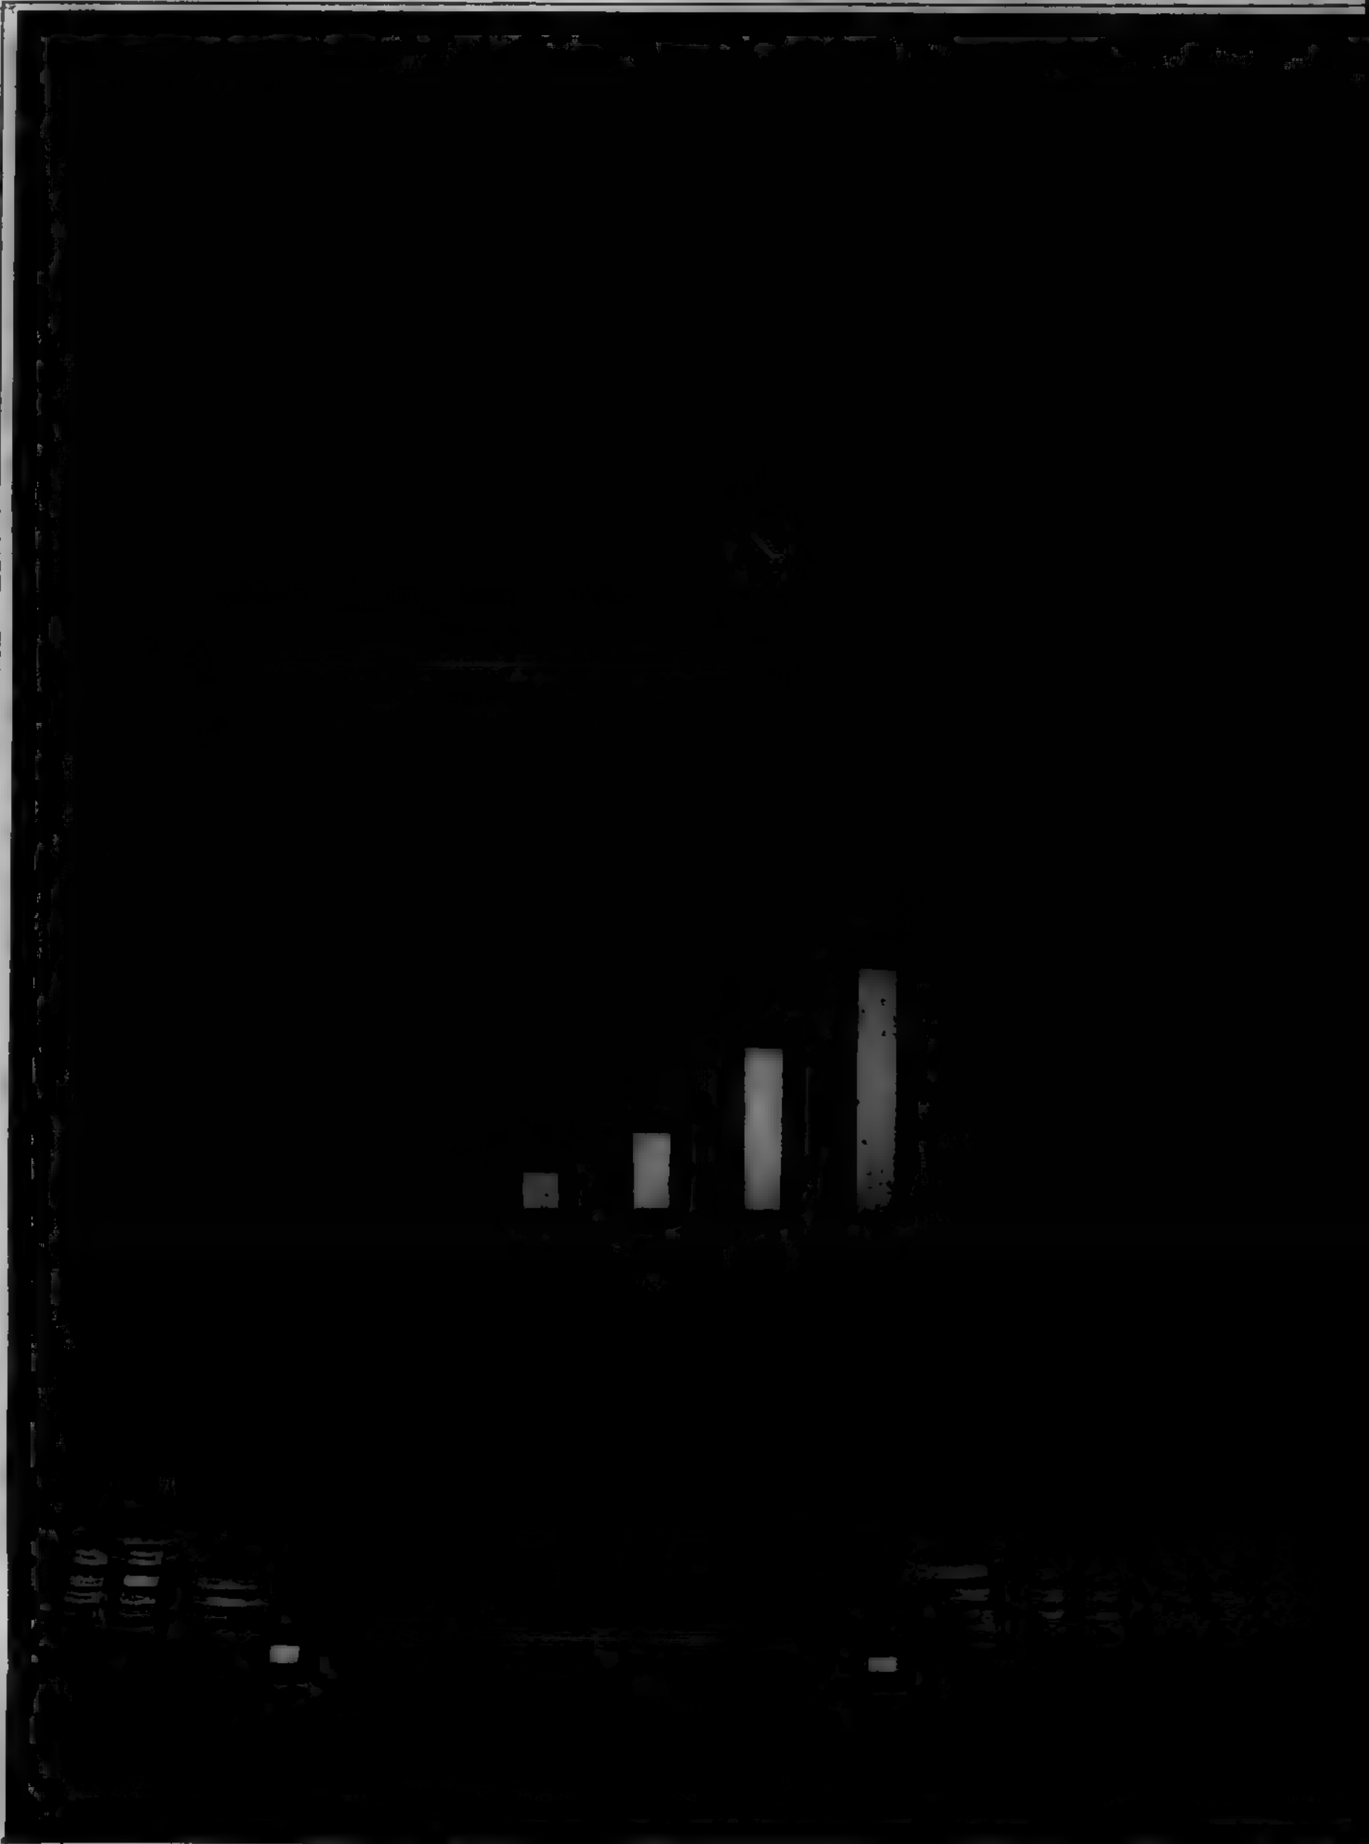
Digital Equipment Corp.'s Medical Systems Group has announced enhancements for its VAX Decrad application package for use in hospital radiology departments.

VAX Decrad V2.0, which runs on DEC VAX-11/750, VAX-11/780 and VAX-11/785 processors, reportedly was developed with the assistance of the Radiology Information System Consortium, a nationwide group of medical centers. It may stand alone or network with other information systems.

Features are said to include increased functionality and throughput in transcription, scheduling, patient tracking, film library management and management report production.

Scheduled for delivery in March, it costs $36,500.

DEC, Maynard, Mass. 01754.



SOFTWARE & SERVICES

DATA BASE MANAGEMENT SYSTEMS

SPERRY CORP.
Voice Response Support Package

Sperry Corp. has announced the Voice Response Support Package, which is said to provide telephone access to Sperry mainframe data bases.

According to a company spokesman, the Voice Response Support Package is an enhancement to Sperry's Voice Information Processing System (Vips). It integrates Vips with a Sperry Series 1100 host computer and allows users to interrogate a Series 1100 data base, guided by voice prompts, through any Touch-Tone telephone. The system also allows for concurrent execution of multiple applications.

Under the Series 1100 host, a user-defined vocabulary of words, phrases or prompts can be created to guide the telephone user in retrieving or entering data to the host-based applications. The controlling applications programs are based on Sperry's Mapper system. The Voice Response Support Package supports such applications as on-line order entry, data collection, information retrieval, status reporting and information inquiry and updating, according to a vendor spokesman.

The spokesman said the package acts as an intelligent controller for the telephones and the telephone network, making the Touch-Tone telephone a controlled-access data terminal linked to the host computer. The voice vocabulary needed to guide the user is created and stored using the telephone, and a command language instructs the user to make inquiries or enter information from the telephone.

Pricing for Vips with the Voice Response Support Package ranges from $134,000 to $217,000, depending on configuration, Sperry said.

Sperry, Computer Systems, P.O. Box 500, Blue Bell, Pa. 19424.

BUSINESS CONTROLS CORP.
Report Builders-1

Builders Controls Corp. (BBC) has announced a report writer that produces either Basic or Cobol compiler code.

Report Builders-1 (RB-1), for Digital Equipment Corp. VAX-11 systems, works will all standard RMS files. It reportedly uses the common data dictionary for data definitions.

The vendor said using the RB-1 menu system and the on-line Help facility, the user can create a report specification file for each report. Report name, author, users, control breaks, subtotal fields, sort fields, page and line breaks can all reportedly be included in the report.

The RB-1 is priced at $4,500 for the first system and $3,000 for each additional system.

Business Controls, 3-7 W. First St., Clifton, N.J. 07011.

SOFTSYSTEMS, INC.
Journal Processing Utility

Softsystems, Inc. has introduced its Journal Processing Utility (JPU), a tool for recovering lost data for IBM Vsam files and IBM DL/1 data bases operating within an IBM CICS environment under either IBM's DOS/VSE, OS/VS1 or MVS operating systems on IBM mainframe computers.

JPU provides forward recovery capabilities by allowing the user to select all or specific Vsam file and/or DL/1 data bases to be processed against the CICS journal. JPU also has backout, print, copy and user exit capabilities.

A permanent license for DOS sites is $3,900 and $4,500 for OS sites. The price includes one year of maintenance.

Softsystems, 311 Mallick Tower, One Summit Ave., Fort Worth, Texas 76102.

See PACKS page 78

YOUR TWO FAVORITE COMPUTERS NOW HAVE ONE THING IN COMMON. YOUR FAVORITE GRAPHICS TERMINAL.

Introducing the new CX4100 Series of Tektronix high performance, yet affordable color graphics terminals.
Now you can have the Tektronix PLOT 10 graphics command set you've always wanted while you use the host of your choice, IBM or DEC. Just by typing a single "switch-host" command.

Tek's CX4106, CX4107 and CX4109 are all directly plug compatible with both host environments. One coax to a standard IBM 3270 controller is all you need or one RS-232 connection to your DEC system.

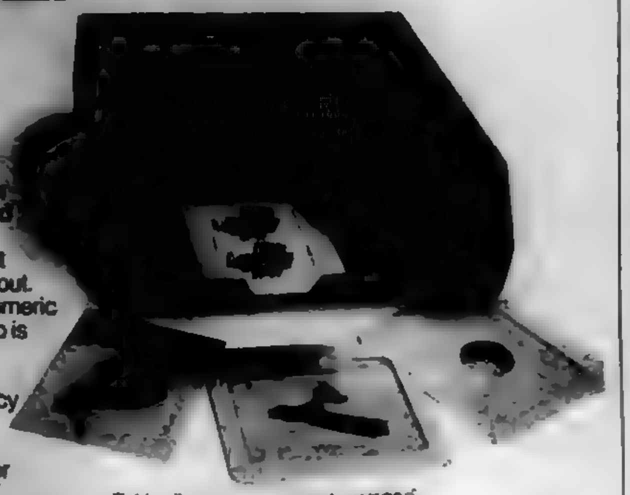
To make your use of existing or new graphics data fast and friendly, the CX Series comes with an IBM-style keyboard. Plus Tek enhancements: individual key programmability, user-selectable ten-key pad, and joydisk for quick cursor movement and graphics input.

Screen output will be just as familiar as keyboard layout. 32-line 3278/3279 alphanumeric emulation is built in. And so is full support for the 4957 Graphics Tablet, plus full hard copy and transparency output to a full range of Tektronix Color Graphics Copiers and the 4510 Color Graphics Rasterizer.

IBM flexibility is matched by DEC flexibility. In RS-232 mode, the terminals can run all VT100 applications through the extended ANSI X3.64 command set. In addition to the host interface port that transmits data at rates up to 38.4k baud, CX terminals are provided with two additional RS-232 ports and a Centronics-style parallel port for connecting a wide range of peripherals.

But best of all you'll have great graphics and full software compatibility. The CX Series will accept many existing programs written for 4010, 4100, and 4110 Series terminals. And they're fully compatible with PLOT 10 IGL, GKS, and TCS programs as well as with popular third-party software such as SAS/GRAPH,® ISSCO's DISSPLA® and TELL-A-GRAF® and Precision Visuals' DI-3000®.

Familiar 3270 IBM-style alphanumeric output is fully emulated on all CX4100 terminals. Enhanced IBM-style keyboard is part of the package.



Tek's all new precision ink jet 4692 color copier produces very high quality full color transparencies or hard copy.

That's software investment protection—matched by technology protection. CX terminals feature a 60 Hz non-interlaced display with 4096 x 4096 addressability displayed in a 640 x 480 matrix.

16 colors, eight line styles, 11 marker types, rapid area fill, scalable/rotatable text, complete segment support, true zoom and pan, and separate dialog area. It's all there with the full PLOT 10 command set.

So don't wait. Set the best of three worlds on one desk: TEK, DEC, and IBM. Contact your local representative today for information on the CX4100 Series. Call 1-800-547-1512. In Oregon 1-800-452-1877.

SIR, INC.
SIR/DBMS

SIR, Inc. has announced that its SIR/DBMS relational data base management system is now available for Hewlett-Packard Co.'s HP9000 Series 500 machines running under HP's HP-UX operating system.

The package was specifically designed for analytical uses in business, industry, science and research, according to the vendor.

Included in the package is SQL+, the company's expansion version of IBM's SQL.

Also included in the package are the Forms feature for interactive screen-oriented data entry and query by forms; Host, an interface for access to one or more SIR/DBMS data bases; Help, for on-line documentation and user assistance; and Graph, for production of business and scientific graphics.

The price of the SIR/DBMS package for HP 9000 Series 500 machines is $6,000 for a single-user initial annual license fee.

SIR, Suite 400, 820 Davis St., Evanston, Ill. 60201.

DIGITAL INFORMATION SYSTEMS CORP.
Version 4, DBL for Unix

Digital Information Systems Corp. has announced that its Data Business Language (DBL) now runs under the AT&T Unix operating system.

According to the company, Version 4 of DBL has the ability to chain to non-DBL programs and to interface to subroutings written in other languages.

Multikey IBM Isam files, full screen programming functions, a fixed-point decimal data type and a symbolic debugger are all said to speed development time.

Pricing starts at $449 for personal computers and ranges up to $3,549 for superminicomputers, according to the vendor.

Digital Information Systems, Suite 340, 3336 Bradshaw Road, Sacramento, Calif. 95827.

AMDAHL CORP.
Ingres under Unix on Amdahl mainframes

Amdahl Corp. has announced that it has entered into a joint marketing agreement with Relational Technology, Inc. to offer that company's Ingres relational data base management system under UTS, Amdahl's version of the AT&T Unix operating system.

Relational Technology has an early installation program for the UTS-based Ingres system under way and is said to view its customer base, which includes more than 700 installations, as prospective users of the new software.

According to the agreement, Relational Technology will license the program directly.

A supported license for the product is priced at $90,000.

Amdahl, 1250 E. Arques Ave., Sunnyvale, Calif.

LANGUAGES

COMPLETE SOFTWARE, INC.
Cdebug

A menu-driven C language source-level debugger that operates independently of its host has been introduced by Complete Software, Inc.

Cdebug is an interactive tool that symbolically debugs source code routines written in C, according to the vendor.

The program uses its own preprocessor to incorporate symbol tables into source code and a runtime library to compile and link programs.

The software operates on Digital Equipment Corp.'s VMS operating systems, Bell Laboratories' Unix 4.1, 4.2,

III and V versions and IBM's PC-DOS for the IBM Personal Computer, according to the vendor.

The company said the product examines and modifies all C elements by name and types.

Depending on the number of users, Cdebug ranges in price from $300 for personal computers to $3,000 for a VAX-11/780.

Complete Software, 60 Aberdeen Ave., Cambridge, Mass. [illegible]

IBM
VS Fortran Interactive Debug Release 2

IBM has announced Release 2 of its interactive debugger for VS Fortran running on IBM mainframes. Enhancements include:

■ Debugging of VS Fortran programs compiled by VS Fortran Release 2 or later in IBM's MVS/XA environment. When linked to the Release 4 VS Fortran library, debugging of 31-bit addressing mode is supported.

■ Debugging of programs compiled with the VS Fortran Release 4 compiler except those compiled with the reentrant option.

■ Added task-type Help panels to aid in debugging 31-bit addressing mode programs under MVS/XA.

Initial licensing is $1,800 with a $300 monthly charge.

IBM, National Accounts Division, 1133 Westchester Ave., White Plains, N.Y. 10604.

PERKIN-ELMER CORP.
Sibol

Perkin-Elmer Corp. has announced that the Software Ireland, Ltd. Sibol language system is now available for its Everyware family of computer systems, ranging from the desktop PE 7350 supermicrocomputer to the Series 3200 family of superminicomputers. The package runs with PE's Xelos and Unisoft Corp.'s Uniplus+ operating systems.

Sibol is an implementation of Digital Equipment Corp.'s Dibol business-oriented language.

The Sibol compiler allows Dibol programs to be written on PE's hardware systems, as well as allowing existing applications written in Dibol to be recompiled and run on the PE systems.

The Sibol system consists of a compiler, a linker, a runtime interpreter and a library of external utility subroutines.

Sibol licenses start at [illegible] for the PE 7350 and $1,250 for the entry-level PE Model [illegible]. Full documentation is included.

Perkin-Elmer, Data Systems Group, Two Crescent Place, Oceanport, N.J. 07757.

ADVANCED COMPUTER TECHNIQUES CORP.
Fortran 77 compiler

Advanced Computer Techniques Corp. has announced a version of its Fortran 77 compiler that targets the MIL-STD-1750A chip set.

Programs are written on Digital Equipment Corp.'s VAX-11 series computers under Digital Equipment Corp.'s VMS operating system to run on MIL-STD-1750A chip-set-embedded computers. This version of the compiler will generate the MIL-STD-1750A assembler code output.

The package is consistent with the Ansi X3.9-1978 for full Fortran 77, according to the vendor.

The military standard extensions to the Fortran 77 language, MIL-STD-1753, are also featured in the product.

Machine-independent optimization techniques for code generation are said to include invariant code movement, strength reductions, constant folding and common subexpression elimination.

The price of the source code is $170,000.

Advanced Computer Techniques, 16 E. 32nd St., New York, N.Y. 10016.

COMPUTER THOUGHT CORP.
Ada Interpreter/Debugger

Computer Thought Corp. has announced an Ada language interpreter and interactive, source-level debugger. The software is available for Symbolics Corp.'s Symbolics 3600 series workstation in Symbolics' Zetalisp environment.

The interpreter supports all major Ada language features and is fully integrated with the interactive debugger, which allows programmers to diagnose errors at the source-code level. Both interpreter and debugger use windowing techniques and support the use of a mouse to select commands.

The license fee for the Ada

See TALK page 78

Cityscape in alternative resources: solar, wind and geothermal technologies are applied to maximize energy efficiency. Solar panels form windprops which rotate parallel to desert surface; temperatures of air and water supplies are maintained by flows through buried conduits.

If You Can Imagine It...

CYBER Can Run It.

It's true. The uses of the CYBER 180 computers are limited only by the breadth of the human imagination.

So the question is not whether you could benefit from this kind of computer power. The question is, does a CYBER fit your budget?

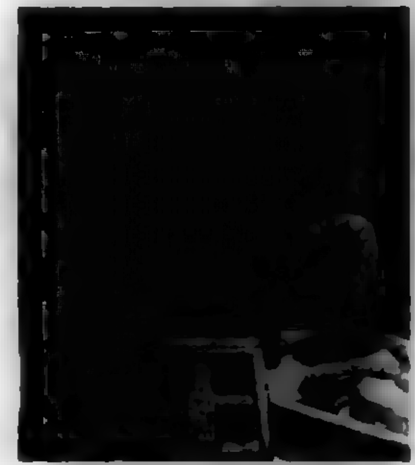
To this question, Control Data has developed an astonishing new answer.

Introducing the Supermini 810.
The new 64-bit word Supermini 810 does everything you'd expect of a supermini system. But that is only the beginning.

In terms of all the usual criteria — performance, application portability, compatible growth potential, ease of installation and the increasingly sensitive matter of security — the Supermini 810 represents some very impressive technology.

But the most impressive aspect of this new supermini computer system may be its price.

The Incredible $250,000 system.
Actually, a Supermini 810 could



run less than $250,000.

And, we're not talking some bare-bones unit either. We're talking about a state-of-the-art supermini system, complete with operating software and peripherals, up and running. The more you learn about the system the better that price looks.

CYBER power begins where other systems reach their limits.
You can look at the Supermini 810 as the ultimate supermini computer system. It's exciting enough in those terms. But it is *only* the entry point to a compatible family of systems that boasts a 1-to-60 performance range. That is the largest compatible growth path in the industry.

So when you look beyond today and see the potential to accommodate growth, you can really appreciate the significance of this new system.

With the CYBER 180 performance range you can, if you wish, enter fully into supercomputing. You can expand your computing power as your future needs warrant. And you can do it in an orderly fashion, and at manageable costs, without massive operational disruptions.

You can start with a call or letter.
We hope what you've learned so far will stimulate you to explore the possibilities presented by the Supermini 810. You can do that by calling 1-800-253-4004 ext. 146. (In Minnesota, 1-612-921-4400 ext. 146). Or by writing Computer Systems Marketing, Control Data Corporation, P.O. Box 0 HQW09G, Minneapolis, MN 55440.

Interpreter/Debugger is priced at $15,000 for the first workstation and $10,000 for up to four workstations. Subsequent workstations cost $7,500.

Computer Thought, Suite 125, 1721 W. Plano Pkwy., Plano, Texas 75075.

UNISOFT SYSTEM CORP.

Pascal-2 for Uniplus+

Unisoft System Corp. has announced the Pascal-2 compiler, developed by Oregon Software, Inc. for Unisoft's Uniplus+ Unix-based operating system.

According to a spokesman, the Pascal-2 compiler performs eight types of code optimization. Pascal-2 programs can call subroutines written in C or Assembler, allowing the user to take advantage of existing Uniplus+ software.

Pascal-2's language extensions provide input and output handling and can gain access to low-level operations.

Program development tools include a high-level interactive debugger, an execution profiler and other utilities to aid in coding and development. The compiler is said to support all capabilities of standard Pascal and conforms to level one of the international Pascal standard.

Pascal-2 for Uniplus+ systems is licensed for $1,000.

Unisoft, 739 Auston Way, Berkeley, Calif. 94710.

POTOMAC SYSTEMS RESOURCES, INC.

RM Cobol for Masscomp systems

Potomac Systems Resources, Inc. has announced the availability of Ryan-McFarland Corp.'s RM/Cobol for Masscomp's line of real-time, multiuser microcomputers.

The language is available from Potomac Systems Resources at a cost of $3,750 per user.

Potomac Systems Resources, P.O. Box 3510, Reston, Va. 22091.

REMOTE COMPUTING SERVICES

GENERAL ELECTRIC INFORMATION SERVICES CO.

Softran

General Electric Information Services Co. (Geisco) has introduced Softran, an electronic software management and distribution system, to its time-sharing network.

Softran reportedly can be used to coordinate and control the distribution of personal computer software in an organization. It reportedly can also be used to distribute proprietary software including programs, files, messages and spreadsheet templates.

Distribution under Softran reportedly can either be limited to the U.S. only or worldwide. It is said to consist of a module for system administrators on the Geisco Mark III Service and an end-user module for each micro.

Softran is priced at $100 for the end-user package, plus a charge for each download, typically $6 to $24.

Geisco, 401 N. Washington St., Rockville, Md. 20850.

ADP NETWORK SERVICES, INC.

Savings and Loan data base update

ADP Network Services, Inc. has released an updated version of its Savings and Loan data base, containing balance sheet and income statement information on more than 4,000 U.S. savings

Oh, the joys of being a DP professional.

Every job has its share of problems. But DP professionals seem to be blessed with more than their fair share.

We can help you do away with some of the grief and hassle. Things such as JCL errors, production foul-ups, and network breakdowns.

Our JCLCHECK™ program spells "relief" from JCL problems. It catches all JCL errors, gives you complete, on-line error validation and concise diagnostics. Plus full documentation on a job stream, or entire production system, suitable for insertion in the run book.

Our ProDict™ program is the instant remedy for production headaches. It's an automatic, on-line dictionary of all your production jobs, data sets and programs, that can save you the hours, days, even weeks now spent manually searching listings. It makes possible better scheduling, reliable contingency planning, and faster disaster recovery.

Our NetCheck™ program takes the pain out of taking control of your CICS network. It allows you to organize your network in manageable groups with easy-to-remember names. It enables you to bring up the network in just minutes. And troubleshoot problems in seconds. So things get done faster and easier, with you in control of your network, instead of vice versa.

For all the details on JCLCHECK, ProDict, and NetCheck send the coupon, or call us at (408) 554-8121. We'll deliver fast, long-lasting relief.

and loan associations. The service is primarily accessed through ADP's Screen software but can be accessed through ADP's Datapath or through Fortran subroutines.

The update reflects recent, major modifications to the format and frequency in which savings and loan associations are required to report their financial positions to the Federal Home Loan Bank Board, the vendor said. Quarterly information is now provided.

The price of the system is transaction-based and depends on resources used and length of time on the system.

ADP Network Services, 175 Jackson Plaza, Ann Arbor, Mich. 48106.

BANK EARNINGS INTERNATIONAL, INC. INNERLINE, INC.

Peer Group

Bank Earnings International, Inc. (BEI) and Innerline, Inc. have announced the Peer Group, an on-line, IBM Personal Computer-based service that allows banks anonymously to compare their performance to that of competing institutions.

Using BEI's Executive Manager Personal Computer Software, a spokesman said, the Peer Group allows banks, bank holding companies and savings and loan companies to upload financial and operational data to Innerline's on-line financial information network. Innerline will compile client data and create a variety of comparative financial reports that will then be downloaded to customer personal computers.

The Peer Group is said to provide nationwide analysis capabilities based on asset size, branching, location and in-house data processing vs. non-DP institutions. Financial and operational data will be available on-line within 48 hours of receipt.

A one-year subscription to the Peer Group service is currently priced at $3,600, with discounts available for multiple subscriptions, a spokesman said.

Innerline, 95 W. Algonquin Road, Arlington Heights, Ill. 60005.

COMPUTER SCIENCES CORP.

Medi-Cal claims service

Computer Sciences Corp. (CSC) has announced that medical billing firms and health care providers in California can now enter and validate Medi-Cal claims data on magnetic tape into the automated claims processing system that CSC operates for the California Department of Health Services.

CSC can process claims submitted on magnetic computer tape on the same day they are received and send more than 90% of them on to the State Controller's Office for payment on the following Monday, CSC said.

Computer Sciences, 650 N. Sepulveda Blvd., El Segundo, Calif. 90245.

ON-LINE DATA BASES

VM SYSTEMS GROUP, INC.

Electronic bulletin board

VM Systems Group, Inc. has introduced an electronic bulletin board for users of systems operating under IBM's VM operating system.

V/Net can be accessed by users with a 300 bit/sec Ascii terminal, a telephone and a V/Net user identification number supplied by the vendor. The bulletin board will enable users to exchange information about VM installations and products.

V/Net is free, except for the cost of the phone call, to all VM sites, those planning to install VM and to other persons or institutions upon request, the vendor said.

VM Systems Group, Suite 515, 2300 S. Ninth St., Arlington, Va. 22204.

PREDICASTS, INC.

Promt data base for ADP Network Services

Predicasts, Inc. has announced that its Promt data base is now available through ADP Network Services.

Promt contains abstracts of more than 400,000 business-related articles published since 1960 from more than 1,600 publications.

Information from Promt can now be used in conjunction with numeric, financial and economic data available through ADP, Predicasts said.

Promt incorporates ADP's Screen, a text searching software package through which users search, retrieve and display information from ADP's data bases. By entering key word qualifiers, users can identify the companies, industries, markets or technologies they want to study.

The service is accessible through ADP's Datapath, a data access software package used with the IBM Personal Computer and Lotus Development Corp.'s 1-2-3. With Datapath, users can download information from Promt to Personal Computers.

ADP charges $15 for a 300 bit/sec connection or $30 for a 1,200 bit/sec connection. In addition, customers are charged $225 for each abstract accessed.

Predicasts, 11001 Cedar Ave., Cleveland, Ohio 44106.

INNERLINE, INC.

Saving Institution Performance Index

Innerline, Inc. has introduced Saving Institution Performance Index, an on-line service that gives savings and loan institutions the opportunity to compare and evaluate their own and their peers' financial performances.

The service compares information on all insured institutions nationwide based on balance sheets, income statement data and 71 performance ratios derived from call reports filed with the Federal Home Loan Bank System, according to the vendor.

Executives can use the index to determine market share or examine possible merger and acquisition candidates, the vendor said. The index reportedly provides four report formats, including the Individual Institution Report and the Comparative Report.

Connect-time costs range from $30 for 20 minutes each month to $300 for 515 minutes a month. The surcharge ranges in price from 54 cents to 60 cents per minute.

Innerline, 95 W. Algonquin Road, Arlington Heights, Ill. 60005.

SST, INC.

Handshake Colt

SST, Inc. has unveiled a software package that reportedly provides a direct link between AT&T Unix-based minicomputers and microcomputers and the full range of Western Union Corp. services including Telex, Telegram, Cablegram, Computer Letter and Mailgram.

Called the Handshake Computer Linked Telex (Colt), the software is now available on the Fortune Systems Corp. 32:16 desktop computer. According to the vendor, the product allows the user to send and receive a variety of electronic communications over a terminal. The user can perform routine tasks while messaging takes place concurrently and transparently, the vendor added, without interrupting applications. Handshake's capabilities are said to include automatic answer and send, text editing, message log with auditing and the ability to send a message at a preprogrammed, specified time.

The price of Handshake is $850 for a single CPU.

SST, 9434 N. 107th St., Milwaukee, Wis. [illegible]

VM SYSTEMS GROUP, INC.

V/Net

VM Systems Group, Inc. has introduced V/Net, an information exchange service for users of IBM's VM operating system. To log on to V/Net, users must have a 300 bit/sec Ascii terminal, a telephone and a V/Net user identification.

V/Net users can ask questions about VM, receive other users' advice, look through files, add information or create a file for which input is desired.

This electronic bulletin board service is free, but the user must contact VM Systems Group to request a user identification.

VM Systems Group, Suite 515, 2300 S. 9th St., Arlington, Va. 22204.

METHODOLOGIES

M. BRYCE & ASSOCIATES, INC.

Release 7 Pride-Automated System Design Methodology

M. Bryce & Associates, Inc. has announced enhancements to its Pride-Automated System Design Methodology program that are said to improve its speed, performance and ease of use and to upgrade the product's documentation.

Release 7 is said to include an interactive facility that replaces four previous modules: search data base, interactive component display, interactive data entry and interactive display. The purpose of the subsystem is to provide a complete interactive environment in order to display, enter, search and reference systems component information that resides in the product's Information Resource Manager, the vendor said.

Release 7 also includes enhancements to the product's Automated In-

When your different computers "don't talk to each other"—

MAY & SPEH has the answer.

How can a company with such diverse hardware as a large central computer, divisional and departmental micros and word processors exchange information and files when they all generate output in different forms?

The answer is easy: Let May & Speh do it!

May & Speh's Data Conversion Services—America's first such unification system, converts:
■ One type of diskette to another diskette ■ Diskette to magnetic tape ■ Tape to diskette ■ Diskette to port

Now you can convert diskette information to magnetic tape for transfer to your central computer…batch diskettes onto a system-readable tape…convert diskettes prepared on multiple non-compatible devices…convert data prepared on a central computer for transfer to any diskette…and produce multiple copies of diskettes for distribution.

May & Speh can convert over 140 different manufacturers' diskettes. For immediate turnaround and cost effective prices, call May & Speh!

ALSO—A "DO-IT-YOURSELF" OPTION.

If your company needs a large quantity of conversions on a regular basis, or you want to link hardware into a network for automatic data exchange purposes, consider owning your own system—available from May & Speh.

DATA

from page 65

ence only those data elements with which it is concerned. As subsystems are added, the schema and the subschemas are changed; there should be no need to modify or rewrite the programs of prior completed subsystems.

It is a shame that most organizations do not take full advantage of this device to achieve and maintain data independence. Instead, the subschema is usually structured to be a mirror image of the schema. As a result, the programmer is forced to perform detailed data base navigation and thereby lock the programs to the physical structure of the data base.

One of the common misuses of a DBMS is to perform data base navigation in the program coding. In practice, data base navigation should be avoided at all costs.

Data base navigation is a technique for retrieving records from the data base. For a multisegment record structure, it involves reading each segment at a given level in sequence and then explicitly using the pointers to the lower segment to retrieve the lower segment records. At each level, checking the data base status is necessary to ascertain whether the end-of-chain for a given segment level has occurred.

Masking the best alternative

The best alternative is to use the DBMS' capabilities to mask the physical structure of the data base from the programmer. Most, if not all, of the currently popular DBMS include this capability, which is generically a component of subschema definition.

Through the subschema, the DBMS keeps track of whether end-of-chain has occurred on each level and retrieves the next data base segment for a lower level. Almost all DBMS are smart enough not to re-retrieve a segment that is already available.

The advantages of this programming technique are numerous. First, the program is considerably more readable. Second, the data base record appears as a flat record, allowing the processing techniques used with flat records to be employed.

The greatest advantage of this technique is that the program is now oblivious to the physical data base structure. Fields can be added or deleted. Segments can be added, deleted, broken into more segments or combined. After making the appropriate changes to the subschema, the programs will almost never have to be modified for segment arrangement changes. Any program that uses a field that was deleted, or which must use a field that is being added, will have to be modified.

The major objection to this technique is that performing the detailed data base navigation in the program is more efficient. This premise is incorrect and leads to false economics. The subschema definition is a program that performs all the segment retrieves and status checks that the programmer would perform. A subschema generator would be optimized to the DBMS and the machine on which it runs. As a result, in most cases, letting the DBMS retrieve the segments is more efficient than the code produced by a high-level language.

More important is the fact that the programmer must code and debug the detailed logic in each program. Furthermore, if unnecessary program changes are required because of data base structure changes, the value of the programmer's time will far exceed the value of the machine time expended on any data base inefficiencies.

Another area where we fail to take advantage of the power of the DBMS occurs when one accesses specific records using selection criteria. This occurs for two reasons. First, in much the same way as sequential access, there is a strong desire to instruct the DBMS on how to find the desired record. Second, there is an attitude that all or nearly all of the fields that will be used as selection criteria must be either segment keys or secondary indexes.

In both cases, it is better to treat the data as flat records and to access the records by specifying the fields to be selected and the desired values. Then let the DBMS analyze the resources that are available, such as segment keys and secondary indexes, and choose the most efficient means of accessing the desired record.

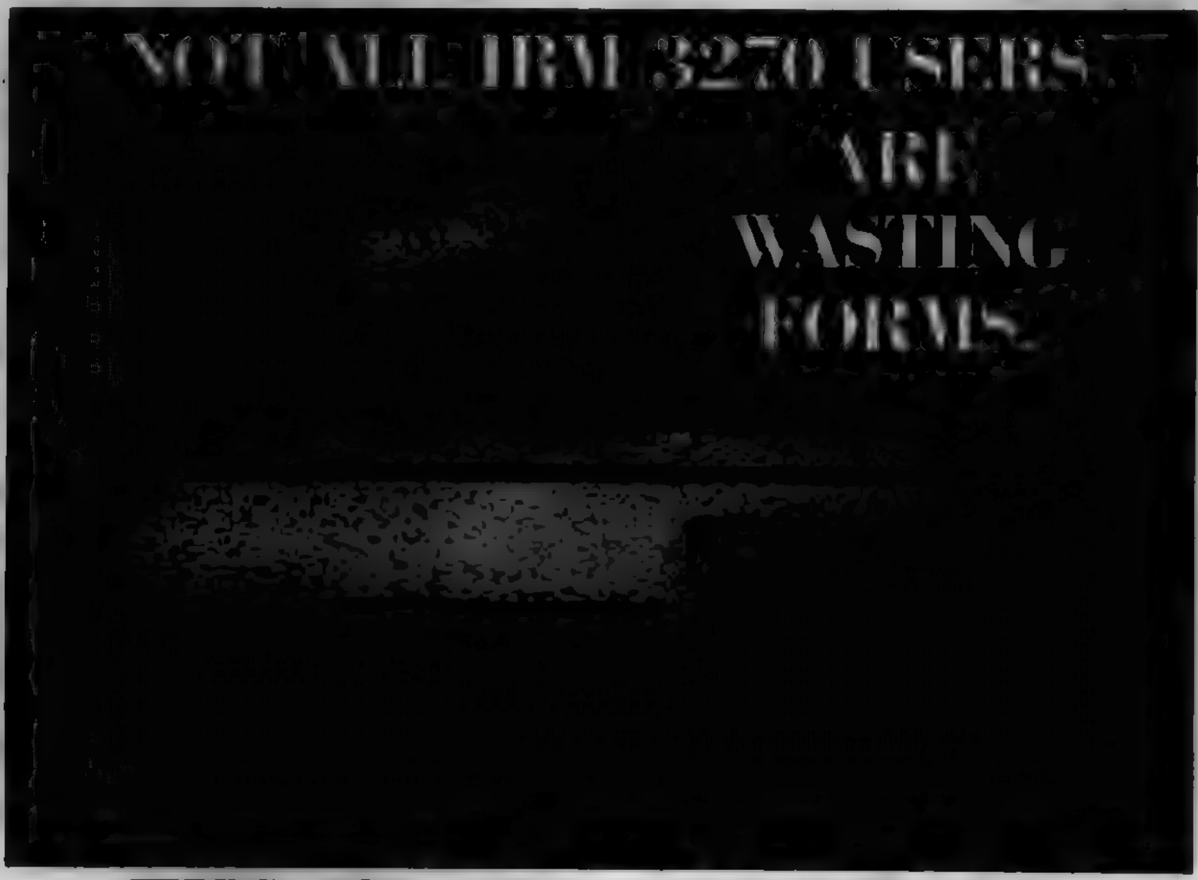
Multistep process typical

A typical manner in which specific records on a data base are accessed is to employ a multistep process. The first step is to direct the DBMS to use a specific secondary index to retrieve one of the segments of the desired record. The second step involves issuing unique retrieval requests that specify any of the selection criteria that happen to be segment keys. If the selection criteria includes any nonkey fields, a sequential search loop is constructed to locate the specific record.

All fields that are involved in the selection criteria should be specified in a retrieval request, regardless of whether an index or key exists for them. It should be left to the DBMS to determine what facilities are available and to use those facilities in an optimal manner. This also leaves the greatest opportunity to take advantage of key and index facilities if they should become available.

It is possible to place the system, using this coding technique, into production with the intention of optimizing the access facilities at some later time. This would be done by monitoring the data usage and selection patterns. When it seems appropriate, one can devise a new schema, modify the subschemas if necessary and then reorganize the data base itself.

In his next article, Ruggera will discuss a method to build a major system using subsystems.



THE ISI 487 CONSERVES.

Not long ago, all IBM 3270 users were treated alike. Anyone that needed immediate access to a printed form was forced to waste a form for each form removed. Simple tasks turned into costly and frustrating procedures on the IBM 3287 printer.

Then the ISI 487 arrived. With tractors tucked neatly away and a tear-off scale positioned conveniently up front, the ISI 487 allows users to tear-off forms right after printing without any waste. Designed to fulfill any application, the ISI 487 handles continuous forms or single sheets and delivers dot matrix, near-letter quality, and incredibly sharp large character label printing.

The ISI 487 has satisfied a variety of IBM 3270 users. Isn't it time you joined them? This plug-compatible replacement for the IBM 3287 carries a price tag as low as $3,350 and belongs anywhere forms are dispensed immediately after printing. *Hospitals, insurance companies, manufacturers, and ticket outlets* — put an end to unnecessary waste!

For more information about the ISI 487 and our other IBM compatible (fully integrated, *no box!*) printers, like the ISI 736 letter quality printer with twin sheet feeder, call, write, or TWX us today!

How to avoid this Lotus position.

Everybody knows that Lotus 1-2-3 is the best selling business software ever developed. And for good reason. Still, learning to use the full power of 1-2-3—not to mention getting up and running on any particular application—is often a tedious, time-consuming proposition.

That's why we created OptionWare—nearly 60 business applications that allow you to bypass all the Lotus programming and set-up procedures. Simply load the appropriate OptionWare application for your job, learn five main keystrokes, and you'll have all the power of 1-2-3 at your fingertips. It's that quick. It's that simple.

OptionWare is a library of nearly 60 specific business applications covering: Finance, Sales & Marketing, Organization, Management, and many more. And, because they all operate exactly the same way—using the same five keys—once you've mastered one, you've mastered them all.

See your nearest OptionWare dealer and ask for a demonstration based on your specific needs.

OptionWare™
A Boyd International Company

The key word in that long, drawn-out headline is system.

A system built for PCs.

At Hewlett-Packard, it's a quality system of personal computers, plotters, a truckload of software, and Local Area Network (LAN) capability.

It's all matched and designed to work brilliantly together.

Yet the system is so flexible each part can stand alone. Or even team with an IBM PC.

So you can build just the system your staff needs.

It all starts with two of our Hewlett-Packard personal computers.

We call one the HP Touchscreen and the other (because it can do even more) the HP Touchscreen MAX.

The first comes with two double-sided disc drives that give you 256K bytes of main memory, expandable to 640K bytes.

The HP Touchscreen MAX has even more capacity, with the added power of a 14.8M byte Winchester disc drive.

And both have DSN/Link, to let you set up a direct line of communication between them and your HP 3000 Department Computer.

As the names imply, you can actually change things on either screen just by touching the screen.

That makes the Touchscreen PCs easier to use. And a lot easier to learn.

The system also includes two printers many people think are simply the best around.

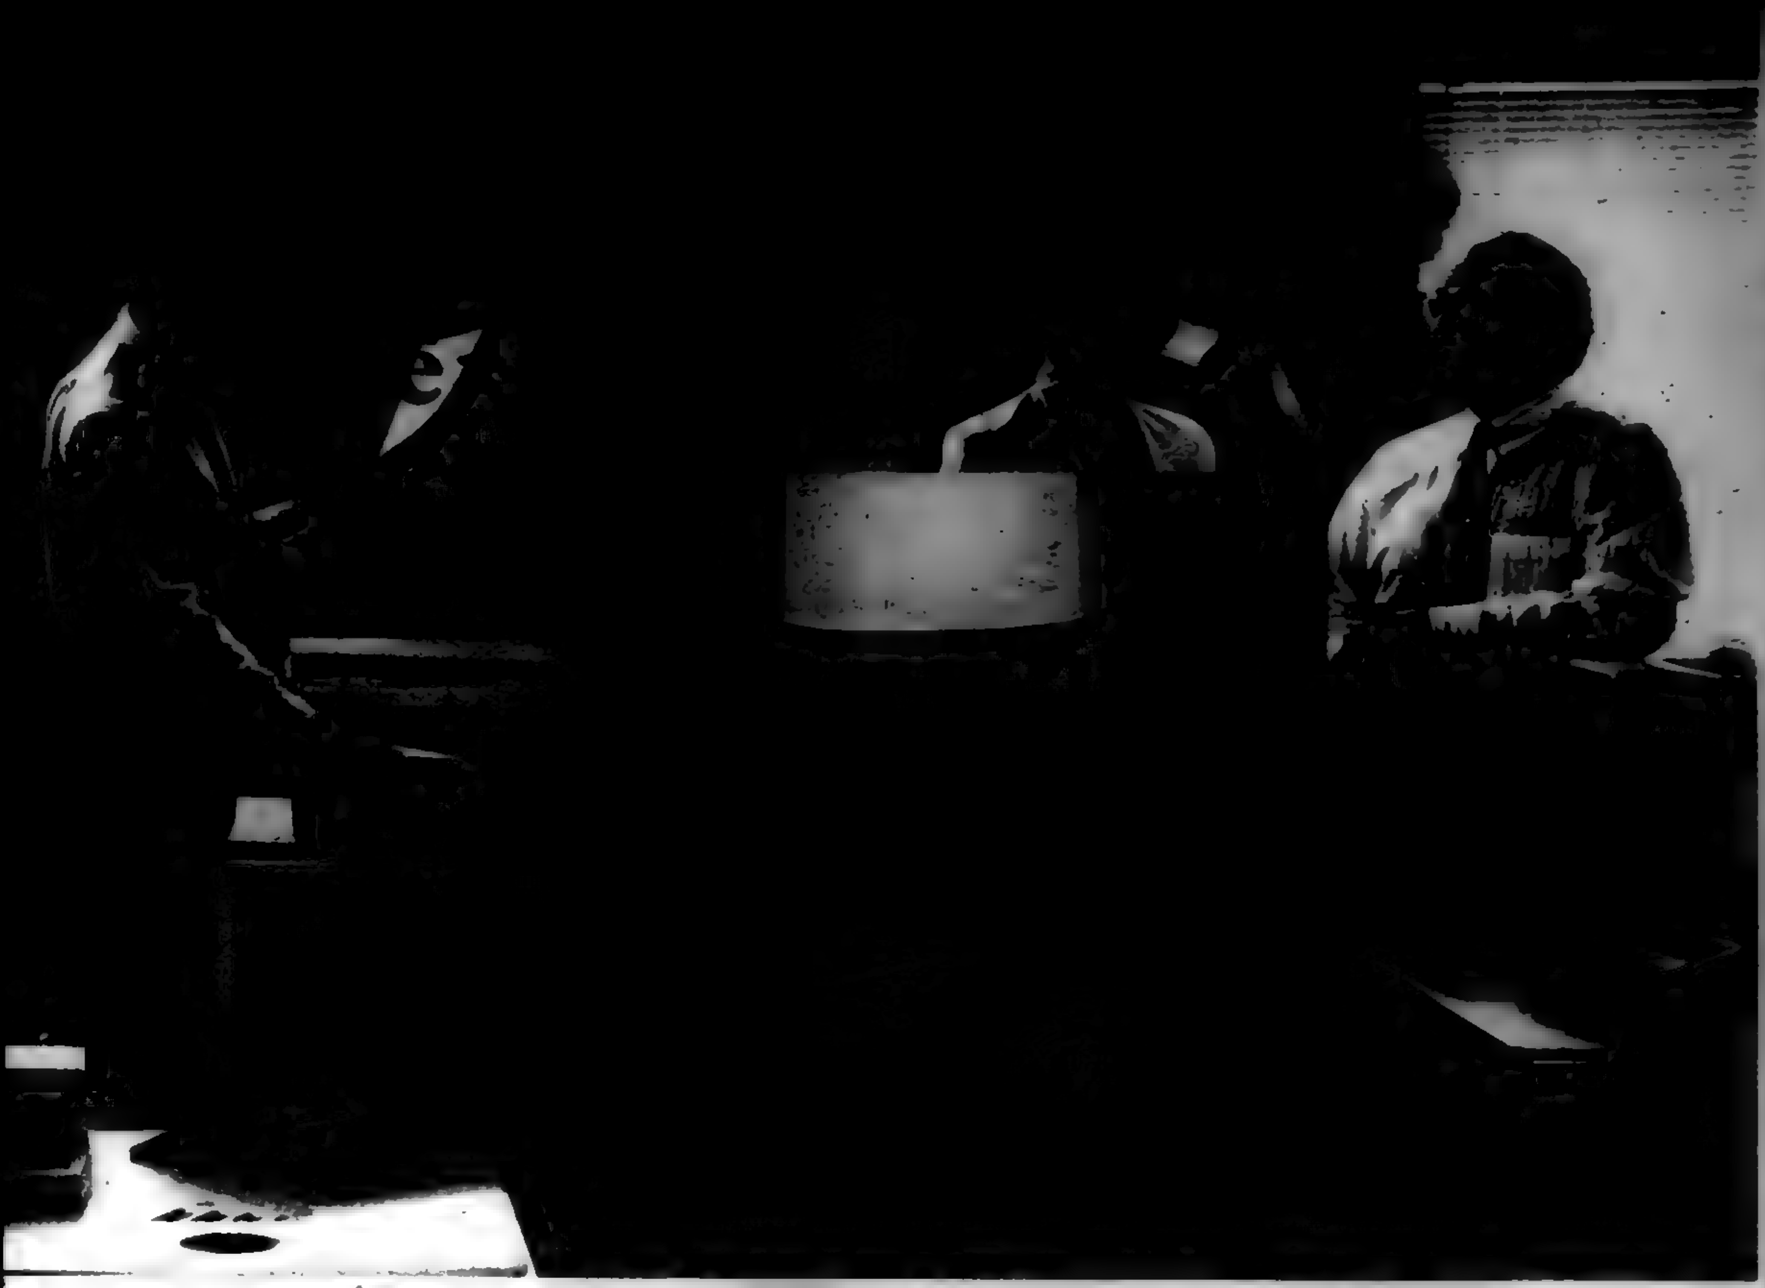
Our Hewlett-Packard LaserJet and ThinkJet printers are both breathtakingly fast and refreshingly quiet.

The ThinkJet printer runs at a rapid 150 characters per second.

Yet because the ThinkJet paints each character with a small jet of ink (instead of smashing the paper with keys), it's as quiet as a sigh.

At 300 characters per second, our LaserJet printer is even faster.

Ten times faster than the best daisy-wheel printers. Yet the image is as sharp as you'll get from a printing press. Amazing.



and when you get to your hotel, change everything.

Two different plotters are also part of the HP personal computer system.

Both create full-color graphics. One with two pens, the other with six for even more detail.

If you like, the system can be knitted together through a LAN.

It lets a number of HP personal computers link up, talk to each other, share printers, and exchange information.

By the way, there can be a lot of information to exchange. That's because there are more than 500 business software titles available. For word processing, accounting, spread sheets and graphics. You'll find the big names there, too.

1-2-3™ from Lotus.™* WordStar.™** MicroPlan.™*** And the whole catalogue of software from HP.

Finally, when you travel, you can take the system with you.

Hewlett-Packard's portable personal computer turns your hotel room (or your den at home, or your customer's desk) into another part of your personal computer system.

The Portable has plenty of capacity; 272K bytes of RAM and 384K bytes of ROM. And with its built-in modem, it can link you with your office printers and plotters. Not bad for a computer that weighs just nine pounds and can fit into a briefcase.

The system is all linked up, all on the same programs, all designed to work together, and all ready to go.

And all from Hewlett-Packard.

Just dial 800-FOR-HPPC, toll free, to find the name of a Hewlett-Packard dealer or sales representative near you.

HEWLETT PACKARD

*1-2-3™ and Lotus™ are U.S. Trademarks of Lotus Development Corporation. **Available for the HP Portable beginning January, 1985. WordStar™ is a U.S. Registered Trademark of MicroPro International Corporation. ***MicroPlan™ is a U.S. Trademark of Chang Laboratories, Inc.

Continued from page 79

structional Materials that contain narratives and instructions for executing all tasks associated with systems design, data base design and project management.

The product runs on a variety of minis and mainframes from IBM, Digital Equipment Corp., Honeywell, Inc., Sperry Corp. and NEC Corp. The price is $80,000.

M. Bryce & Associates, 1248 Springfield Pike, Cincinnati, Ohio 45215.

SPECTRUM INTERNATIONAL

Spectrum/Prototyping

Spectrum International has announced Spectrum/Prototyping, a manual system development package that allows users to design a prototype of an application before building a complete system.

The written development methodology enables a manager to estimate the scope of a project before beginning the actual work, according to the vendor. Spectrum/Prototyping allows a user to create models by providing tasks, estimating guidelines and constructing examples that can be used in a working model, Spectrum International said.

The methodology is said to provide step-by-step project guidance, establish project criteria, develop preliminary design and conduct periodic evaluations.

Spectrum/Prototyping costs $10,000.

Spectrum International, Suite 150, 6101 W. Centinela Ave., Culver City, Calif. 90230.

TRAINING

CREATIVE APPROACHES, INC.

Training for IBM IMS, CICS, TSO and CMS

Creative Approaches, Inc. has introduced IBM mainframe-based software for teaching end users the fundamentals of data entry for any IBM IMS, CICS, TSO or CMS application. The course runs on any IBM mainframe under IBM's Interactive Instructional Presentation System.

The course is customized to any one of the client's application screens, the vendor said. It provides exercise screens so the student can master concepts such as cursor placement, tabbing, function keys, error messages and problem resolution.

The course is priced at $1,200 plus an hourly charge for customization. The typical cost is $4,000.

Creative Approaches, 8 Prince St., Rochester, N.Y. 14607.

MENTOR RESOURCES, INC.

Taskmaster

Mentor Resources, Inc. has announced an on-line interactive training system for users of Wang Laboratories, Inc. VS operating systems.

Taskmaster reportedly allows users to design their own training programs. The program is said to allow students to interact with VS features through simulation activities.

Course titles are "Command Processor," "Operator's Console," "Backup," "WP Administration in a VS Environment," "Disk Space Management," "VS Problem Resolution," "Configuration Management" and "Communication Concepts."

Courses are available for $500 and are sold on a per-CPU basis.

Mentor Resources, One Tara Blvd., Nashua, N.H. 03062.

OXFORD SOFTWARE CORP.

Video Training Tape for Maxicalc II

Oxford Software Corp. has announced a full color, video training tape to tutor users on the most recent release of Oxford's Maxicalc II IBM CICS-based spreadsheet package. The tape is available in ½-in. VHS, ½-in. Beta or ¾-in. video formats and is accompanied by a Maxicalc II reference card.

The tape is one hour long and teaches users how to sign on to Maxicalc II; build a simple workbook with three worksheets; modify, format and print work sheets; generate and display full color graphics; and sign off from the package.

The price of the Video Training Tape is $200 for the first tape and $150 for each additional tape. It is available to those organizations having a license agreement for the product.

Oxford Software, 174 Boulevard, Hasbrouck Heights, N.J. 07604.

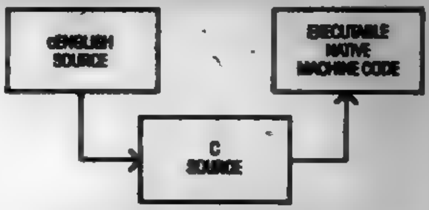
cENGLISH.™
The C Generation Language.

What is cENGLISH? cENGLISH is a comprehensive fourth generation procedural language based on dBASE II® syntax. It is portable to a wide range of micros and minis. The language features user-transparent interfaces to a wide range of popular C compilers, operating systems, and data base managers.

How is portability achieved? cENGLISH through its compiler interface translates cENGLISH into documented C source and uses a host C compiler to produce native machine code.



C source can be embedded in cENGLISH source.

Differences in the operating system and data base manager are handled by the runtime libraries.

The result is that cENGLISH source can be compiled without modification on any micro or mini configuration supporting cENGLISH.

What about performance? cENGLISH executes FAST, just like any compiled C program.

How easy is cENGLISH to use? While cENGLISH is a powerful high level language that can accommodate complex software development, it remains simple and straightforward to use.

Call or write for availability of cENGLISH for the following configurations—

Compilers:
  Standard O/S compilers: Lattice C™ for MS/DOS™
Operating Systems:
  UNIX,™ UNIX-like, MS/DOS,™ Coherent,™ VMS™
Data Base Managers:
  C-ISAM™ and INFORMIX,™ UNIFY,™ ORACLE,™ PHACT,™ Logix™
Foreign Language Versions:
  German, French, Spanish

Attention MS/DOS users. Demo version and special introductory offer available for IBM PC,™ XT,™ AT,™ and other MS/DOS systems. Requirements: 256K, hard disk or two floppy disk drives, and MS/DOS 2.1 or higher.

Attention dBASE II and dBASE III users. dBASE II to cENGLISH Converter now available; dBASE III Converter available later this quarter. Converted code is portable to micros or minis and executes as fast as original cENGLISH source.

dBASE II and dBASE III are trademarks of Ashton-Tate. Lattice is a trademark of Lattice, Inc. UNIX is a trademark of Bell Laboratories. MS/DOS is a trademark of Microsoft, Inc. Coherent is a trademark of Mark Williams Company. VMS is a trademark of Digital Equipment Corporation. C-ISAM and INFORMIX are trademarks of Relational Database Systems, Inc. Oracle is a trademark of Oracle Inc. PHACT is a trademark of Phact Associates. Logix is a trademark of Logical Software, Inc. IBM-PC XT and AT are trademarks of International Business Machines Corporation. UNIFY is a trademark of Unify Corp.

PCR

from page 65

[illegible] unlimited use and maintenance of the MRP software for 25 years after paying one flat fee up-front. The benefits were offset by a substantial risk, Milnes said.

"[PCR] took a risk because we could have designed a completely unusable system that they couldn't sell," he explained. "On the other hand, we were taking time and a lot of knowledgeable people to work with them."

Most input at design end

CTS assigned three people during the spring and summer, two people in the fall and one person in the winter to work virtually full-time with PCR. Most of the CTS input came at the design end, and then the compromise began.

> *'One problem was that we designed a lot more [features] than human programmers could code, and the project turned out to take far longer to finish than we thought at first. . . . [But] if we had written it ourselves, it would have taken a lot longer.'*
>
> — Mike Sherck, programmer/analyst, CTS Corp.

"One problem was that we designed a lot more [features] than human programmers could code, and the project turned out to take far longer to finish than we thought at first," Sherck said. "If I could do it again, I would have tried to generate numbers during design for how long the coding would take."

But he added, "If we had written it ourselves, it would have taken a lot longer."

Both men noted that a joint development arrangement is not for the fainthearted. "It's very important that you understand the risks up front," Sherck said, "and you have to be willing to be frustrated. The vendor will want to do things to make the package more generic. You have to be willing to compromise."

Milne also stressed the need for a carefully structured contract that spells out what the product will do and what it will cost. Unforeseen problems are likely to occur, he said.

'Step-wise approach'

Milnes said a contract should specify a "step-wise approach. You should have a contract for each part of the design," he said. "You should decide up front what you're going to get and what you're going to pay for it." But he cautioned, "You also can't let lawyers huddle in a courtroom for days. There has to be give and take between you and the vendor."

In contrast with the manufacturing systems CTS used, to use the PCR MRP package "is like a bullet train compared to a horse and buggy," Sherck said. "I don't think there's any small group that could have designed and built this. It's just too big."

Added Milnes, "I'd rather go the route of buying off the shelf whenever possible. But we just couldn't do it. The software wasn't there."

ISPF

from page 65

host environments. A dialogue managed by ISPF consists of selection panels, or menus, from which the user selects a particular processing option, functions that perform the requested processing and data entry panels on which the user supplies the additional information needed for the application.

Application development aid

The spokesman said ISPF/PDF for SSX/VSE aids in the development of various types of applications, including dialogues. It may be used with both conventional and structured programming techniques, and it provides simplified procedures for development of dialogue applications.

ISPF/PDF provides functions such as multilevel programming library support, full screen context editing, models that help a user develop dialogue panels, messages, function routines, file skeletons and tables, scrolling of source and data listings, utilities, interfaces to standard language processors, dialogue test facilities and on-line tutorials.

The enhanced version of ISPF for VM features CMS sequential file support, added library definition services and CMS/DOS simulation support. In addition, added dialogue manager functions include an IBM APL interface that supports IBM's APL2 system in VM, an IBM Graphic Data Display Manager interface allowing graphic objects to be displayed within an ISPF panel, table enhancements and added device support for 3290 terminals.

So-called usability enhancements include added profile pool support, a dynamic screen area that may be accessed and controlled completely by the application, display, variable and file tailoring enhancements and panel update program descriptions.

Version 2, Release 1 of ISPF for VM has a $500 initial charge and a monthly charge of $165; for SSX/VSE, the initial charge is $749, and the monthly charge is $75. ISPF/PDF for SSX/VSE has an initial charge of $800 and a $125 monthly charge.

IBM's National Accounts Division is located at 1133 Westchester Ave., White Plains, N.Y. 10604.

EXPERIENCE THE WORLDS OF UNIX*

UniForum '85 is your passport to the fascinating "Worlds of UNIX." You'll examine the growing impact of UNIX in Office Systems, Personal Computers, Engineering/Programming, and Market Trends at UniForum '85, the largest UNIX event ever held.

More than 200 major vendors, in 850 booths, will display and demonstrate all that's new in UNIX products and applications.

An extensive conference and tutorial program will expand your UNIX database. This program, organized by /usr/group, will include 14 all-day tutorials on user-specific aspects of UNIX...40 in-depth and informative conference sessions...four nationally-known plenary speakers.

In addition, a number of introductory courses in UNIX will be presented throughout the event.

UniForum '85 will be your total UNIX experience. Whether you're just getting started... or are a seasoned UNIX veteran...UniForum '85 is *the* UNIX event of the year.

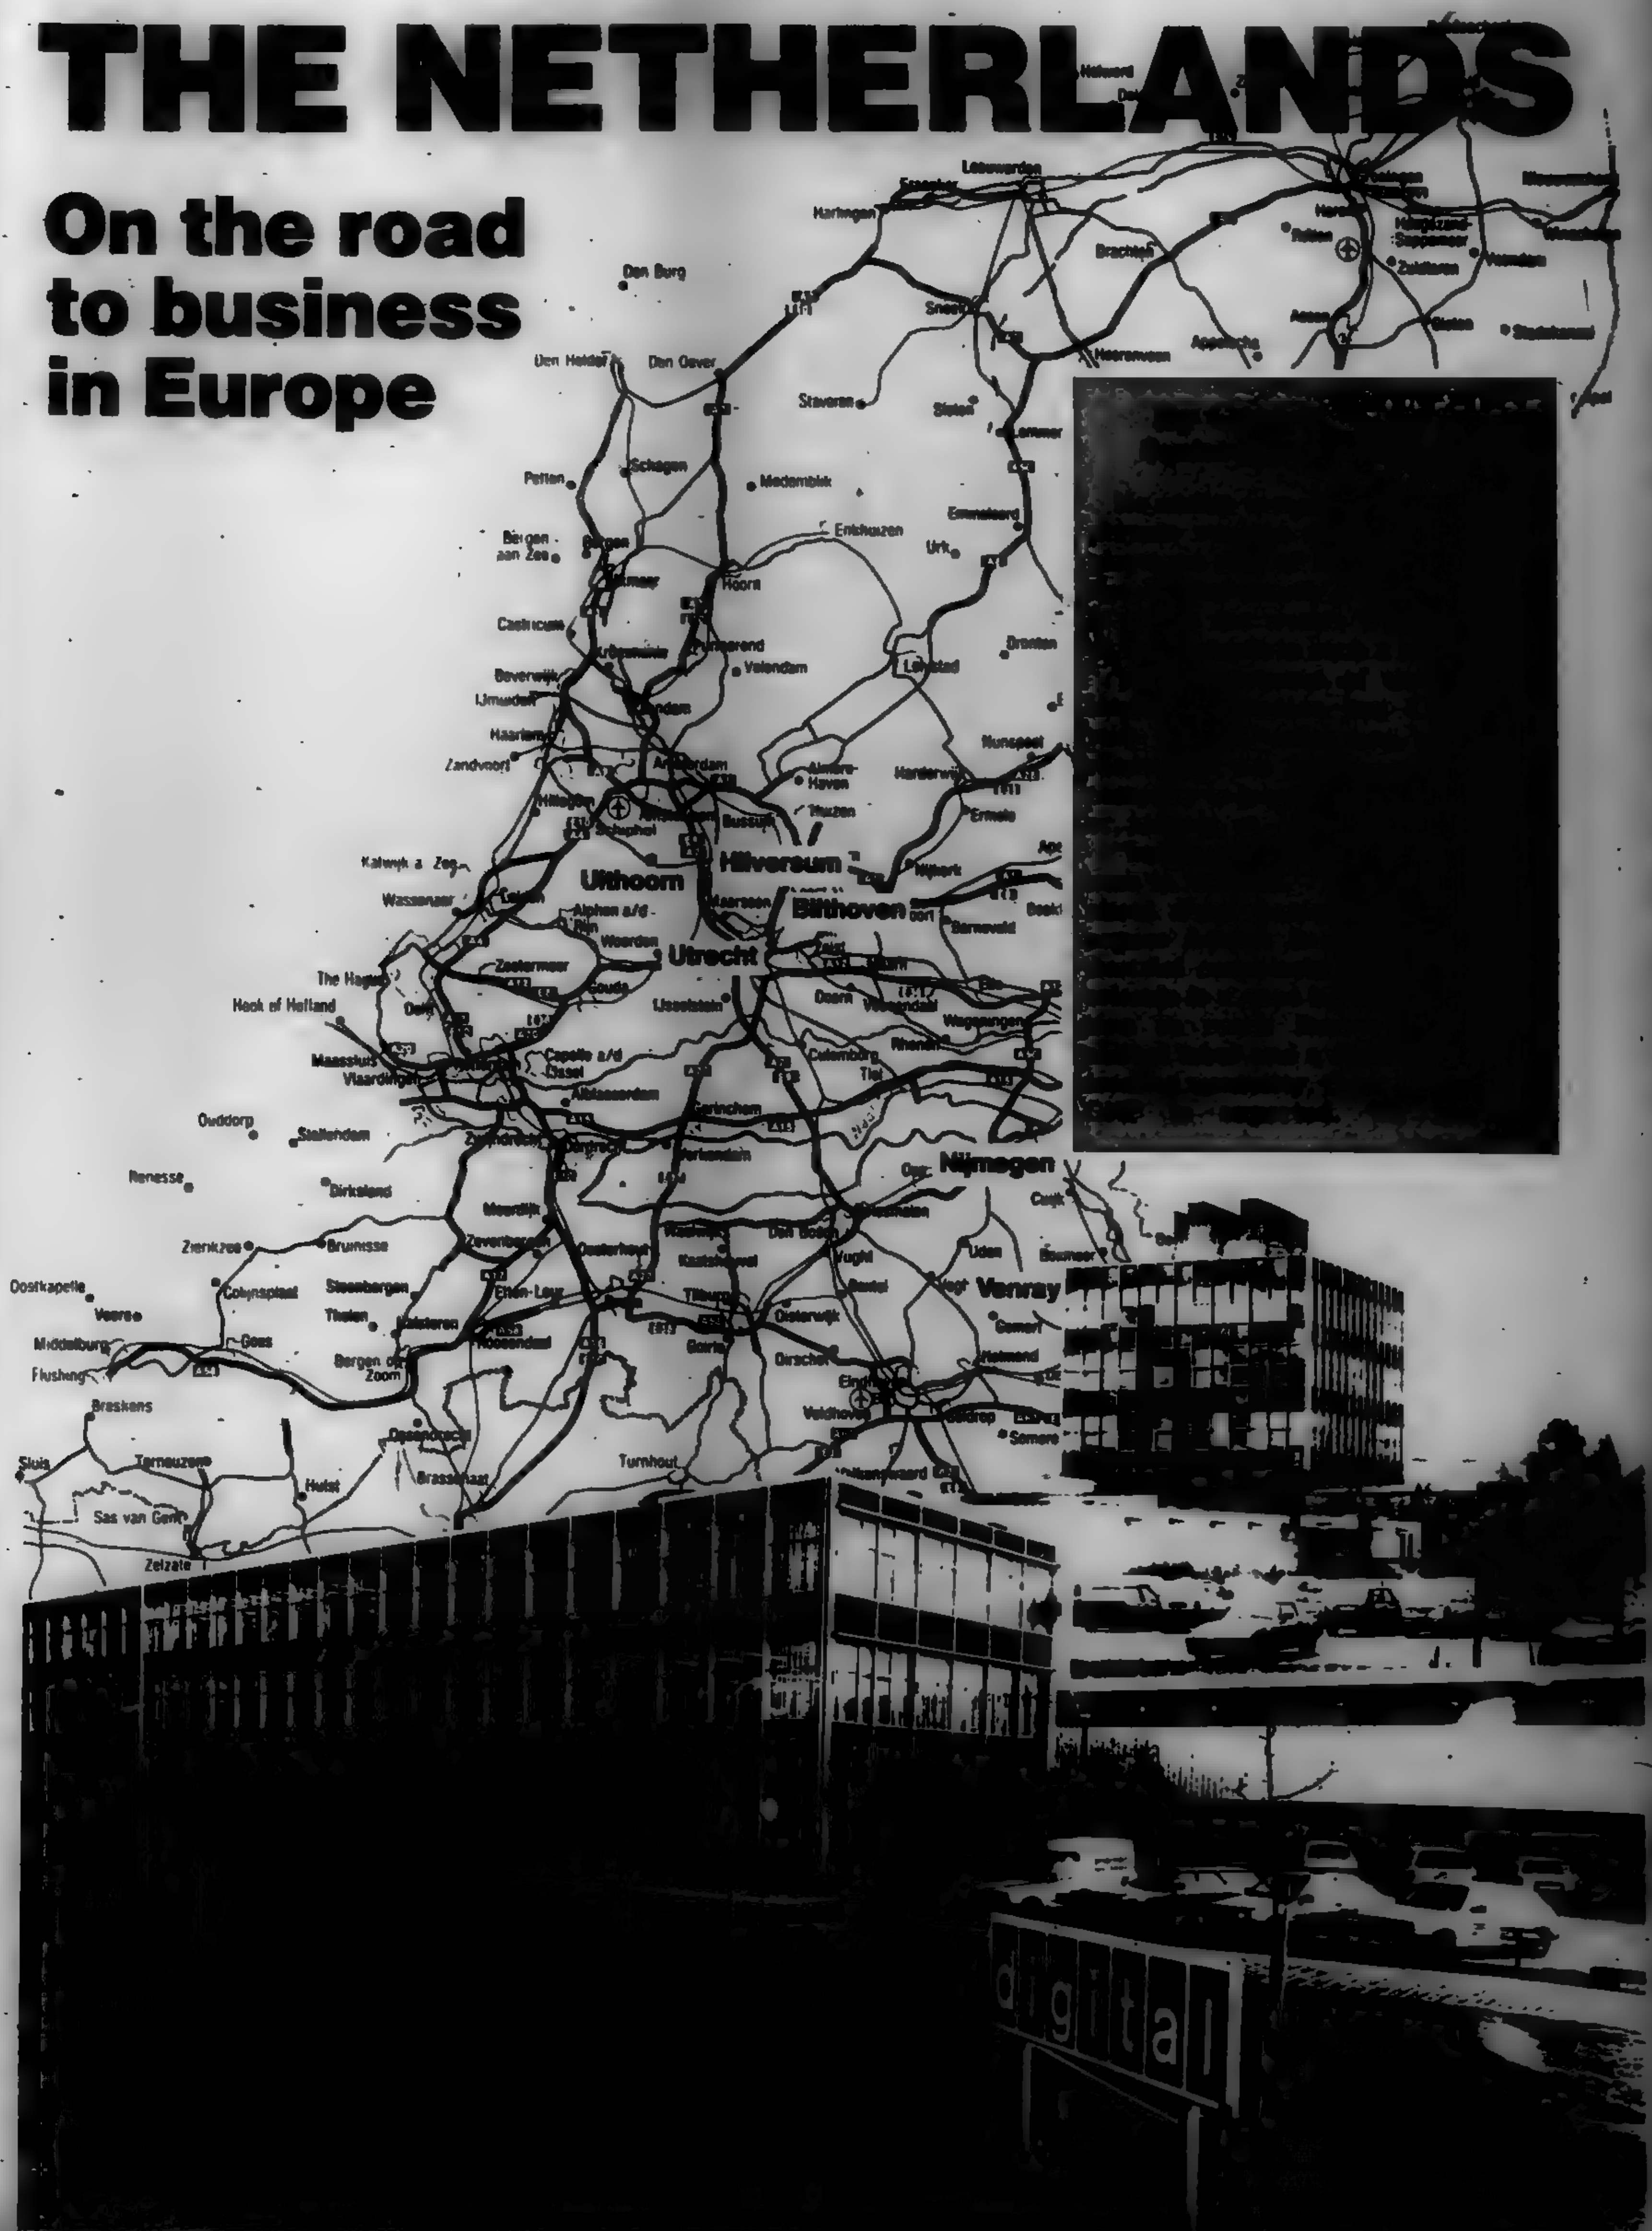
IN DEPTH

THE NETHERLANDS

On the road to business in Europe



[illegible]

extremely outward-looking country. Always select an outward-looking country."

"We are looking for foreign investment," says Martin de Leeuw, deputy commissioner for foreign investments, "but not for the sake of employment. We're looking for the long-term benefit. Foreign companies setting up here pay taxes, but they are small, because we have liberal tax policies."

These financial incentives do not rival the tax holidays Ireland proffers. The Netherlands is not jumping into a bidding war for high-technology business. This country of just 14 million is flipping over the coin, saying, "Look at the other side":

- We may not offer much of a home computer market to sell to, but we can give you Europe as only a "Dutch trader" knows how.
- Our citizens won't risk their savings to fund new ventures, but our government started the MIP Equity Fund in 1982 with $400 million capital to meet your needs.
- The country is small and crowded, but we have built a transportation structure geared to getting goods into and out of the country as fast as you need.

"Europe in general and maybe the Dutch in particular are very negative," de Leeuw notes. "We say the cup is half-empty. I think it goes back to the 16th century, when we changed from Catholic to Reformist with Mr. Calvin. We always say, 'It's not good enough.'"

In September, ITT Corp. decided the Netherlands was good enough as a central distribution site for Europe and eventually to the Middle East and Africa.

"That was a major decision," de Leeuw says, "because ITT made a thorough study. We must really be number one. ITT will set up distribution centers in the U.S., Japan and the Netherlands. They studied Europe for 2½ years and found out that on a cost basis, the Netherlands was by far the best country."

The Dutch government has identified the critical stages companies such as ITT go through in developing a mature, European operation: 1) establishing an initial European presence; 2) spreading into several countries; and 3) developing an integrated European organization.

According to de Leeuw, the government assists at each point, by gathering market information for a company in stage one, for instance, then helping to create a sales organization and consulting on locations and Customs procedures. The government might also propose a joint venture as the quickest means of entry into Europe. The Netherlands Industrial Commission will select prospects and aid in negotiations.

In the second stage, the government helps evaluate whether it is feasible to create a European assembly plant, centralized distribution or research and development facility.

At the final stage, the foreign company will be supported in considering regional headquarters and administrative coordination centers.

Government grants for research, called Basic Research Subsidies, can amount to $250,000. One requirement: Any products resulting from the research must be manufactured at least partially in the Netherlands. The government takes no equity position in the companies receiving these subsidies.

Such grants are comparatively easy to land. "The first one you get just if you fill in the application," de Leeuw says. A sound track record in scientific as well as the commercial development of products ensures the subsidy.

Also in the field of R&D is the High Technology Grant, given when a product is new to the Netherlands, has a high added value and advanced technological characteristics.

The Technology Development Loan goes to companies on favorable credit terms. Companies pay back loans only if the product makes a profit.

Two other basic grants are noteworthy: "One is a 12.5% tax break given on investments in buildings and equipment — everyone gets that," says Roosen. "You get the tax break only when you have a profit, of course.

"The second is a cash grant, given by the government as a percentage of investments in buildings and equipment." The Dutch government coaxes companies to the outlands of the north and

How to be in 16 places

south with grants running as high as 35% of fixed assets up to a maximum of $6 million. The cash grant applies to initial as well as add-on investments.

The MIP Equity Fund operates much as venture capital funds do in the U.S. It was started by the government as a means to fill in where private capital was sorely lacking. MIP combines pension funds with private and state money. The minimum investment is $1 million. Twenty smaller venture capital funds seek investments under $1 million.

The Dutch have long looked beyond their narrow borders for partners in trade. Citizens from cabbie to chief executive officer learn to speak English, German and French in school. Rotterdam is the world's largest port and Schiphol one of the most efficient airports. The Dutch move people and goods in and out so fast it sometimes seems there is no border at all.

This effort to be an international trading country runs up against strong protectionism within the European Economic Community (EEC).

"Computer companies are more willing to set up in bigger countries where there is a bigger home market and a tie to a bigger government," de Leeuw says. "For instance, MAI, an American company, was planning an extension in Enschede [the Netherlands], but they wouldn't do it because to sell to France, they had to set up there. France will say, 'If you don't set up here, you can't sell here.'

"It can be a major problem having no home market. France is suggesting, especially to Japanese clients, that if they locate outside France, they won't be allowed to sell inside France."

The Netherlands is a founding member of the EEC, which recently devised Esprit. This European Strategic Program for Research in Information Technologies is a plan for the 1980s that hopes to encourage common spirit among The Ten where now there is open competition if not commercial combat. One project funded in Esprit's pilot stage was the development of a very large-scale integration description language by Philips Information Systems, Inc. and West Germany's Siemens.

Philips, located in Eindhoven (or Philipstown, as it is known), is No. 26 on *Fortune's* list of the largest industrial companies worldwide. With sales of $16,176,941,000, net income of $226,631,000 and 343,000 employees, the electronics giant possesses the stable center around which the Dutch can create a computer industry.

In October, Philips launched one of the world's largest private telephone networks, an 18,000-extension system to handle voice and data for employees in Eindhoven.

Philips recently joined Siemens, a $15,724,273,000 company, to develop and manufacture advanced microchips with 1M bit and 4M bit memories capable of storing 16 and 64 times more data respectively than 64K bit chips.

Currently, European-owned companies supply no more than 10% of the world semiconductor market. The hope in The Hague and Bonn is that this kind of commitment between Europe's supercompanies will pump up the continent's lagging computer industry. Production of these chips would not take place until 1989. In 1986, Philips and Siemens will make the critical decision to carry on with their production plans or not.

Closer to its home base, Philips formed a venture partnership with the Nederlandsche Middenstand-bank in 1983 to provide start-ups in Holland with scientific and entrepreneurial support. Philips was not buying itself new ideas; in fact, the giant would have to bid along with any other interested parties for the products that might come from this program. Philips is taking on the role of leader in vitalizing the climate for electronics and computers in its home country.

The Netherlands is considered seventh on the most-favored list of sites for U.S.-owned electronics companies to locate subsidiaries. Still ahead are Britain, Ireland, West Germany, Mexico, Japan and France. Canada and Italy have been surpassed.

The following reports picture Holland's computer industry through the business of several companies, both domestic and foreign, operating there.

...at once.

With Northern Telecom's unique multi-tasking capability, you can perform a multitude of jobs—simultaneously.

Now your staff can work on spreadsheets, move to word processing, shift to personal computing, then access data and communicate, without missing a beat. No more time-consuming interruptions. Thanks to the unique multi-tasking capability of Northern Telecom's 500 Series Office Information Systems.

With our unique access feature, your staff can leave any application at any point and move to another—and another—while the original task is processed through completion. In fact, the 500 Series will keep track of as many as 16 running programs at once!

Northern Telecom's 500 Series Information Systems also have outstanding communications capabilities. Besides being compatible with each other, they communicate with a multitude of mainframes, including IBM, Burroughs and CDC. They also talk to other minis and even micros such as IBM PC's and Apple.

Our multi-tasking capability allows for up to 16 users to access common files—send or retrieve—from across the hall or across the country. So your people spend less time researching, duplicating efforts and conducting meetings.

Let us show you how easy and cost-effective it is to be in 16 places at once.

One-stop supplier

ADVANCED SEMICONDUCTOR MATERIALS INTERNATIONAL (ASMI), Bilthoven

ASMI, the "not-so-little-anymore" maker of chip manufacturing equipment, thrives because traditional semiconductor companies do not have the design experience or expertise to build their own machines. Customers include Intel Corp. and Motorola, Inc., as well as computer vendors such as IBM and Digital Equipment Corp.

Philips, the Dutch electronics giant with annual revenues exceeding $16 billion, joined ASMI last April in a 50-50 venture to build and market the stepping aligner used to print integrated circuits onto silicon wafers. Philips, which operates Europe's largest chip factory, developed the stepper for internal use.

"We found Philips sitting on a tremendous wealth of technology," says Arthur del Prado, ASMI president and chief executive officer. "We said, 'Why don't you let us bring it to market?' It took them many years to digest that idea."

The venture, ASM Lithography Systems Ltd., gives ASMI access to Philips facilities and, just as important, Philips engineers. "We lifted 50," del Prado says, no small boost to ASMI, a company with annual sales estimated at $115 million for 1984.

Del Prado notes that it is characteristic of European companies to develop technological advances in-house but not market them. "Philips was ahead of everyone in videodisk technology but gave the market away because it didn't move. Philips is changing its posture now, through joint ventures, for instance."

Designing automated factory

The stepper fills out ASMI's product line, creating, in effect, a one-stop supplier. "We can now start designing the automated factory better than most of our competitors because of our product mix for the entire process," del Prado asserts. Together, ASMI and Philips are aiming for 30% of the lithography market by 1988.

Del Prado projects worldwide semiconductor sales of $32 billion in 1985, up from $24 billion this year. Wafer diameter dimensions will change drastically. "It is four inches now; eight inches is around the corner, and we have even seen 10 inches. We're looking at lifespans of only six, seven or eight years. That means tremendous changes in equipment."

ASMI's stronghold now is in chemical vapor deposition (CVD) equipment and also plasma-enhanced CVD. There was no use designing for the small Dutch home market or even the wider European market, which lacks, del Prado says, "the dynamics or cohesive structure to justify the investment.

"We had to become a global company. Here it's not like in Silicon Valley, where there are markets everywhere around you."

Capital from U.S.

To become global, ASMI needed capital. "We had been growing through internal financing until 1980," del Prado says. "We realized that unless we found a good source of financing, we could not keep up. We looked to European equity funding, but Europe is asleep, or was asleep, in this area. The Dutch capitalistic system is broke. It is trying to recover. If it doesn't, the chances for technological development are not good. We cannot keep looking to government."

ASMI shed its "funny little Dutch company" image and drummed up capital in the U.S. The company's stock is 20% publicly owned — 80% of that by Americans.

It is curious, perhaps, that Americans are more interested than the Dutch in investing in a Dutch company. That del Prado accepts. But the Dutch government's actions toward home companies quite visibly anger him.

"The government is not yet industry-oriented," he says. "The response mechanism is so slow we would have to have a special department to deal with them. I don't think the Dutch government has a vision yet related to industry. They should not be trying to bring American companies [to the Netherlands] at the expense of neglecting companies here.

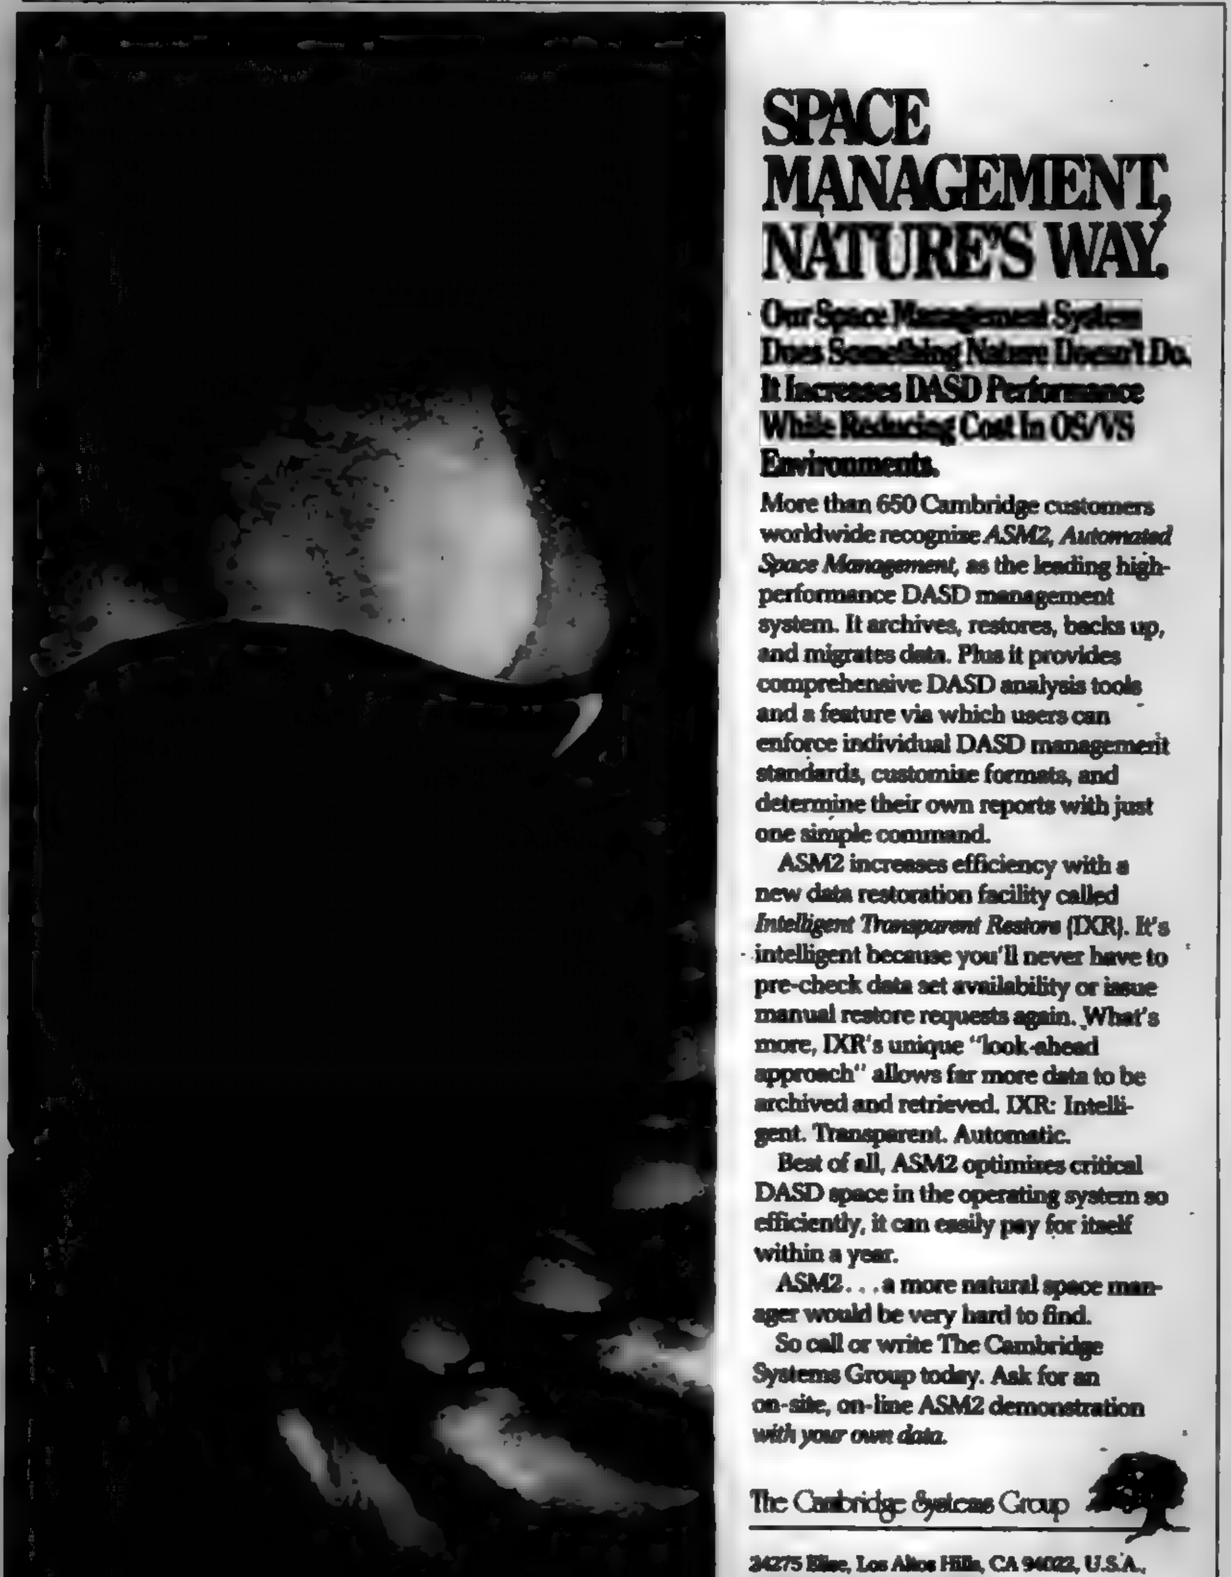
"The government is responsible for some of the negatives — such as taxation. It is responsible, in a way, for its own headaches. If the climate doesn't change, if it got to where we couldn't raise money, then we would have to go. I'm being very critical about our climate, but it's by pure experience."

Advantages at home

Del Prado does go on to mention the considerable pluses to being a homegrown Dutch company or even a foreign doing business there. "In America, management changes every year," he says. "The pressures are tremendous for short-term growth. Dutch companies are more stable. The unions do not bother us. For any well-run company, they shouldn't be a fear factor. We have more union pressure in Phoenix than here. And the education base is very sound. The engineers can stand up to any technological changes."

Del Prado admits that if ASMI had started in Silicon Valley, he would probably not have brought the company to Holland to do business.

But he cautions others not to follow his logic necessarily in choosing where to set up foreign facilities: "Many companies make the decision to go where their markets are. It may be the fastest way, but it may not be the best."



SPACE MANAGEMENT, NATURE'S WAY.

Our Space Management System Does Something Nature Doesn't Do. It Increases DASD Performance While Reducing Cost In OS/VS Environments.

More than 650 Cambridge customers worldwide recognize *ASM2, Automated Space Management,* as the leading high-performance DASD management system. It archives, restores, backs up, and migrates data. Plus it provides comprehensive DASD analysis tools and a feature via which users can enforce individual DASD management standards, customize formats, and determine their own reports with just one simple command.

ASM2 increases efficiency with a new data restoration facility called *Intelligent Transparent Restore* (IXR). It's intelligent because you'll never have to pre-check data set availability or issue manual restore requests again. What's more, IXR's unique "look-ahead approach" allows far more data to be archived and retrieved. IXR: Intelligent. Transparent. Automatic.

Best of all, ASM2 optimizes critical DASD space in the operating system so efficiently, it can easily pay for itself within a year.

ASM2 . . . a more natural space manager would be very hard to find.

So call or write The Cambridge Systems Group today. Ask for an on-site, on-line ASM2 demonstration *with your own data.*

INS. We wrote the book on adaptability.

Now we present a brand-new chapter.

The INS story began in 1982 with our first adapter product, the 100 Series SNA/SDLC Loop Adapter. It allowed the 3270 family of communications-attached SDLC devices to connect to the loop of IBM's® 8100 Information System, via direct-connection, lease line or auto answer dial-up line.

In 1983 we introduced the 200 Series, allowing connection of asynchronous data collection devices such as bar code scanners, magnetic scanners, scales and process controllers to the 8100's loop.

Earlier this year we unveiled our INS 8100 Adapter, which enables IBM PCs to be used as intelligent workstations to the 8100—complete with multiple terminal sessions, file transfer, 3287 printer emulation, concurrent PC-DOS operations and the ability to switch between sessions with a single keystroke.

Now INS is proud to present the latest chapter—our SDLC PC Adapter. It offers all the features of our 8100 Adapter for SDLC data link connection.

The INS SDLC PC Adapter provides:

- S/370, 4300 and 8100 host connection
- Dial-up or leased line connection up to 19,200 bps
- Two 3270 display emulation sessions
- 3287 printer emulation session
- PC-DOS session
- Hot-key session switching
- Host-initiated file transfer allowing simple operator interface or unattended transfer operations
- Local screen copy to printer or disk
- On-board microprocessor reduces PC processor overhead

And for users needing access to SNA host X.25 networks, you can upgrade the SDLC PC Adapter with an upcoming X.25 version.*

The SDLC PC Adapter is available now for only $995. And large users, ask about our quantity discounts.

Thousands of our adapters are already in service in some of the world's largest corporations. So let INS expertise make the most of your system, too. After all, when it comes to adaptability—INS wrote the book.

Call now to place your orders and ask about other INS products, (205) 633-3270.

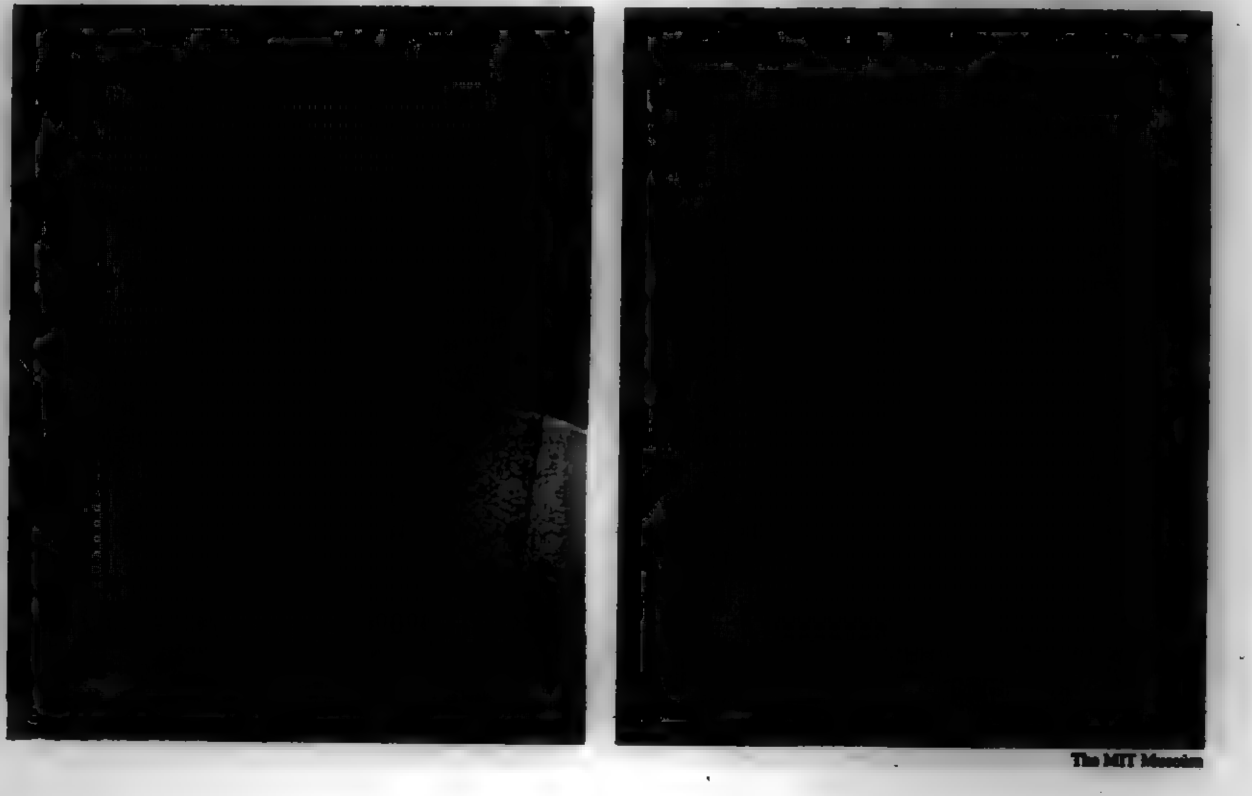
Oddly enough, most offices are better equipped for the future than the people who will create it.



The MIT Museum

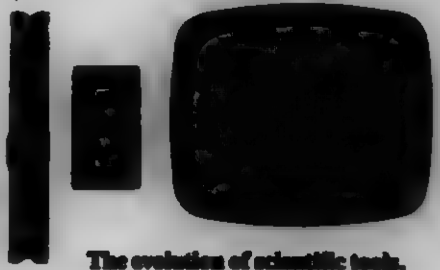
According to recent reports, this last year, businesses spent over $10.5 billion successfully automating America's offices.

Meanwhile, do you realize what many of the scientists and engineers are using to design and develop America's new products?

Hand calculators.

Which is just preposterous.

Especially now that there's computer-aided analysis software designed specifically to do what all technical professionals spend most of their time doing: analyzing data.



The evolution of scientific tools.

It's called RS/1.™ And it's from BBN Software Products Corporation.

RS/1 is fully capable of making technical professionals 4-5 times more productive. Which in turn, will allow them to create considerably better, considerably more reliable new products. In a fraction of the time it now takes.

And it will do so without turning them into hackers. RS/1 works like a research assistant. Not a computer.

Lest you doubt the significance of RS/1, we would hasten to point out that a single copy of RS/1 running on a single computer has already saved one company over $7 million. In one plant. In one year. Without any additional investment in new equipment. They did it simply by allowing their technical professionals to explore alternatives they never had the time to before.

And if you think RS/1 may be something you should look into in the future, you should know that many leaders in American industry are already using it to get their new products out into the marketplace faster.

Don't expect them to tell you about it, though. They'd just as soon you continue spending your money only on getting your letters out faster.

For information on RS/1, call toll-free 1-800-251-1717,
in Massachusetts 617-491-8488.

Got the Most out of SAS®

through AppTech's
Comprehensive Training Seminars

Until now, there has never been a single course specifically designed to allow programmers and technical users to get the most out of SAS.

AppTech seminars provide step by step, progressive instruction in:

- Reading data from simple through complex (such as VSAM files) sources
- Producing sophisticated management reports in chart, graph, plot and columnar form
- SAS utilities
- An introduction to the SAS Macro Language

Dates and Locations

Washington, DC - January 28 to February 1
Houston, TX - February 25 to March 1
Los Angeles, CA - March 18 to 22
New York, NY - April 1 to 5
Chicago, IL - April 15 to 19

Additionally, on-site courses which address specific business applications are available. Applications offered include:

Payroll
Banking
Insurance
Manufacturing
Finance (Accounting)

For more information on this unique approach to SAS education, contact:

AppTech®, Inc.
Suite 100, Dept. C
8 North Third Street
Warrenton, VA 22186 (703) 347-2522

The Saturday MBA for data processing professionals.

Is there any other way to get ahead?

It's no secret—business professionals need a competitive edge. So FDU has created a weekend Master of Business Administration in Management program designed for you, the data processing professional with at least five years of experience in the field.

Qualified candidates will earn an MBA in just two years of study on Saturdays—preparing them for the challenges that come on Monday. Courses are taught in five-week modules, three modules per semester.

The MBA in Management (for Data Processing Professionals) is available at our Rutherford, New Jersey campus, located between Routes 3 and 17, 10 miles from New York City. For an application and more information complete the coupon or call

(201) 460-5181

An affirmative action/equal opportunity institution

Supply center to Europe

ITT CORP.
THE NETHERLANDS

ITT, the telecommunications, industrial technology, natural resource and diversified service company with annual sales exceeding $20 billion, has operated in the Netherlands for 74 years. On Sept. 10, this conglomerate with headquarters in New York City chose this country as the centerpoint for worldwide distribution of certain products.

"This now establishes Holland as our major redistribution center in Europe," says Levon Soorikian, the director of physical distribution and logistics for ITT. "We will be able to do here what we do in the States now — react within 24 hours to delivery anyplace in the country."

ITT expects to reduce inventory and transportation costs for goods shipped to and from Europe. In the computer area, those goods include personal computers, printers, semiconductors, connectors and telephone equipment. The port of Rotterdam and Schiphol Airport will be the entry points for the shipments, which will bear an expected transit value of $590 million.

According to Soorikian, the Netherlands was chosen because of rapid Customs processing, a strong transportation infrastructure and sophisticated communications links to ITT facilities worldwide. From the Netherlands, ITT will ship to Madrid, Paris, Milan, Stuttgart, Vienna, Antwerp, London, Oslo, Copenhagen and Stockholm. The estimated yuearly load through Rotterdam is 3,000 containers of finished goods, semiassembled products and raw materials. Air freight volume expected through Schiphol is 3,000 tons per year.

Within Europe, ITT expects to minimize air shipments by collecting inventory at a single distribution spot. Soorikian says, "That makes it possible to keep a pipeline and meet schedules without spending an inordinate amount of money for premium transportation."

In the first phase of the plan, existing Dutch transportation facilities will be used for assembly and distribution. Later, ITT's own facilities will take over as the single source of inventory for Common Market countries as well as Africa and the Middle East. In the last phase, ITT will use its centers in the Netherlands to store parts and do repairs.

"Right now," Soorikian says, "it's not bad service in Europe, but it's located in many points. We're hoping to be able to provide at least the same level of service but not with inventory scattered throughout so many different places. When we go into the repair area, then we will have all the components and repair parts in one place. Right now repair is scattered; we hope to concentrate it."

Soorikian sees no barriers to implementing phases two and three because "it is easy to establish bonded and freeport facilities in Holland. Configuration of high-tech equipment for exports and imports will be performed under freeport conditions."

The new ITT distribution center is expected to create 200 to 300 new jobs and provide millions of dollars of new business for Dutch transportation companies.

Joint venture in switches

AT&T and PHILIPS TELECOMMUNICATIONS, B.V.
Hilversum

AT&T developed the digital switch; Philips is modifying it for application in CEPT and CCITT networks. The result is the 5ESS-PRX, a digital exchange product offered by the joint venture company formed out of the communications and electronics industry giants.

They decided a realignment of forces was necessary to produce economies of scale in manufacturing, aggressive research and development capabilities and a stable supplier environment to service customers. The joint company, launched early this year, intends to develop, manufacture and market systems for public telecommunications networks for countries worldwide.

Philips will internationalize AT&T's basic switch, the 5ESS, by modifying such things as the physical cabinet, the power requirements and the interface to maintenance operations. Philips also contributes its national organizations — marketing groups so assimilated into the host country that most citizens believe the company to be native. These sales organizations theoretically can respond quickly to the needs of local telecommunications authorities.

"Fifteen years ago, we were a happy industry," says F.C. Kuznik, vice-president of marketing. "We were mature, conservative management. That all is gone."

The estimated $60 billion world telephony market cannot support the massive development costs associated with a new switch, Kuznik says, for most companies. A European company going alone would need to win 100% of several major countries just to recover development costs.

In 1982, AT&T owned 23% of the switching equipment market and Philips 2%. Kuznik puts the cutoff point for recovery of cost by the new joint venture at 15% of the market.

In this venture, AT&T provides the developed product and Philips, by virtue of being a Dutch company, eases the way through the European Economic Community.

Kuznik sees a tremendous hunger for high technology in Europe. Yet there are obstacles. "We are nowhere near open telecommunications as in the U.S. But costs are becoming so that maybe someday . . . At some point, governments are going to say they can't afford to back public telephone systems.

"In Holland," Kuznik continues, "there is no capital gains tax, so no way to write off a loss. If you invest in something and it flops, you are in trouble. Of course, profits are not taxed, either, but who would risk his savings?"

One other advantage Philips gets from the venture is access to AT&T's Unix. "We have Unix as used internally at Bell Labs," Kuznik says, "which is one or two steps ahead of what is available commercially."

IBM facility set to grow

IBM INTERNATIONAL OPERATIONS
Uithoorn

Thirty-three thousand networked terminals and 130 international telecommunications lines service this suburban Amsterdam location that includes IBM's second largest typewriter plant and its second largest European programming facility.

J. Schoonenberg, director of international operations, says, "We can do complex things here that others have trouble doing. That is our added value. We offset high labor costs through quality produced on time. It took us awhile to show the outside world. Last year IBM took the decision for us to grow. All future development of financial applications worldwide will now take place here."

Uithoorn employs 600 in its work force, which will grow to 700 soon; 400 are programmers and analysts.

Uithoorn had prime responsibility for development of DOS. It is the site of one of seven computer systems that make up the data base for Retain, the Remote Technical Assistance and Information Network, an internal IBM network linking engineers worldwide. Currently, 20,000 are registered users, 350 of whom can access Retain at any time. Any problem related to DOS is automatically routed to the "problem determination and fix group" in Uithoorn.

This facility also is a site for the Hone (Hands-on Network Environment) system, which supports 32,000 regular users, 1,100 of whom can log on simultaneously for support in selling and installing IBM systems.

Current product

Andre du Croix, Information Network Services development manager, describes a current product — a system relating Prolog and Business System 12.

"We're trying to link logic programming and relational data bases. It should be possible to support a version of logic programming that runs directly on the data base itself without further need for interfacing," du Croix says. "The advantage is that the full power of relational data base facilities becomes available to the logic programmer.

"This is not a commercial product," du Croix emphasizes. "It's for IBM internal use only."

BS12 is the new relational data base system. It takes its name from the number of relational commands. One of the first applications will be used with the Exshare Databank, a data base on securities of international stock market exchanges. Users can get information from any of the exchanges displayed on their screens.

ALRIGHT! QUIT CLOWNING AROUND AND LET'S GET DOWN TO BUSINESS!

IBM's Uithoorn facility had prime responsibility for development of DOS.

Why locate in Holland?

**EUROPEAN CENTRALIZED
LOGISTICS OPERATIONS
DIGITAL EQUIPMENT CORP.
PARTS CENTER
Nijmegen**

DEC management asked itself a question back in 1981: How could the company better supply its installed base in Europe, which now numbers 100,000 computers? Supplying directly from the U.S. was too time- and money-consuming.

A site on the continent was needed. The Netherlands was chosen.

Analysis of DEC's decision-making process points up Holland's advantages as a distribution site. The company first identified the variables in its business needs: stable business environment; proximity to efficient transportation; workers with international business sense; trained high-technology people; high-quality telecommunications possibilities; and close proximity to the concentration of DEC revenue-producing locations.

"We felt subsidies were the last consideration," says Simon Dijkhuizen, general manager at the Nijmegen facility. "Operational factors were most important. The UK was considered too peripheral and Ireland too high a risk as well as too peripheral."

Potential countries numbered four: Belgium, France, Germany and Holland. The selection criteria were broken down to the categories of distribution, personnel, telecommunications and financial.

The Netherlands equalled or surpassed its three competing countries in each element of distribution, ranging from Customs attitude (Holland's famous "five-second Customs" processing), banking facilities, transport network and cost and so on.

In terms of the personnel criteria, Dijkhuizen says, Nijmegen sits across from Europe's largest semiconductor plant run by Philips Information Systems, Inc. and still has no problem finding workers. That isn't surprising in a region of the Netherlands suffering 31% unemployment.

The Netherlands fared worst in the area of telecommunications, being judged by DEC as adequate but not superior in international voice and data capabilities, satellite transmission, degree of regulation and cost.

As for financial incentives, Dijkhuizen notes that there were "com-

DEC chose the Netherlands as the supply center for its European customers.

**Simon Dijkhuizen
General Manager
Nijmegen Parts Center**

Robert Campbell
General Manager
Software Distribution

pelling reasons to open another facility in Ireland, which offers tax holidays of 20 years sometimes. But we chose to optimize around distribution."

In the Netherlands, a company can individually negotiate tax rules with the government. A distribution center such as at Nijmegen services profit centers in Europe and in doing so has costs but no real profits. The "cost-plus" method of taxation is used. A percentage, normally negotiated between 10 and 25, of the cost of the distribution center to do business is subject to the corporate tax rate. DEC negotiated a 10% level.

The Nijmegen facility receives about 30 tons a month of defective parts from European subsidiaries for repair. The town isn't particularly close to Schiphol Airport or Rotterdam harbor, the two prime locations in any distribution strategist's plans. But there are tax benefits to locating further east in the Netherlands, and 90% of the parts come to Nijmegen by truck rather than by air or sea.

More recently, DEC decided to centralize its European software distribution system in Nijmegen, with American Robert Campbell as manager. He says, "The Dutch work ethic is extremely high; the workers are industrious, conscientious, aggressive. They're much more interested in details than Americans. I was shocked that assemblers and materials handlers were so interested in the details of business."

When DEC relocated the European Software Distribution Center to Nijmegen, Campbell experienced a few cultural work differences. On one Friday he asked a secretary to work overtime on Saturday morning and receiving a most amazed look. He discovered that workers expect management to plan better, to ask ahead of time for weekend work. They guard their time off.

About the workers council legislated by Dutch law into the management lives of corporations, Campbell says, "It frightened the life out of me in the beginning. It really isn't like a union — it's a partner."

Software development is distribution-sensitive, and DEC looked at Ireland, Spain and the UK as central sites. The software center began in Galway, but demand could not be met from that Irish location.

"Galway isn't serviced by a major airline," Campbell says. "Shannon is primarily a tourist airport. You can't get anything out of Ireland. There was growing market pressure for fast turnaround of 48 hours. It's possible now to get our product in the hands of users anywhere in the continent within 24 hours, if necessary."

Working toward OSI

NCR SYSTEMS ENGINEERING
Utrecht

NCR Corp.'s presence here is small — a $7 million investment at offices employing 125. The importance of the development work goes much beyond the figures.

European countries are leading proponents of the International Standards Organization's Open Systems Interconnection (OSI) model, which attempts to make compatible local and long-haul networks. "The work is being done here," says NCR's P. Van Roekel, "to prepare the company for products to meet the OSI model. It's coming."

According to Van Roekel, the Systems Engineering group at Utrecht is also leading the move within NCR to IBM's Systems Network Architecture (SNA) communications marketplace. We have developed here high-speed modems for connecting to IBM." These modems apparently work with IBM's SNA modems.

Mirlan is a mid-range local-area network being developed jointly by NCR on the communications end (transceiver and channel designs) and Intel Corp. on the controller side (local-area network controller design). The first products from this project are expected early in 1985. Mirlan reportedly can run on cabling schemes from both IBM and AT&T.

Mirlan's objectives are:

- Low cost per connected device.
- Suitable for coaxial and twisted pair wiring.
- Designed for transaction-type systems.
- Based on international standards.
- Use of international standards (IEEE 802.3).
- Capable of covering 3,600 meters' distance.
- Design available to the industry.
- Workstations removable without taking the system down.

Currently, the coaxial system for Mirlan is operational. Samples of the transceiver in development by NCR are expected by the third quarter of 1985. Samples are available now of Intel's controllers.

Until now, when you operated the PC in the terminal emulation mode, keys had to be redefined.

For inexperienced users, that could be both awkward and time-consuming.

What's more, it's always required quite a few keystrokes to engage a PC-to-mainframe function such as file transferring.

The result again was an increase in the chance for human error.

As well as an increase in the amount of time and money spent on a job.

Now IRMA's addressed both those problems with a keyboard that costs only $329, suggested retail.

Introducing the IRMAkey/3270. IRMAkey contains all the 3270 keys for terminal emulation. And all the PC keys when you're in the computer processing mode.

Moreover, IRMAkey contains four additional keys that allow the PC user to get IRMA up and running immediately as well as engage any DCA software system the user wants.

All in one simple stroke. IRMAkey/3270. Only from DCA. It's a touch faster than a terminal. Or a PC. Or both.

For more information, send in the coupon to DCA. Faster still, call us at 1-800-241-IRMA. Telex 261375 DCAATL.

Mail to DCA, 303 Technology Park, Norcross, GA 30092.
And we'll tell you more about all IRMA products.

The manufacturing plant at Venray is one of the most advanced Xerox units.

Advanced MRP in action

RANK XEROX MANUFACTURING B.V.
Venray

To the 119,000 sq. meters of buildings here each day come 40 truckloads of parts; 35 leave again with manufactured goods.

The 2,100 employees of Rank Xerox in Venray produce copiers and output devices, specifically the world supply of processors for the Xerox Corp. 1045 and the output modules for the Xerox 1075. Goods are distributed to 80 destinations in 50 countries.

Rank Xerox at Venray typifies full-blown manufacturing resource planning (MRP) principles. It is a "just-in-time" plant linked to automated handling of parts and control of the supply lines.

According to A. Noordjik, manager of general services, the company uses the transport network to buffer incoming parts flow. Trucks can be speeded up or slowed down throughout Europe so that they arrive at their specified hour. The "window" for suppliers to deliver their parts is zero to three days.

Venray is one of the most advanced Xerox units. Power for automating the manufacturing control is furnished by an IBM 3083 for the Xerox Management Program, a Data General Corp. MV 10,000 (2x) for the Automated Material Control System, a DEC PDP-11/23 and Zilog, Inc. 80 (6x) for the cranes and shuttle cars, as well as the automatic guided vehicles.

No-inspection policy

Rank Xerox reduced from 4,000 to 600 the number of its parts suppliers and instituted a no-inspection policy. The assembly line reject rate of 1,500 per million now compares with 10,000 in 1982. Inventory was reduced from nearly three months' worth to about 23 days. By year's end, 80% of the supply will be just in time.

It took four years to educate suppliers of the 40,000 parts coming in of the necessity of delivering on time. The operating philosophy is: If you can control the external supplier, you don't need extensive inventory.

In the change to an automated manufacturing facility and with the decision to use Xerox Computer Services, located nearby, for computing power, the DP department at Rank Xerox, Venray, dropped from 150 to 5.

Portables on the factory floor

The factory floor has become a primary target in the corporate battle to improve productivity.

By John Balga

Until recently, hand-held computers were little more than advanced calculators with limited use of variables, programming languages and memory. They were, however, useful for making quick calculations and running small "canned" programs. But the past few years have witnessed the global acceptance of the personal computer and a growing interest in more powerful hand-held computers.

The new hand-held computers offer the user many of the features of a personal computer in addition to several unique extras. A typical hand-held configuration will support a display of anywhere from one to 25 lines, full keyboard functions, random-access memory,

an integrated printer, communications capabilities and some form of optical reader (bar code, magnetic stripe or punched card).

As far as software is concerned, a full operating system with a programming language (usually Basic) is included in read-only memory (ROM). Recent advances in ROM-based software will provide word processing, electronic spreadsheet, data base management, telecommunications, calculator functions and file utility functions. Units are powered by rechargeable batteries, which provide a minimum of eight hours of operation. All this capability is then bundled into a lightweight, compact package that can be held and operated in a person's hand.

Several manufacturers are producing hand-held computers appropriate for factory applications.

> *Erroneous and inefficient data transfers occur primarily in operations where the communication between worker and supervisor takes place on paper.*

Among the most popular units are the Hewlett-Packard Co. Model 75C, the HP 110 and the Tandy Corp. Model 100. Prices for a complete system range between $1,000 and $2,000, depending on options.

In addition to generic hand-held computers, specialized hand-held computers, called portable data entry terminals, have entered the market. Some of these terminals are programmed in a low-level language (commonly Forth) to conserve on memory requirements. Manufacturers of portable data entry terminals include MSI Data Corp. and Telxon Corp.

Many applications have greeted the hand-held computer with open arms (and hands) because of one key advantage other systems cannot offer — mobility. One application area that critically requires mobility is the factory floor.

Immediate rewards

The factory floor has become a key target in a company's fight for improving productivity. In many cases, productivity can be immediately increased by acquiring and distributing accurate data quickly. Erroneous and inefficient data transfers occur primarily in operations where the communication between worker and supervisor takes place on paper. Human inscription is extremely vulnerable to misinterpretation. In addition, the paper on which data is recorded can be lost or destroyed.

Hand-held computers in such applications have eliminated keypunching by allowing direct input of the data into the system. Also, as data is being entered, input can be checked to eliminate virtually all errors. Once the data is accumulated, it can be transmitted to a host computer for calculations and report generation. The results of such a system are realized immediately.

Some of the more common applications in which hand-held computers have prospered on the factory floor include order picking, warehouse receiving operations, inventory control and front-line control.

Order picking

An order picking application tells workers which orders must be processed and where the orders are physically located. This operation is commonly implemented by conveying the order information on paper. A worker must retrieve the paperwork from a supervisor prior to picking any orders. When the task is complete, the paperwork is returned to the supervisor and new orders are distributed.

This application can be effectively converted into a hand-held computer application. At the start of a shift, an order picker retrieves a hand-held computer containing order processing that must be performed during the shift by each worker. The order information is downloaded by a host computer and arranged to optimize the worker's route.

A worker starts up the device by entering an employee number, which will serve as a key to display only orders relevant to that worker. The computer then displays the order number, quantity of parts, location of parts and perhaps quickest route to the destination. If more information is required, the worker may request the system to display it.

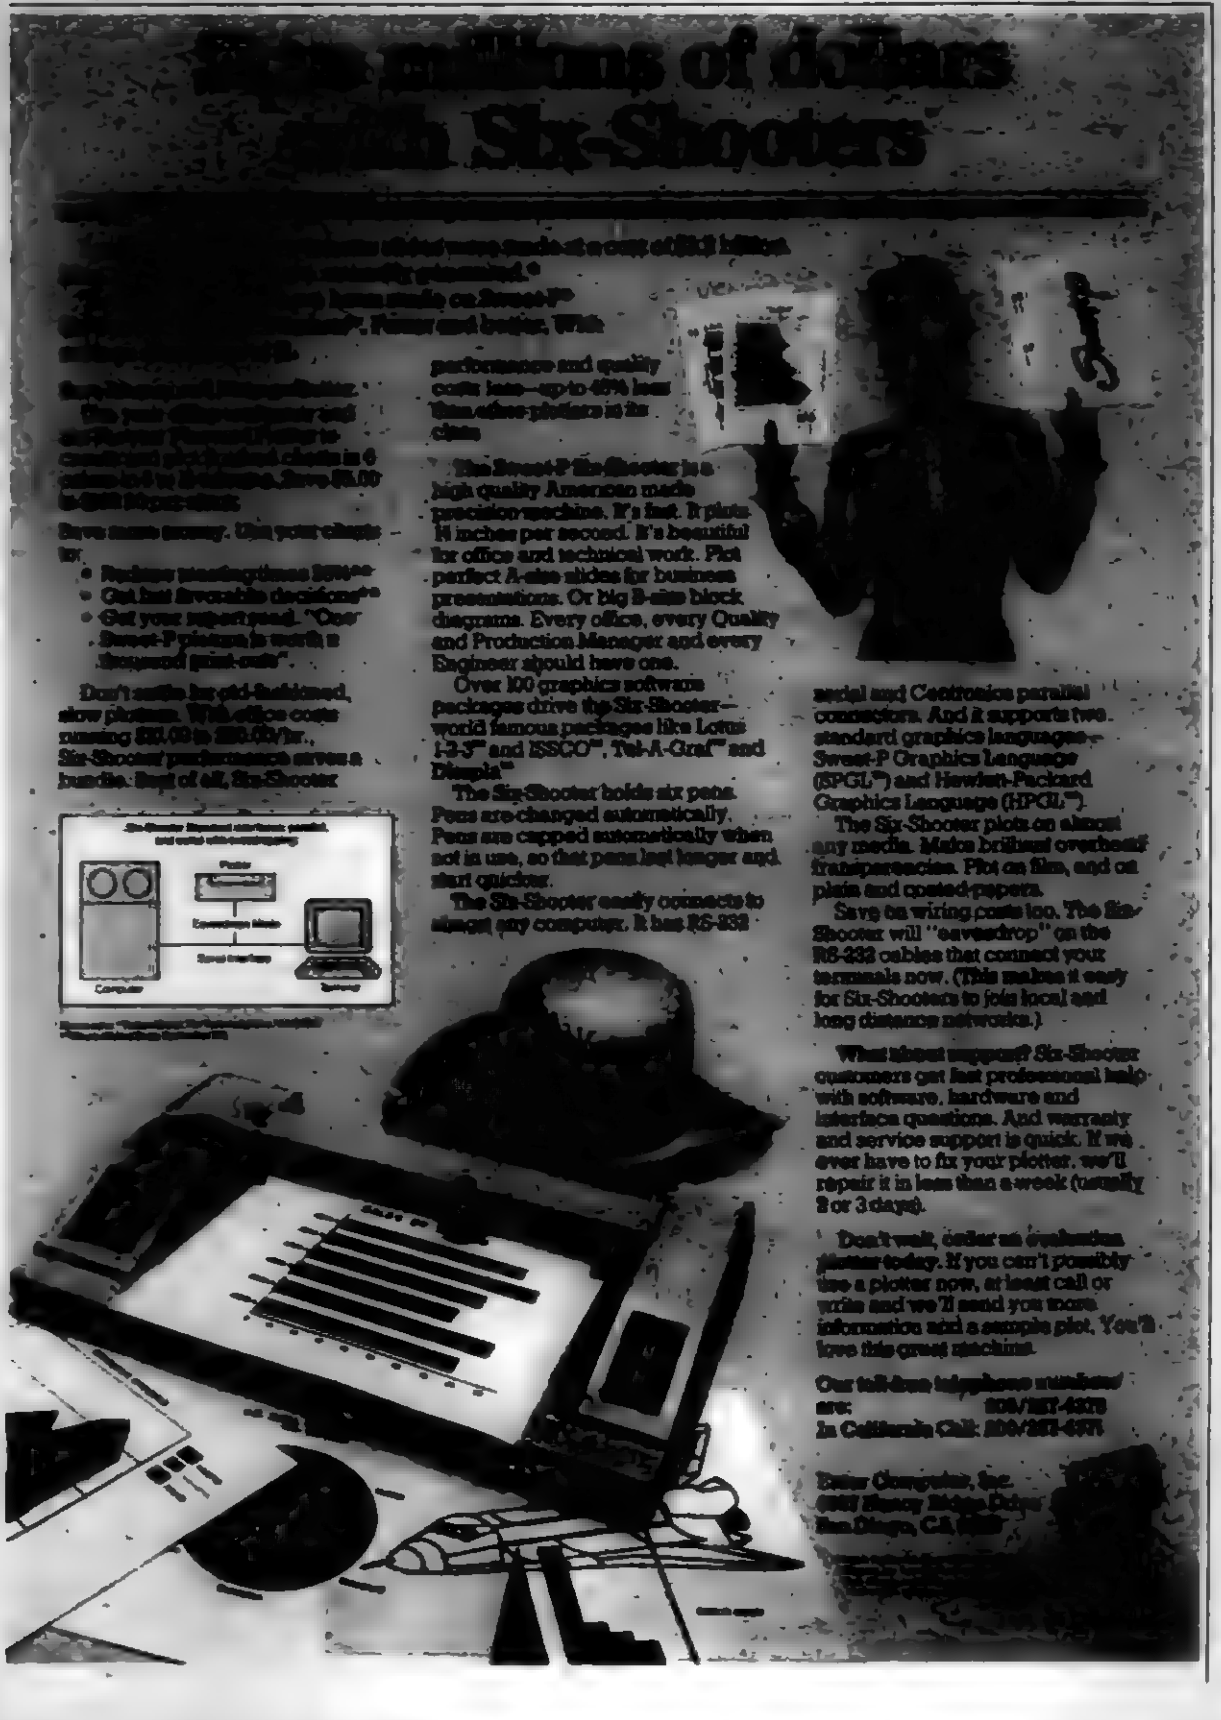
As a worker completes an order, the completion data (actual number of parts picked and number of parts remaining at location) is entered into the computer before the next order is displayed. A time-of-day stamp is automatically recorded in the hand-held computer in order to track the productivity of each worker.

At the completion of a shift, the worker returns the device to the supervisor, who then uploads any recorded data to the host. The data is processed into report format and immediately forwarded to supervisors as well as upper management. Any orders not processed are requeued for picking in the next available shift.

This approach to order picking allows a worker the mobility to process orders efficiently, while eliminating the requirement to keypunch the status of each order.

Warehouse receiving operation

A warehouse receiving operation revolves around fork-truck activity. As a delivery is accepted at the



[illegible] millions of dollars [illegible] Six-Shooters

[illegible]

performance and quality costs less—up to 45% less than other plotters in its class.

The Sweet-P Six-Shooter is a high quality American made precision machine. It's fast. It plots 14 inches per second. It's beautiful for office and technical work. Plot perfect A-size slides for business presentations. Or big B-size block diagrams. Every office, every Quality and Production Manager and every Engineer should have one.

Over 100 graphics software packages drive the Six-Shooter—world famous packages like Lotus 1-2-3™ and ISSCO™, Tel-A-Graf™ and Disspla™.

The Six-Shooter holds six pens. Pens are changed automatically. Pens are capped automatically when not in use, so that pens last longer and start quicker.

The Six-Shooter easily connects to almost any computer. It has RS-232 serial and Centronics parallel connectors. And it supports two standard graphics languages—Sweet-P Graphics Language (SPGL™) and Hewlett-Packard Graphics Language (HPGL™).

The Six-Shooter plots on almost any media. Make brilliant overhead transparencies. Plot on film, and on plain and coated papers.

Save on wiring costs too. The Six-Shooter will "eavesdrop" on the RS-232 cables that connect your terminals now. (This makes it easy for Six-Shooters to join local and long distance networks.)

What about support? Six-Shooter customers get fast professional help with software, hardware and interface questions. And warranty and service support is quick. If we ever have to fix your plotter, we'll repair it in less than a week (usually 2 or 3 days).

Don't wait, order an evaluation plotter today. If you can't possibly use a plotter now, at least call or write and we'll send you more information and a sample plot. You'll love this great machine.

In California Call: [illegible]

[illegible]
San Diego, CA [illegible]

receiving dock, the supervisor instructs the fork-truck operator where to store the delivery, either verbally or as a note scribbled on a piece of paper. The operator proceeds to stock the delivery and returns for another run.

To improve this kind of operation, a hand-held computer can be installed on the fork truck. Before each shift, information concerning the current status of the warehouse facility and expected deliveries is downloaded into the hand-held computer. Upon receiving a shipment, the operator enters the number and/or description of the delivery. The computer will then determine and display the desired location for the delivery.

Once at the specified location, the fork-truck operator keys in the actual storage location, and the time of day is automatically recorded. In addition, the computer generates a label identifying the contents of the delivery, vendor information and the date of delivery. The label is then applied to the shipment to enable a visual inventory inspection. At this stage, a label can also be generated to serialize important inventory items.

The input information is uploaded to a host computer following the completion of a shift. This data is then used to update the available storage facilities in the warehouse as well as inventory counts.

The installation of a warehouse receiving system will eliminate the requirement of having a routing supervisor at the receiving dock. In addition, making received goods available to manufacturing quickly may eliminate the problem of running out of raw materials.

Inventory control

Inventory control is probably the most prominent application for hand-held computers. The process of counting inventory obviously requires mobility. Therefore, the paper-and-pencil approach was ideal and is still the primary method of acquiring inventory counts.

Initial inventory counts are based on the data received from the warehouse receiving operation. As the inventory is distributed and depleted, inventory counts are decreased. The inventory tallies are keypunched periodically into a host computer in order to generate inventory reports.

The issue of timely information is important here. If the inventory levels are to be maintained above a critical level, the deleted inventory counts must be recorded immediately following a shift, and management must provide the respective reports shortly thereafter. A timely inventory feedback procedure may eliminate stock outages as well as reduce the amount of inventory required.

The application of hand-held computers offers a solution to this problem. Hand-held devices containing current inventory data can be provided to each worker. The computer guides the worker to particular items that must be accounted for. The worker inputs the quantity of items at that particular location. If there is a discrepancy between the expected and actual number of items, the device will prompt the worker to recount the items and record occurrence. At the completion of the inventory, the recorded data is uploaded to a host computer and inventory reports are generated.

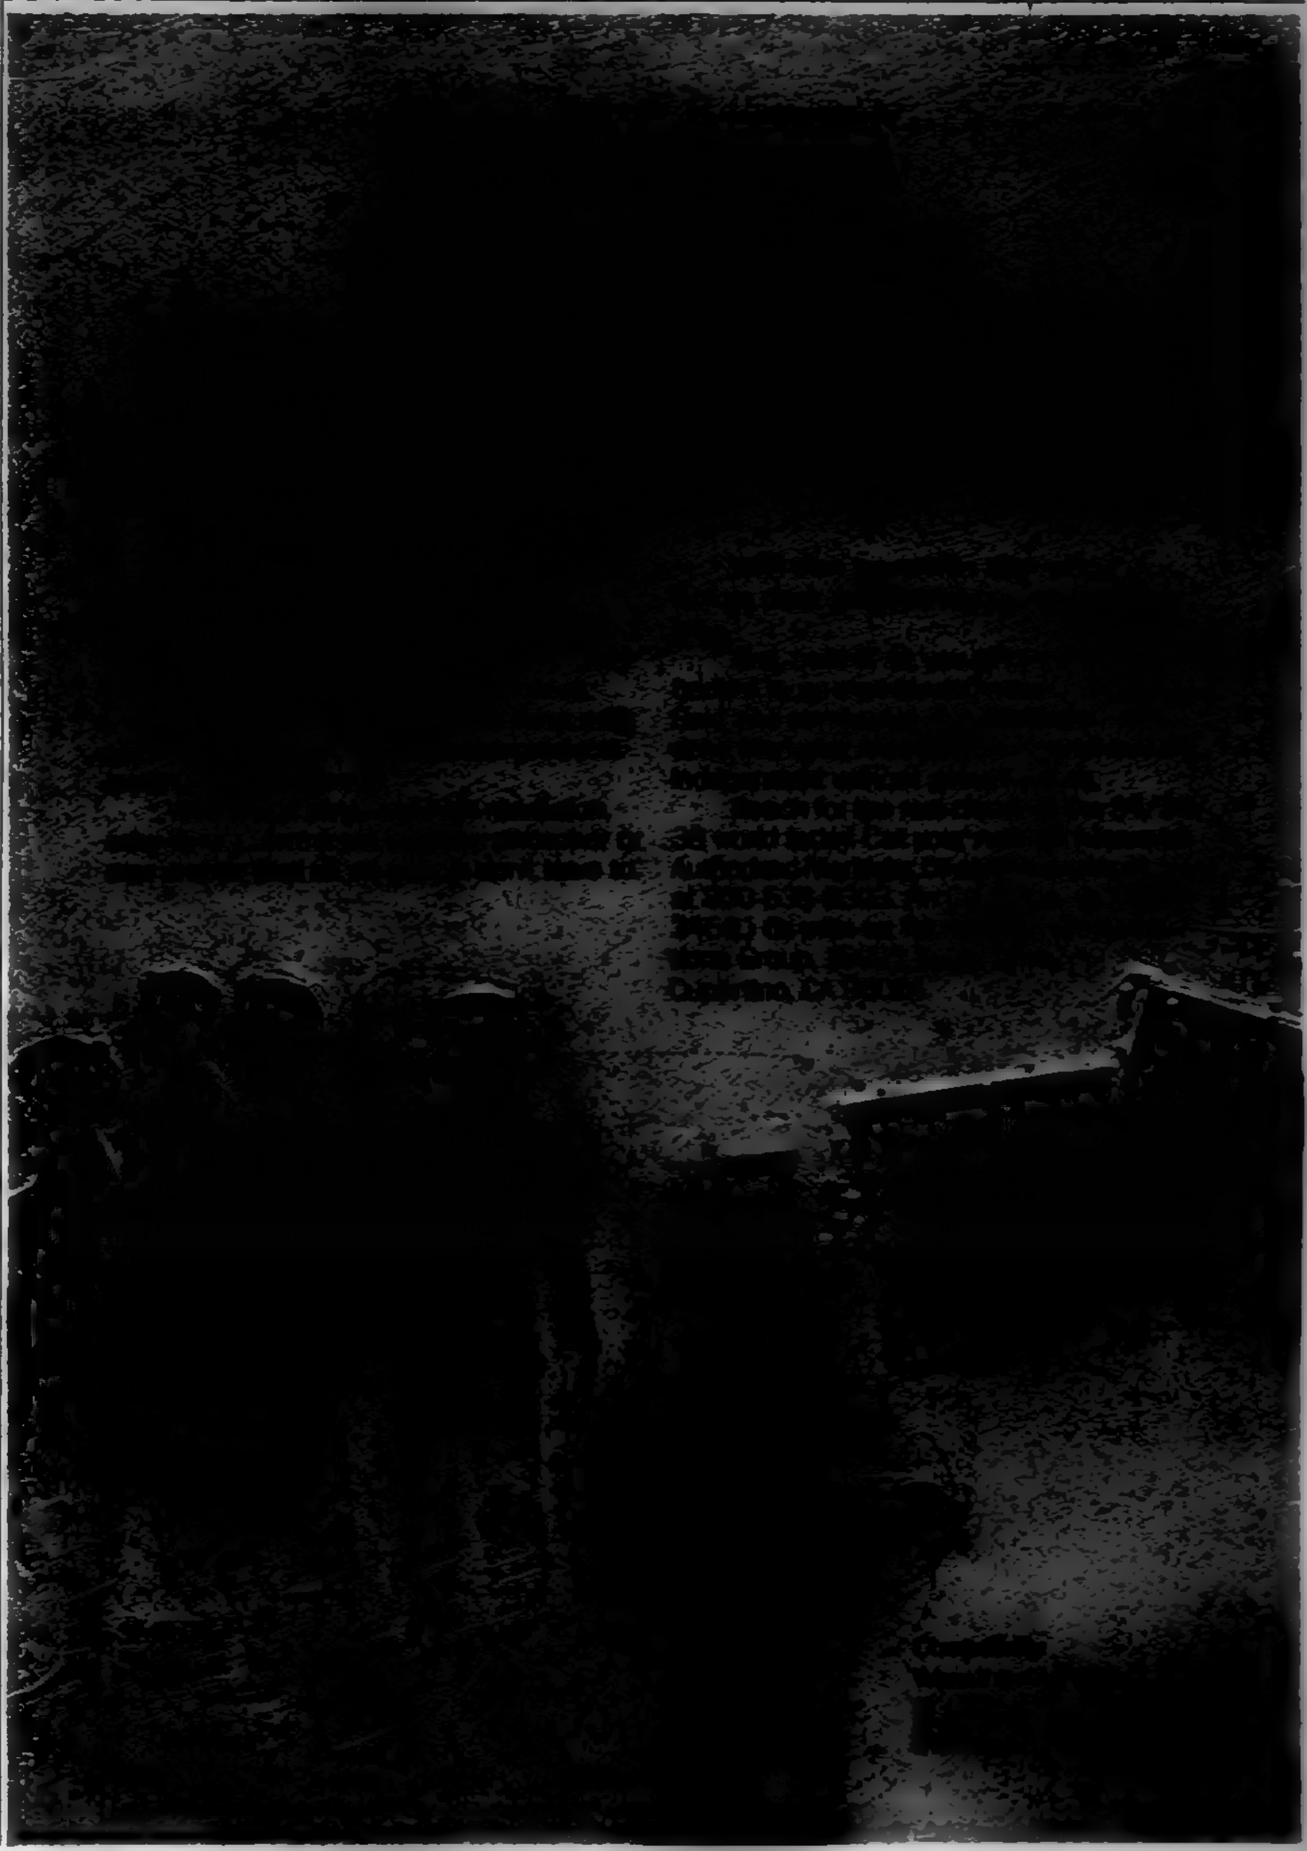
Front-line control

Factory-floor operations use various systems to track the rate of production. A common approach to this problem has been to require a supervisor to inspect the production of each workstation at selected time intervals and record the accumulated results.

The accumulated production is then compared with an expected calculation of output. If a discrepancy exists, the supervisor must then track down the cause of the shortage or surplus. Each problem and any action taken to remedy it is recorded in a production log.

The production readings and problem reports are handed over to a keypunch operator at the completion of a shift. The data is entered into a host computer, which generates production reports for management, usually on a weekly basis. During this keypunch phase, human encryption errors and keypunch errors may introduce fluctuations in the actual production that will either cover up or increase the number of problems.

The problem with this



Peat Marwick technology has exploded the myths about computer systems development: It doesn't have to take forever or cost the earth.

Introducing Structured Retrofit.

The landscape of your computer software can grow rather twisted over the years. Constant change, varying needs and greater demand have rendered many systems chaotic, or worse yet, useless. And the cost and time of developing a new computer system has been a financial nightmare.

Until now. Peat Marwick introduces a technological breakthrough that gives you the best of both worlds: the technical currency of a new software system at an affordable price. It's called Structured Retrofit. Its advantages are simple: You save the valuable existing information from your present system by regenerating it in a structured format that is then used as a base to build a new system. Even on a new computer.

Your immediate benefit is you can achieve your new system with savings in time and expense as great as fifty percent of that needed to write an entirely new system. Only Peat Marwick's Structured Retrofit can do this. And you gain the long-term advantage of a major reduction in maintenance programming costs.

Peat Marwick technology creates workable solutions for your business problems. Learn more about the advantages of systems development through the Structured Retrofit process. For a free brochure and case histories, send in the coupon or call 800-621-1776 (in Illinois 312-951-7692).

> *In general, technology for portable data entry terminals has been slow in reaching the industrial marketplace. Many small companies have come along to foster the technology.*

approach lies in the time it takes to acquire and process production data. Any production problems will exist for at least a week before they are filtered to management.

And by the time management investigates a problem, it may no longer be apparent, and other problems may exist.

A hand-held computer can provide for automatic recording of production output, and any required performance analysis can be calculated immediately for review.

With this system approach, the supervisor is prompted to inspect production, a verification is performed on all data input by the supervisor.

Expected output is calculated automatically, based on the operation and manpower applied, an on-line analysis is performed and the keypunch requirement is eliminated.

Bringing in a portable

General Electric Co. uses a portable computer for data entry in a shop-floor pilot project involving eight workstations. The system enables a supervisor to analyze performance on-site. In this front-line control operation, all the necessary questions are displayed by the terminal, a search is conducted for errors and calculations are performed automatically. At the end of the shift, all performance data is transferred to a host computer for further processing and data logging.

The first step in designing this system was to establish its flow. Then hardware and software specifications could be determined.

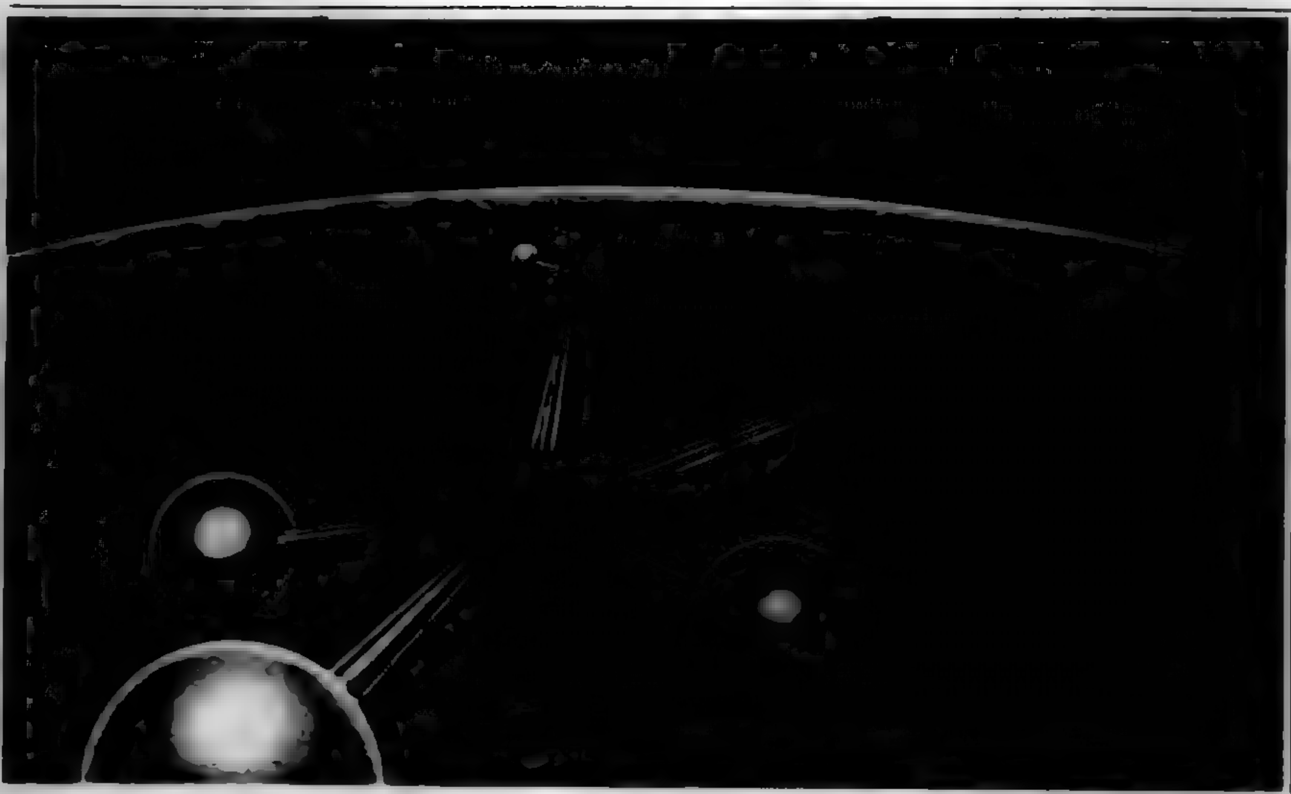
Given a production schedule, the supervisor would initiate the terminal every day by entering the type of operation being performed, the manpower for each operating station and the expected production rate for each station. At select times during the day, the supervisor would record the actual production output at each operating station via prompting by the terminal. If the output rate fell below expectation, the terminal would immediately display the variance and query the supervisor to identify the problem as well as what actions would be taken to remedy the situation.

Upon termination of the work shift, the portable data entry terminal would transmit all recorded information concerning the operation's activities to a host computer, where it would be converted and stored in a resident data base.

Hardware selection

With the system flow defined, two pieces of hardware had to be selected: a host computer and the portable data entry terminal. Initially, the only major constraint was cost, which was set at a maximum of $5,000 for the host computer hardware, $2,000 for the hand-held terminal.

The selection criteria for the host computer were kept general: a reliable microcomputer system that could support external data communications and could use a large selection of development and application software. The IBM Personal Computer was selected to perform the host computer functions because of its interface options and the amount of commercial software. Among its available adapter cards are RS-232 asynchronous communications, parallel I/O and graphics display. The estimated price for the Personal Computer was $4,000.



Statistical Multiplexers From Paradyne

Paradyne's series of Intelligent Networking Multiplexers is now a family of network solutions. With User Switching and Auto Rerouting, hundreds, even thousands of your employees and customers can depend on your network.

User Switching For Efficient Communications. To be productive you need computer resources. User Switching provides a way for users to tap into the variety of your company's resources, regardless of where those computer resources are in the network. Paradyne's DCX multiplexers find the most efficient communications path to each computer.

Auto Rerouting Means Increased Productivity. Auto rerouting maintains the connection to the computer and insures user productivity in the face of degraded telco lines. When a link fails, DCX automatically looks for alternate routes in the network to reroute communications traffic, insuring continued productivity.

Advanced Networking Diagnostics. Paradyne offers the most advanced networking diagnostics in today's market. Both data and controls can be viewed to and from any channel in the network. Problems at a remote site can be isolated and diagnosed through DCX, quickly and easily.

Productivity and Efficiency. Another Paradyne systems solution. If you would like to know more about Paradyne's Series of Intelligent Networking Multiplexers call **1-800-482-3333**. We'll answer your questions and give you the location of the Paradyne sales office nearest you.

DCX 815...four or eight channels. DCX 825...four to 32 channels. DCX 845...240 channel data networking exchange. DCX 850... 240 channel intelligent networking processor. DCX 861...four or eight channel statistical multiplexer with an integrated 9,600 bps modem. DCX 871...four to 32 channels with integrated 9,600 bps modem. And Paradyne's **NEW T1 Multiplexer**...combining the channel capacity of T1 facilities with the versatility and networking capabilities of the DCX product line.

Meeting the Communications Challenge of the 80's

paradyne

Paradyne Corporation P.O. Box 1347
8550 Ulmerton Road, Largo, FL 33540

The terminal selection process developed into a major egg hunt. In general, technology for portable data entry terminals has been slow in reaching the industrial marketplace. Many small companies have come along to foster the technology. The selection criteria were based on obtaining a device that supported a conventional full alphanumeric keyboard (without second function key entry), data transmission capability and a large display window.

The HP75C was finally selected. A recent entry in the HP portable line, the 75C weighs 26 oz. and measures 10 in. by 5 in. by 1.25 in. Powered by nickel-cadmium batteries, it contains a 48K ROM-based operating system with Basic, which supports up to 24K bytes of RAM, a 32-character LCD and a typewriter keyboard. External hardware, such as printers, video monitors and communications links, can be added to the system using adapters attached on the HP-IL. A fully loaded HP-75C lists at $1,895.

Applications software design

The front-line control system design was now out of the woods. The only remaining task was to develop the data acquisition and data transmission software. The front-line control system software is divided into three modules: initialization, data collection and data transfer.

Initialization is performed before the beginning of each shift. The supervisor selects a model number of the given production process being performed, and the corresponding data is loaded into the shift data file. The data for each workstation is then displayed for the supervisor to confirm or to update.

After the initialization is complete, an appointment file containing time intervals for monitoring production output is loaded. When the real-time resident in the HP-75C reaches a set time, a beeper sounds, reminding the supervisor to monitor workstation production.

For each workstation, the system prompts for the cumulative production output. The expected output is computed for the elapsed time and compared to the actual output for that time interval. Any shortage causes the system to prompt for further information concerning the shortage, such as possible cause, persons notified, action taken and an optional description.

For both the initialization and data collection process, input is checked for certain obvious user mistakes, such as alpha input in lieu of numeric. Input that passes this review is then echoed by the HP-75C for confirmation so that logical errors can be corrected.

After acquiring all the production data for a given shift, the hand-held system is connected to the Personal Computer for data transmission. Initiating the data transfer programs at the HP-75C and at the Personal Computer will result in uploading the production data.

If any errors occur in data transmission, the supervisor is notified and the necessary steps displayed on the Personal Computer screen. Otherwise, a data file is created for the daily data and appended to the data file for the current fiscal week. Only if the supervisor signifies to the HP-75C that the data transmission for that day was successful will the HP purge the data files for that shift.

> *Besides reminding the supervisor when and what to enter, the portable system had to perform all the usual number of checks and double-checks of a data collection system.*

The transferred data files are converted into data interchange format (DIF) at the Personal Computer. The DIF files can then be directly accessed by various commercial software packages compatible with this format.

Such packages include electronic spreadsheets (Software Arts, Inc.'s Visicalc, Microsoft Corp.'s Multiplan), data base utilities (Ashton-Tate's Dbase-II, Visicorp's Visi File and Visi Dex), project scheduling (Visi Schedule) and plotting software (Visi Plot/Visi Trend, Decision Resources' Chart-Master).

System software development

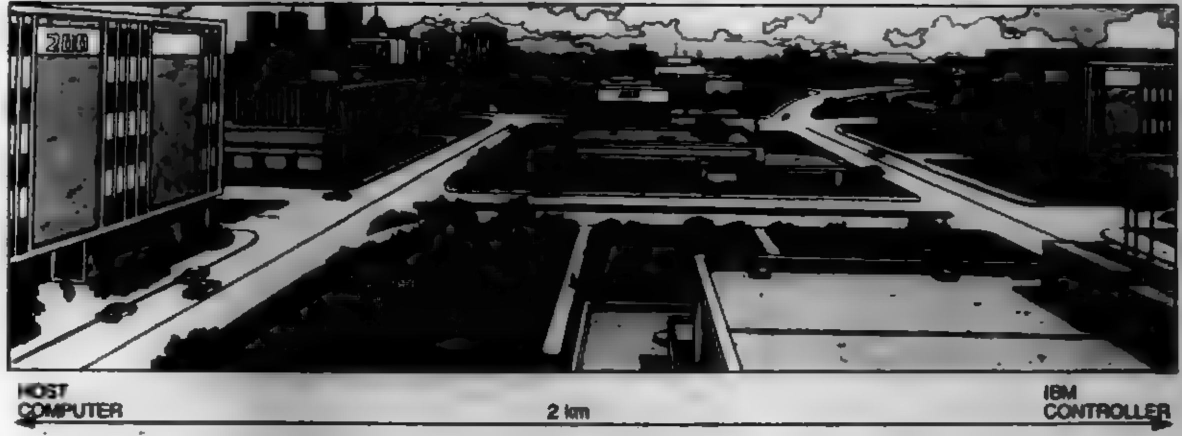
Developing software for the hand-held system was a unique experience. Programming on a portable computer requires the acceptance of several limitations. Even with the 8K memory expansion module, programs and data files could only occupy a limited 24K bytes of storage space. Exceeding this limit resulted in a "locked" condition, in which no system commands could be executed, not even deleting files to free memory.

Yet, it was more than simply scaling everything down. Besides reminding the supervisor when and what to enter, the portable system had to perform all the usual number of checks and double-checks inherent in a data collection system. The area of human engineering was especially demanding.

Because the display line was only 32 characters long, each prompt had to be as concise as possible without being cryptic. In order to provide enough information, longer prompts were displayed in sections, with a timed delay in between.

At the same time, the system had to be kept as streamlined as possible, so that it did not become cumbersome to use. As with any system, it was a question of balance.

Interactive Systems/3M has just stretched IBM's 200-foot limit by nearly 2,000 yards.



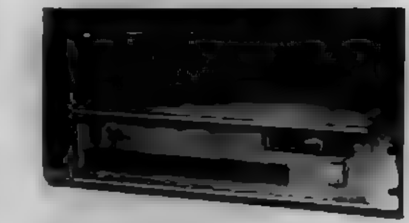
With the new IS/3M Fiber Optics Channel Extender, you can put your IBM controllers and peripherals up to 2 km. away from your host computer.

The 200-foot limit on the distance between your IBM mainframe and your IBM peripheral controllers or minicomputers may not seem like a big deal right now. But what are you going to do when you run out of space in your present computer facility? And how can you put peripherals such as laser printers in more convenient locations when BUS and TAG cable limitations force you to keep them on a short leash?

Simple. Replace your standard IBM BUS and TAG cable with a Model 6101 Fiber Optics Channel Extender from Interactive Systems/3M.

Put your controllers where you need them. Down the hall, across campus, or on the 99th floor.

A slender, flexible optical-fiber cable replaces your old-fashioned BUS and TAG umbilical cord. You can put your controllers wherever they're needed, up to a distance of two kilometers.



Simple to install, easy to ignore once it's in place.

To install the IS/3M Fiber Optics Channel Extender, you simply break the BUS and TAG chain and insert the fiber-optics link. You're back in business immediately, with no changes in hardware or software.

Get the full story on the reliable, affordable Model 6101 Fiber Optics Channel Extender from Interactive Systems/3M. Call (800) 328-5727 x 176 toll free. (In Minnesota, (800) 742-5685 x 176.) Or mail coupon to Interactive Systems/3M, P.O. Box 22756, Robbinsdale, MN 55422

IBM is a registered trademark of International Business Machines Corporation

☐ Please send me information on the Model 6101 Fiber Optics Channel Extender and other IS/3M products for my IBM computers, controllers, and peripherals

☐ I'd also like to learn about your point-to-point modems and your "crashproof" LAN/I and LAN/II local-area networks

3M

The development of the IBM software was built around two factors: the method of data transfer and the rigid requirements of the data interchange format. Because of the nature of the data transfer, there was a high risk of losing individual characters. To prevent this loss, the input loop was limited to as few checks as possible.

At first, it was decided simply to check for a character and directly store it in an array. Trying this out with several cables proved how dangerous this approach was. Because the port frequently picked up noise from the cable as incoming characters, the input array was quickly filled with garbage data before the HP-75C had signalled the end of transmission. Although it increased the chance that a character might be missed, a second check was added to the loop. Only those characters of decimal code 122 (lower case z) or less were stored in a vector array. Termination of the transmission was signalled by two bell characters in a row on the rather reasonable assumption that it would be unlikely that chance (and noise) would produce two such characters in a row.

After the termination characters were received, the program separated the characters into words. This second loop converted the decimal codes to characters and concatenated the characters until a carriage return was reached. The word, minus the carriage return, was then stored in a second array, still as a string. Because the DIF file organization was somewhat irregular, a third loop wrote the individual DIF records.

The DIF format itself is very particular in its construction, with checks and double-checks for each data record. Special header records declare the number of rows and columns in advance. Each row is then marked by its own (BOT) header record. Individual data elements consist of two records. The first contains two numbers: the type of element (whether numeric, string or header) and a numeric value. The second record contains a string. If the element is numeric, the value in the first record is the value of the element and the string contains a "V." If the element is a string, the numeric value is ignored and the contents of the element are found in the second record. Finally, the end of data is marked by a special EOD record.

Strict requirements

Beyond this double-layered description, the programmer must beware of yet more. That innocuous-looking string record has strict requirements. Certain special headers require a null record surrounded by double quotes (" "). The BOT and EOD header labels and the V for numeric records must not be surrounded by quotes. The string for string elements varies. Strings containing any special characters (blanks, commas and so on) must be in double quotes, while a single word can do without. Files whose contents conflict with this are considered invalid and are not recognized by Visicalc.

In order to create a valid DIF file, a parallel format array was set up, containing the type and string length for that DIF record. As each string of the string array was read, the appropriate form of record was written, converting strings to numbers where necessary and

fitting strings to the proper length.

Hardware interfacing

The next step in the system design was to integrate the host computer with the portable data entry terminal.

Establishing communications between the two proved to be a nightmare. Since HP announced a May 1984 release date for the RS-232C interface on the HP-75C, the decision to use HP's General Purpose Input/Output (GPIO) interface for data communications was not difficult. The GPIO interface enables unidirectional or bidirectional communications with either an 8- or 16-bit parallel bus structure.

The IBM Personal Computer list of hardware options does not contain a parallel communications interface. It does, however, contain two parallel printer adapters, the Monochrome Display/Parallel Printer Adapter and the Parallel Printer Adapter (1505200). Further investigation into the technical reference manual revealed that both adapters "can be used as a general input/output port." Logic diagrams showed that the parallel adapter designs are not identical and both adapters only support parallel output.

The one-line display, in many instances, does not provide the user with enough information.

The Parallel Printer Adapter contains the required hardware to perform parallel input, but an inherent design feature must be altered. (Heat up those soldering irons.)

After the adapter is modified, parallel input is enabled by writing a 20H to the Personal Computer's write control register.

In addition, when connecting the HP GPIO Interface to the IBM Parallel Printer Adapter, several communications lines need to be crossed in order to maintain signal continuity.

The HP GPIO supports various handshaking options (strobed, full handshake, half handshake) in transmitting or receiving data. The strobed option was selected for this application.

In this application, the data will always be uploaded from the HP-75C to the IBM Personal Computer.

On the HP-75C end, the data will be transferred in Ascii format to the GPIO interface via the HP-IL/GPIO interface adapter.

The initial response has been positive. However, the users have expressed dissatisfaction with the size of the hand-held device, claiming it from workstation to workstation.

Another complaint concerned using commercial software packages to access and manipulate the production data. While an experienced user of the application software can retrieve information he needs, the novice manager often is intimidated by the package. Therefore, a customized data base/spread-sheet application program would offer user friendliness in addition to protecting access to privileged information.

Other users of hand-held systems have expressed dissatisfaction with one-line displays and physical dimensions. The one-line display, in many cases, does not provide the user with enough information and frequently causes disorientation when he must enter multiple-line input parameters.

Some users find it awkward or uncomfortable to hold the computer in one hand and key in data with the other.

Nevertheless, the elimination of human inscription and keypunching have substantially decreased the number of input errors. The increase in productivity is immediate.

As the price of hand-held computers continues to decline while convenience and number of functions increase, more applications opportunities will surface in automating factory procedures.

SCIENCE/SCOPE

Satellite images have led to the discovery of a large Mayan city hidden for centuries by the jungles of Mexico's Yucatan peninsula. Scientists uncovered over 100 possible ancient sites by studying false-color images provided by Landsat earth resources satellites. Jungles typically are made to appear bright red in these pictures. The ruins appeared pink or light red, because foliage had not grown as densely over the sites as it had in the neighboring jungle. The Landsat images also revealed the existence of vast farmed fields that may prompt new theories of how the ancient civilization was able to feed itself. The imaging instruments aboard the Landsat satellites, called multispectral scanners, were built by the Santa Barbara Research Center, a Hughes Aircraft Company subsidiary.

A U.S. Army laser device has been made less costly and more reliable by manufacturing its housing assembly in a new way. The improvements were made to the Ground/Vehicular Laser Locator Designator, which determines the distances to targets and pinpoints them for laser-homing weapons. The original housing assembly was made from a number of aluminum sections bonded together. The Value-Engineered housing is a one-piece fiberglass-nylon structure cast under high pressure. The changes stem from technology that was not available at the time the original contract was signed. Under the Department of Defense Value Engineering program, Hughes will share in the savings. The Value Engineering program is designed to encourage employees to look at the functions of a product and develop alternatives that cost less, perform better, and improve reliability.

A new vector network analyzer for millimeter-wave devices lets microwave designers make broad-band measurements at frequencies up to 110 GHz. The Hughes system uses a downconverter technique to convert a millimeter-wave signal into a frequency suitable for measurement on the Hewlett-Packard 8410 microwave vector network analyzer. The system permits analysis of all four S-parameters after a single insertion of the device under test, either in real time or, for enhanced accuracy, by computer-control using error-correcting software.

Development times for semicustom very large-scale integrated (VLSI) circuits have been cut from greater than one year to 20 weeks at an ultramodern computer-aided training and design center at the Hughes facility in Newport Beach, California. Utilizing advanced design automation software, a comprehensive library of predesigned logic functions (called Macros), and preprocessed wafers, the new facility is helping engineers design chips with 2,000 to 8,000 gates and with as many as 180 pins. New 3-micron dual-layer metal HCMOS processes are applied to both standard cell products and state-of-the-art gate arrays. Skilled design engineers and education specialists at the Newport Design Center provide training and technical support for IC designers throughout the company.

The Hughes Tucson facility, located in picturesque Southern Arizona, is a large, modern manufacturing complex with capabilities for producing advanced missile systems developed by Hughes. We have openings for experienced and graduating engineers to work on such advanced systems as the electro-optical Maverick, radar-guided Phoenix, TOW, and AMRAAM, the Advanced Medium-Range Air-to-Air Missile. Please send your resume to Professional Employment, Dept. S3, Hughes Aircraft Company, P.O. Box 11337, Tucson, AZ 85734. Equal opportunity employer. U.S. citizenship required.

WHEN THE CHAIRMAN EXPLODES OVER A SECURITY LEAK, WHAT'S YOUR DEFENSE?

VMCENTER:

THE ONE INDISPENSABLE SURVIVAL TOOL FOR VM DATA CENTER MANAGERS.

It doesn't matter who actually leaked it—if there's a failure in system security, it's *your* problem.

But now, at last, you have an ally. In VMCENTER.

VMCENTER puts you squarely in control of system resources—providing multiple levels of authorization, for maximum protection against security violations.

It also allows you to do a lot more. Change passwords in a flash, encrypt data through simple commands, and keep top management informed of potential problems through a variety of reports.

Best of all, VMCENTER makes *you* secure—knowing that problems are being taken care of *before* they happen, not after.

But there's more.

In addition to security problems, VMCENTER solves a lot of others, like disk and tape management, resource scheduling and accounting, even workload balancing. And it does it all in an integrated manner that's more effective than any possible collection ofquick fixes.

VMCENTER. It's a survival tool—and then some. Once you use it, you'll wonder how you ever got along without it.

And the Chairman may even learn to feel the same way about you.

For more information on VMCENTER, call or write VM Software, Inc., 2070 Chain Bridge Road, Suite 355, Vienna, Virginia 22180, telephone (703) 821-6886.

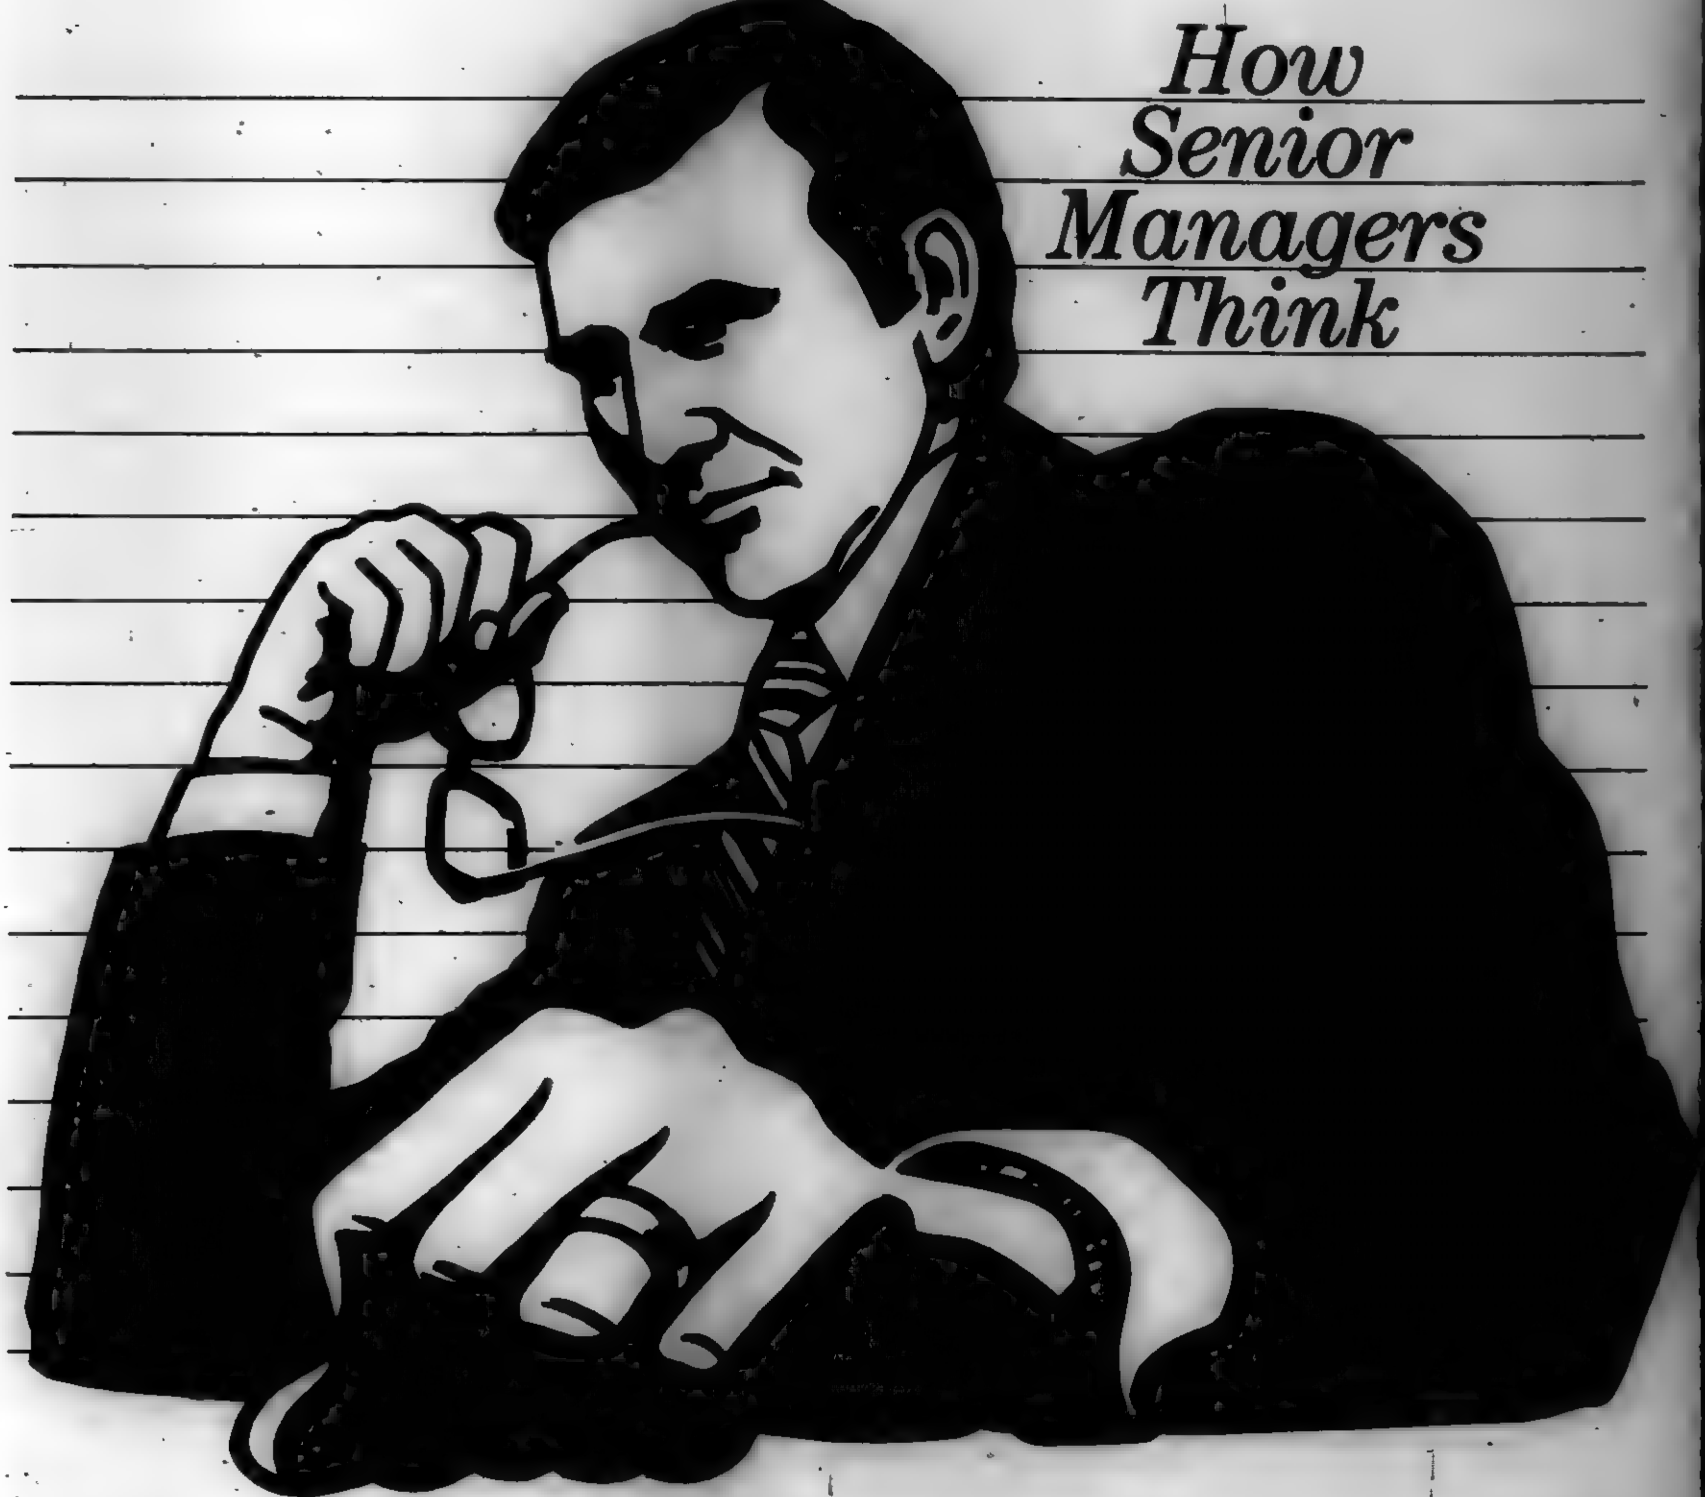
How Senior Managers Think



By Daniel Isenberg

If you communicate with senior managers or aspire to move up through the ranks, you can benefit from knowing what concerns them and how they combine intuition and rationality to solve problems.

> *"It is not enough to have a good mind. The main thing is to use it well."*
>
> — Rene Descartes

Jim LeBlanc phoned Steve Baum, who formerly worked in his division, to ask about the chief executive officer's new corporate task force on quality control that wanted to meet with Jim. Jim, the head of the industrial equipment division of Tanner Corp., thought that Steve, now director of technology, could help him figure out why the task force wanted to meet with him in two weeks.

"It's because you're doing so damn well

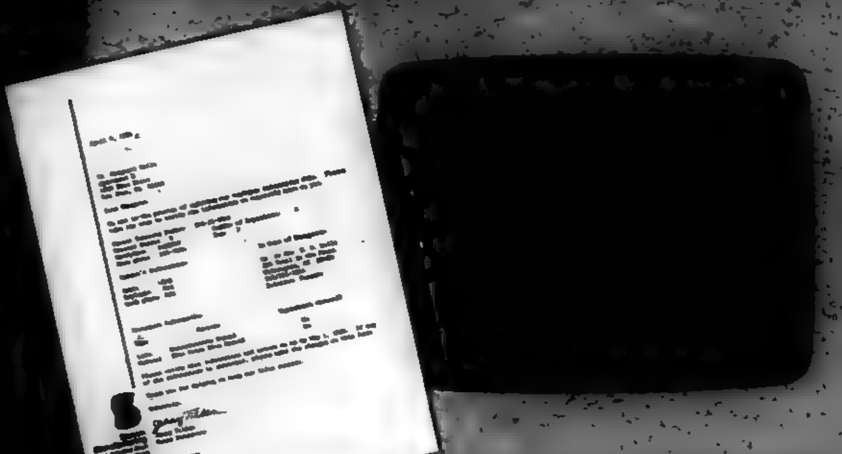
The SAS System. . . .

Are your users demanding faster service and more business expertise than your data processing staff can offer? Is your DP staff demanding relief from its applications backlog? Is your management demanding lower development and maintenance costs? Put the SAS® System in your Information Center and you can meet all these demands.

"The SAS System is the one, completely integrated software solution to meet your Information Center needs."

The SAS Solution for End Users

Your marketing staff can use the base SAS® product for sales reports and analyses. Sales representatives can use the full-screen capabilities in our SAS/FSP® product to manage their prospect files and the personnel department can keep track of employee and applicant records.



The accounting staff can quickly produce budgets and spreadsheet reports.

Your clerical staff can take orders, track inventories, and produce mass mailings. Managers can schedule projects and determine product mix with our SAS/OR® product, and combine the results to make accurate [illegible] library of procedures. Then they can present the results of their work in easy-to-understand SAS/GRAPH® displays. All this and more with the SAS System.

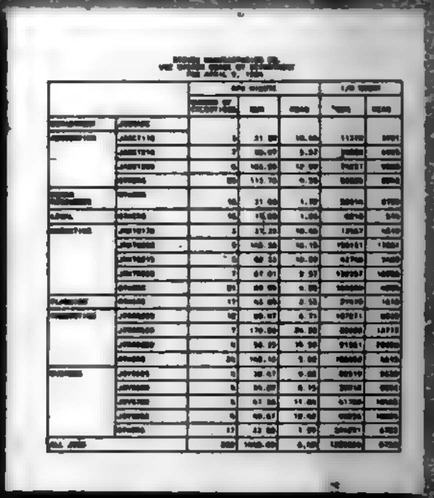
With the SAS System, users can [illegible] language to accomplish [illegible] need to maintain one [illegible] one set of easy-to-read manuals and [illegible]. If they need more help, they can register for public training courses or you can schedule an in-house course for several users. We also develop videotapes to train your SAS users. And you can call us. Our full-time staff of specialists is ready to answer your questions.

"Our services help guarantee that our software will make you more productive."

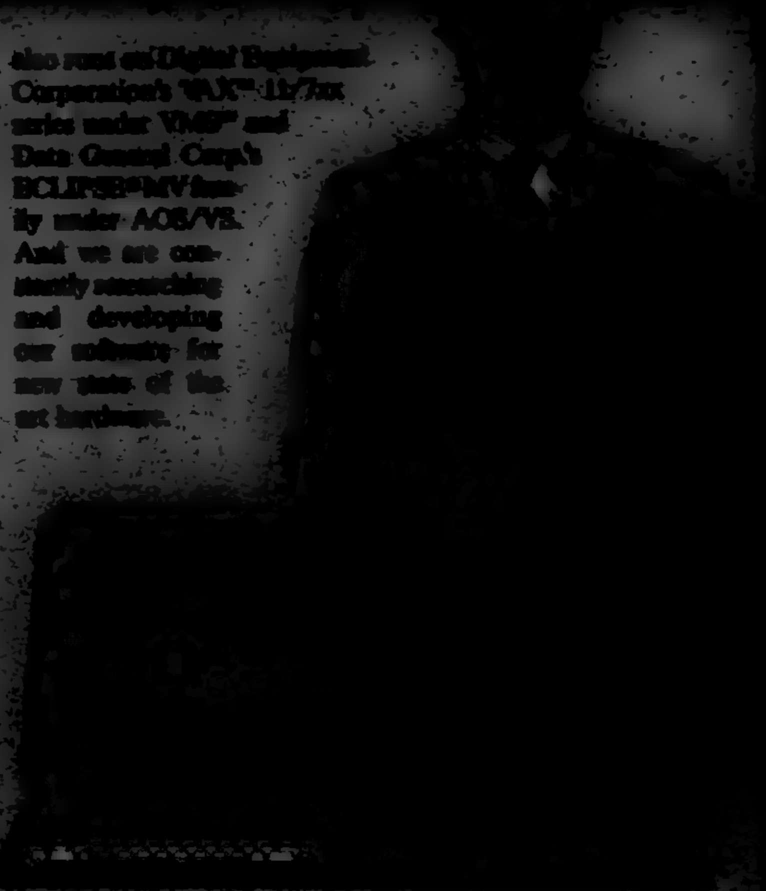
The Solution for Your Information Center

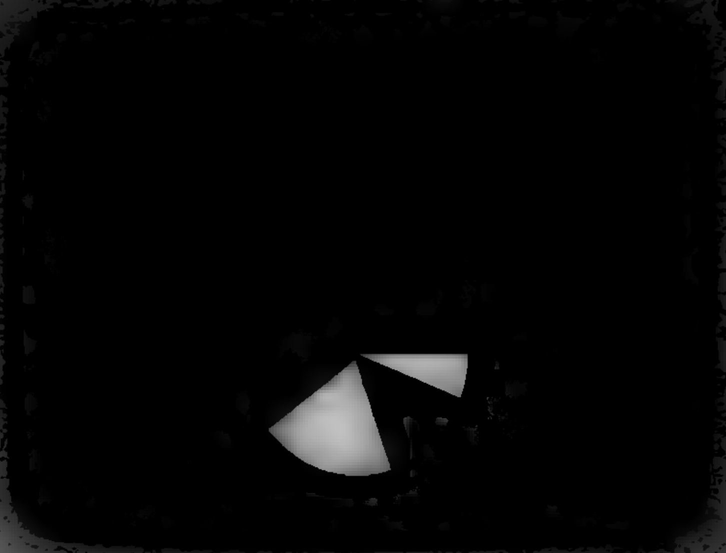
The SAS Solution for Programmers

Once your Information Center is equipped with the SAS System, your DP staff is free to use SAS programming tools to develop complicated reports and analyses, measure hardware [illegible] or system usage, and accomplish many other jobs. [illegible] SAS/IMS-DL/I® interface to build test data bases and DL/I [illegible] CICS [illegible]



also runs on Digital Equipment Corporation's VAX™ 11/7xx series under VMS™ and Data General Corp.'s ECLIPSE® MV family under AOS/VS. And we are constantly researching and developing our software for new state of the art hardware.





The SAS Solution for You

The SAS System [illegible] corporate [illegible]

“In short, the SAS System gives you everything you need—at a price you can afford.”

So put an end to the demands. Send the coupon or call us today for the solution to your Information Center needs.

SAS Institute Inc., SAS Circle, Box 8000, Cary, NC 27511-8000, USA. Telephone (919) 467-8000. Telex 802505.

Outside the US, call our subsidiaries in the United Kingdom, West Germany, France, New Zealand, Australia, and Singapore, or our distributors in Japan, Italy, Israel, South Africa, Brazil, Colombia, Singapore, and Saudi Arabia.

SAS®

down there, boss!" Steve replied.

"Gee, thanks. By the way, Steve, what's the agenda for Singer's staff meeting for next week?" [Singer was the president and Jim's boss.]

"Well, we're going to talk about the reorganization and look at the overhead reduction figures for each division. Then Singer's going to report on last week's executive committee meeting and his trip to Japan."

"How did it go?"

"His telex from Osaka sounded enthusiastic, but he just got in last night, and I haven't seen him yet."

"Well," said Jim, "I guess we'll just have to see, but if you hear something, call me right away because if Osaka comes through I'm going to have to hustle to get ready, and you know how Bernie hates to shake is. Now, about the task force . . ."

In the space of three minutes, Jim LeBlanc got a lot done. In addition to collecting critical information about a task force that the CEO, with unusual fanfare, had personally commissioned one month ago, he also began to plan his approach to the upcoming staff meeting. He decided not to try to get a presentation by his marketing people on opportunities in the Far East on the agenda.

Sensing that Singer was optimistic about the Osaka trip, Jim decided that he should get his people ready for the possibility that the deal would materialize, which meant pulling engineers off another project for a while.

What were the thinking processes that allowed Jim to get so much done so pointedly and so rapidly? What was going on in his mind during his conversation with Steve? How, given the incomplete and uncertain information that Steve gave him, did Jim conclude that the Japan deal was imminent?

Thought processes

For the past two years I have studied the thought processes used by more than a dozen very senior managers while on the job. The managers that I studied ranged in age from their lower 40s to their upper 50s, in managerial experience from 10 to 30 years and in current job tenure from four months to 10 years. Their companies ranged from $1 billion divisions in Fortune 100 companies to $10 million entrepreneurial companies just beginning to take hold in the marketplace.

Company products included low- and high-technology goods, and markets ranged from rapidly expanding to precipitately deteriorating. All but two of the executives were responsible for the overall performance of their business units. As all had been frequently promoted throughout their careers and were considered excellent performers across the board, they were a representative sample of today's successful business executives.

Two findings about how senior managers do not think stand out from the study. First, it is hard to pinpoint if or when they actually make decisions about major business or organizational issues on their own. And second, they seldom think in ways that one might simplistically view as "rational"; in other words, they rarely systematically formulate goals, assess their worth, evaluate the probabilities of alternative ways of reaching them and choose the path that maximizes expected return. Rather, managers frequently bypass rigorous, analytical planning altogether, particularly when they face difficult, novel or extremely entangled problems. When they do use analysis for a prolonged time, it is always in conjunction with intuition.

Obviously, decisions do get made in organizations, and these are frequently justified by data and logic. In particular, when viewed retrospectively over a long time period, effective executives often appear quite rational. Yet when studying their concurrent thinking processes, being "rational" does not best describe what the manager presiding over the decision-making process thinks about nor how he thinks.

I have a fourfold purpose in this article. First, I want to present a more accurate and empirically grounded description of what goes on inside the minds of senior managers (see sidebar on ID/32). Second, I hope to offer a more accurate description of managerial thinking that should help provide a beginning language for talking about these elusive mental phenomena. Third, I hope that this language will also help to relieve some managers of the inconsistency between their view of how they are "supposed to" think and the thinking processes that, through experience, they have learned are actually quite effective. Fourth, I want to take advantage of successful senior managers' experiences to explore the managerial implications of their thinking processes.

What they think about

Senior managers tend to think about two kinds of problems: how to create effective organizational processes and how to deal with one or two overriding concerns or very general goals. These two domains of thought underlie the two critical activities in which John P. Kotter found general managers engaged: developing and maintaining an extensive interpersonal network and formulating an agenda.

The primary focus of on-line managerial thinking is on organizational and interpersonal processes. By "process" I mean the ways managers bring people and groups together to handle problems and take action.

Whether proposing a change in the executive compensation structure, establishing priorities for a diverse group of business units, consolidating redundant operations or preparing for plant closings, a senior executive's conscious thoughts are

Dumb.

Stand-alone programs can't be made to work as a system no matter how hard you might try.

Stand-alone programs are fine. Unless, of course, you need them to work together. Because the sum of the parts will never equal a whole.

That's why even the highly touted WordStar,® dBase II™ and 1-2-3,™ programs don't make sense as a business system.

They were designed to perform very specific application functions only, and therefore, make miserable workmates.

Fortunately, there's a smart solution. It's the new Smart Software System.

Smart's unique "modular integration" is the key to productivity. It means that The Smart Word Processor, The Smart Data Manager

foremost among the processes for accomplishing a change or implementing a decision: "Who are the key players here, and how can I get their support? Whom should I talk to first? Should I start by getting the production group's input? What kind of signal will that send to the marketing people? I can't afford to lose their commitment in the upcoming discussions on our market strategy."

> ***Successful senior managers think a lot about interpersonal processes and the people with whom they come in contact. They try to understand the strengths and weaknesses of others, the relationships that are important to them and their agendas and priorities.***

During the first months of his tenure, one area general manager I studied asked all of his business unit management teams to evaluate their own units. Subsequently, the area manager and his staff spent a day or more with each team discussing the whole area, each business unit within it and how the two interrelated.

Although the area manager was concerned with the substance of the business-unit priorities, uppermost in his mind was a series of process concerns: How could the review process help managers be increasingly committed to their goals? How could the process help managers to become increasingly aware of the interdependencies among business units? How did his business unit managers use their people in reviewing their business units? How much management depth existed in the units?

In addition to thinking about organizational processes, successful senior managers think a lot about interpersonal processes and the people with whom they come in contact. They try to understand the strengths and weaknesses of others, the relationships that are important to them and what their agendas and priorities are.

For example, the CEO of a small high-technology company spent more than an hour with his personnel director, a woman he rated as having performed excellently so far and whom he saw as having great potential although still inexperienced. At the time of the discussion, the CEO was considering adopting a new top-management structure under which the personnel director would report to another staff member rather than directly to him.

The CEO explained the proposed change to the personnel director, pointing out that it was not definite and that he was soliciting her reactions. Managers' "maps" of people provide them with guides to action. In this case, because of his sense of the personnel director's needs, the CEO slowed the reorganizing process so that the people who reported to him could deal with the various issues that arose.

The CEO elaborately described to me his awareness of the personnel director's concern at being new and at being a woman, and her desire to be in direct contact with him. He also understood her worry that if she reported to someone lower than him, people would perceive that the new personnel function was not very important, and she would lose power.

Overriding concern

The stereotypical senior executive pays a great deal of attention to the strategy of the business, carefully formulates goals, lays out quantified and clear objectives and sets about to achieve these objectives in the most efficient way. Whereas senior executives certainly attend to specific strategies and objectives some of the time, in their day-to-day reality specific objectives lurk in the background, not in the forefront of their thoughts.

Approximately two-thirds of the senior managers I studied were preoccupied with a very limited number of quite general issues, each of which subsumed a large number of specific issues. This preoccupation persisted for anywhere from a month to several years and, when in effect, dominated the manager's attention and provided coherence to many of his chaotic and disorganized activities.

The general manager of one large division of an automotive company, for example, used the word "discipline" more than a dozen times in the course of a two-hour interview. For him, this concept embodied his deep concern for creating order and predictability in a division that, in his view, had become too loose before he took it over.

His concern for discipline appeared in a number of diverse actions — strongly discouraging his subordinates' fire-fighting mentality, criticizing their poor preparation for corporate reviews, introducing rigorous strategic planning, encouraging time management, putting out a yearly calendar with divisional and corporate meetings printed on it, publishing agendas for many of these meetings up to a year in advance and, by keeping recent reports in the top drawer of his desk, forcing himself to review frequently the division's activities and performance.

Regardless of its substance, the overriding concern weaves its way in and out of all the manager's daily activities, at times achieving the dimensions of an all-consuming passion.

Smart.

The fully integrated Smart Software System is designed to make the whole office more productive.

and The Smart Spreadsheet with Graphics not only have the uncompromising power and capacity of these leading stand-alone programs, but they also have the unprecedented capability to work brilliantly together.

So you can easily transfer data and pass commands from one to another. Which means that you can compile financial data, to be included in graph-form, within the text of a printed report, that's mailed to a list drawn from the data manager—automatically.

Don't short change your business by attempting to squeeze the impossible out of a makeshift software system. Get Smart, and the whole office will thank you.

Smart is available for the IBM PC, PC/XT, PC/AT, and compatibles. For information call, 800-GET-SMART. (In Kansas call, 913-383-1089).

Smart Software
from Innovative Software

[illegible]

After his first 100 days in office, an area general manager described his experience turning around a subsidiary in these words:

"The personal cost of achieving our top priorities has been huge. I dropped all outside activities. Now I have a feeling of just having emerged, like a chap who's been taken by a surf wave and rolled. Suddenly he comes up and can look at daylight again. It has been like a single-minded rage or madness. At the end of the 100 days, somehow I have awakened. It was overwhelming."

Of course senior managers do think about the content of their businesses, particularly during crises and periodic business reviews. But this thinking is always in close conjunction with thinking about the process of getting others to think about the business. In other words, even very senior managers devote most of their attention to the tactics of implementation rather than the formulation of strategy.

How managers think

In making their day-by-day and minute-by-minute tactical maneuvers, senior executives tend to rely on several general thought processes such as using intuition; managing a network of interrelated problems; dealing with ambiguity, inconsistency, novelty and surprise; and integrating action into the process of thinking.

Generations of writers on the art of management have recognized that practicing managers rely heavily on intuition. In general, however, people have a poor grasp of what intuition is. Some see it as the opposite of rationality, others use it as an excuse for capriciousness, and currently some view it as the exclusive property of a particular side of the brain.

Senior managers use intuition in at least five distinct ways. First, they intuitively sense when a problem exists. The chief financial officer of a leading technical products company, for example, forecast a difficult year ahead for the company and, based on a vague gut feel that something was wrong, decided to analyze one business group. "The data on the group was inconsistent and unfocused," he said after doing the analysis. "I had the sense that they were talking about a future that just was not going to happen, and I turned out to be right."

Second, managers rely on intuition to perform well-learned behavior patterns rapidly. Early on, managerial action needs to be thought through carefully. Once the manager is fluent at performance, however, and the behavior is programmed, executives can execute programs without conscious effort. In the words of one general manager:

"It was very instinctive, almost like you have been drilled in close combat for years and now the big battle is on, and you really don't have time to think. It's as if your arms, your feet and your body just move instinctively. You have a preoccupation with capital expenditure, a preoccupation with people and one with productivity, and all this goes so fast that you don't even know whether it's completely rational or it's part rational, part intuitive."

After a while a manager can perform a sequence of actions in a seamless fabric of action and reaction without being aware of the effort.

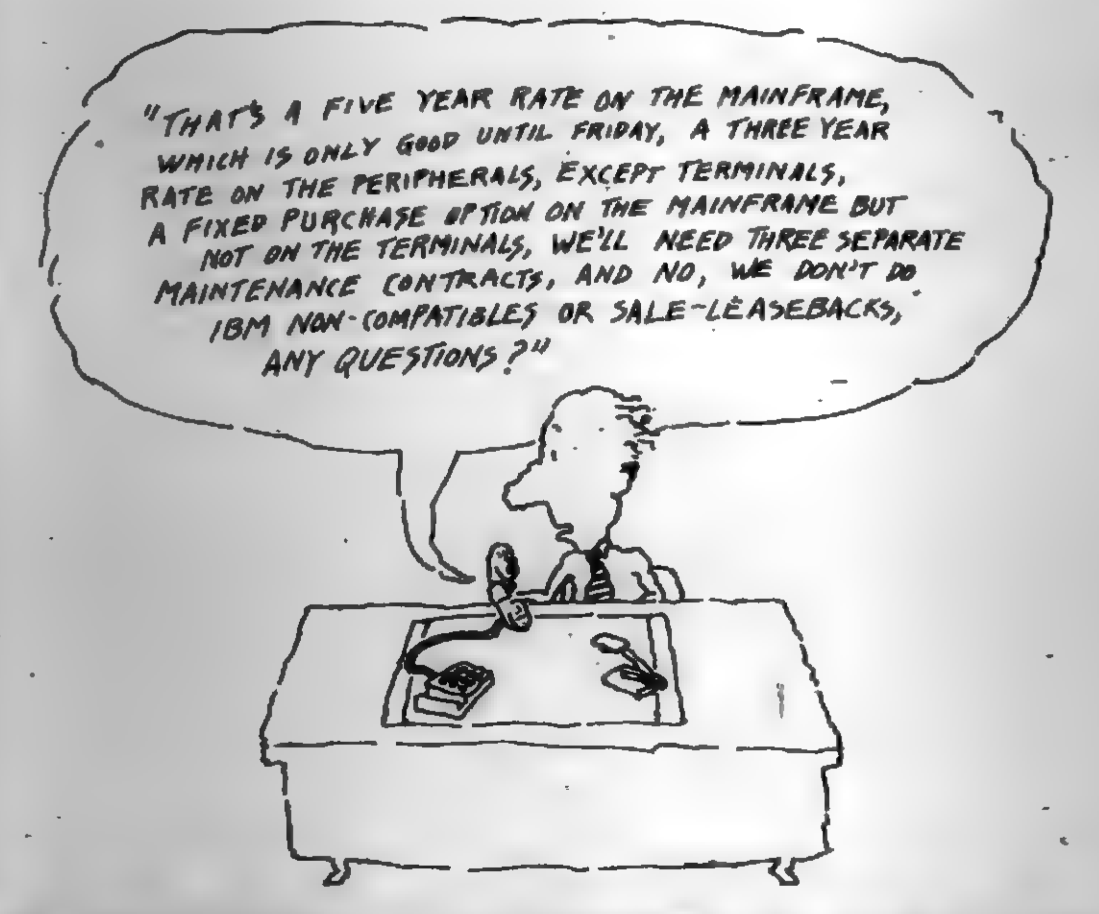
Intuition here refers to the smooth automatic performance of learned behavior sequences. This intuition is not arbitrary or irrational but is based on years of painstaking practice and hands-on experience that builds skills. After a while a manager can perform a sequence of actions in a seamless fabric of action and reaction without being aware of the effort.

A third function of intuition is to synthesize isolated bits of data and experience into an integrated picture, often in an "aha!" experience. In the words of one manager: "Synergy is always nonrational because it takes you beyond the mere sum of the parts. It is a nonrational, nonlogical thinking perspective."

Fourth, some managers use intuition as a check (a belt-and-suspenders approach) on the results of more rational analysis. Most senior executives are familiar with the formal decision analysis models and tools, and those that occasionally use such systematic methods for reaching decisions are leery of solutions that these methods suggest that run counter to their sense of the correct course of action.

Conversely, if managers completely trusted intuition, they'd have little need for rigorous and systematic analysis. In practice, executives work on an issue until they find a match between their "gut" and their "head." One manager explained to me, "Intuition leads me to seek out holes in the data. But I discount casual empiricism and don't act on it."

Fifth, managers can use intuition to bypass in-depth analysis and move rapidly to come up with a plausible solution. Used in this way, intuition is an almost instantaneous cognitive process in which a manager recognizes familiar patterns. In much the same way that people can immediately recognize faces that were familiar years ago, administrators have a repertoire of familiar problematic situations matched with the necessary responses. As one manager explained:



"THAT'S A FIVE YEAR RATE ON THE MAINFRAME, WHICH IS ONLY GOOD UNTIL FRIDAY, A THREE YEAR RATE ON THE PERIPHERALS, EXCEPT TERMINALS, A FIXED PURCHASE OPTION ON THE MAINFRAME BUT NOT ON THE TERMINALS, WE'LL NEED THREE SEPARATE MAINTENANCE CONTRACTS, AND NO, WE DON'T DO IBM NON-COMPATIBLES OR SALE-LEASEBACKS, ANY QUESTIONS?"

IF YOU NEED A COMPUTER TO SORT OUT YOUR LEASING ALTERNATIVES,

WE HAVE A BETTER IDEA.

Phoenix Leasing now offers one stop lease shopping for IBM, IBM compatible, and IBM non-compatible computer systems and peripherals.

Configure your own system, *and* select your own lease plan, with terms ranging from 1-5 years for IBM and IBM compatible equipment and 3-5 years for IBM non-compatible equipment.

If our standard lease plans don't fit you, let us custom design one that does.

Contact Phoenix Leasing today. You'll find you don't need a computer to appreciate our flexible lease terms. We have a better idea for you.

PHOENIX LEASING

A new standard in leasing. Flexibility.

Compared to Data General's desktop, the IBM PC-AT seems a little empty.

If you need a networked multi-user micro system today, there's no comparison.

Data General's DESKTOP GENERATION™ has delivered for over a year the multi-user applications that the IBM PC-AT only promises.

What can Data General deliver today? Distributed data processing. Connectability to other vendors' equipment, including IBM mainframes. Fully integrated office automation, using our CEO® systems.

Can you get all this from the IBM PC-AT?

It's anyone's guess when the IBM PC-AT will have all the capabilities Data General's DESKTOP GENERATION gives you now. So in today's business battle, don't get caught using yesterday's technology.

Choose Data General. And choose productivity over promises. For more information, call 1-800-DATAGEN.

Vendor Supplied Features	Data General Model 20	IBM PC-AT Model 80

Data General
a Generation ahead.

"My gut feeling points me in a given direction. When I arrive there, then I can begin to sort out the issues. I do not do a deep analysis at first. I suppose the intuition comes from scar tissue, getting burned enough times. For example, while discussing the European budget with someone, suddenly I got the answer: It was hard for us to get the transfer prices. It rang a bell, then I ran some quick checks."

By now it should be clear that intuition is not the opposite of rationality, nor is it a random process of guessing. Rather, it is based on extensive experience both in analysis and problem solving and in implementation, and to the extent that the lessons of experience are logical and well-founded, then so is the intuition. Further, managers often combine gut feeling with systematic analysis, quantified data and thoughtfulness.

It should also be clear that executives use intuition during all phases of the problem-solving process: problem finding, problem defining, generating and choosing a solution and implementing the solution. In fact, senior managers often ignore the implied linear progression of the rational decision-making model and jump opportunistically from phase to phase, allowing implementation concerns to affect the problem definition and perhaps even to limit the range of solutions generated.

Problem management

Managers at all levels work at understanding and solving the problems that arise in their jobs. One distinctive characteristic of top managers is that their thinking deals not with isolated and discrete items but with portfolios of problems, issues and opportunities in which many problems exist simultaneously. These problems compete for some part of the manager's immediate concern, and the issues are interrelated.

The cognitive tasks in problem management are to find and define good problems, to map these into a network and to manage their dynamically shifting priorities. For lack of a better term, I call this the process of problem management.

Defining the problem. After learning of a state health organization threat to exclude one of its major products from the list of drugs for which the state would reimburse buyers, top executives in a pharmaceutical company struggled to find a proper response. After some time, the managers discovered that the real problem that was not the alleged drug abuse the availability of the drug on the street caused. Rather, the problem was budgetary: The health services department had to reduce its budget drastically and was doing so by trimming its list of reimbursable drugs. Once they redefined the problem, the pharmaceutical executives not only could work on a better, more real problem, but also had a chance to solve it — which they did.

In another case, a division general manager discovered that, without his knowledge but with the approval of the division controller, one of his vice-presidents had drawn a questionable personal loan from the company. The division manager told me how he defined the problem: "I could spend my time formulating rules to guide managers. But the real fundamental issue here was that I needed to expect and demand that my managers manage their resources effectively." Although he recognized the ethical components involved, he chose to define the problem as concerned with asset management rather than cheating. Because asset management was an issue the division frequently discussed, the manager felt that it was more legitimate and efficacious to define the problem in this way.

Making a network of problems. By forming problem categories, executives can see how individual problems interrelate. For instance, a bank CEO had a network of at least 19 related problems and issues that he

SELF-PACED TRAINING
AVAILABLE WHENEVER YOU NEED IT

The Computer Technology Group offers an extensive library of video courses on UNIX and 'C' language subjects—for managers, end users, applications developers and technical support. Depending upon the type of training you prefer and the number of people to be trained, select Video-Based Training or Interactive Video disc Training.

VIDEO-BASED TRAINING
- Consistent training every time
- Ideal for self-paced or group instruction
- Professionally produced with a variety of graphics techniques for training effectiveness
- Available in all cassette formats and all international standards

INTERACTIVE VIDEODISC TRAINING
- Benefits of both Video-Based Training and microcomputer access
- Dynamic tailoring of each course to the individual student
- Increased student comprehension in reduced training time

THE COMPUTER TECHNOLOGY GROUP

Three factors make the Computer Technology Group the experts in UNIX and 'C' language training:
- Experience, through training thousands of students worldwide in live seminars, with thousands more using our video training at their own locations.
- Extensive Curricula Supporting All UNIX Versions, creating a client base of manufacturers, software developers and end users.
- Quality of instruction, with instructors and course developers who are experts in teaching UNIX and 'C', as well as in designing and implementing a variety of UNIX-based systems.

ASK FOR OUR 48-PAGE COURSE CATALOG, WHICH PROVIDES:
- Comprehensive course outlines
- Course prerequisites
- Curriculum recommendations for multiple audiences
- Guidelines for cost effective training media selection

Some good and bad news about cognition

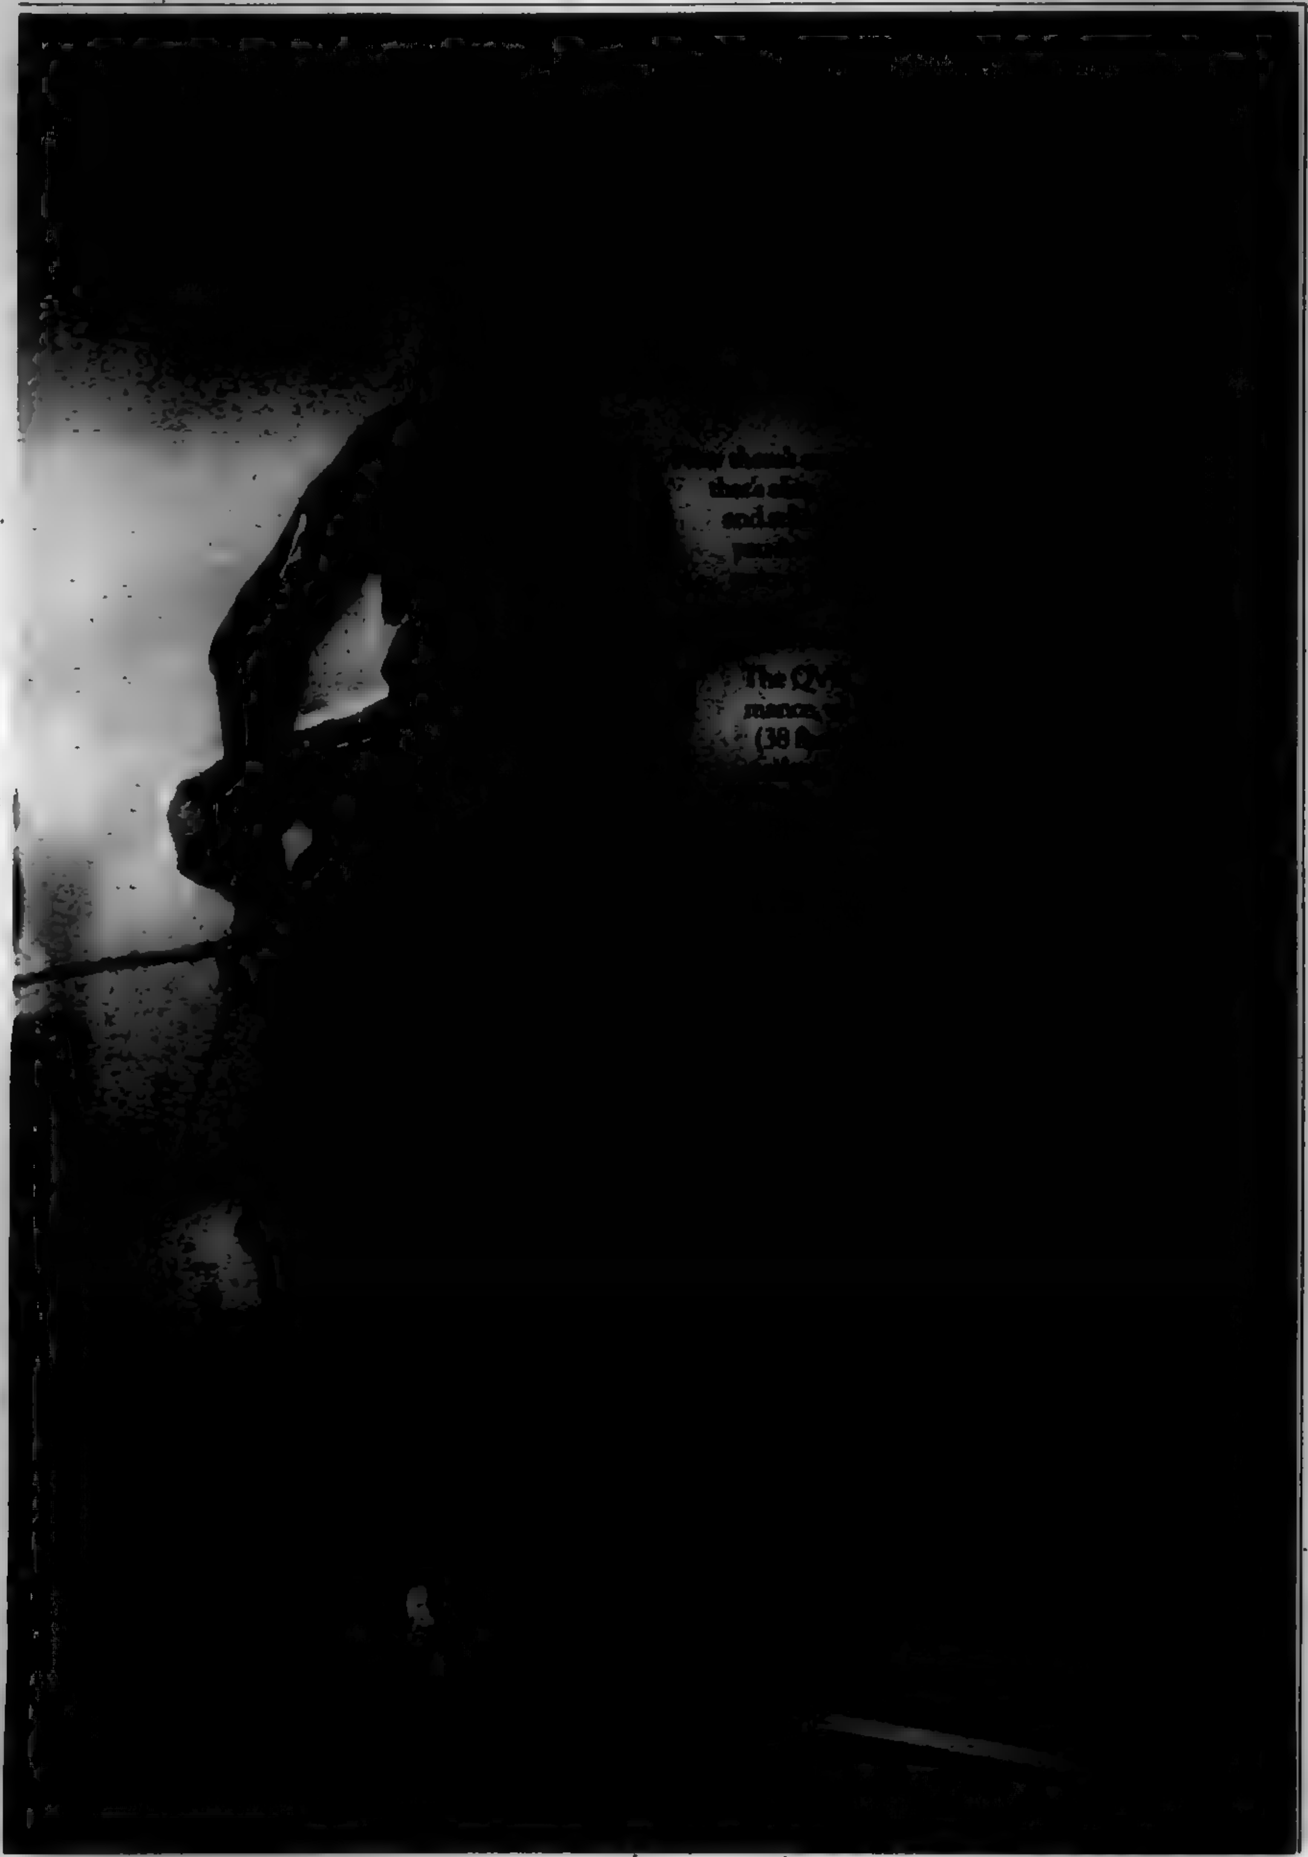
Although the study of cognition is not new, in the past 30 years the popularity and practical importance of the cognitive sciences have increased dramatically, adding to our knowledge of the capabilities and limitations of the human mind. The news is both "good" and "bad" in terms of our accuracy as judges and decision makers.

The good news is that each of us possesses a wide range of cognitive capabilities, including many that even the most powerful computers cannot match. For all intents and purposes, the long-term storage capacity of the human memory is unlimited, capable of storing perhaps trillions of bits of information.

Furthermore, much of this memory is almost immediately accessible.

The human mind is also capable of performing very complicated simulations, such as giving directions to someone on how to get to an office from an airport or rehearsing an upcoming meeting. We are also capable of making huge inferential leaps with rarely a hitch.

Try interpreting the following sentences: "The manager prepared the forecast using an accepted inflation estimate. He knew that it was imprecise but figured that it was better than no projection at all." Who is "he"? What is "it"? What does "projection" refer to? We know what these sentences mean, yet to interpret them correctly required the reader to make a number of inferences, which he usually makes with unhesitating accuracy.



Finally, we are capable of using our unlimited memory, our rapid retrieval system and our unconscious rules of inference to attain extremely high levels of skill, such as playing chess, analyzing stocks, conducting performance appraisals or speaking a language. These skills do not come easily, requiring years of experience and many thousands of hours of practice.

Nevertheless, when we use them we compress years of experience and learning into split seconds. This compression is one of the bases of what we call intuition as well as of the art of management.

The same cognitive processes that underlie our greatest mental accomplishments also account for incorrigible flaws in our thinking. For instance, we easily believe that salient events occur more frequently than they really do.

For example, despite the fact that dozens of examples exist where missed budgets did not lead to termination, managers interpret Sam's being fired for not making a budget as, "There is a good chance that division heads who do not meet budgeted profit objectives will get axed."

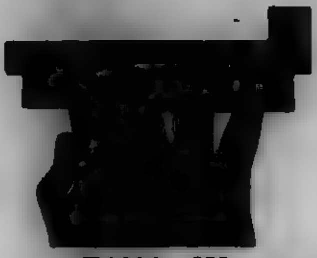
Hindsight bias

A second family of flaws arises from our overconfidence in our own expertise at making complex judgments. Various cognitive biases such as the "hindsight bias," our retrospective confidence in judgments that we hesitated about making at the time ("I *knew* it wouldn't work when she first proposed it"), and our tendency to search for confirming but not for disconfirming evidence of our judgments, conspire to exaggerate that belief.

And finally, research has shown that when presented with data, we are not very good at assessing the degree of relationship among variables — even though this skill is critical for successful management. Unless the relationships are very obvious, we tend to rely on preconceptions and perceive illusory correlations.

TeleVideo corrects the VT220 key mistakes.

The new TeleVideo® 922 shares but one feature with the VT220®: DEC®-compatibility. The similarity ends there.

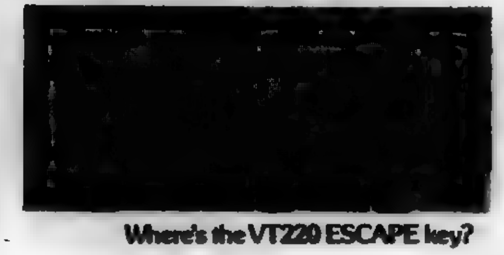


TeleVideo 922

DEC VT220

1. Take our keyboard, for example. The RETURN key is within direct, easy reach. But VT220 users must stretch over an additional key to hit RETURN. Or have the hands of a concert pianist.

Here's ours.



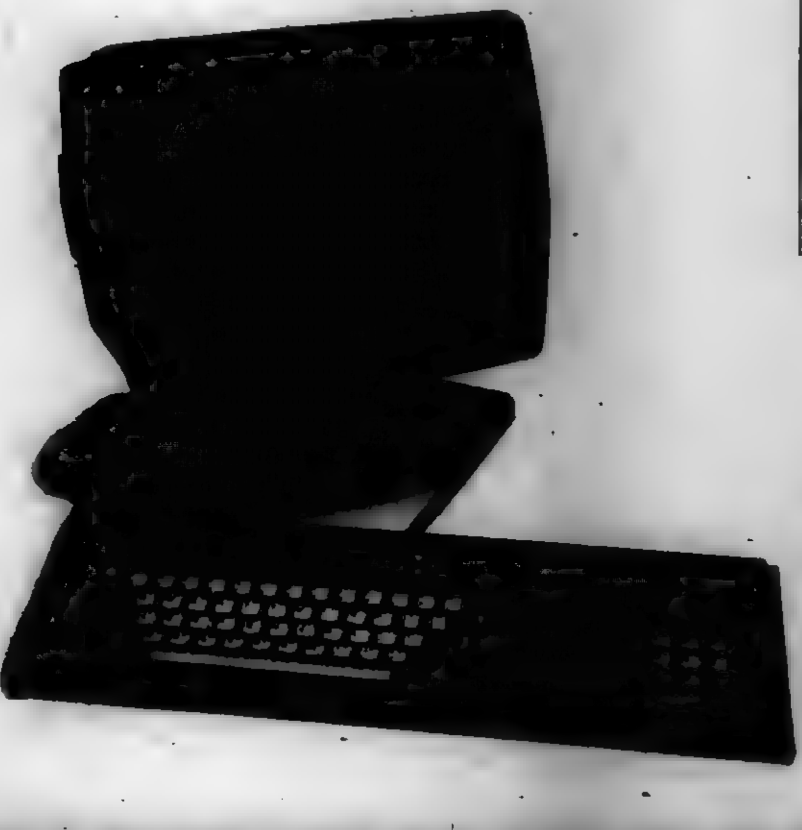
Where's the VT220 ESCAPE key?

2. Our ESCAPE key is located above the TAB key, right where you'd expect to find it.

Theirs isn't.

In fact, you have to go hunt for the VT220 ESCAPE key halfway across the row of function keys.

3. Take a look below at the 922 keyboard. That's a true accounting keypad, complete with a Clear Entry, Double Zero and a TAB key. Not merely the numeric keys you get with the VT220.



4. Our SHIFT key is exactly where it should be, so it does exactly what it should do—shift. Their SHIFT key is shoved over by the 〈 and 〉 key to create lots of 〈 and 〉 on the CRT. Of course with a little practice, you could relearn their keyboard. But why, now that you've seen our 922?

922 Display Screen.

VT220 Display Screen.

5. And after we built a better keyboard, we built a better terminal. With exceptional reliability. Quality. Advanced ergonomics. Everything you'd expect from the industry ANSI leader.

The new 922 is available now and priced to move now. And it's backed by a worldwide sales and support network.

6. Here are 5 more advantages to the 922.

	TeleVideo 922	DEC VT220
Programmable Function Keys	15 (30 with shift)	15 (shifted only)
True Accountant Keypad	YES	NO
Plug-in Graphics Upgrade Option	YES	NO
Full Tilt & Swivel	YES	NO
Enhanced ANSI Mode	YES	NO

Anything less than a complete solution is no solution at all.

So why use anything less than Motorola/Four-Phase?

One third of the Fortune 500 relies on office information systems from Motorola/Four-Phase. When these companies need office information systems, they can't settle for partial solutions. They demand it all—hardware, software, service, leadership. All vital elements of the complete system solution. Few suppliers can meet that demand, year after year. Motorola/Four-Phase can.

Solution Part One: Hardware

Motorola/Four-Phase has been setting milestones in advanced hardware development for over 15 years. We pioneered distributed data processing in 1971 when we introduced the first all-LSI computer. Now, with our new 2000 and 6000 Series, we're among the first to incorporate the powerful Motorola MC68010 microprocessor. We provide complete systems—processors, workstations, communications and peripherals.

Solution Part Two: Software

We've invested the necessary resources to bring you one of the largest software product lines in the industry—a multitude of tools, languages, and applications programs. Software designed to provide reliable, high-performance solutions, like advanced interactive processing provided by VISION®; and user-friendly access

provided by our UNIX*-based UNIVIEW.™ We've designed our software to help you make maximum use of our systems.

Solution Part Three: Service

Other office system suppliers have tried to emulate our award-winning Customer Support Operation. That's understandable. It's a centralized service, communications and dispatching facility that operates 24-hours a day, every day of the year. We give you hardware *and* software technical support with one phone call. You can expect quick hands-on help from any of our 1400 customer support specialists located throughout the country.

Solution Part Four: Leadership

Motorola is a world leader in advanced electronic technology. Businesses of all kinds depend on our long-term commitment to provide innovations in microprocessors, electronic communications equipment and office information systems. We meet your information processing needs today—and tomorrow, with increasingly sophisticated solutions.

Nothing less than a complete systems solution.

Before you decide on your next office information system, consider the difference between a complete solution and no solution at all. Contact Motorola/Four-Phase today at 1-800-528-6050, ext. 1599. In Arizona, call 1-800-352-0458, ext. 1599. Or write us at 10700 North De Anza Blvd., M/S 52-3B1, Dept. S, Cupertino, CA 95014.

IN DEPTH/HOW MANAGERS THINK

(Continued from ID/30)

was concerned about. Among these were: establishing credibility in international banking, strengthening the bank's role in corporate banking, increasing the range of financial services and products, being prepared to introduce new products in response to competitors' innovations, developing systems to give product cost information, reducing operational costs, standardizing branch architecture and utilizing space efficiently.

The bank CEO classified these problems in terms of broad issue categories. He found that many were related to the issue of expanding and broadening the bank's competence beyond consumer banking in which it was already firmly established. A second overarching issue was standardization of the bank's many branches with regard to architecture, physical layout, accounting systems and so on.

Having an interrelated network of problems allows a manager to seize opportunities more flexibly and to use progress on one problem to achieve progress on another, related issue. The bank CEO likened himself to a frog on a lily pad waiting for the fly — the problem or issue — to buzz by. Having a mental network of problems helped him to realize the opportunities as they occurred.

Choosing which problems to work on. Although managers often decide to work on the problem that seems to offer the best opportunities for attack, determining which problems they ought to tackle can be hard. One manager commented:

"I have to sort through so many isues at once. There are 10 times too many. I use a number of defense mechanisms to deal with this overload — I use delaying actions, I deny the existence of problems or I put problems in a mental queue of sorts. This is an uncomfortable process for me. My office and responsibility say I need to deal with all of these issues, so I create smoke or offer some grand theory as my only way to keep my own sanity. One of the frustrations is that I don't want to tell my people that their number one problems have lower priorities than they think they should get."

In my observations, how managers define and rank problems is heavily influenced by how easy the problems are to solve. Very shortly after perceiving that a problem exists, managers run a quick feasibility check to see if it is solvable.

Only if they find it is solvable will they then invest further energy to understand its various ramifications and causes. In other words, managers tend not to think very much about a problem unless they sense that it is solvable. Contrary to some management doctrines, this finding suggests that a general concept of what is a possible solution often precedes and guides the process of conceptualizing a problem.

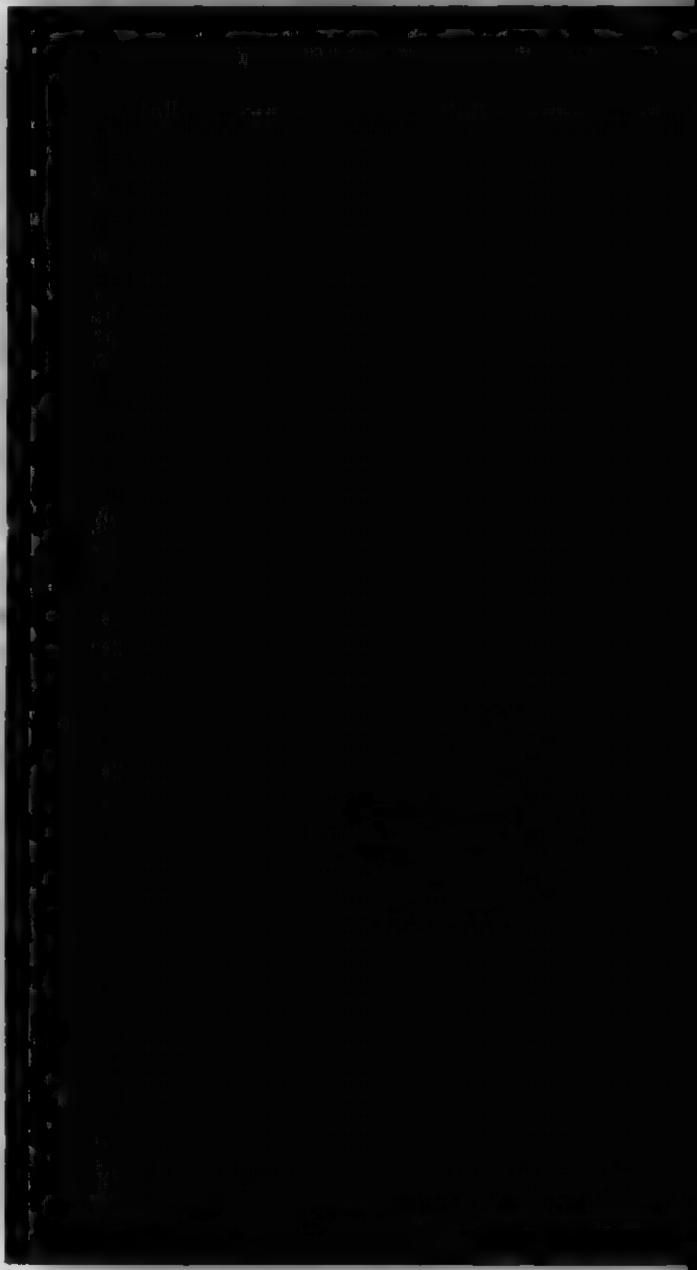
Thus, the two stages of problem analysis and problem solving are tightly linked and occur reiteratively rather than sequentially. By going back and forth between these two cognitive processes, managers define the array of problems facing them in terms that already incorporate key features of solutions and thus make it easier for them to take action.

Mental map

One outcome of this process is that managers have an organized mental map of all the problems and issues facing them. The map is neither static nor permanent; rather, managers continually test, correct and revise it. In the words of one CEO, the executive "takes advantage of the best cartography at his command but knows that that is not enough. He knows that along the way he will find things that change his maps or alter his perceptions of the terrain. He trains himself the best he can in the detective skills. He is endlessly sending out patrols to learn greater detail, overflying targets to get some sense of the general battlefield."

Tolerating ambiguity. The senior managers that I observed showed an ability to tolerate and even thrive on high degrees of ambiguity and apparent inconsistency. One top executive said:

"I think ambiguity can be destroying, but it can be very helpful to an operation. Ambiguities come from the things you can't spell out exactly. They yield a certain freedom you need as a chief executive officer not to be nailed down on everything. Also, certain people thrive



Getting a group of five or six personal computers networked isn't that big a deal. But it gets complicated when the group gets bigger. And in case you hadn't noticed, the groups are getting bigger. Fast.

Experience may have already taught you that low-end PC networks run out of steam in a hurry once you have more than five or six stations connected. If your plans include several PCs or several hundred, high performance isn't a luxury. It's critical.

WHY YOU SHOULD BUY YOUR PC NETWORK FROM A COMPANY THAT UNDERSTANDS HIGH PERFORMANCE.

If you want the PCs in your company working in concert with the rest of the information processing equipment in your company, it makes sense to talk to people who have a track record networking more than just PCs.

Like us. The expertise we've gained from developing the widest range of interfaces and protocols in the data communications industry has allowed us to build PC networking products with the muscle necessary for quick responses even in heavy traffic.

The Net/One Personal Connection™ is a high performance, high speed network system that can take your PCs as far, and as fast as you want in the corporate network. With the Personal Connection's SNA server software, a PC can emulate a 3278 and get a direct SNA route to the top. With Diskshare™ and Printshare,™ PCs can share information and expensive peripheral resources, and Mailshare™ gives you complete electronic mail service.

It's a far-sighted solution, even if all you want to do now is hook up a few PCs economically. And it's the *only* solution when PCs need to be mixed cost effectively into a high-speed corporate network with devices from different manufacturers.

In heavy ne
high performan

> *Rather than deny, downplay or ignore disconfirmation, successful senior managers often treat it as friendly and, in a way, cherish the discomfort surprise creates.*

on ambiguity, so I leave certain things ambiguous. The fact is we tie ourselves too much to linear plans, to clear time scales. I like to fuzz up time scales completely."

Because demands on a manager become both stronger and more divergent as responsibility increases, the need to tolerate apparent ambiguity and inconsistency also increases. For example, the top manager has to deal with stakeholders who may have adversarial roles. By responding positively to one set of demands, the manager automatically will create other conflicting sets of demands.

The reason I have called the inconsistency "apparent" is that senior managers tend to have ways of thinking that make issues seem less inconsistent. For example, the president of a leading high-technology company was considering whether to exercise or forgo an option to lease land on which to build expensive warehouse space for one of the divisions at the same time as the division was laying off workers for the first time in its history.

"To spend a half- million dollars on keeping the land and building warehouse space while the plant is laying off people looks terrible and makes no sense," he said, "but if next year is a good year, we'll need to be in a position to make the product."

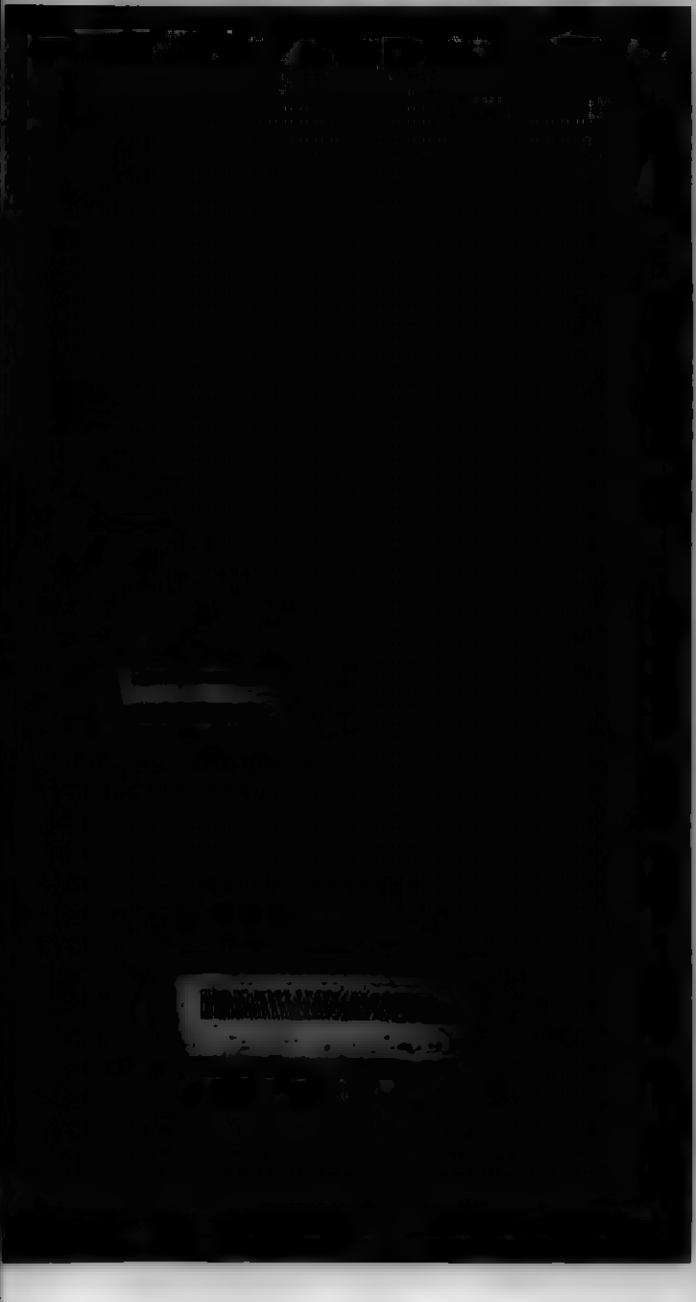
Perceiving and understanding novelty. The managers I observed dealt frequently with novel situations that were unexpected and, in many cases, were impossible to plan for in advance. For example, one division general manager found himself with the task of selling his division, which was still developing a marketable product.

In response to its shareholders, the corporation had shifted its strategy and thus decided to divest the fledgling division. How should the general manager look for buyers? If buyers were not forthcoming, would the corporation retain a stake to reduce the risk to potential new partners? How should he manage his people in the process of selling? Should he, himself, look for a new position or commit himself to a new owner? These were some of the unique questions the division head faced while selling his own division, and there was no industry experience to give him clear answers.

In general, the human mind is conservative. Long after an assumption is outmoded, people tend to apply it to novel situations. One way in which some of the senior managers I studied counteract this conservative bent is by paying attention to their feelings of surprise when a particular fact does not fit their prior understanding and then by highlighting, rather than denying, the novelty.

Although surprise made them feel uncomfortable, it made them take the cause seriously and inquire into it — "What is behind the personal loan by my vice-president of sales that appears on the books? How extensive a problem is it?" "Why did the management committee of the corporation spend more than an hour of its valuable time discussing a problem three levels down in my division?" "Now that we've shown the health services department beyond a reasonable doubt that this drug is not involved in drug abuse, why don't they reinstate it on the list?"

Rather than deny, downplay or ignore disconfirmation, successful senior managers often treat it as friendly and, in a way, cherish the discomfort surprise



HERE'S A CASE WHERE
A BIGGER ENGINE IS ACTUALLY
MORE ECONOMICAL.

The Net/One Personal Connection system packs the microprocessing power to offload all networking functions, so it doesn't eat up the host CPU's resources. That frees up a work station that other systems require simply to do their network's work.

WITH TWO BOARDS TO CHOOSE FROM,
THE COST GOES WAY DOWN.

We now have two Personal Connection interface boards, with two levels of intelligence and two prices. At stations on the net where this additional offloading intelligence isn't required, plug our newest, most economical Personal Connection board into the PC, and bring your cost-per-connection down to where it would be tough to justify buying anything less. The full network functionality is all there with either of the two interface boards; they can be used interchangeably on the network and it makes no difference to network users. But now, with the option to pay for only as much intelligence as you need at each station, we've made it possible to have a real network at PC network prices.

IT'S POSSIBLE BECAUSE THESE ARE
NET/ONE® PRODUCTS.

They are the newest extension of Net/One, the general purpose local area network system that can turn *all* the equipment you have now, no matter who makes it, into a fully functional, high performance network. Broadband, baseband, fiber optics. Mainframe to mini to micro. Local to remote.

Give us a call. Ungermann-Bass, Inc., 2560 Mission College Boulevard, Santa Clara, California 95050. Telephone (408)496-0111.

Net/One from Ungermann-Bass

twork traffic,
nce isn't a luxury.

> ***But is it possible for imperfectly rational managers to design even more perfectly rational systems? The answer is a qualified yes. There is evidence that with help people can design systems that are better than they are at making judgments.***

creates. As a result, these managers often perceive novel situations early on and in a frame of mind relatively undistorted by hidebound notions.

What to do

Having looked at the inner workings of the managerial mind, what insights can we derive from our observations? Literally hundreds of laboratory and field studies demonstrate that the human mind is imperfectly rational, and dozens of additional articles, offering arguments based on every field of study from psychology to economics, explain why. The evidence that we should curtail our impractical and overly ambitious expectations of managerial rationality is compelling.

Yet abandoning the rational ideal leaves us with two glaring problems. First, whether managers think in a linear and systematic fashion or not, companies still need to strive toward rational action in the attainment of corporate goals, particularly in their use of resources. Second, we still need to spell out what kinds of thinking processes are attainable and helpful to senior managers.

Of course, rationality is desirable and should be manifest in the functioning of the company. One alternative to the vain task of trying to rationalize managers is to increase the rationality of organizational systems and processes.

Although organizational behavior is never completely rational, managers can design and program processes and systems that will approach rationality in resource allocation and employment.

Decision support systems are one source of organizational rationality. These generally computerized routines perform many functions ranging from providing a broad and quantitative data base; to presenting that data base in easily understandable form, to modeling the impact of decisions on various financial and other criteria, to mimicking expert judgment such as in the diagnosis and repair of malfunctioning equipment or in oil field exploration.

Strategic planning

Another rational process that many businesses employ is strategic planning. Nonrational or partly rational managers can devise, implement and use a plan that systematically assesses a company's strengths and weaknesses, logically extrapolates a set of its competencies, proposes a quantitative assessment of environmental constraints and resources and performs all these tasks in a time-sequenced, linear fashion.

Of course, companies have used rational systems for information gathering, strategic planning, budgeting, human resource planning, environmental scanning and so forth for a long time. But I see these systems not only as useful but also as a necessary complement to a manager's apparent inability to be very systematic or rational in thought.

But is it possible for imperfectly rational managers to design even more perfectly rational systems? The answer is a qualified yes. There is evidence, for example, that with help people can design systems that are better than they themselves are at making judgments.

Creating organizational systems to improve on their own behavior is not new to managers. In order to still hear the beautiful sirens yet prevent himself from being seduced by the music and throwing himself into the sea, Ulysses ordered his men to block their own ears with wax, bind him to the mast and to tighten his bindings if he ordered them to let him go. Although Ulysses begged his sailors to release him, they obeyed his original orders, and Ulysses succeeded in both hearing the sirens and surviving their perilous allure.

Programming rationality into the organizational functioning is important for another reason: Rational systems free senior executives to tackle the ambiguous, ill-defined tasks that the human mind is uniquely capable of addressing. Many senior managers today face problems — developing new products for embryonic markets, creating new forms of manufacturing operations, conceiving of innovative human resource systems — that are new to them and new to their companies and that they can deal with only extemporaneously and with a nonprogrammable artistic sense. In fact, it may even seem paradoxical that managers need to create rational systems in order to tackle creatively and incrementally the nonrecurrent problems that defy systematic approaches.

In the literature on managerial behavior, there is disagreement as to

A little couponwork takes the endless paperwork out of data base design.

People involved in data base design have had good reason to be frustrated: They've had to endure a maze of endless paperwork and manual procedures so that others may escape it.

MANAGER SOFTWARE PRODUCTS' DESIGNMANAGER™ provides them with a method of carrying out data analysis and data base design quickly and cost-effectively — without endless paperwork.

DESIGNMANAGER's central driving force is a modeling dictionary that holds information about your organization's data resource. The content of the modeling dictionary is interactively built up by end-users and analysts directly through two complementary methodologies: top-down (Enterprise model) and bottom-up (user view model).

The reconciliation of these two components provides the basis upon which you can construct and verify models of your organization's data, and generate stable, third-normal form logical data base designs.

DESIGNMANAGER can increase user productivity whether used as a stand-alone system or fully integrated with other dictionary-driven products in MSP's MANAGER family. These include DATAMANAGER® the data and information resource management system, and SOURCEMANAGER™ the COBOL application development system.

Find out how DESIGNMANAGER can take the endless paperwork out of your data base design work and increase productivity. Send the coupon today. Or call (617) 863-5800 (Telex 710 326 6431).

For several years Local Data has provided AT&T Information Systems, Avis, Bell Labs, Citicorp, Exxon, General Motors, IBM, ITT and other Fortune 500 companies with easy and inexpensive IBM communications using DataLynx™/3274 . . . the best price/performance 3270 protocol converter available.

Supporting over 50 primary types of terminals and satisfying requirements of more than 125 varieties of ASCII terminals and PC's, DataLynx™/3274 offers base color support for IBM PC and Viewpoint/78 color terminals, interleaved display/print data over a single dialup connection, pseudotransparency, graphics data passthru, command port facility, disable echo on ASCII CRT port for computer-computer or X.25, 3270 BSC to 3270 or 5251 SNA field upgradeability and many more additional features than any other 3270 protocol converter.

Call (213) 320-7126 for more information and ask about our free 30-day trial program. In Canada call (613) 748-9751.

Given the great uncertainty of many of the management or business issues that they face, senior managers often instigate a course of action simply to learn more about an issue

how much or how often senior managers engage in thoughtful reflection. Many executives that I studied do make time for in-depth thinking, sometimes while they are alone, sometimes with their peers or subordinates and sometimes in active experimentation.

Furthermore, most senior managers I studied constantly maintain and sharpen their intellectual abilities in order to better analyze their current or past experiences. Rigorous thinking is a way of life for them, not a task they try to avoid or expedite superficially.

These senior managers read books outside their fields, engage in enthusiastic discussions of political and economic affairs, attend academic lectures and management seminars and tackle brainteasers such as word problems, chess and crossword puzzles. One company president I studied is a regular theatergoer who can discuss Shakespearean and contemporary plays at great length, while another often [redacted] to float around in his con-[redacted]

These activities are valuable not only for their content but also for the thinking processes that they establish, develop and refine. Whether managers indulge in such blue-sky, irrelevant activities at work or outside, they are developing critical mental resources that they can then apply to problems that arise in their jobs.

One of the implications of the intuitive nature of executive action is that "thinking" is inseparable from acting. Since managers often "know" what is right before they can analyze and explain it, they frequently act first and think later. Thinking is inextricably tied to action in what I call thinking/acting cycles, in which managers develop thoughts about their companies and organizations not by analyzing a problematic situation and then acting, but by thinking and acting in close concert. Many of the managers I studied were quite facile at using thinking to inform action and vice [redacted]

Given the great uncertainty of many of the management or business issues that they face, senior managers often instigate a course of action simply to learn more about an issue: "We bought that company because we wanted to learn about that business." They then use the results of the action to develop a more complete understanding of the issue. What may appear as action for action's sake is really the result of an intuitive understanding that analysis is only possible in the light of experience gained while attempting to solve the problem. Analysis is not a passive process but a dynamic, interactive series of activity and reflection.

One implication of acting/thinking cycles is that action is often part of defining the problem, not just of implementing the solution. Frequently, once they had begun to perceive the symptoms, but before they could articulate a problem, the managers I studied talked to a few people to collect more information and confirm what they already knew.

The act of collecting more data more often than not changed the nature of the problem, in part because subordinates then realized that the problem was serious enough to warrant the boss's attention. Managers also often acted in the absence of clearly specified goals, allowing these to emerge from the process of clarifying the nature of the problem.

NOW
THE ONLY
DIAL ERROR
YOU CAN MAKE
IS TO STAY AT
1200 BPS

Announcing Codex's 2230 Series dial modems.

Now you can get 2400 bps productivity with the reliability you expect at 1200 bps.

Codex's 2230 Series full duplex modems accomplish this through the industry's only proven, second generation design. A design that combines powerful automatic and fixed equalization, delivering leased-line performance over any dial network.

The 2230 Series lets you operate at both 2400 bps and 1200 bps, allowing for faster screen fills and file transfers, reducing computer port needs, and drastically reducing line charges.

There's even a model with programmable auto call. So you can send data unattended at night when rates go down.

Each 2230 Series model is fully Bell 212 compatible. Each accommodates all communications protocols and meets the CCITT international 2400 bps dial standard. You can integrate Codex 2230's into your network gradually or all at once, without putting your system in turmoil.

Then, there's Codex's worldwide service and support organization, ready to answer any question or solve any problem.

Plus very attractive options to buy or lease.

To get the complete story on Codex's advanced 2230 Series dial modems, dial **1-800-821-7700**, ext. 881. Or write: Codex Corporation, Dept. 707-81, 20 Cabot Boulevard, Mansfield, MA 02048.

THE ITT 9236. IT HAS THE FUNCTIONS YOU WANT TODAY, THE FLEXIBILITY YOU'LL NEED TOMORROW.

When it comes to extended functions, our new 9236 display has everything.

For instance, it gives you dual logical units that let you change applications with a single keystroke.

It has selectable screen formats so you can use one display to handle more than one application.

It can use a light pen or operate a display-attached printer so you can make local copies at your workstation.

It offers the ergonomic benefits of a non-glare matte finish. A compact, low-profile keyboard. And a flicker-free, high-resolution, 14-inch screen that tilts and swivels.

On top of all this, our 9236 gives you extended data stream and programmed symbols for color graphics. Plus a long list of exclusive ITT productivity features, like automated keystrokes, built-in notepad, dynamic color assignment, and auto log off/power off.

But perhaps the most important thing we've built into our 9236 is a flexible, open architecture. The kind of architecture that'll take you into networking, the electronic office, or wherever else you want to grow.

Of course it wasn't easy designing in all this and keeping the 9236's price competitive, too.

But, then again, giving you more display for your money has always been what ITT Courier is all about.

For more information, contact your nearest ITT Courier Representative. Or call the ITT Courier Sales Support Dept. at 1-800-528-1400, toll-free.

ITT
COURIER

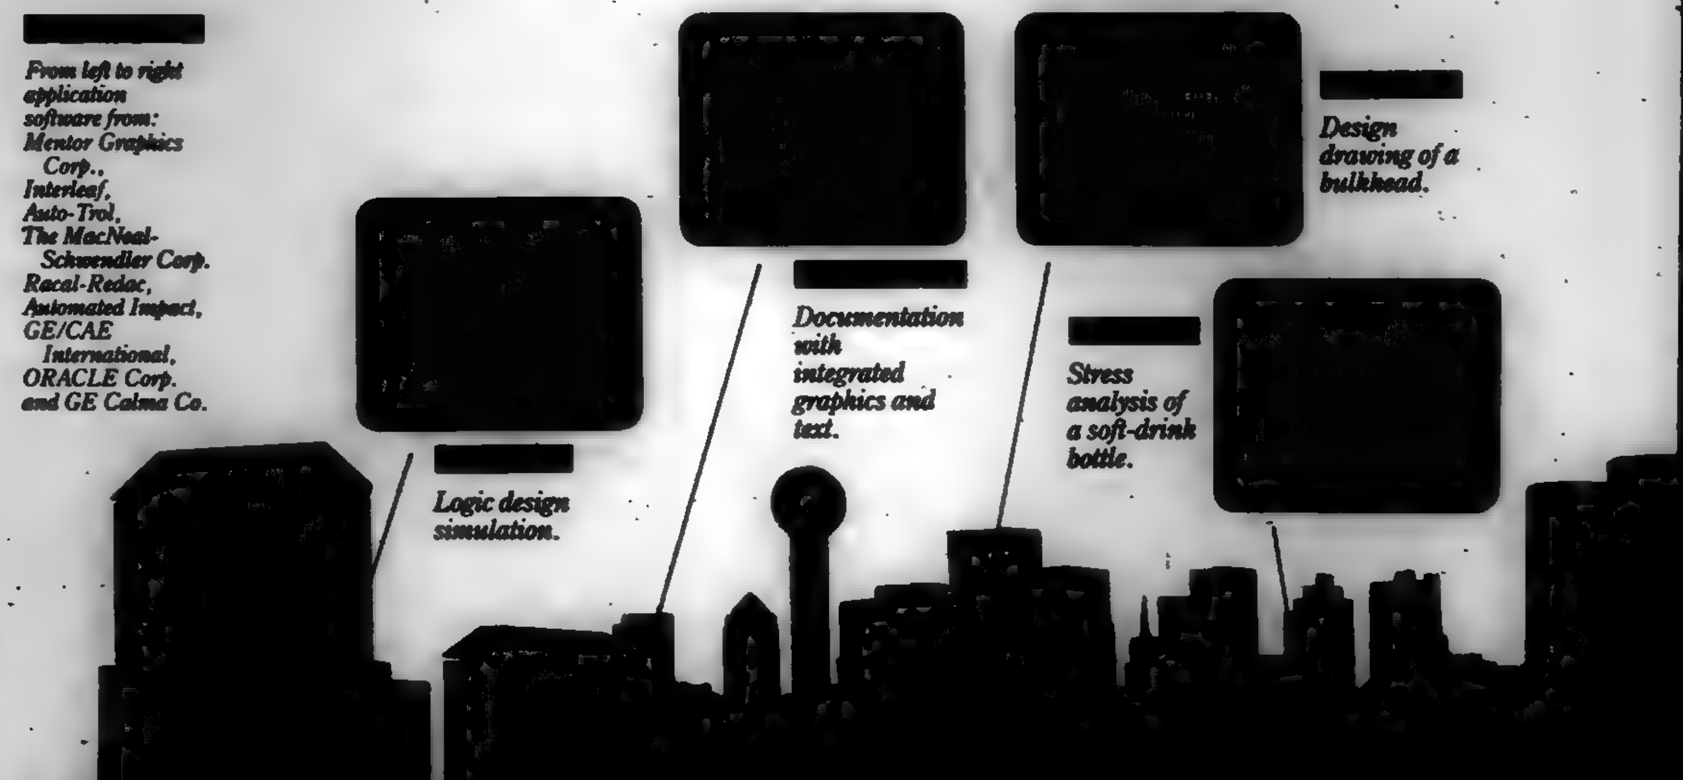
We make computers that design what you make.

We're Apollo Computer, the fastest growing professional workstation company in the world. And for some very good reasons.

We introduced a new standard in the computer industry.

In 1980, we introduced the next step in the evolution of the computer. With the logical successor to timesharing: DOMAIN* processing.

DOMAIN processing puts on the desk of every technical professional exactly what they need to design and develop new products. Dedicated 32-bit workstations with the compute power of a mainframe. Closely-integrated, bit-mapped graphics. And a high speed local area network that shares information and resources. The result is a fully integrated, dynamic environment that lets your technical professionals produce better, more innovative new products in considerably less time. With considerably lower development costs.



From left to right application software from: Mentor Graphics Corp., Interleaf, Auto-Trol, The MacNeal-Schwendler Corp. Racal-Redac, Automated Impact, GE/CAE International, ORACLE Corp. and GE Calma Co.

Logic design simulation.

Documentation with integrated graphics and text.

Design drawing of a bulkhead.

Stress analysis of a soft-drink bottle.

We have a family of compatible workstations.

Today, we have an unprecedented range of DOMAIN workstations to meet whatever design and development needs you may have. From our high performance VAX™ 780-class DN660 (color) and DN460 (monochromatic) for applications like finite element analysis and solids modeling, to our midrange DN550 for applications like integrated circuit and printed circuit board design. To our low cost DN300 series for applications like software engineering and technical illustration. And all of our DOMAIN family of workstations are completely compatible.

We have nearly 300 technical applications packages.

To stay competitive today, you have to look beyond automating individual tasks. So we allow you to automate the entire development process. With nearly 300 of the most powerful and prestigious third party applications packages available today.

If you'd like to know how we can help boost your technical professionals' productivity and shorten your product development cycle, you have only to ask. Write or call Marketing Communications, Department A1, Apollo Computer, 330 Billerica Road, Chelmsford, Massachusetts 01824 (617) 256-6600 Ext. 4497.

Yet how often do managers push their subordinates to spell out their goals clearly and specify their objectives? A creative subordinate will always be able to present a plausible and achievable goal when pressed, but in the early stages of a tough problem it is more helpful for managers to provide a receptive forum in which their people can play around with an issue, "noodle" it through and experiment. Sometimes it will be necessary for managers to allow subordinates to act in the absence of goals to achieve a clearer comprehension of what is going on and even at times to discover rather than achieve the organization's true goals.

All managers would like to accomplish more in less time. One of the implications of the process of mapping problems and issues is that when a manager addresses any particular problem, he calls a number of related problems or issues to mind at the same time. One by-product is that a manager can attain economies of effort.

For example, when working on a problem of poor product quality, a division manager might see a connection between poor quality and an inadequate production control system and tackle both problems together. To address the issues, he could form a cross-functional task force involving his marketing manager, who understands customers' tolerance for defects. (One reason for bringing him in might be to prepare him for promotion in two or three years.) The manager might intend the task force to reduce interdepartmental conflicts as well as prepare a report that he could present to corporate headquarters.

Managers can facilitate the process of creating a problem network in many ways. They can ask their staff to list short- and long-term issues that they think need to be addressed, consolidate these lists and spend some time together mapping the interrelationships. Or they can ask themselves how an issue fits into other nonproblematic aspects of the company or business unit. How does product quality relate to marketing strategy? To capital expenditure guidelines? To the company's research and development center with a budget surplus? To the new performance appraisal system? To the company's recent efforts in affirmative action? To their own career plans?

Managers should never deal with problems in isolation. They should always ask themselves what additional related issues they should be aware of while dealing with the problem at hand.

Some suggestions

These suggestions on how managers can improve their thinking emerge from my study of senior managers' thought processes:

- Bolster intuition with rational thinking. Recognize that good intuition requires hard work, study, periods of concentrated thought and rehearsal.
- Offset tendencies to be rational by stressing the importance of values and preferences, of using imagination and of acting with an incomplete picture of the situation.
- Develop skills at mapping an unfamiliar territory by, for example, generalizing from facts and testing generalities by collecting more data.
- Pay attention to the simple rules of thumb — heuristics — that you have developed over the years. These can help you bypass many levels of painstaking analysis.
- Don't be afraid to act in the absence of complete understanding, but then cherish the feelings of surprise that you will necessarily experience.
- Spend time understanding what the problem or issue is.
- Look for the connections among the many diverse problems and issues facing you to see their underlying relationships with each other. By working on one problem you can make progress on others.
- Finally, recognize that your abilities to think are critical assets that you need to manage and develop in the same way that you manage other business assets. ‡

IBM's Information Quality Analysis

By John Vacca

IBM's Information Systems Services brought out a service last August called Information Quality Analysis (IQA), an automated version of its Business Systems Planning (BSP) strategic planning methodology.

The IQA process, like its predecessor, examines the flow of data and information used to make decisions in an organization and attempts to identify data that is missing, inaccurate, late, incomplete, underautomated or improperly distributed.

As in BSP, the data input for the IQA process is provided by joint user, management and information system department participation. However, with IQA, the analysis itself is assisted by IBM simulation software, providing for more rapid diagnosis of problem areas and allowing for faster formulation of an information systems plan that addresses both short- and long-term needs. The analysis is intended to provide, within a few weeks, the critical facts needed to improve the quality of information.

IQA was developed by IBM Belgium and has been used by more than 400 European and U.S. customers during the past five years. After having been performed at several U.S. pilot locations and inside IBM, the service is now available to IBM customers who need to bring their information systems activities in line with their current business operations and plans.

An IQA is led by an IBM Information

Systems Services team leader and staffed by its customer and services personnel. The studies take five to seven weeks and produce reports on the quality of data in each functional area of the corporation as well as recommendations for improvement.

Even though IQA is similar to the BSP process, it takes considerably less time and is supported by an integrated set of APL programs called Panda. The Panda software automates the data entry, data base creation, data manipulation and data anlysis functions.

This software, which runs under the VM/CMS and MVS/TSO environments, is part of the IQA service offering and is not available as a separate program product.

In addition to assisting in the development of a strategic plan, the data collected can provide information for the development of applications and data architectures.

A study team composed of IBM customer executives and Information Systems Services representatives conduct group session interviews to identify user information needs and evaluate user satisfaction with existing data.

From the information supplied and analyzed, the study produces statistics on how IBM customer personnel view the data they use to make decisions. These statistics might include the following:

- The amount of essential vs. nonessential data.
- The amount of computerized vs. noncomputerized data.
- An analysis of the quality of the data; for example, the amount of data deemed satisfactory and the amount of data adversely criticized or missing.

For the unsatisfactory data, the IQA identifies problems with reliability, content, delays and missing items. This analysis points to problem areas and helps to identify work to be done.

Objectives of IQA

The most common objective of an IQA is to provide critical information for the formulation of a strategic plan for information systems. While most executives would agree that information systems are essential for effectively managing their business, these systems must work in concert with the overall business plan in order to achieve their objective of being a real business asset.

An IQA can be an important step to ensure that the goals and plans of the business are accurately reflected in the information system department strategic plan.

Companies can obtain the following benefits:

- Executives can become confident that the information systems department's strategic plan is in concert with the business plan.
- A nonorganizational view of the business, which is based on information and information flow, may broaden the perspective of the IQA participants.
- IQA results can be used for specific actions tailored to an individual company's situation. It can serve as the starting point for reorganizations, staff reductions, redefinition of roles and responsibilities and other actions that might benefit an entire organization.

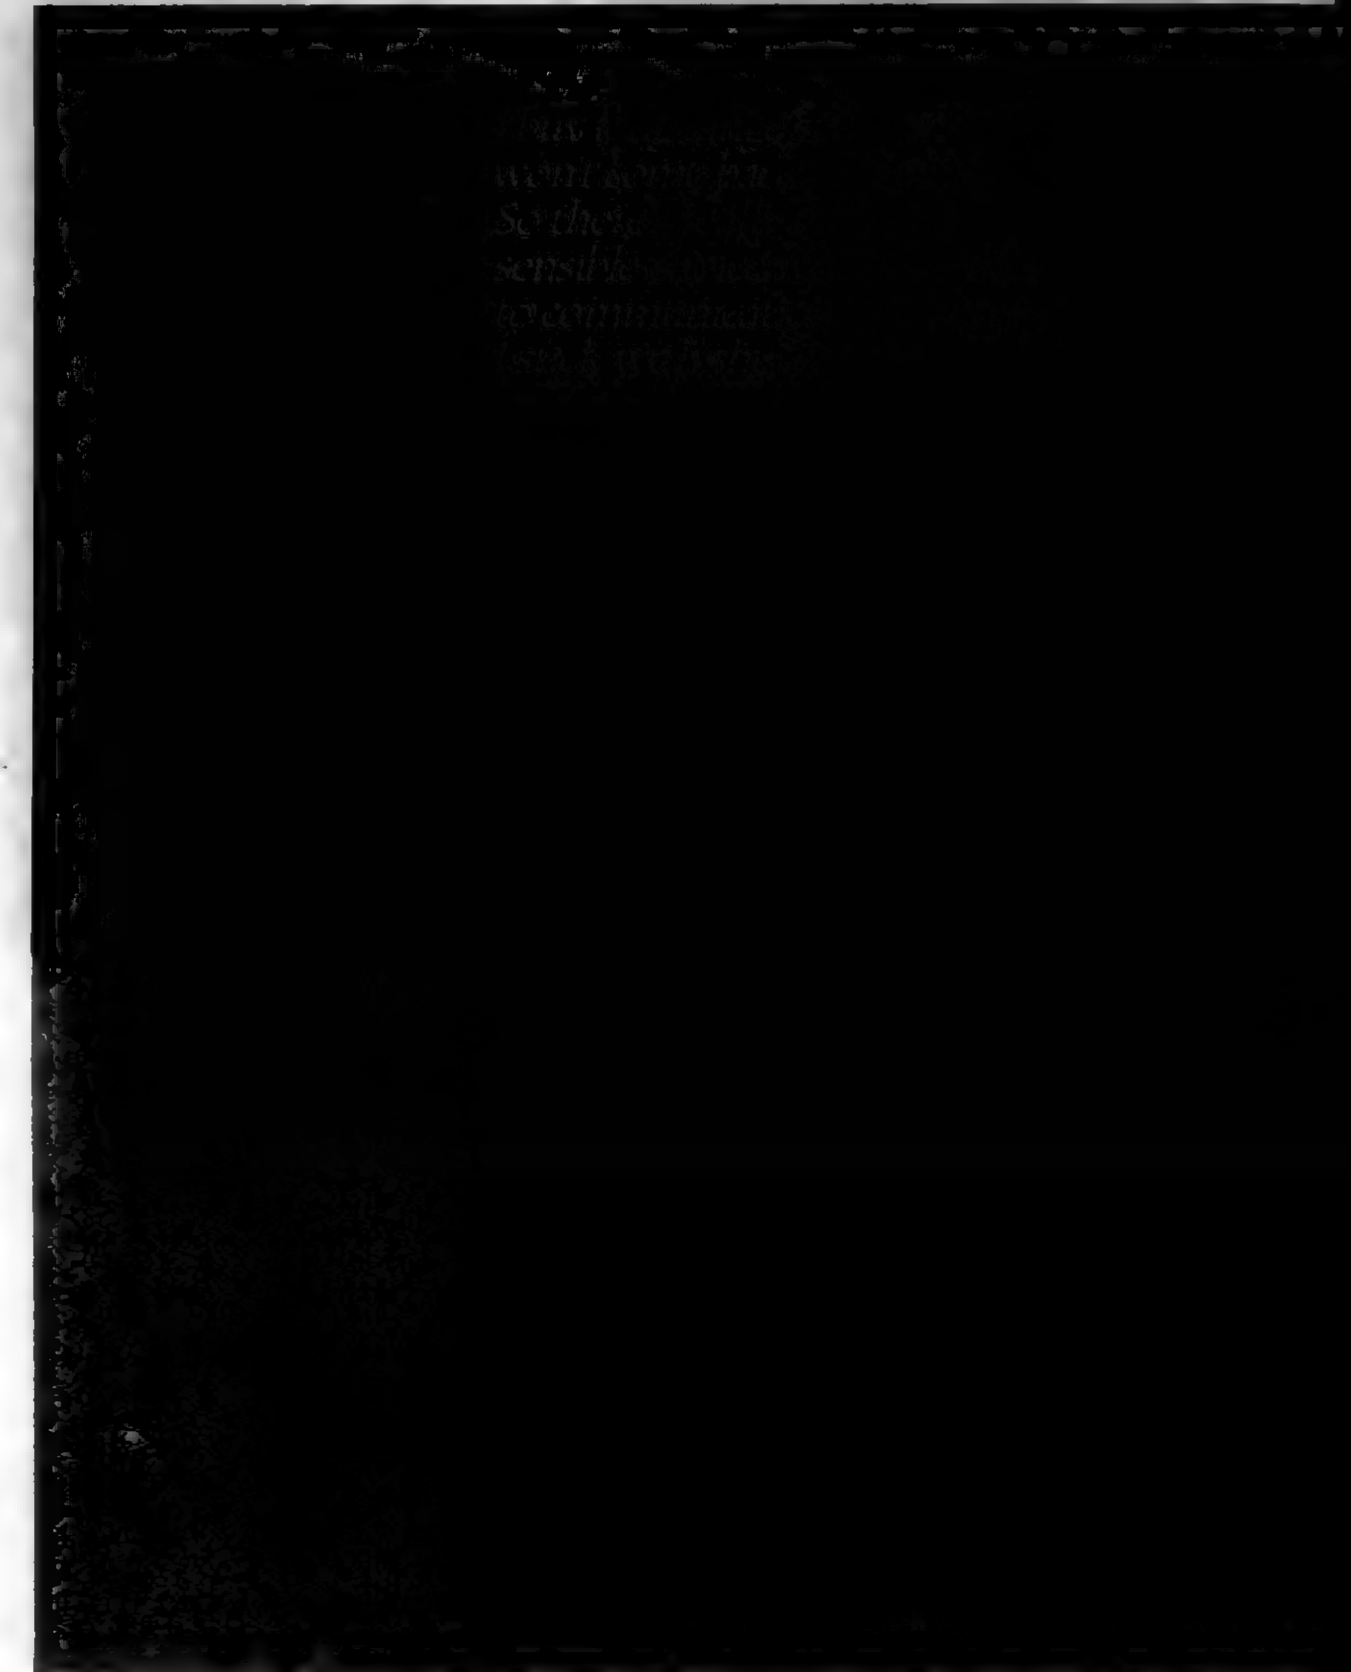
The IQA is conducted by personnel of the enterprise being studied. It is guided by the IBM consultants and aided by a computer program used to assist in the diagnosis of the data collected. The analysis is, therefore, internal and also possesses a high degree of objectivity. It is built on business processes and information flow that are independent of organizational structures and personal and political pressures.

IQA methodology

The IQA study has four phases. Phase 1 is called the enterprise analysis. The objective of this phase is to identify the following:

- Business processes of the company.
- People who should be interviewed who can identify the information required to exercise the business processes.
- The data classes into which the identified information may be categorized.

The personnel involved in this phase are the IQA consultant (the IBM person responsible for directing the analysis), the consultant's assistants and the IQA team (the customer managers who report to the sponsor). The IQA administrator (the customer representative responsible for interacting with IBM on a day-to-day basis) and administration



assistants are needed in this phase to handle calendar, logistics and secretarial work.

This phase generally requires a full 40-hour week of commitment by all participants. An off-site location is desirable.

Phase 2 is called the enterprise survey. The enterprise survey phase is divided into five parts:

- General briefing.
- Group interviews.
- Data entry.
- Validation.
- Data encoding.

The general briefing is conducted by the sponsor (the customer representative who has commissioned the IQA) and the IQA consultant for all of the interviewees (customer personnel selected during the enterprise analysis phase who are representative of the people who perform each business process). This one-hour meeting has as its objective the motivation of the interviewees and an explanation of their role and their responsibilities.

The group interviews are conducted by the IQA consultant or consultant assistant. Six interviewees should be in attendance and one IQA team member. The objective of this two-day interview is to have each interviewee identify the business processes in which he is involved and identify the information he requires for each of those processes.

In addition, the interviewees also critique the information. The IQA team member records the business process of origin for the information items identified and the data class of the information. Motivation, clarification and continuity are also supplied by this high-level manager.

Data entry is organized and supervised by the customer administrative assistants. Information collected on forms during the group interviews is entered on IBM 3270 terminals using Panda, the APL program tool. Approximately three hours of data entry time per interviewee is required. Data entry should be started immediately after each group interview is completed.

Validation is accomplished through the use of Panda, which will print a detail of each interviewee's responses. This report is reviewed by the interviewee and returned so corrections can be made by data entry personnel.

Data encoding occurs after all the group interviews have been completed. The objective of this two-day process is to normalize the information items identified. Normalization is accomplished by collecting the data class information accumulated by the IQA leaders during the group interviews and assigning a unique information item code to each unique piece of information identified. This information and the origin process codes are then entered using Panda.

Phase 3 is the study diagnosis. It begins with the IQA consultant using Panda to produce some initial statistics and matrices and to cluster the business processes into subsystems based on an analysis of the relative strength of information exchange. These findings are presented to the IQA team, which will spend from two to five full days together with the IQA consultant doing its own analysis.

Additional computer runs are common during this phase. The diagnosis concludes with the development of an action plan by the IQA team and the designation of a member to draft a final report to be presented to the sponsor. An abbreviated feedback report to the interviewees is also recommended.

Phase 4 is called the IQA management report. A summary is drafted by one of the IQA team members. At a half-day meeting, this report is reviewed by the assembled IQA team. A presentation to the sponsor is made in the presence of the IQA team shortly thereafter.

The benefits of IQA extend beyond the formalized strategic plan and other action plans formulated by the IQA team. Going through the process has been identified as a benefit in itself. The introspective nature of the process stimulates each participant to reexamine his own roles and objectives, often giving rise to new energy and job interest.

COMMUNICATIONS

DATA STREAM/JOHN DIX

Application not equal to voice/data technology

The widespread integration of telephones with personal computers or terminals may be inevitable, but the products now available are still ahead of the market.

There are generally three types of voice/data integration products now available: telephone/terminals like Northern Telecom, Inc.'s Displayphone; personal computer add-ons like Rolm Corp.'s Juniper and Wilcom, Inc.'s Asher; and telephone/personal computers like Rolm's Cedar.

Presumably, the integration of telephones with computers or terminals will serve to unclutter desks, enhance the functionality of the mated devices and pump up users' productivity — that elusive measure by which so-called office automation devices are justified.

Unclutter desks? Possibly. Make the devices more functional? In some cases. Boost productivity? Only if you have to explain the purchase to your boss.

Ironically, telephone/terminals — an older technology never well received and presumably superseded by telephone/computers — may eventually prove to be the most useful and widely used device.

Consider the alternatives, like Rolm's Cedar. This device combines an IBM Personal Computer with a full-feature, multiline digital phone and includes a speakerphone. Cedar's capabilities include Digital Equipment Corp. VT100 terminal compatibility, IBM 3270 emulation, communications at speeds up to 19.2K bit/sec, prestored terminal profiles, single-button logon capabilities, telephone directory, one-button dialing and simultaneous voice/data support. This squat, neatly packaged workstation costs $4,245.

But who needs one? The price, roughly $1,000 over a comparable personal computer (without the phone), would confine the device's market to managers who do not already have a personal computer and think a neat desk is worth the added expense.

Cedar does obviate the need for modems when interconnected over a special digital link with a Rolm private branch

See PHONE page 96

PE adds Everyware enhancements for IBM link

By James Connolly
CW Staff

OCEANPORT, N.J. — Perkin-Elmer Corp. today announced eight enhancements and new products for its Everyware line of communications products designed to interconnect its own computers and IBM systems.

The announcements include Ethernet support for interconnection of PE 3200 series superminicomputers running the company's AT&T Unix-based operating system Xelos, additional communications capabilities for PE equipment connected to IBM Systems Network Architecture (SNA) systems, a terminal server that links RS-232C devices to Ethernet and an Ethernet link for the PE 7350A supermicrocomputer. That supermicro was also announced today (see story page 107).

The company said that its IEEE 802.3 Ethernet support for Xelos-based systems appears to be unique in that it allows direct cabling of workstations to superminicomputers, the 3200 series running PE OS/32 and Xelos, an operating system based on AT&T Unix System V. The support is through PE's Ethernet Data Link Controllers (EDLC), hardware interfaces and transceivers providing connection to Ethernet cable.

The Ethernet Terminal Server (ETS) reportedly enables devices such as terminals, personal computers and printers to access Ethernet through RS-232C interfaces. The ETS resides between Ethernet and the devices. It allows connection of up to 32 RS-232C devices in increments of eight through a single Ethernet interface. The company said the ETS handles Ethernet addressing for the devices and allows users to access multiple hosts.

Pennet Plus PE 7350A, a board for the PE 7350A, is said to allow the supermicro running the Unisoft Corp. Uniplus port of AT&T Unix System III to access Ethernet and other portions of PE's Pennet Plus networking product. Pennet Plus, an open systems network, is said to allow connections through Ethernet, SNA, CCITT X.25 packet-switching and the International Standards Organization Open Systems Interconnect model.

PE, which last year introduced Pennet Plus with support for Ethernet, SNA and IBM bisynchronous emulation, also announced in this release expanded SNA and bisynchronous support. This includes support of IBM SNA Host Command Facility

See PE page 92

■ Interlan, Inc. announced products to interconnect two local-area networks and to manage networks/90

■ Wow Enterprises introduced software that transfers binary files over asynchronous lines from an IBM mainframe to IBM Personal Computers/91

■ 3Com Corp. cut prices and announced enhancements for its line of Ethernet products/91

■ NEC America, Inc. introduced a multispeed, auto-dial modem and a modem for use with personal computers/91

BBN announces PAD line for IBM interfacing

CAMBRIDGE, Mass. — BBN Communications Corp., a subsidiary of Bolt Beranek and Newman, Inc., has announced a family of IBM-compatible packet assemblers/disassemblers (PAD) for interfacing IBM equipment with BBN Communications packet networks.

The Model C/10 PADs reportedly support IBM host and terminal equipment using IBM's System Network Architecture/Synchronous Data Link Control (SNA/SDLC), 3270 Bisynchronous, 2780/3780 Bisynchronous protocols and asynchronous transmissions.

The units are designed to attach directly to IBM equipment without modification to the existing IBM hardware and software. The C/10 PAD is said to support 32 BSC/SDLC synchronous multidrop lines and concentrate traffic over one or two X.25 links operating at up to 64K bit/sec.

The C/10 PAD was intended to allow dispersed IBM terminals and hosts to communicate via a BBN Communications X.25 packet-switching network and to let users access multiple IBM hosts and applications from a single terminal.

Polling and selection of remote peripherals reportedly is performed locally by the C/10 PAD, eliminating polling traffic from the X.25 network. Monitoring and control of the C/10 PAD is said to be from a locally attached terminal or from a centralized network control facility. Remote diagnostics support is provided by a dedicated service port on all C/10 PADs, according to the vendor.

Modular design is said to allow the user to configure a C/10 PAD system with as few as four or as many as 32 host/terminal ports.

Delivery is scheduled for April. Prices range from $4,350 for a four-line configuration to $24,500 for a 32-line configuration.

BBN Communications is located at 70 Fawcett St., Cambridge, Mass. 02238.

DEC launches Ethernet products for broadband nets

MAYNARD, Mass. — Digital Equipment Corp. has announced that it is the first computer manufacturer to offer full Ethernet functions, including a 10M bit/sec data rate over broadband cable.

The company introduced a broadband Ethernet transceiver called Decom and a broadband Ethernet frequency translator called Deftr. The products are said to enable up to 1,024 Ethernet nodes to be interconnected over a broadband net at distances up to 3,800 meters apart.

The products were designed to connect to DEC's Ethernet controllers for DEC VAX-11 superminicomputers, PDP-11 minicomputers and Professional 300 microcomputers. They also can be connected to DEC's router, gateway and terminal server products and the DEC Local-Area Interconnect (Delni) clustering device.

The Decom and Deftr are targeted at installations using broadband cabling for video, data and voice communications and run under DEC's Phase IV Decnet networking software.

Decom is said to be available for dual- and single-cable broadband installations and to provide connections for up to eight Decnet/Ethernet devices when used in conjunction with Delni.

Deftr reportedly is used in conjunction with Decom in single-cable installations and lets Decom transmit at one set of frequencies and receive on another. The company said Deftr is unnecessary in dual-cable situations.

DEC's broadband products reportedly attach to conventional CATV cabling and components, use the Ethernet carrier-sense multiple access with collision detect protocol and require an 18 MHz bandwidth.

Decom and Deftr will be available in the spring of 1985. According to the company, Decom costs $4,250, and Deftr costs $4,500.

DEC is located in Maynard, Mass. 01754.

FINALLY. HELP FOR THE DATA CRAZED.

Introducing Cypress,® Cedar,™ and Juniper.™ Three fast, friendly, infinitely applicable desktop ideas from ROLM.

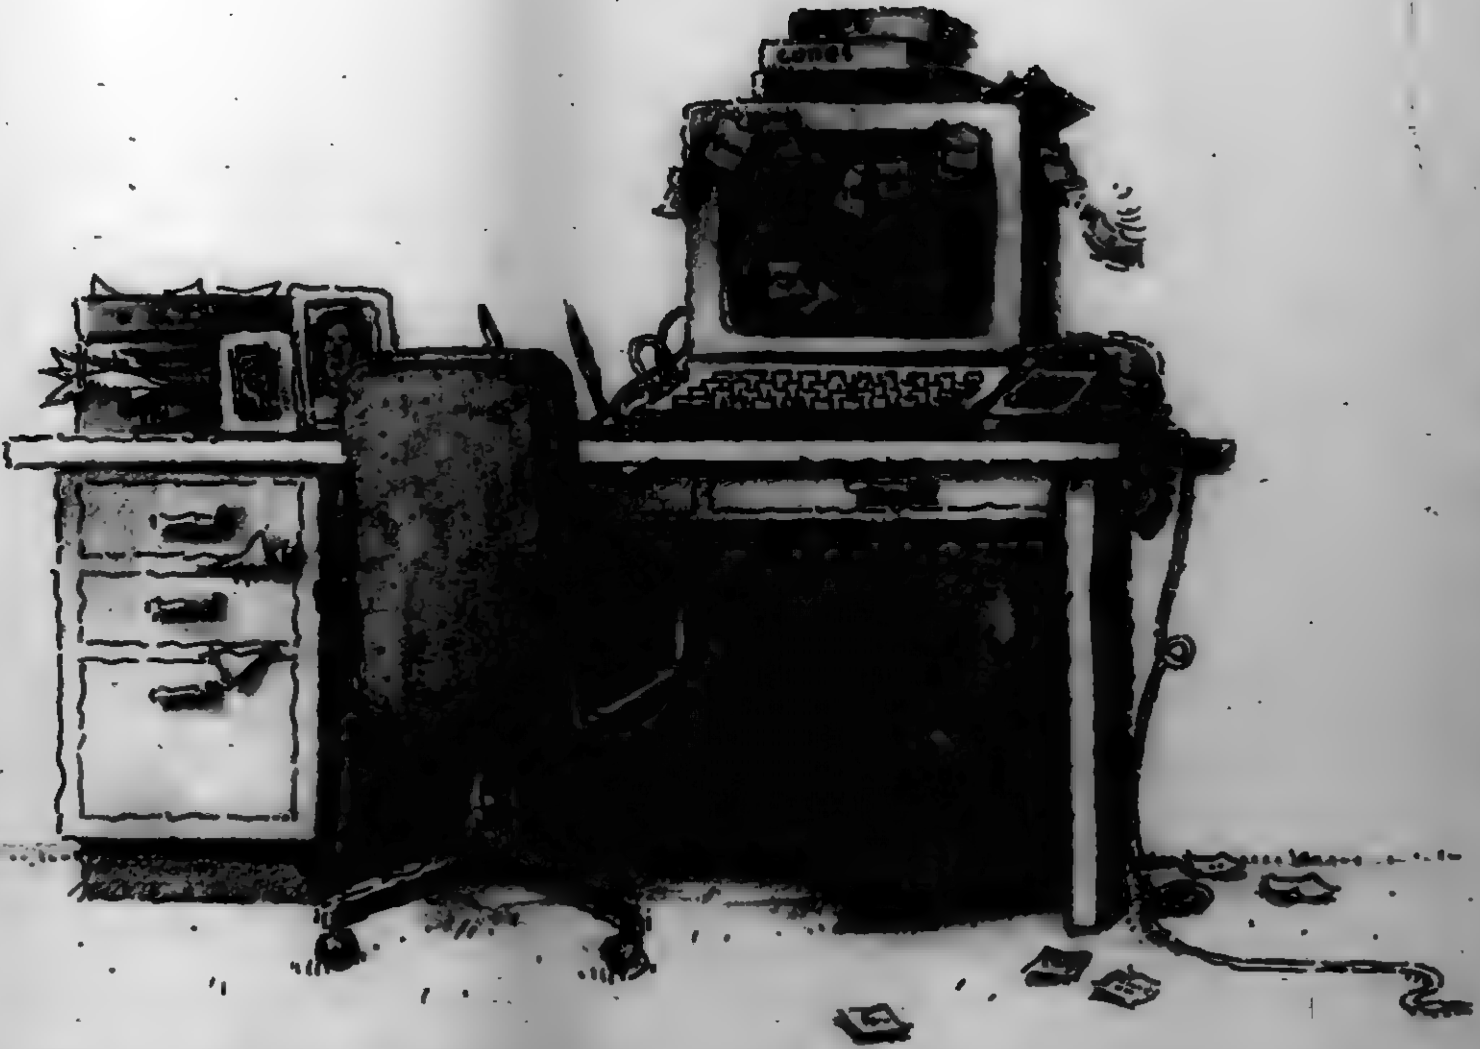
It comes as no surprise that people react to technology differently. Dyed-in-the-chip techies thrive on it. True non-believers avoid it instinctively.

Now you can please all of the people all of the time. Honest.

Say goodbye to complicated log-on codes. Just push a button and—whoosh!—travel all the way to a data base, talk to a mini or access your IBM mainframe.

Say hello to speakerphones, phone books, message takers and calculators. Built right in.

If you want to take snapshots of data in your mainframe, there's Cypress. It's as easy as Point & Shoot. It's a smart little ASCII terminal integrated with a fully-featured digital phone.



Need a 512 KB, fully IBM-compatible PC that runs programs like pfs:graph,™ the IBM Assistant Series,™ 1-2-3,™ and lets you mini-network through your phone line? Cedar's the one.

Already in love with your IBM®PC or XT but crave the affections of Cypress? Ask for Juniper. Its one slot adaptor card lets your system keep growing. And growing.

Of course, only ROLM has Cypress, Cedar and Juniper. Because only ROLM has the system to run them on. At its heart is the CBX II, a breakthrough communications controller that manages voice and data over standard telephone wire. Simply, brilliantly and cost effectively.

And ROLM has the technical edge, the operational track record and the worldwide service and support organization to please even the toughest customer.

So phone ROLM. High tech. Not high anxiety.

CW West Coast Bureau

MOUNTAIN VIEW, Calif. — National Advanced Systems Corp. (NAS) recently departed from its traditional product direction with the introduction of a Systems Network Architecture (SNA) gateway processor that reportedly permits communications between IBM Personal Computers and compatibles in dissimilar local networks.

The Advanced Systems (AS)/Gateway also enables the same personal computers to share modems and exchange data with host processors, according to Jerry Samstad, NAS' director of network systems.

Unlike NAS' IBM-compatible mainframes and external storage modules, which originate in Japan, AS/Gateway is manufactured in the U.S. and is a product of the American vendor's own development efforts. The decision to produce the communications unit domestically allowed NAS to take advantage of the microprocessor expertise of its parent company, National Semiconductor Corp., Samstad said.

The SNA gateway processor is built around National Semi's 32016 microprocessor and consists of two printed circuit boards. One of the boards emulates IBM's 3274 remote cluster controller, manages all communications protocols in an SNA environment and directs all I/O traffic entering or leaving a gateway, according to the vendor.

The other board manages Synchronous Data Link Control protocols and permits data to be passed back and forth between gateways and central mainframes, Samstad said.

Because it is compatible with the IBM Personal Computer's form-factor bus, AS/Gateway can accept various kinds of local networking interface boards, the vendor said. The NAS processor thus allows micros on, for example, a token-passing type of local network to communicate with personal computers connected through Ethernet, Samstad said.

In addition, AS/Gateway reportedly enables micro users to gain access to both their own and other organizations' CPUs, whether housed locally or remotely.

Capable of operating in either an asynchronous or an SNA communications environment, the gateway permits local networks to share up to eight modems, with access to the devices allocated on a first-come-first-served basis, the vendor said.

AS/Gateway costs $6,000 plus an additional $125 for each personal computer node connection. Software maintenance and updates will sell for an additional $1,000 per gateway, according to NAS.

NAS is headquartered at 800 E. Middlefield Road, Mountain View, Calif. 94040.

Interlan unveils internet router, network utility

WESTFORD, Mass. — Interlan, Inc. has announced two Ethernet network products, the Network Communications Server/Internet Router (NCS/IR), used to interconnect independent local networks, and the Network Management Utilities that runs on the IBM Personal Computer.

The NCS/IR is said to provide transparent data transmission for both interactive and file transfer sessions between two physically separate Ethernet local-area networks without the need to know the overall network topology.

Internetwork routing is reportedly done with XNS Internet Protocols. The internet router provides for asynchronous communications between networks supporting Interlan's NTS10 Terminal Servers and host Integrated Terminal Servers used with Digital Equipment Corp. VAX-11 systems running VMS, according to Interlan.

The internet router also allows Interlan's Ethernet Direct Connect for the IBM Personal Computer to access systems and resources on a remote Ethernet and supports file transfers between distributed personal computers, VAX-11 VMS and AT&T Unix systems.

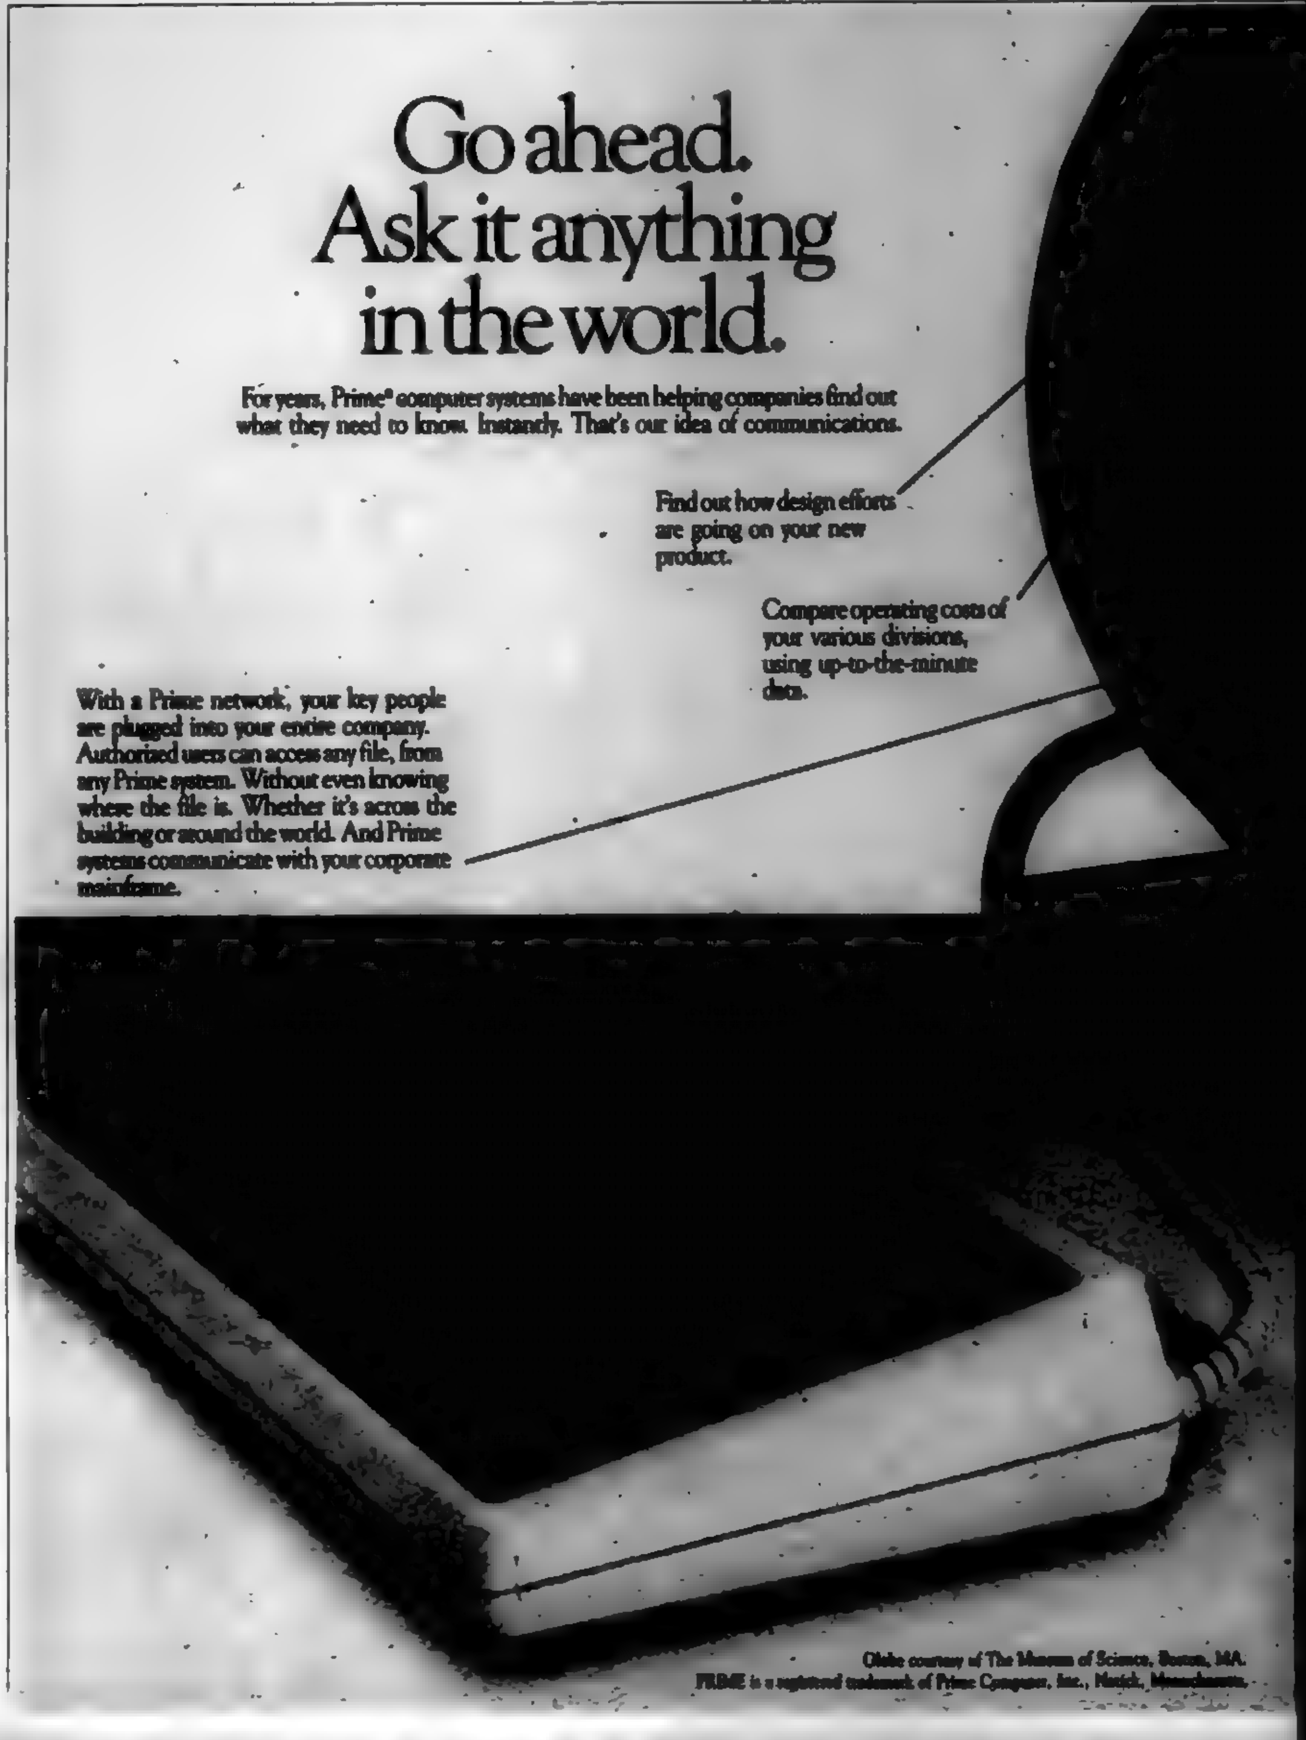
The NCS/IR supports two 9.6K bit/sec links via an RS-232 interface or 224K bit/sec connections via V.35 or RS-449/RS-422 interfaces.

Scheduled for delivery this month, the 9.6K bit/sec connection NCS/IR costs $6,650. The 224K bit/sec capability will be available at no incremental cost in the second quarter of 1985.

The Network Management Utilities reportedly provides the network operator with tools for controlling a collection of servers on Ethernet. They run on the IBM Personal Computer family and compatibles and allow the management station to service boot requests from any server on the network.

The utilities include a controller board and diagnostic software. They are scheduled for shipment this month at $1,000.

Interlan is located at 3 Liberty Way, Westford, Mass. 01886.



Go ahead.
Ask it anything
in the world.
For years, Prime® computer systems have been helping companies find out what they need to know. Instantly. That's our idea of communications.
Find out how design efforts are going on your new product.
Compare operating costs of your various divisions, using up-to-the-minute data.
With a Prime network, your key people are plugged into your entire company. Authorized users can access any file, from any Prime system. Without even knowing where the file is. Whether it's across the building or around the world. And Prime systems communicate with your corporate mainframe.

Binary file package debuts

PALO ALTO, Calif. — WOW Enterprises has introduced a software product said to permit the transfer of binary files between IBM mainframes and IBM Personal Computers over an asynchronous communications link.

The Missing (Async) Link is intended for use with the IBM 3101 Emulation Program and converts IBM CMS and TSO host files to and from the same transmission format that is supported by Fileconv, a utility supplied with the IBM program, the vendor said. The conversion is said to include data compression, cyclic redundancy checksum characters and efficient encoding of binary data as printable characters that require four characters to represent each 3-byte group.

The program consists of host system programs for CMS and TSO that convert native host system files for transmission in Ascii over an asynchronous communications link, using the same encoded format that is used by the IBM 3101 Emulation Program for transmission of IBM Personal Computer files, the vendor said. The program is distributed on diskette and includes special procedures for installation of the object programs on CMS and TSO host systems from the IBM Personal Computer.

Price is $96.

WOW Enterprises is located at 1500 Middlefield Road, Palo Alto, Calif. 94301.

3Com enhances Etherseries

MOUNTAIN VIEW, Calif. — 3Com Corp. has announced enhancements to its Etherseries local-area network software, an extended warranty on its Etherlink hardware and price reductions of 18% to 70%.

The Etherseries 2.4 enhancements include support for the IBM Personal Computer AT and the IBM PC-DOS Release 3.0 operating system; Ethermenu, a menu system designed to restrict access to network functions and to allow custom-designed menus for frequently used applications; laser printer support; and an Ethershare upgrade that allows a standard mode server to support Ethermail, multiple third-party hard disks and connection between the local user and other servers.

The company said the warranty on the Etherlink network adapter has been increased from 90 days to one year. 3Com also said that the software warranties will remain at 90 days.

The price changes are Ethershare/PC, down from $595 to $395; Etherprint/PC, down from $500 to $150; Ethermail down from $750 to $550; and Etherlink down from $795 to $650.

Software upgrades for current users of Etherseries range from $49 to $99.

3Com can be reached at P.O. Box 7390, 1365 Shorebird Way, Mountain View, Calif. 94039.

NEC America offers autodial, micro modems

LAS VEGAS — At the recent Comdex/Fall '84 show, NEC America, Inc. unveiled two modems, a multiple-speed device with autodial and logon capabilities and another designed for personal computer use.

The NEC DSP2430II modem is said to be AT&T-compatible at 300 and 1,200 bit/sec and conform to the international CCITT V.22 standard at 2,400 bit/sec.

The autodial modem also has automatic logon capabilities and can store up to 12 numbers with optional logon messages. These logon commands can be protected with use of the device's password feature which can accommodate passwords of up to eight characters.

Used with PBX dialing

The device's ability to detect second dial tones enables the DSP2430II to be used with private branch exchange (PBX) dialing. The modem will be available in January at a price of $1,095.

The NEC Data Modem N1230 is a 1,200 bit/sec full-duplex autodial modem said to be AT&T 212-compatible. It reportedly has a Hayes Microcomputer Products, Inc.-compatible mode that enables it to operate with the major data communications software available but has built-in intelligence and storage capabilities that make it suitable for use with terminals.

Users that need Hayes- or Apple Computer, Inc.-compatible modems can use the N1230 in conjunction with the appropriate software, enabling a personal computer to control the modem directly. The device is said to have storage enough for 12 telephone numbers with logon sequences.

Host of accessible features

A host of features, such as password security and number editing functions, are accessible from the personal computer keyboard.

Available in January, the N1230 will cost $450 in single quantities, according to the vendor.

For more information, NEC America is located at 8 Old Sod Farm Road, Melville, N.Y. 11747.

CONTROLLERS

NCR COMTEN, INC.
Comten T-7362

NCR Comten, Inc. has introduced a disk for its 3690 communications processor systems that reportedly stores system software load modules and memory dumps.

According to the company, the Comten T-7362 is a 29M-byte integrated fixed-disk drive that can capture data when the system fails and restore a downed system by automatically reloading the communications processor. Console commands can be issued to the disk to display a table of contents, delete any file, format a disk or display disk file records, the company said. The disk reportedly can be installed into any Comten 3690 communications processor running under the Comtem COS/S2/90 communications operating system.

The price of the product, including one 29M-byte disk drive, controller and interface adapter is $4,450, according to the vendor.

NCR Comten, 2700 Snelling Ave. N., St. Paul, Minn. 55113.

VOICE/DATA COMMUNICATIONS

WESTERN TELEMATIC, INC.
SS-16

Western Telematic, Inc. has announced a 16-port, RS-232 smart switching device designed to let users create their own port-to-port local network.

The SS-16 reportedly allows computer port expansion, computer sharing and linking of terminals, modems, printers and computers.

It is said to use menu-driven commands for selecting ports, disconnecting and displaying port activity.

Each of the ports can be configured for independent transmission rates from 150 bit/sec to 19.2K bit/sec. Parity conversion and handshake protocol and ports can be selected by number, name or group with up to eight simultaneous connections, according to a spokesman for the vendor.

It costs $1,895.

Western Telematic, 2435 S. Anne St., Santa Ana, Calif. 92704.

See VOICE page 93

PE

from page 87

(HCF) and Distributed Systems Executive (DSX) applications for its Series 3200 systems.

The HCF Support software package running on the Series 3200 reportedly allows a local or remote IBM 3270 terminal in an IBM SNA network to interact with applications on the Series 3200 and to use Pennet functions. It is intended primarily to give system programmers at the IBM host site access to remote processors.

The DSX Support package is said to enable IBM host-initiated sequential file transfers between a Series 3200 and an IBM 370, 30 series or 4300 host. The 3200 is said to be managed by the IBM host as if it were an IBM 8100 distributed processing system.

The company also announced IBM 3270 terminal support, allowing connection of IBM SNA 3270 and IBM Bisynchronous 3270 terminals to a 3200 series processor via an IBM cluster controller. The support products are said to allow access to applications on the PE host or pass through to an IBM host.

Pricing for the software products are according to the size of the 3200 series processor they will run on. All except SNA/3270 Support, which will be available in January, are available now.

The original license for SNA/HCF Support costs from $1,600 to $4,500, and additional copies cost from $600 to $1,600. SNA/DSX Support costs from $1,000 to $3,000 for the original license and from $300 to $1,000 for copies; SNA/3270 Support is from $1,600 to $5,000 for the original license and from $600 to $1,600 for copies; and BSC/3270 Support is from $1,400 to $4,300 for the original and $500 to $1,400 for copies.

Pennet Plus PE 7350A is now available for $500.

EDLC-Xelos, scheduled for February deliveries, costs $3,700.

EDLC-PE 7350A, available now, costs $1,000.

The Ethernet Terminal Server, now available, costs $4,500 for the terminal portion and $5,500 for the host connection.

PE is located at 2 Crescent Place, Oceanport, N.J. 07757.

$100,000 GUARANTEED TRADE-IN NOW

TRADE THIS GET THIS

Tired of waiting for DEC's promises?
Now ELXSI will guarantee a $100,000 trade-in for your VAX 11/780 system*
when you move up to the ELXSI System 6400. A one-CPU ELXSI system offers 4 to 8 times
the performance of your VAX 11/780, with single cabinet expansion to 5 CPUs
and over 20 times the performance of your VAX 11/780.

Plus the ELXSI System 6400 has a true native port of Unix System V, not an emulation,
with a unique combination of Berkeley enhancements.

The ELXSI System 6400. Unmatched performance, deliverable now, and the potential for future expansion.
Add to this a $100,000 trade-in of your VAX 11/780. Why wait?
Call ELXSI today—sales offices in most major cities.

* See your ELXSI sales representative for the VAX 11/780 minimum configuration required for trade-in and exact details of the offer. Offer limited to the first 50 customers.

THE ELXSI GUARANTEE: Find a computer system that can match our performance and our potential for expansion, and we'll raise our price to match theirs.

MICOM SYSTEMS, INC.
Micro800/X.25i

Micom Systems, Inc. has introduced its Micro800/X.25i concentrator packet assembler/disassembler (PAD). The integral PAD lets Micom's Micro600 data private branch exchange-based Instanet local-area network users utilise X.25 networks to link their Micro600s to terminals, computers and other Micro600s.

The Micro800/X.25i can communicate with local host computers supporting X.25 software, providing up to 16 full duplex logical data channels over a single hard-wired connection to one X.25-supported computer port. Compatible with CCITT X.3, X.25, X.28 and X.29, the Micro800/X.25i supports both permanent and switched virtual circuits, plus fast select, abbreviated calling and closed user groups.

An eight-channel Micro800/X.25i is priced at $2,500, and a 16-channel version costs $4,200.

Micom Systems, 20151 Nordhoff St., Chatsworth, Calif. 90311.

PROTOCOL CONVERTERS

INNOVATIVE ELECTRONICS, INC.
MC 800 protocol converter

Innovative Electronics, Inc., has announced a protocol converter that is said to allow up to 24 asynchronous Ascii devices to communicate with an IBM mainframe or host computer using either Systems Network Architecture/Synchronous Data Link Control (SNA/SDLC) or Binary Synchronous Communications (BSC) protocols.

According to the company, the MC 800 appears to the host computer as an IBM 3274 or 3276 communications controller with IBM 3278/3279 terminals attached. The product is designed for computer facilities that have numerous remote sites employing only one or two 3270 terminals per site. Remote terminals, connected via asynchronous modems, can timeshare a MC 800 at the main computer site, the company said.

The product reportedly comes in port configurations of up to 24 ports and supports more than 100 types of asynchronous terminals. The MC 800 is said to be user-configurable to support all standard asynchronous bit/sec rates up to 19.2K bit/sec.

The price of the product is $3,600 for the five-port unit, according to the vendor.

Innovative Electronics, 4714 N.W. 165th St., Miami, Fla. 33014.

MULTIPLEXERS/ MODEMS

RACAL-MILGO, INC.
Planet Starter Pack

Racal-Milgo, Inc. has introduced a starter pack designed to create an expandable local-area network linking up to 10 word processors and personal computers.

The Private Local-Area Network (Planet) Starter Pack reportedly includes the cables, hardware and documentation needed to support up to 10 asynchronous or synchronous communications devices. According to the company, asynchronous and synchronous devices may be on the same network but not interconnected.

The network was designed to allow expansion to Racal-Milgo's Planet network with a capacity of 250 stations.

It also is said to offer Planet's features, including port selection, queuing, resource sharing, closed user groups, password, priority and automatic network restoral after a power failure.

Using a token-ring configuration with baseband, the Planet Starter Pack features a 19.2K bit/sec transfer rate and supports RS-232, V.24 and V.28 devices.

According to the company, it supports all major protocols with the aid of a protocol and code translator and provides communications among most major word processing systems and personal computers.

The Planet Starter Pack costs $9,995, according to the vendor spokesman.

Racal-Milgo, 8600 N.W. 41st St., Miami, Fla. 33166.

TELEPROCESSING PRODUCTS, INC.
TP-214

Teleprocessing Products, Inc. has announced its TP-214 four-channel statistical multiplexer, designed to support asynchronous terminals in synchronous networks.

The TP-214 is said to allow connection of four asynchronous terminals with input speeds from 110 bit/sec to 9,600 bit/sec to a synchronous modem, to one or more ports of a multiport synchronous modem or to a digital service unit.

The company said a typical use would be providing four 2,400 bit/sec asynchronous data paths over one 2,400 bit/sec modem.

The desktop device costs $1,350.

Teleprocessing Products, Building 7K, 4565 E. Industrial St., Simi Valley, Calif. 93063.

LOCAL-AREA NETWORKS

PROTEON, INC.
Infrared link

Proteon, Inc. has introduced an infrared communications link for use with its local network to interconnect buildings or for use in electronically noisy environments such as a factory or automated warehouse.

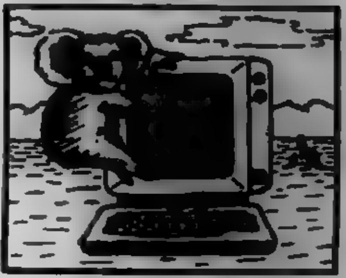
We've cornered the Australian computer market for you.



Your ad in one of CW International's Australian magazines will pay for itself over and over again. Australians buy about $500 million worth of computers and related equipment every year. And American products account for 60% of that amount.

The number of installed minicomputers is expected to grow by 20% per year through the 1980s. Your best way to reach that market is through **Computerworld Australia** — the newsweekly for the Australian computer community. It's one of **Computerworld's** sister publications. We have a guaranteed circulation of 10,000 (8,000 paid), and 85% of our readers are DP professionals.

The IBM PC market is booming in Australia. By the end of 1984, almost 20,000 units will have been sold. **Australian PC World** — the only computer magazine for IBM PC users in Australia — premiered this March in response to the growing demand. Total distribution has already topped 16,000. And newsstand sales are vigorous from Sydney to Perth.

Forecasters predict that the Australian government and businesses will increase their usage of microcomputers by 170% over the next two years. **Australian Micro Computerworld** is the only monthly magazine covering this market. Written for both single-unit and networked users, most of our 12,000 readers are skilled professionals involved in the selection or design of systems and networks.

CW International Marketing Services makes it easy for you to advertise in countries all around the world. For more information on our three Australian publications, fill out the coupon below and return it today.

Turns Spaghetti Code COBOL Into Structured COBOL Automatically

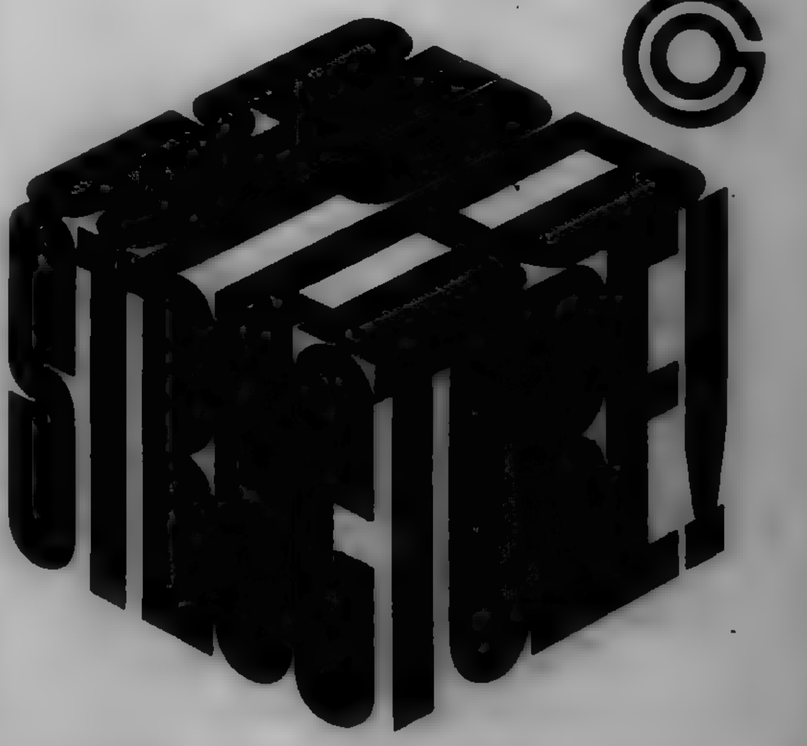
SUPERSTRUCTURE takes your unstructured COBOL programs and automatically produces structured COBOL programs that are easy to understand and maintain.

SUPERSTRUCTURE provides a simple and cost effective alternative to manually rewriting those unstructured programs that are a maintenance nightmare. Of course you can't believe it. Let us prove SUPERSTRUCTURE works, using your programs at your location. SUPERSTRUCTURE— the breakthrough you've been waiting for.

Call today: Marketing Director— SUPERSTRUCTURE

Group Operations, Incorporated
1110 Vermont Avenue, N.W.
Washington, D.C. 20005
(202) 887-5420

Offices in Atlanta, Boston, Chicago, Dallas, Denver, Hartford, Los Angeles and New York.



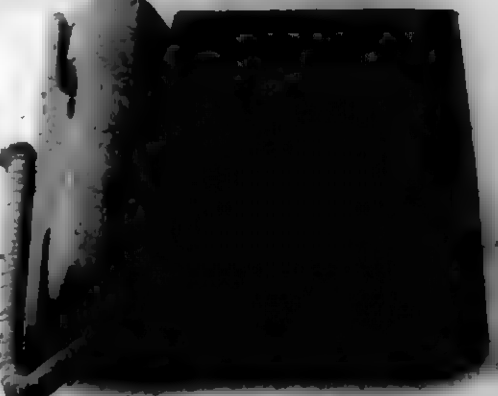
SUPERSTRUCTURE!

You'll be impressed with your Honeywell computer.

If you need service... even more impressed.

In evaluating a computer system, many users put service at the top of their list. So do we.

We start by making one individual responsible for your system's performance. He's highly trained and knows you and your operation first hand. And he's the focal point of a person-to-person approach that makes communication more effective and the entire program more responsive.



The Honeywell service program includes varied resources to assist your representative in meeting every eventuality. Like our National Response Center, operating 24 hours a day, seven days a week. Your one call here is all it takes to trigger action. All of the historic data on your system is at their fingertips, all resources at their disposal.

Among these are our Technical Assistance Centers. Staffed by hardware and software experts, each TAC is equipped with system documentation libraries and advanced capabilities to quickly diagnose your problem remotely.

If spare parts are required, you'll get them. Fast. Our nationwide on-line inventory tracking system and network of stocking centers allow us to locate and ship any part. Quickly.

Still another element of our customer service is training. In addition to such basics as programming, we conduct classes in advanced areas such as data communications and database design. Using the latest computer-assisted learning techniques, these classes can be conducted at your facilities or ours.

There are no compromises in the quality of our service. But there are varying levels of service available that can be tailored to meet your system availability requirements. Our Customer-Assisted Maintenance Program (CAMP), for example, provides tools for self-diagnosis of difficulties and offers additional economies through parts replacement arrangements that include carry-in, mail-in, or call-in options for expedited delivery.

We call this comprehensive approach to system support TotalCare™ service. It represents all that we've learned in more than 25 years of serving the needs of customers all over the world.

For more information, call 800-328-5111, ext. 2702 (in Minnesota call collect 612-870-2142) or write:

Customer Services Division
Honeywell
MS 440
200 Smith Street
Waltham, MA 02154.

Together, we can find the answers.

Honeywell

Continued from page 93

The infrared link is intended as an alternative to physical cable connections in Pronet, the company's token-passing local network. The infrared devices reportedly can link Pronet networks together or act as a connecting medium in a single star-shaped ring.

Information can be transmitted at 10M bit/sec for up to 250 meters, depending upon weather conditions. Snow and rain have a minimal disruptive effect, Proteon said.

The infrared device reportedly includes a microprocessor that analyzes the link's performance and ensures the integrity of the data transmitted.

A two-unit link is priced at $17,000.

Proteon, 4 Tech Circle, Natick, Mass. 01760.

AUXILIARY EQUIPMENT

PLEX TECHNOLOGIES
Convert

Plex Technologies has announced a serial-to-parallel converter designed to allow computers with RS-232 serial ports to drive Centronics Data Computer Corp.-compatible printers.

The Convert is said to have a standard DB-25S female, 25-pin connector for the serial output and a standard Centronics-type 36-pin ribbon connector for the parallel input.

The transmission rate is user-selectable, with eight rates available from 150 bit/sec to 19.2K bit/sec.

It costs $99.95, the vendor said.

Plex Technologies, 2308 Fourth St., Berkeley, Calif. 94710.

VG SYSTEMS
Remote communications options

VG Systems has announced remote communications options for its VG 9250 color raster and VG 8250 stroke computer-aided design and manufacturing display stations.

The options reportedly enable multiple topologies to be configured, including point-to-point communications, multidrop coaxial lines, a gateway network for remote display stations over a multidrop coaxial network and a multicity, multidrop network over telephone lines. The VG 9250 is being shipped with the multidrop capability.

The gateway option, needed only on the first display station in the network, costs $3,000.

VG Systems, 21300 Oxnard St., Woodland Hills, Calif. 91367.

PHONE from page 87

exchange (PBX) and does facilitate communications, particularly with other Cedars. But at that cost, the user must make do with a non-IBM-style keyboard and be confident that he won't need to add a hard disk, which Cedar does not support.

At simpler levels, consider where telephones sit on desks compared with where keyboard devices sit.

Every time Cedar users want to use the device they will have to drag the thing to the middle of their desks.

More practical solution

It would seem that a more practical solution would be to retain telephones — which everybody already has — and update personal computers to get Cedar-like communications functions.

This measure would enable use of full-size personal computers and appeal to a broader market base — the thousands of people who already have personal computers.

Products of this ilk are coming from two sources: PBX vendors and manufacturers of personal computer add-ons.

When Cedar was announced, Rolm also unveiled Juniper, a $1,360 software and board option for IBM Personal Computers, Personal Computer XTs and compatibles. This device supports most Cedar capabilities — one-touch dialing for voice and data conversations, prestored terminal profiles, VT100 compatibility and 3270 emulation — including the important ability to use the voice and data devices simultaneously.

Less useful than Juniper are the third-party personal computer add-ons. These boards fit in an expansion slot within a personal computer and often do away with the need for a phone.

Instead, a handset — no base — is directly attached to the personal computer from which the "telephone" is dialed or answered. While it provides an electronic telephone directory and facilitates computer logon procedures, the productivity benefits of these devices are elusive at best.

'Too integrated' problem

Telephone/terminals suffer from the same "too integrated" problem of the Cedar and these personal computer add-ons. These devices are too small — both in screen size and keyboard — to be used as a normal terminal would. But to be fair, that was never the intended use for these devices.

It is possible, however, that the application will someday catch up to technology. Telephones are, after all, messaging devices. A telephone/terminal would extend electronic mail to personnel without terminals and make the integration of text and voice messaging systems more desirable and functional. Additionally, such a device could be used to access corporate videotex systems, when and if these systems are ever embraced.

According to industry sources, AT&T will release its own integrated voice/data workstation in January. This device reportedly will have a built-in speakerphone, built-in modem, 3270 emulation and a new touchscreen technology on which an image of a keyboard can be displayed.

BLUELYNX™ PACKS A MAINFRAME IN YOUR PC

Need access to an IBM mainframe?* BLUELYNX puts that power at your PC!

3 reasons you'll want BLUELYNX to solve **every** IBM PC/Mainframe communications problem:

1. **Technical Leader.** BLUELYNX leads the field with products for PCs and ATs in IBM terminal environments.
2. **Ease of Use.** For example, our 3270 line of products includes the BLUELYNX 3270 Keyboard (see illustration) so terminal users are at peak productivity from day one. No retraining required.
3. **Superior Support.** A BLUELYNX tradition!

IMPORTANT:
BLUELYNX is the **only** complete family of products offering COOPERATIVE PROCESSING to get the most from your DP resources. One BLUELYNX 3270 Gateway, for example, lets 32 PC's talk to your mainframe.

Call Techland for solutions to your PC/Mainframe problems.

SYSTEMS & PERIPHERALS

Users cool to quality WP units, still prefer multifunction micros

By John Desmond
CW Staff

FRAMINGHAM, Mass. — While dedicated word processors generally offer higher quality output than microcomputers outfitted with word processing software, users seem to prefer multifunction micros for office automation applications. In fact, a market research firm here has significantly altered its market growth predictions for dedicated word processors in light of slumping 1983 sales figures.

International Data Corp. (IDC) predicted that in 1983, the compound annual growth rate in a five-year period for stand-alone word processors would be 27%. But the actual 1983 figures showed only a 10% growth rate.

According to a revision of an earlier report titled "Word Processor Marketplace," IDC stated that since stand-alone micros can perform calculations and run graphics, spreadsheet and other DP software, they appear to have the edge over dedicated word processors in the office. The report defined a stand-alone word processor as a unit sold primarily for office applications with vendor-supplied word processing software. A clustered word processor was defined as one capable of accessing a central processor.

The growth rate of clustered systems was projected to be 38% for the current installed base and 22.7% for new shipments, but the actual rates were 23% for the installed base and 11% for shipments, the IDC report stated.

Prices for both stand-alone and clustered systems dropped as the industry tried to adjust prices to compete with the microcomputer market. IDC had forecast that stand-alone systems would cost $10,900 each in 1983 and drop to $7,500 by 1987. But according to IDC's revised report, the average price dropped to $7,720 this year, a decrease of 30% from the previous year. The $7,500 price is now expected in 1984, three years sooner than originally predicted, IDC said.

On the average, the forecast price for clustered systems was $10,000. But in 1983, the actual average price turned out to be $6,950, a 31% reduction, the report stated.

IDC originally predicted the overall shipment value of stand-alone word processors would reach over $4 billion by 1987. The market research firm now says that overall value will reach only $1.4 billion by 1988. "This is due to the increased number of personal computers doing word processing applications, the decreased cost of the word processing systems and the decreasing number of shipments," the report stated.

Manufacturing accounted for most applications, with 22.3% of the stand-alone market and 13% of the clustered market. The government was found to be the second larg-

Word processing shipments in units

NCR unveils Worksaver cluster unit

Control processor links 64 terminals

DAYTON, Ohio — NCR Corp. recently unveiled the Worksaver 3000, a cluster control processor that the company claimed allows up to 64 of the company's Worksaver line of intelligent terminals to share common file storage and applications programs. The unit can also be used as a file server, print server or communications gateway to larger processors.

Based on multiple Intel Corp. 8186 microprocessors, the Worksaver 3000 hardware was developed for NCR by Convergent Technologies, Inc. According to NCR's office systems product manager Tom Davis, the unit uses Convergent Technologies' CTOS operating system and a proprietary local-area network developed by NCR that is based on the RS-422 communicatons interface. Within this network, all peripherals, files and applications software can be shared among all users, Davis said. The vendor added that security blocks can be used to restrict file access if necessary.

Like other members of the Worksaver line, the Worksaver 3000 employs what NCR calls a Distributed Intelligence Architecture. This, Davis explained, is a concept that allows each workstation attached in a cluster to have individual use of applications software. The advantage of this architecture, Davis contended, is

SHOP TALK
Ralph Spencer Poore

Data security tactics evolving for terminals

The security requirements for data communications terminals are escalating as managers become more aware of the vulnerability of terminals and the information they can access.

The methods used to compromise data transmitted to or from a terminal have become increasingly sophisticated. As a result, theft, misuse and disclosure problems have, to some degree, been countered by legislative, regulatory and judicial actions. For example, government agencies and several key businesses now require technical and procedural countermeasures for the protection of data. And more organizations now require that data communications equipment have security features before they purchase any.

Historically, there has not been a strong concern for

HARD TALK/TOM HENKEL

IBM, DEC clash to jolt '85 market

IBM and Digital Equipment Corp. have launched a processor performance war that will have a strong influence on almost every large system announced in 1985. In addition, new processors announced by both IBM and DEC have further blurred the already confused distinction between big mainframes and smaller mid-range systems and may signal a significant change in the types of work traditonally performed by mid-range CPUs.

IBM's 4381 Model Group 3 and DEC's VAX 8600 both appear to offer internal performances that challenge the performances of currently available large mainframes.

Some industry watchers seem convinced that IBM's Model Group 3 is a better deal (in a price/performance sense) than the low-end models of IBM's larger 3083 line. When it announced the 8600 in late October, DEC made a point of comparing the performance of its new processor, in a VAX cluster configuration, with IBM's top-of-the-line 3084 mainframe. DEC's move seems to indicate it plans to challenge IBM's thus far inpenetrable dominance in the mainframe processing arena with a finely tuned superminicomputer.

The intensifying dual between DEC and IBM is only the beginning of the mid-range systems performance war. Now that DEC and IBM have given power boosts to their systems, other vendors competing in the same marketplace will have to follow suit. Sperry Corp. made its move in early November when it launched the 7000/40, an AT&T Unix-based 32-bit system. In the months to come, look for similar performance enhancements from Data General Corp., Prime Computer, Inc., Wang Laboratories, Inc. and others.

The upshot of all these performance enhancements is a brewing metamorphosis that will change the traditionally held roles of large systems. Superminicomputers appear to be taking over the duties that two years ago were reserved for mainframes. Mainframes seem to be moving into a new performance domain, one that combines traditional computing power with the high-speed number-crunching capabilities formerly found in supercomputers. And multimillion-dollar supercomputers appear to be slowly gaining acceptance as a general busi-

SYSTEMS & PERIPHERALS

TURNKEY SYSTEMS

NCR CORP.
Modular Lodging System

NCR Corp. has announced the Modular Lodging System (MLS) for its 32-bit NCR 9300 CPU, said to be capable of running front- and back-office applications simultaneously on a single processor.

MLS runs property management packages, including registration, rooms management, housekeeping and guest accounting, as well as back-office applications such as payroll, accounts payable, city ledger, travel agent accounting and general ledger. The program runs on NCR's Interactive Transaction Executive operating system.

The price for MLS with a 9300 configuration, including 2M bytes of main memory, 21 communications lines, nine CRTs, 175M bytes of disk storage and printers, is approximately $125,000, the vendor said.

NCR, 1700 S. Patterson Blvd., Dayton, Ohio. 45479.

SCAN-OPTICS, INC.
Reliareader 536

Scan-Optics, Inc. has announced the Reliareader 536, an optical character recognition system that reportedly offers six output pockets for sorting documents after they have been read. The unit also reportedly allows users to add additional pockets in increments of six, up to a total of 30 per system.

In addition to many printer and typewriter fonts, the Alphanumeric Handprint option enables the system to read hand-printed material. It has a maximum throughput of 750 document/min.

The price of the Reliareader 536 system will start at approximately $300,000, and the system will be available in the first quarter of 1985.

Scan-Optics, 22 Prestige Park, E. Hartford, Conn. 06108.

TERMINALS

TELEX COMPUTER PRODUCTS, INC.
Telex 080 and 179 terminals

Telex Computer Products, Inc. has introduced the Telex 080, a 15-in. monochrome terminal, and its 179-color terminal, both said to offer enhanced IBM 3270 capabilities.

The two terminals reportedly connect directly to an IBM 3274 controller or Telex 274C control unit. They are said to be available in screen sizes offering 1,920, 2,560 or 3,440 char.

Both are also said to offer extended highlighting, automatic screen cutoff, volume-adjustable audio alarm and a security keylock.

The 080 is priced at $2,195. The 179 is priced at $2,295.

Telex Computer Products, 6422 E. 41st St., Tulsa, Okla. 74135.

BOARD-LEVEL DEVICES

EMULEX CORP.
UC03, UC13 host adapters

Emulex Corp. has introduced two host adapters said to provide mass storage control protocol emulation and connect Digital Equipment Corp. Q-bus or Unibus host systems to the small computer systems interface (SCSI).

The UC03 host adapter is a single, quadwide board that embeds in the standard Q-bus backplane slot of the DEC LSI-11, Micro/PDP-11 and Microvax. The UC13 is also a single, quadwide board, which plugs into a Unibus slot of the DEC PDP-11 and VAX-11 series computers.

Both the UC03 and UC13 are said to emulate DEC's mass storage control protocol in a manner completely transparent to the operating system software, the vendor said, allowing users to receive all of the mass storage control protocol benefits without the need for patches or operating system modifications.

The UC03 and UC13 allow up to four SCSI drives of any standard type or capacity to be connected to each host, the vendor said. Both adapters are said to support Shugart Corp.'s Optimem 1000, a 1.2G-byte optical disk drive.

The UC03 is priced at $1,860, and the UC13 costs $2,200, the vendor said.

Emulex, P.O. Box 6725, 3545 Harbor Blvd., Costa Mesa, Calif. 92626.

INTERNATIONAL ELECTRONICS ENTERPRISES, INC.
MK2

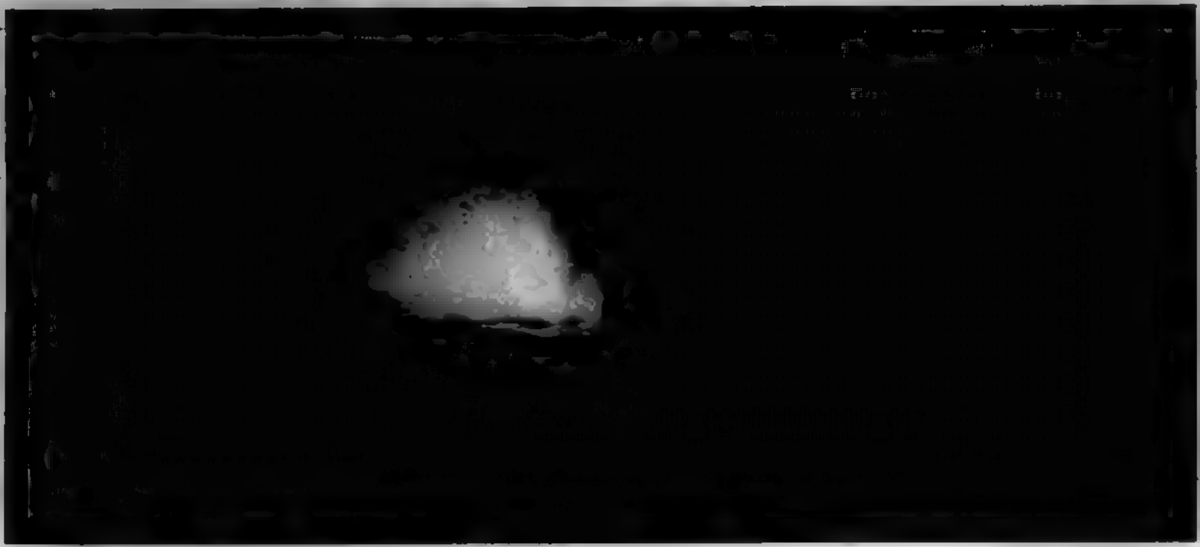
International Electronics Enterprises, Inc. has introduced a printed-circuit board said to check the alignment and operation of hard disk drives.

The MK2 disk mini-exerciser has reportedly been designed to eliminate the need for an oscilloscope when exercising or aligning disk drives. The exerciser can be used to test Control Data Corp. 9762 and 9766; Digital Equipment Corp. RMO2, RMO3 and RMO5; and Wang Laboratories, Inc. 2265 V-1 and 2262 V-2 disk drives.

The MK2 contains logic and switching circuitry said to enable an engineer to perform a complete disk alignment or exercise and check the operation of 40M- to 80M-byte or 150M- to 300M-byte disk drives. The exerciser tests seek direct or between two selected cylinders, random seek, return to zero, head select and alignment circuitry, the vendor said. Test points are provided for read/write, head alignment and ground.

The unit costs $675.

International Electronics Enterprises, 110 Agate Ave., Newport Beach, Calif. 92662.



ONE BIG REASON WHY OVER 800 LARGE NETWORK USERS WORK WITH NCR COMTEN TODAY:

TOMORROW.

Because tomorrow *does come.* Only too soon. That's why more than 800 data communications network users have chosen, and continue to work with, NCR Comten. Our systems anticipate the day *after* tomorrow.

In our long-range planning, we know that growth and change are the only constants with which our customers must deal. As a consequence, we design network systems capable of handling new technologies and services as they emerge. Not only do we help you reduce initial system costs, we also help you preserve that substantial investment when tomorrow comes.

Planned non-obsolescence is just part of the NCR Comten story. More reasons will be found in our special executive briefing. For details, write "Data Communications Systems", NCR Comten, Inc., Department 8015, 2700 Snelling Ave. N., St. Paul, MN 55113. Or call 1-800-334-2227. In Canada, call 1-800-543-5713.

NCR COMTEN. KNOWN BY THE COMPANIES WE KEEP.

NCR
NCR Comten, Inc.

AUXILIARY EQUIPMENT

APPLIED CIRCUIT TECHNOLOGY, INC.
Winchester disk drive emulator

Applied Circuit Technology, Inc. has announced a Winchester disk drive emulator said to provide a testing standard for hard disk drives used with personal computers.

Intended for use with both 5¼-in. and smaller hard disk drives, the emulator is targeted at systems integrators and at disk drive and controller manufacturers for calibrating and verifying read/write capabilities of their units, the company said.

The emulator stores one track of data and accepts and returns up to 10,416 bytes of data during a read/write operation. After a seek test, track zero's data is returned until a write operation is performed.

The price of the emulator is $1,895, the vendor said.

Applied Circuit Technology, 2931 La Jolla St., Anaheim, Calif. 92806.

PRESTON SCIENTIFIC, INC.
Preston GM/SEL 32

Preston Scientific, Inc. has announced a parallel interface designed to link Preston's 13-bit and 15-bit data conversion systems to Gould, Inc. superminicomputers.

The Preston GM/SEL 32 reportedly provides logic terminations and compatible driver-receiver circuitry for operating Preston's analog and digital conversion subsystems from the Gould/SEL HBS controller. It is available with options for either a 16-bit or 32-bit format, according to Preston.

The 32-bit format is said to provide a data packing feature that allows converted data from Preston's 500-KHz and 1-MHz ADC systems to be assembled in 32-bit words consisting of two 15-bit conversions.

The interface costs $3,775.

Preston Scientific, 805 E. Cerritos Ave., Anaheim, Calif. 92805.

PRACTICAL PERIPHERALS, INC.
DES 2000

Practical Peripherals, Inc. has announced DES 2000 Data Encryption Service, a stand-alone data encryption unit.

The unit reportedly encrypts and decrypts data while using U.S. National Bureau of Standards encryption standards. DES 2000 features local and communication modes of operation, three levels of security and four methods of encryption, the vendor said. The product is said to limit access to an on-line computer and controls entry into specific files on a host computer.

The encryption unit reportedly operates at 10 transmission speeds ranging from 110 to 38,400 bit/sec.

DES 2000 Data Encryption Service costs $459.

Practical Peripherals, 31245 La Baya Drive, Westgate Village, Calif. 91362.

HI-SECURITY CENTRE
Data Armor

Hi-Security Centre has announced the Data Armor data encryption device, developed by Tranco Ewen, Inc., said to employ two separate encryption systems to safeguard data.

Data Armor employs the Data Encryption Standard certified by the U.S. Bureau of Standards for nonclassified data encryption. It also employs the Transcrypt data encryption program, said to allow users to select a unique key code for their data using up to a 20-digit number. Transcrypt is said to offer over four billion key codes, which the company claims makes unauthorized access impractical.

The device is said to provide phone line dial-up protection by requiring the caller to input the proper identification codes and to protect from unauthorized access by blocking all communications from a terminal that has not been used for five minutes or more.

Data Armor is priced at $999.

Hi-Security Centre, 3435 Galt Ocean Drive, Fort Lauderdale, Fla., 33308.

PRESTON SCIENTIFIC, INC.
GMAD5A A/D Conversion System

Preston Scientific, Inc. has announced the GMAD5A A/D Conversion System, for analog-to-digital conversion, said to be capable of interfacing a variety of Digital Equipment Corp., Hewlett-Packard Co. and Data General Corp. CPUs.

The GMAD5A is said to have analog conversion accuracy of up to .01% and a 15 msec/channel conversion rate. Features of the GMAD5A include automatic gain control, automatic random channel addressing, automatic repeat-channel addressing and automatic timing control.

A range of analog signal amplifiers and multiplexers can be included within the standard configuration of the GMAD5A A/D, including multichannel single-ended and differential multiplexers, fixed-gain amplifiers and filters with accuracy of .005% and sample and hold amplifiers with hold apertures of one nsec, according to the company.

Up to 128 single-ended or differential multiplexer channels reportedly can be installed within the 5¼ in. by 19-in. chassis. The price of a GMAD5A A/D Conversion System with 64 input channels is approximately $8,500.

Preston Scientific, 805 E. Cerritos Ave., Anaheim, Calif. 92805.

KEYWORD OFFICE TECHNOLOGIES, INC.
Keyword 7000

Keyword Office Technologies, Inc. has introduced its Keyword 7000 disk-to-disk data conversion device.

Boeing puts mainframe decision support on your desk with a difference you can see.

Now you can have large-scale decision support at your fingertips. Our Business Management Workstation combines the IBM® PC XT/370 with compatible mainframe power and our proven EIS® (Executive Information Services) software. The result is comprehensive, integrated decision support with mainframe capabilities — on your desktop.

Boeing takes another unique step, too. We equip every workstation with color graphics. You won't find this impressive capability on the standard IBM PC XT/370. It's one of the extras you get only from Boeing, an IBM Value-Added Dealer.

Of course, the PC XT/370 is itself an amazing machine. With its virtual memory capabilities, you can handle modeling and reporting locally. You can analyze and project events with expanded functionality previously reserved for only the largest computers. Yet you have the convenience and response of your own microcomputer.

Meanwhile, your decision support can take full advantage of mainframe capabilities. You can quickly access your data base on our MAINSTREAM® remote computing service with full compatibility. And you can easily transfer applications and files without the complications traditionally associated with micro/mainframe links.

The software expertise of Boeing and the most advanced personal computer ever offered by IBM are joined to give you unprecedented decision support . . . with solutions that are graphically visible.

For more information on our Business Management Workstation or the location of a sales office near you, call toll-free 1-800-447-4700. Or write BOEING COMPUTER SERVICES, M.S. CV-26-19B, 7980 Gallows Court, Vienna, Virginia 22180.

BOEING COMPUTER SERVICES A Division of The Boeing Company

Boeing Computer Services is an Authorized IBM Value Added Dealer for the IBM Personal Computer, PC XT and PC XT/370.
IBM is a registered trademark of International Business Machines Corporation. EIS and MAINSTREAM are registered service marks of The Boeing Company.

Keyword 7000 reportedly allows diskettes created on one word processor to be used on other word processors or personal computers. The Keyword 7000 can interface with Wang Laboratories, Inc.'s WPS, OIS and VS product line; Xerox Corp.'s 820; the IBM Displaywriter; Lanier Business Products, Inc.'s No Problem and Super No Problem; Philips Information Systems, Inc. Micom 2000 and 3000 series; and Digital Equipment Corp.'s Decmate II.

Additionally, users only need to buy one hardware box plus software pairings that convert incompatible diskettes, the firm said.

Keyword 7000 hardware is priced at $9,995, including one software pairing. Additional software pairings are priced at $495 each.

Keyword Office Technologies, 2047 Hamilton Ave., San Jose, Calif. 95125.

DIGITAL PRODUCTS, INC.
Digital Datacollector

Digital Products, Inc. has announced Digital Datacollector, a bidirectional network/buffer said to provide a link between process control, shop or laboratory equipment and a central management analysis computer.

According to the company, the Digital Datacollector features up to eight hours of data collection buffering and the ability to download programs and instructions via user-definable commands.

The device is user-transparent and said to be capable of networking up to 16 different devices. It consists of modular, expandable RS-232C-compatible components, including all cabling, software and instruction manuals, the company said.

The price of the Datacollector ranges from $595 to $8,000, depending on configuration, the company said.

Digital Products, 600 Pleasant St., Watertown, Mass. 02172.

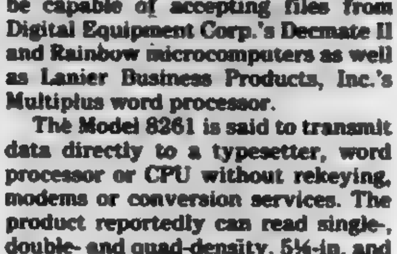
BABER, INC.
Multidisk Reader Model 8261

Baber, Inc. has announced the Multidisk Reader Model 8261, said to be capable of accepting files from Digital Equipment Corp.'s Decmate II and Rainbow microcomputers as well as Lanier Business Products, Inc.'s Multiplus word processor.

The Model 8261 is said to transmit data directly to a typesetter, word processor or CPU without rekeying, modems or conversion services. The product reportedly can read single-, double- and quad-density, 5¼-in. and 8-in. floppy disks. Existing 8161 models can be upgraded, according to the company.

The price of the Model 8261 is approximately $7,495, the company said.

Baber, 3 Northern Blvd., Amherst, N.H. 03031.



'Hi there, handsome!'

DOLCH LOGIC INSTRUMENTS, INC.
Palas 40C50

Dolch Logic Instruments, Inc. has announced its Personal Advanced Logic Analysis System, Palas 40C50, a stand-alone instrument for testing microprocessors.

The instrument has RS-232 and General Purpose Interface Bus compatibility.

Palas 40C50 features include three setup menus for recording, triggering and compare; a 9-in. CRT display; nonvolatile setup memory; up to 40 channels — 32 data and eight trigger qualifiers; support of eight- and 16-bit microprocessors; and dual-time base clocking, according to the company.

Price of the Palas 40C50 is $3,950, the company said.

Dolch Logic Instruments, 2029 O'Toole Ave., San Jose, Calif. 95131.

COMPUDYNE, INC.
Sensaphone 1000C/X

Compudyne, Inc. has introduced a computer room security monitoring device said to feature automatic voice call-out and inquiry response capability.

Sensaphone 1000C/X is said to have the capability of monitoring and reporting by telephone on environmental and electrical conditions in a computer room or secure area. The basic system monitors temperature, power status, sound level and the status of its own battery backup.

An alarm condition exists in the following circumstances: when the temperature falls outside high and low limits set by the user, when the electrical power fails for more than five minutes, when there is a sharp change in the sound level near the unit for more than [illegible] seconds and when the backup batteries in the unit are near exhaustion, the vendor said.

The price for Sensaphone 1000C/X is $[illegible].

Compudyne, 10 Deangelo Drive, Bedford, Mass. 01730.

APPLIED CIRCUIT TECHNOLOGY, INC.
Portable Test Station

Applied Circuit Technology, Inc. has announced a portable computer disk drive test device said to be designed for single-unit testing.

The desktop Portable Test Station (PTS) tests Winchester disk drives of both 5¼-in. and sub-5¼-in., the vendor said. Features reportedly include

WE'RE OUT
THE FEDERA
OF BIG PA

Over the past eleven years, people have come to think of Federal Express as the best way to send important letters and small packages.

That's really too bad.

Because while almost everyone knows Federal Express is great for small things, almost no one knows we're also great for big things.

WE'RE OUT TO CHANGE ALL THAT.

Most people immediately assume that getting Federal Express service for a big package or shipment will cost big money.

But just take a look at the example on the left.

Sending a 150-pound package from New York to Los Angeles actually costs a lot less with Federal Express than with Emery or Burlington Northern.

This isn't some trick example. To most places, a package that weighs over 100 pounds costs less by Federal Express than with many major air freight companies. Even less than many major freight forwarders.

It also pays to use Federal for your bulk shipments. With our new Hundredweight pricing, instead of charging you by the weight of each individual package in your shipment, we'll charge you based on the total weight of the shipment.

So if you're sending, say, a 12-piece shipment weighing 300 pounds from New York to Los Angeles, it will only cost $465.00. The same shipment would cost $748.80 by Emery. Even Burlington Northern would get $488.25.

SYSTEMS & PERIPHERALS

two forms of test criteria: the standard, with pass/fail limits set by the disk drive manufacturer; or the conditional, with additional user-set parameters. The PTS is said to read media flaw maps that are written on disks at their manufacturing site.

The PTS, reportedly designed primarily for disk drive repair, rework and development and receiving inspection, is comprised of disk drive certification electronics with power supplies, a CRT screen, keyboard and 5¼-in. half-height floppy disk.

PTS is priced at approximately $8,000.

Applied Circuit Technology, 2931 LaJolla St., Anaheim, Calif. 92806.

DIRECT, INC.
PC2624B

Direct, Inc. has announced an interface package said to allow IBM Personal Computers to communicate with Hewlett-Packard Co. HP 3000 host computers.

According to the vendor, the PC2624B display enhancement card and diskette software provides 80- by 132-col. screen format and 27 text lines for a full 24 lines of text with two rows of function key soft labels and a file send and receive module.

The product is priced at $595, the vendor said.

Direct, 4201 Burton Drive, Santa Clara, Calif. 95054

VOYAGER DEVELOPMENT, INC.
Model SP101 antipiracy device

Voyager Development, Inc. has added an antipiracy device to its Voyager SP100 series intended for use by software developers. The Model SP101 places part or all of the protected programs in molded plug-in read-only memory (ROM) modules.

The microprocessor-based SP101 has provisions for four plug-in modules, each containing from 2K bytes to 64K bytes of user code, providing a maximum of 256K bytes of available, on-line ROM at any one time, the vendor said. Each module reportedly can protect one or more programs, or the entire 256K bytes can be used for one program.

The SP101 device connects to standard RS-232 ports and was designed so that data reportedly passes through the device output port in a transparent mode when not transmitting.

The device contains automatic transmission rate determination and will function at rates from 50 to 19.2K bit/sec, according to the vendor.

Prices start at $32.50 for the base SP101 device and vary with order quantity. Plug-in modules start at $5.50 for 2K bytes of ROM and vary with capacity and quantity, the vendor said.

Voyager Development, 412 S. Lyon St., Santa Ana, Calif. 92701.

REMOTE MEASUREMENT SYSTEMS, INC.
ADC-1 Data Acquisition and Control System

Remote Measurement Systems, Inc. has introduced the ADC-1 Data Acquisition and Control System that can be used with any personal computer with an RS-232 interface.

As an analog/digital input interface, the ADC-1 lets nearly any computer talk with sensors and instruments of all kinds.

As a computer control system, it makes six digital controlled outputs and BSR U.S.A., Ltd.'s X-10 system of line-carrier wireless remote control available to the programmer.

Price of the unit is $395. Available options include sensors, cables, control modules and software diskettes at a variety of prices.

Remote Measurement Systems, P.O. Box 15544, Seattle, Wash. 98115.

'That's how it looks from where I'm standing. Anyone want to stand here for awhile?'

TO BECOME
AL EXPRESS
CKAGES.

And, if you use our economical 1 to 2 day Standard Air℠ service, or qualify for a volume discount, you'll save even more.

WE'RE OUT TO DO FOR BIG PACKAGES WHAT WE'VE DONE FOR SMALL PACKAGES.

Don't let our low prices scare you away. You'll still be getting the same service that's made us the biggest name in small packages.

The same 10:30 AM* delivery. The same Saturday service. And the same door-to-door convenience.

You'll get our unique network that includes the most advanced tracking system in the business. So you'll never have to worry about your package getting lost.

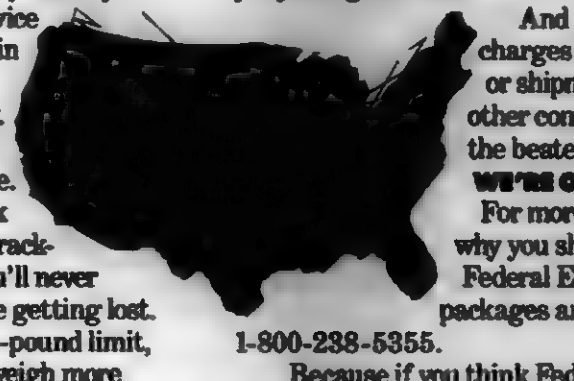
Best of all, with our new 150-pound limit, as long as each package doesn't weigh more than 150 pounds, almost no shipment is too big to send Federal.

WE'RE OUT TO GET YOUR PACKAGE TO MORE PLACES THAN ANYONE ELSE.

Since we're the largest air express company in the United States, it's not surprising that we go to a lot of places.

More places overnight, in fact, than any other delivery company.

So next time you have to get something to Walla Walla or Spurger overnight, you won't have to waste a day trying to figure out which company can get it there.



And you won't pay extra charges to get your package or shipment to some place other companies consider off the beaten track.

WE'RE OUT OF SPACE.

For more information about why you should be using Federal Express for your big packages and shipments, call 1-800-238-5355.

Because if you think Federal Express is only good for small packages, you're making a very big mistake.

[illegible]

Flexibility required for automated factories

By John C. Rowe
Special to CW

The automated factory requires combining production, processing and material-handling equipment into a single computer-controlled system. The efforts toward this integration started with decentralized numerical-control automation of simple machine tools and metal-forming equipment. As this automation trend evolved, it employed the computer and computer-based communications to support integration.

This was accomplished horizontally to incorporate more functions and vertically to bring more and more devices into coordinated control of the work flow on the floor.

The integrated factory exhibits flexibility — the ability to establish new factorywide machine setups; the ability to implement engineering changes in a controlled, coherent manner; and the ability to react to changes occuring on the factory floor in a real-time mode.

Computers used at all levels

This flexibility and control exist because of the use of computers at all levels of the industrial organization. A variety of computers is used to control the production factory. They include mainframes, superminicomputers, minicomputers, microcomputers and programmable-logic controllers. As the fully integrated factory continues to develop and evolve, each of these types of computers will play its own role. There is not one single best solution to control the factory.

It is not practical to tie every sensor and device into a single host mainframe due to the time-critical nature of many control processes. Conversely, a completely distributed arrangement of all of the production devices with communications and coordination attempted among all of them in a peer-to-peer mode would be chaotic.

In order to understand the levels of control required in the factory, it is necessary to classify the factory into a hierarchy of manufacturing and then describe the role that computer control plays in each of the levels.

Factory segments

The U.S. Air Force Integrated Computer-Aided Manufacturing Program has constructed a model of the manufacturing process that segments the factory as follows:

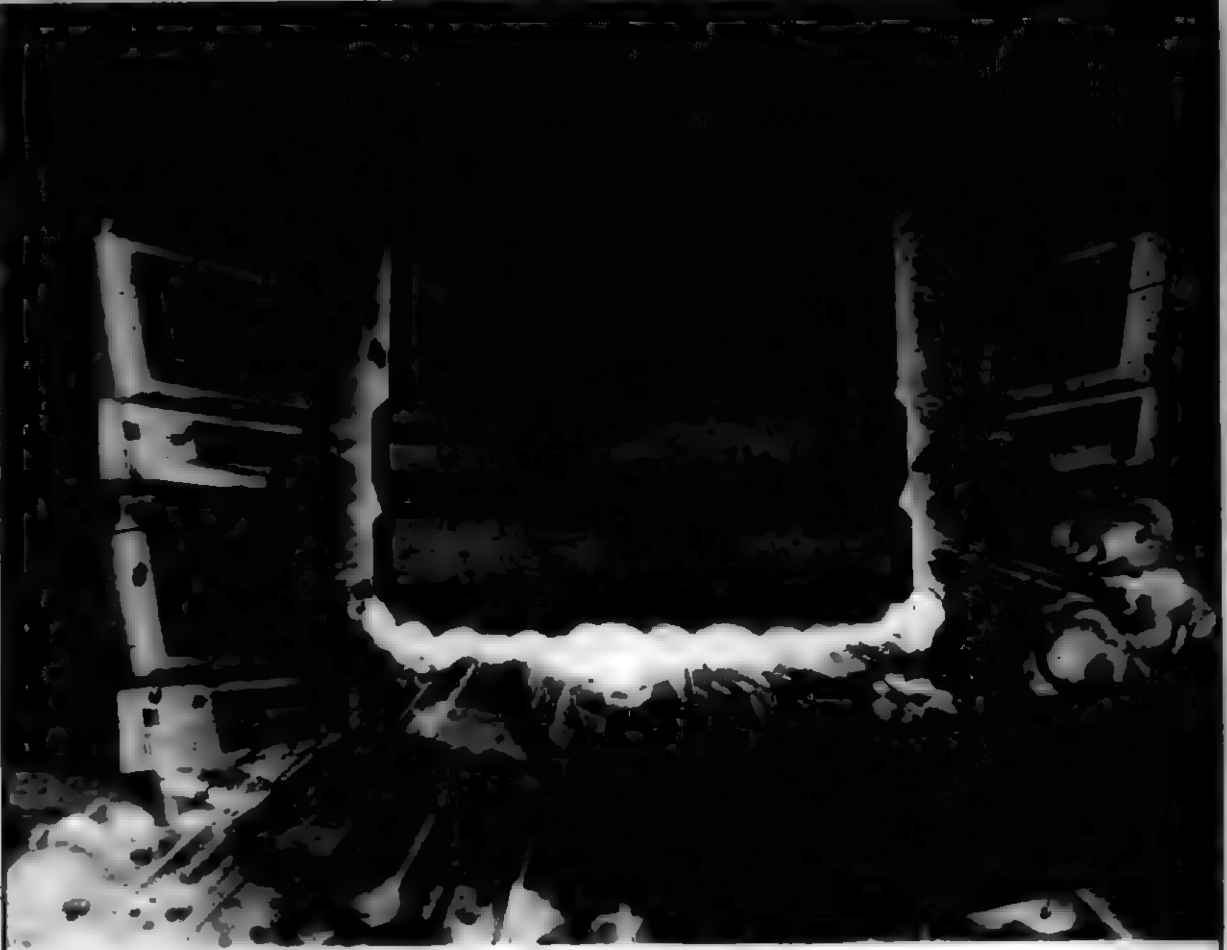
- **Process** — A single operation or set of operations carried out by a person or machine, not aided by an external hierarchy of program-driven circuitry or software. Processes are primarily controlled by a station controller or person.
- **Station** — The lowest level of automated control, it is composed of sets of processes under the control of software resident at or under the direction of the station. Stations control processes but do not control other stations.
- **Cell** — A basic concept in plant operation, controls stations and any process that is external to station control. Cell controllers control multiple stations or a single station if it is accompanied by at least one process not under station control.
- **Center** — The grouping and control of two or more cells. A center may control a single station that is external and not controlled by a particular cell.
- **Factory** — The grouping and control of one or more centers. Single cells not under the control of a center may be under the control of the factory controller. The factory is that level in the hierarchy that is controlled by management personnel and business policies.

Each of the various types of computers available on the market today has a place in factory automation. System cost vs. performance under the communications and control load of a moderately large number of distributed attachments is the major consideration.

When considering the power, response and flexibility of the computers available, minicomputers are ideal for the intermediate levels. In fact, their attributes make them a viable choice for filling the task at both the cell and the center levels, which are the key intermediate layers of factory control. They are much less expensive than large mainframes or superminicomputers. They also offer more operating system and communications flexibility than microcomputers. They offer relatively easy upgrades to increase processing power by substituting or adding circuit boards, as well as large potential additions to on-line file storage.

A major advantage that minicomputers have within the factory environment is their extensive communications capability, Distributed processing control as described also requires a hierarchy of communications along with the hierarchy of computer control.

Rowe is a principal of J.C. Rowe & Associates in Cleveland, a consulting firm specializing in factory automation and computer-aided manufacturing.



Another breakthrough for 3270 users.

Introducing the Telex 1186 Intelligent Workstation.

Here's pure intelligence in a corporate workstation. It combines standalone and on-line capability. Lets you develop off-line data files, do local processing, access your corporate data base, even transfer files to your host system. It's IBM PC compatible, too.

All that from one workstation? That's why we call it intelligent. We also call it a breakthrough in micro performance. Because it's that, too. Its 80186 microprocessor and 16 bit system make it function two to three times faster than most other micros. Plus, the 1186 utilizes MS-DOS, supports 3270 communications with Telex's optional coax feature board, and runs most standard PC software.

Here's more intelligence. We even made it easy on the user. With silent-tactile PC or 3270 style keyboards, a high resolution tilt display, and space saving ergonomic styling.

And since the 1186 Intelligent Workstation comes from Telex, a recognized leader in 3270 terminals, you know you're doing business with a company that understands your needs. Plus Telex provides systems and service support from over 750 service engineers and support people nationwide.

The 1186 Intelligent Workstation. If it didn't make such good business sense, you might just choose it for purely selfish reasons.

Introducing VU-TEK™.
No other glare screen does more to increase productivity.

A glaring problem VDT operators face.

More than 90% of all employees who regularly use VDT's may suffer from eyestrain.* And that can make your business suffer, too.

The cause of eyestrain? Glare. Reflection from office lights. And hard to read characters.

The result. Impaired vision. Headaches. Fatigue. More work breaks and absenteeism.

And reduced office productivity.

VU-TEK™ reduces glare up to 99%.

VU-TEK contrast enhancement filters help increase operator productivity by eliminating up to 99% of reflected VDT glare while also improving character clarity. VDT operators can now work more efficiently and comfortably.

VU-TEK's dramatic effectiveness is due to an advanced circular polarizer that traps glare preventing it from reaching the VDT operator's eyes.

No other glare screen is more effective than VU-TEK.

VU-TEK increases character legibility.

VU-TEK uses a special distortion-free anti-reflective coating on the front glass surface to improve character contrast and clarity.

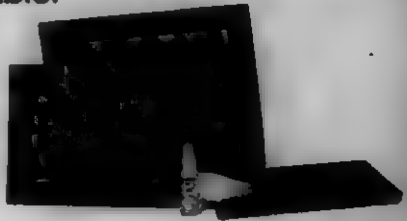
The result... bright, clear, easy to read VDT's.

American Hoechst Corporation
Specialty Film Products

Fits leading VDT's. Easy to install.

VU-TEK fits more than 800 different VDT types. Custom sizes are also available.

VU-TEK is lightweight, durable and attaches in seconds.



"See for yourself" free trial.

End the glaring problem with computer automation — with VU-TEK.

To order your VU-TEK or arrange a 30 day free trial, call collect 1-805-987-5026. Or mail the attached coupon for more information.

VU-TEK is the result of research by American Hoechst, a member of the Hoechst Group of companies, with worldwide sales of $14.5 billion, and annual research expenditures of over $630 million.

System fits shoemaker's market data needs

A satellite link helps Fisher Camuto track merchandise on a daily basis, allowing it to respond to shifts in buying trends in time to reorder popular styles from its manufacturing plants within the same season.

STAMFORD, Conn. — A shoe manufacturer here claims it has improved its ability to compete in the rapidly changing consumer goods marketplace by installing a superminicomputer with a satellite link to the firm's manufacturing facility in Brazil.

In just six years, Fisher Camuto Corp., a manufacturer and marketer of women's shoes, has become one of the largest privately owned shoe companies in the U.S.

Last year, the company produced more than 15 million pairs of shoes at its manufacturing facilities in Brazil. The company supplies more than 5,000 retailers, and the company is establishing a retail chain that it hopes will expand to more than 200 stores in the next two years.

Faced number of challenges

Until 1983, Fisher Camuto was strictly a wholesaler. When management elected to create an organization for direct sales to customers, it had to face a number of challenges.

First, the company had to find a way to get the maximum competitive advantage from its vertical integration. To do this, it needed to transfer information from its retail outlets to corporate headquarters and then to the manufacturing plants in Brazil. This process would allow management to respond on a daily basis to shifts in the marketplace, stepping up production of hot sellers and reacting to inventory needs relative to reorder and markdown, noted Ken Scharf, the company's vice-president and director of MIS.

A second concern was how to evaluate the wide range of variables involved in tracking and identifying inventory. This problem was particularly acute for Fisher Camuto because, Scharf said, the company offers a large number of colors.

A third concern was speed. Fisher Camuto wanted to move fast, but Scharf said that developing custom software to perform all the desired functions would take at least a year. That was longer than Fisher Camuto wanted to wait.

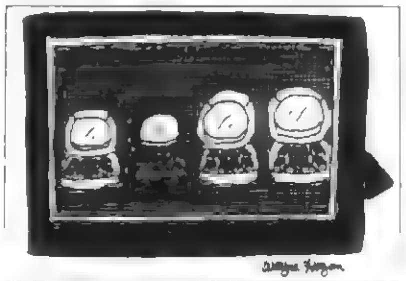
It was at that time that Fisher Camuto first learned of MDS Qantel Corp. The company elected to purchase a Qantel System 64 supermini with 512K bytes of main memory, MDS Qantel's Frame III software, a 600-line/min printer, and 12 terminals. The system also includes 26 IBM 3884 cash registers that record point-of-sale information at stores. An IBM 4381 mainframe located at company headquarters here polls these registers nightly, Scharf said.

Scharf said the company also uses the system for inventory, sales forecasting and marketing analysis. It has also added packages for accounts payable and general ledger to oversee the administrative aspects of its stores.

A satellite link between Fisher Camuto headquarters and its manufacturing facilities in Brazil allows plant managers in Brazil to know what types of shoes are selling each day in the U.S. and allows headquarters managers to verify inventory levels in Brazil, Scharf said.

Fisher Camuto is able to track merchandise on a daily basis, determining what is selling and what is not. This, Scharf said, allows the company to respond to shifts in buying trends in time to reorder popular styles from its manufacturing plants within the same season. If a certain color is hot, Scharf said, Camuto can respond by offering that color in a variety of styles. Conversely, Scharf said, the firm can pinpoint quickly and mark down slow movers to increase cash flow.

The Qantel system also gives Fisher Camuto the ability to test-market new products before putting them into full-scale production. Sales can be monitored from company headquarters, and full-scale production can be ordered if the product tests well.



There's one in every family.

NCR adds 32-bit board-level processor

COLORADO SPRINGS, Colo. — NCR Corp.'s Microelectronics Division announced a very large-scale integrated (VLSI) 32-bit board-level processor said to be compatible with Intel Corp.'s Multibus architecture.

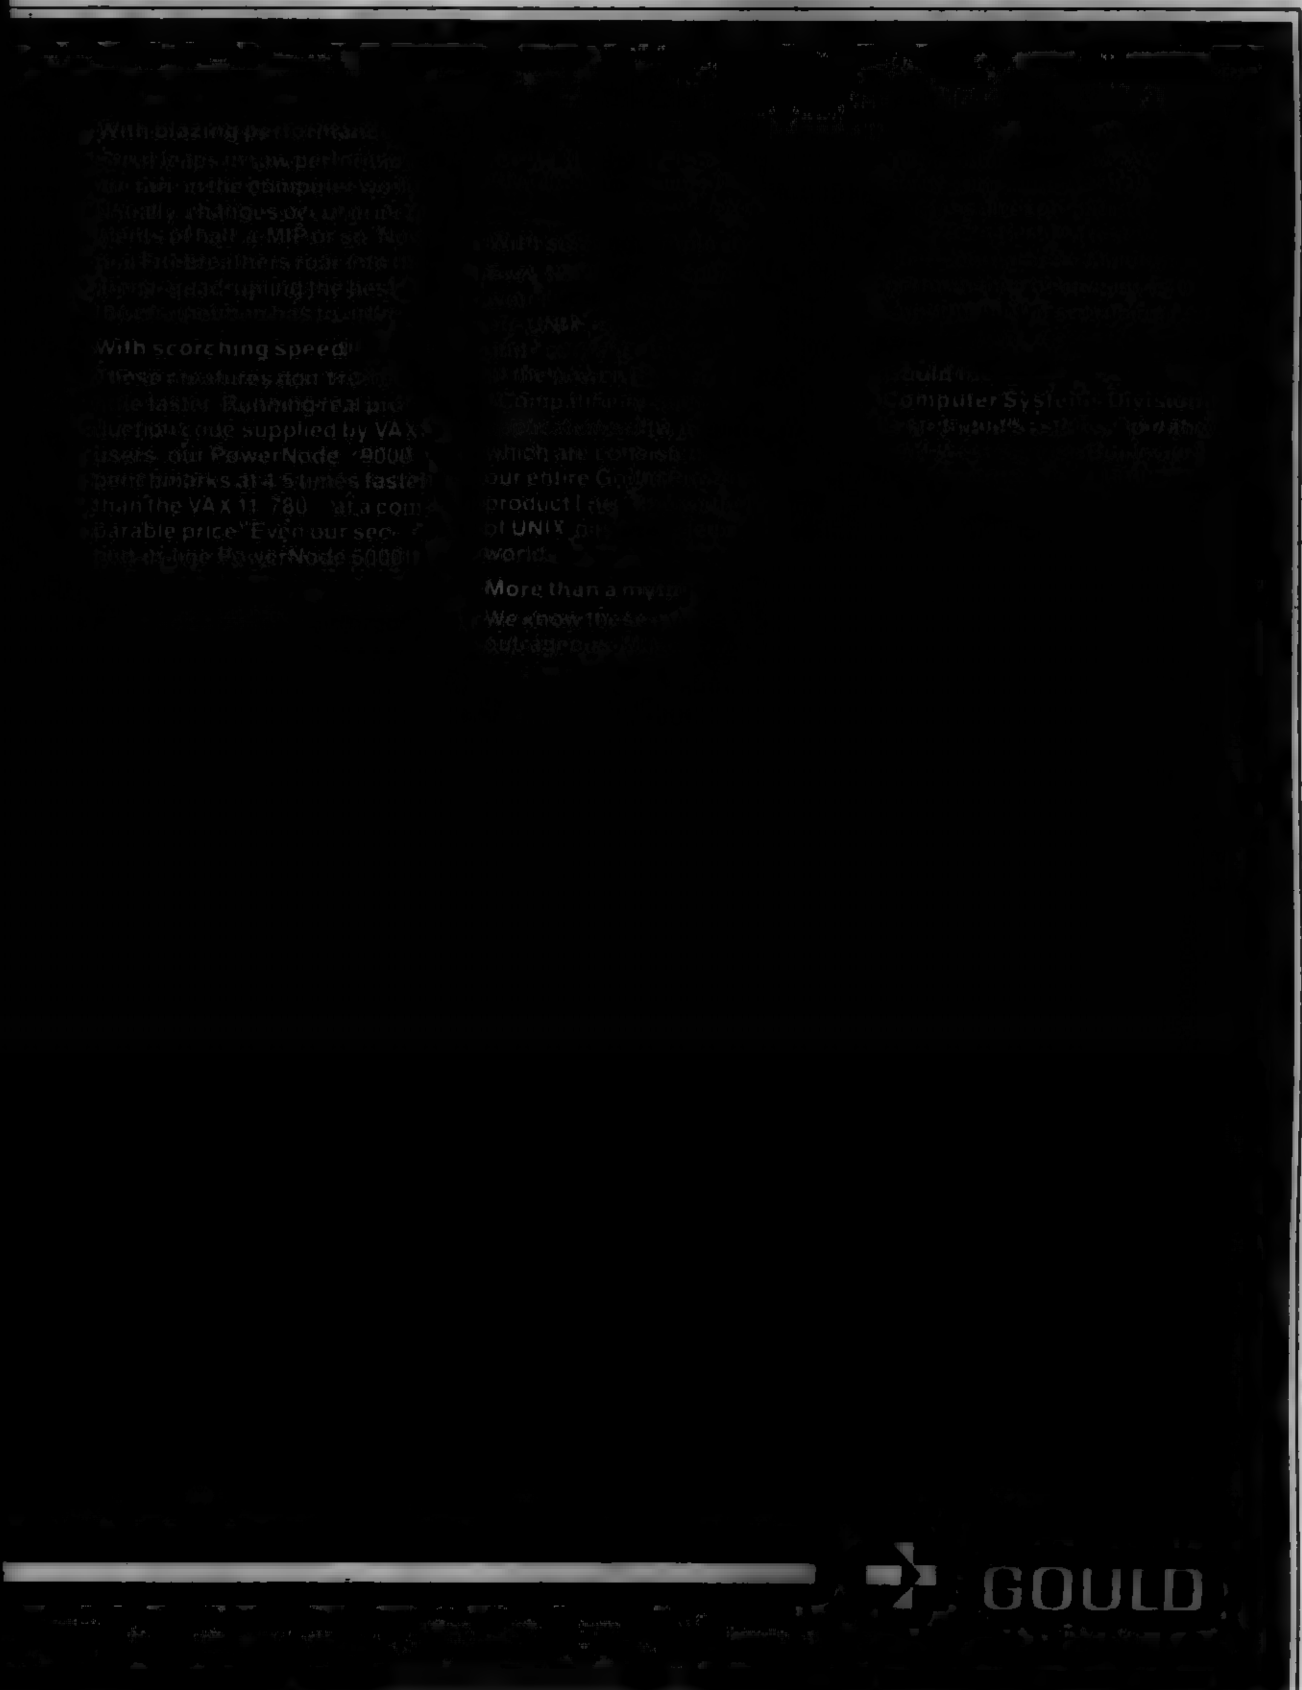
Called the NCR/32-795A, the unit features three members of the firm's NCR/32 chip set, including its microprogrammable Central Processor Chip, an Address Translation Chip and an Extended Arithmetic Chip. External microprogrammability is supported with 16K words of random-access memory microcode instruction storage. There is also a 128-word scratch pad memory for temporary data storage, the vendor said.

Operating with a 13.3-MHz clock, the board has instruction and bus access speeds of 150 nsec. The addressable memory capacity is 4G bytes of virtual storage and 16M bytes of real memory, the vendor said.

Applications for the board include dedicated algorithmic processing, graphics coprocessing, robotics control, high-level language acceleration and virtual machine emulation. The board was designed for users with compute-bound applications. The board can be added to 8- and 16-bit Multibus computer systems, the vendor said.

The board costs $4,995; a series of NCR-developed software tools that provide a debug monitor, initialization and trap/interrupt service routines costs $895. The board will be available this month, according to the vendor.

More information on the products is available from the vendor's VLSI Product Marketing Division, which is located at 1635 Aeroplaza Drive, Colorado Springs, Colo. 80916.



NCR from page 97

that it eliminates CPU contention and performance degradation problems that can occur with systems that rely on a single CPU to manage all applications software.

The Worksaver 3000 can operate with any product in the company's Worksaver line. These include the Worksaver 100, 200 and 300 series of workstations. Previously, only the Worksaver 300 could be used as a cluster controller. Davis added that the Worksaver 300 was only capable of supporting a cluster of three workstations.

Davis said the Worksaver 3000 can also be used as a communications gateway to larger systems. By using an NCR software product called the Workstation Host Access Method, users can access NCR mainframes running the firm's VRX operating system. The unit can also be used to provide asychronous, binary synchronous or IBM 3270 terminal emulation. The unit can also be used for remote job entry to an IBM host, or it can be used in an IBM Systems Network Architecture network environment.

The Worksaver 3000 can accommodate up to eight processor modules and can support up to six 300M-byte disk drives.

A standard configuration of the Worksaver 3000, capable of supporting up to 16 workstations, costs $48,300. That configuration includes system software, a 5M-byte removable cartridge disk drive, two 50M-byte disk drives, a file processor, a cluster processor, two memory expansion boards, one parallel port and three serial ports.

Volume shipments are scheduled to begin in the second quarter of 1985, the vendor said, from NCR World Headquarters, Dayton, Ohio 45470.

IDC from page 97

est market, with 15% of the stand-alone market and 18% of the clustered market.

IDC predicted that word processors will continue to increase market penetration in paper-intensive areas such as government, legal and insurance industries, for secretaries and clerical workers. But because of the influx of multifunction systems and because of the tendency toward personal computers with third-party word processing packages over multifunctional word processors, IDC is not predicting significant increases in sales in the professional or managerial marketplace.

IDC estimated that 80% of total word processor sales in 1983 were made directly, 9% through office product dealers, 4% through distributors and 3% each through dealers and OEMs.

In market share, IBM continued to dominate the stand-alone market with 29.8% of shipments and 39.5% of the installed base. Digital Equipment Corp.'s multifunctional Decmate systems showed a 108% increase in shipments and 141% increase in installed base.

The clustered market continued to be dominated by Wang Laboratories, Inc., with 49% of shipments and 50.8% of the installed base.

The report is available for $1,000 from IDC, Five Speen St., Framingham, Mass. 01701.

SECURITY

from page 97

terminal security. Most early terminals were designed with the assumption that security, if any, would be provided through either the physical security of the facility or through logical security designed into the host computer system.

Most early terminals were dumb and incapable of storing significant amounts of data. Consequently, there were higher security risks associated with paper tape or printouts than terminals. Also, older terminals were directly connected to the host computer, primarily through dedicated circuits, which also limited risks.

Today, however, technology has eclipsed the historic terminal environment. Intelligent terminals can have significant storage capabilities that make them removable data bases that must be protected.

It is often difficult to secure terminals because they are placed in warehouse, office or manufacturing locations that lack the physical security routinely provided by a computer center. The portability, high-dollar value per pound and widespread use of microcomputers have created a black market for terminals, microcomputers and components.

Misuse of a terminal can occur when an unauthorized person uses a terminal or when an authorized person uses a terminal in an unauthorized manner. Such misuse threatens both the integrity and the privacy of data stored at the terminal and can sometimes compromise the actual operation of the terminal.

> *Misuse of a terminal can occur when an unauthorized person uses a terminal or when an authorized person uses a terminal in an unauthorized manner. Such misuse threatens both the integrity and the privacy of data stored at the terminal and can sometimes compromise the actual operation of the terminal.*

It is also possible for someone to penetrate the logical security of the host computer through a terminal. Dependent upon a terminal's storage or processing capabilities, a perpetrator can use it to trap data sent to the host computer. Security breaches of this sort compromise the identification and authentication processes, such as a logon identification and password used on the host computer system.

Some terminals — those integrated with a telephone — store the telephone number and access codes for automatic logon to host systems. If this feature is misused, the number and codes can be altered, destroying the security of the associated host systems. These examples demonstrate that if terminals can be misused, host systems can be as well. Such misuse opens the door to fraud, malicious mischief and denial of service. The potential losses in productivity and asset conversion easily exceed the value of the terminal equipment.

Another serious information threat — disclosure — is a risk to valuable data and proprietary software. Actual access to the victimized terminal is not essential here. Most networks are vulnerable to disclosure regardless of whether they use coaxial cable, microwave terrestrial links, satellites, switched or dedicated circuits.

Although exploiting the electromagnetic interference (EMI) or electromagnetic conductance (EMC) transmission of data from terminals requires specialized equipment that remains relatively expensive, there are buyers for such hardware. Today, 98% of all terminals emanate characteristic EMI/EMC patterns from their keyboards, CRTs, printer elements, storage devices and other electronic and electromechanical components that can be recorded, analyzed and traced back to the original characters. Thus, messages entered or displayed at the terminal can be re-created for eavesdroppers.

To counter these security threats, managers must implement both technical and human procedural controls. Products like the Anchor Pad by Anchor Pad International, Inc. can prevent theft of terminals. The misuse of terminals can be reduced by requiring a means for identifying authorized users and by limiting the functions or data accessible to authorized users.

BATTLE

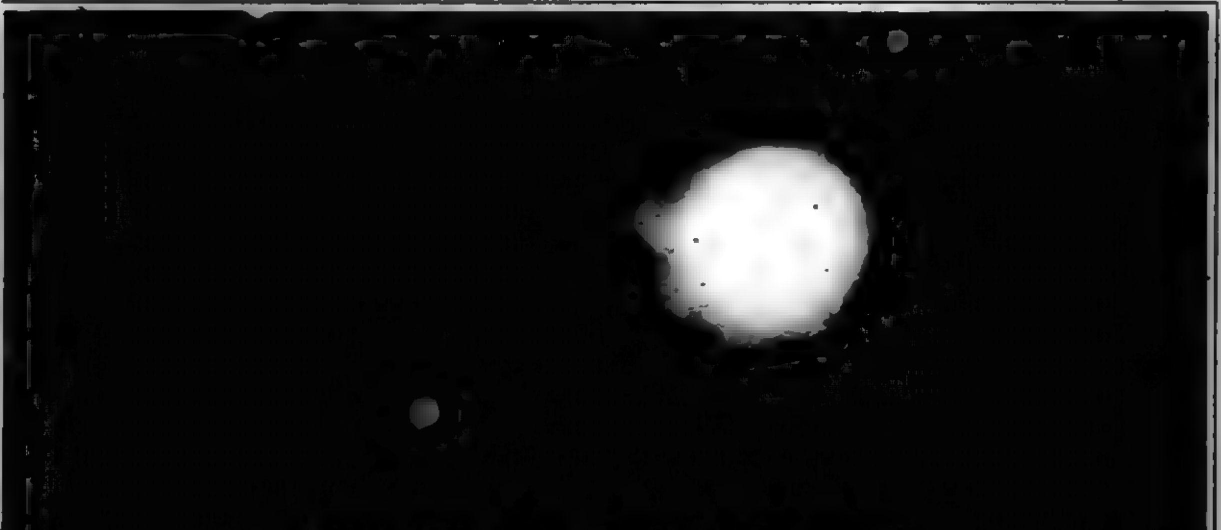
from page 97

ness tool.

The top two vendors of IBM-compatible mainframes, for example, both have announced plans to market Japanese-developed supercomputers as part of their regular processor lineup.

Industry watchers said they feel certain that IBM's rumored Sierra mainframe, while it may not offer supercomputer-class capabilities, will possess impressive number-crunching capabilities that far exceed those of currently available IBM mainframes.

Unlike supercomputers, mainframes with impressive number-crunching capabilities appear geared to perform traditional file-oriented functions and the sophisticated modeling and simulation tasks that many users are now demanding.



Unleash The True Potential
Of The 68000/Unix Environment

PHILON FAST/Compilers are so fast, your concept of speed will never be the same. Compilers that unleash the ultimate power of the 68000 and drive UNIX* to its fullest potential. PHILON FAST/Compilers redefine performance in benchmarks — UP TO 47 TIMES FASTER (see benchmark chart).

FLEXIBILITY — it's built in. PHILON FAST/Compilers are specifically designed to free programmers from artificial constraints (such as 64K program size or [illegible]) and allow efficient development of highly-optimized application systems. You can even link program modules in the same or different languages.

DEBUGGING — it's a snap. The Phi-Analyzer high-powered debugger vastly increases programming productivity.

THOROUGH TESTING — RESPONSIVE SUPPORT

You demand reliable compilers; Philon's quality assurance commitment delivers.

ACCURATE, EASY-TO-UNDERSTAND DOCUMENTATION — it's part of The Philon Approach.™ Plus, you can become part of a comprehensive customer support program designed to keep productivity at its maximum. This is what you will come to expect from Philon.

RECOMPILE EXISTING APPLICATIONS FOR DRAMATIC RESULTS

Dramatic speed improvements can be achieved by simply recompiling with one of these corresponding PHILON FAST/Compilers.

MICROCOMPUTERS

Visage ties micros, videodisk players

Development tools offered for visual information systems

BOSTON — Visage, Inc. has announced a line of visual information system products here that combine an IBM Personal Computer or compatible system with an interactive videodisk player for training, computer-based instruction, visual archiving and other applications.

In addition to what the firm hailed as "the industry's first IBM Personal Computer-compatible interactive video systems" and a host of software tools said to provide authors with a complete development environment, Visage introduced plug-in boards, interactive video upgrade kits and other options.

Visage's V:Station 2000 series includes five models, each featuring an IBM-compatible micro with videodisk player controller board, 13-in. red-green-blue (RGB) monitor and software development and run-time tools. Common system features reportedly include the ability to run most videodisk players, to overlay computer-generated graphics on the video image and to read digital data encoded on the video signal.

The V:Station series ranges from the VIS:2001 delivery system, with 256K bytes of random-access memory (RAM) and dual floppy disk drives, to the VIS:2005 development system, with 512K bytes of

See VISAGE page 126

Minis to act as hosts

Larger role predicted as departmental CPU

By Edward Warner
CW Staff

WALTHAM, Mass. — The minicomputer, not the mainframe, is destined to become the host processor of choice for departmental personal computer networks in Fortune 1,000 firms, according to analyst George Colony, president of Forrester Research.

Colony, who spoke on the future of corporate computing at the Boston regional meeting of the Microcomputer Manager's Association here last month, said he expects minicomputers, serving as what he called departmental resource processors, to become the standard in Fortune 1,000 firms. The processors, he explained, will control a local data base and a local network of what are likely to be mostly IBM Personal Computer ATs.

The departmental resource processor will reduce the need for micro-to-mainframe communications by housing the department's or division's data base. At present, he said, Fortune 1,000 firms, most with as many as 50 to 70 different divisional locations, experience large data communications costs when they try to link all their sites with a central mainframe.

"Intersite communications costs are going to force these [data processing] functions to be pushed out to the departmental level," he observed.

For both the corporate personal computer manager and the data processing manager, however, the resource processor will mean a loss of power, Colony said. The departmental resource processor is likely, he estimated, to be put in the hands of an on-site administrator who knows minicomputers and data communications, someone who once was "the minicomputer renegade of the 1970s."

Moves toward the departmental resource processor can already be seen in the rise of multiuser personal computers such as the Personal Computer AT and in the spread of such multifunction software as Data General Corp.'s CEO and Digital Equipment Corp.'s All-In-One, noted Colo-

Innovative developers aim at Apple Macintosh

SMALL TALK
Paul Korzeniowski

You are a software developer. You are young, energetic and bright, and you would like to become a millionaire.

You have written a data base management system (DBMS), spreadsheet or telecommunications package that someone else marketed. You were disappointed with the way the package was marketed and vowed to do it yourself the second time.

This morning, while pouring milk over a bowl of your favorite cereal, you had an idea for a new product — a product no one else is making, everyone needs and one that could make you a millionaire.

Decisions must be made, and one key choice is what machine should run your software.

One year ago, you probably would have chosen the IBM Personal Computer. Today, you're more likely to turn to Apple Computer, Inc.'s Macintosh.

"At [Comdex/Fall '84], there was a lot of software for the Macintosh," noted Robert Lefkowits, director of microcomputer system software research at Infocorp, a Cupertino, Calif., market research firm. "If the manufacturers can get the products to market [in good shape], there will be some real interesting Macintosh products in 1985."

If 1985 mirrors 1984, it will bring few interesting products for the IBM Personal Computer. This year, bells and whistles were added to Personal Computer spreadsheets, data bases, word processors and communications packages. But, while more cells in a spreadsheet, additional records in a data base or automatic dialing capabilities in a communications package may aid a user, they are not very enthralling.

See MAC page [illegible]

Perkin-Elmer's Unix-based micro to support five users

OCEANPORT, N.J. — Perkin-Elmer Corp. today is scheduled to announce an AT&T Unix-based, 32-bit supermicrocomputer.

The PE 7350A, built around an 8-MHz Motorola, Inc. 68000 microprocessor and supporting up to five users, is targeted to applications such as wholesale distribution systems, graphics and computer-aided design, disbursed site systems, Unix training and application development and small business accounting and control.

According to the company, the product is now available to OEMs, value-added resellers and large user companies. A spokesman said the product is not designed to replace the year-old PE 7350 supermicro, but that it is smaller and offers a better price/performance ratio.

The PE 7350A, with an entry-level system price of $8,250 in single quantity and $5,100 in quantities of 100, is said to be Ethernet-ready, with expansion space for a PE Ethernet Data Link Controller board, also announced today (See story page 87). That controller is said to give the 7350A access to a PE Ethernet local-area network and the resulting gateway to X.25 packet-switching and IBM Systems Network Architecture/Synchronous Data Link Control networks.

Supports Unix System III

The PE 7350A features the Unisoft Corp. Uniplus port of AT&T Unix System III. The system is said to support up to five users by connection of PE terminals to four RS-232C ports. An IEEE 488 bus is optional. The processor consists of the Motorola 68000, a 24-bit memory address bus and a 16-bit data bus and is said to have a 150 nsec random-access memory (RAM) access time and a 500 nsec RAM cycle time.

It features a minimum memory of 512K bytes and a maximum memory of 3M bytes and is available with a 320K-byte floppy disk and a 15M-byte or 28M-byte, 5¼-in. Winchester disk drive. The system is available with four monitors, including a 13-in. color graphics monitor with a palette of 27 colors.

In addition to Uniplus, the 7350A includes an interface for PE's OS/32 operating system and the PE Menu Maker user interface. The system reportedly supports Fortran 77, C, Unisoft's Basic-Plus, Ryan-McFarland Corp.'s RM-Cobol and Software Ireland Ltd.'s Sibol.

Third-party software now available is said to include Mark-of-the-Unicorn, Inc. Finalword, Visicorp Visi Word, Access Technology, Inc.'s Supercomp-Twenty spreadsheet and Unify Corp.'s Unify relational data base.

An entry-level system, including 512K bytes of memory, four ports, 15M bytes of hard disk storage and the operating system, costs $8,250.

A multiuser system with 1M byte of memory, four ports, 28M bytes of hard disk storage and the operating system costs $10,900, the vendor said.

More information is available from PE, which is located at 2 Crescent Place, Oceanport, N.J. 07757.

CDC software for IBM micro automates process-flow analysis

MINNEAPOLIS — Control Data Corp. has introduced Process Flow Analysis (PFA) Micro software. The software is said to allow businesses to automate process-flow analysis, a management technique that uses flow charts to examine repetitive operations.

PFA Micro, for the IBM Personal Computer, reportedly can cut documentation time by 50% over manual [redacted]

The software is also able to generate automatically nine different reports to identify areas where processes can be improved, according to the vendor.

PFA Micro is said to be supported by consulting services from Control Data Business Advisors, a CDC subsidiary, and by training modules. The training modules are said to be provided either on diskette or via workshops by using a facilitator's kit from CDC.

The PFA Micro software is priced at $950.

The training modules are priced at $450 for diskettes and $950 for the facilitator's kit, which is said to include slides, videotape and a facilitator's manual.

CDC is located at 3601 W. 77th St., Minneapolis, Minn. 55435.

Metasoft package integrates word processing, graphics

CHANDLER, Ariz. — Metasoft Corp. has introduced a software package that integrates word processing with presentation graphics for personal computers from IBM and other manufacturers.

The Benchmark Composer reportedly provides word processing that features word wrap, on-screen display of page breaks and automatic pagination. Its built-in graphics offer both business and presentation functions and can be windowed into a word processing document, according to the vendor.

The program's graphics capabilities are said to include the capacity to produce line, bar and pie charts as well as x/y plots. The graphics facility is able to interface with either a mouse or a graphics tablet and permit users to zoom or rotate images, [redacted]

The Benchmark Composer is priced at $575 and available for the IBM Personal Computer, 3270 Personal Computer and 3270/G Personal Computer. It is also available for the Texas Instruments, Inc. Professional and the Digital Equipment Corp. Rainbow 100 microcomputers.

Metasoft is located at Suite 12, 6509 W. Frye Road, Chandler, Ariz. 85224.

Package allows micros access to ITT's Telex

SECAUCUS, N.J. — ITT Communications Services, Inc., a division of ITT, said it has signed a joint marketing agreement with American International Communications Corp. of Boulder, Colo., for a software package said to allow personal computers to be used as Telex terminals.

The DCS-300 software program, developed by American International, provides access to ITT services through personal computers with communications capabilities. The package is said to support ITT's interactive Telex and directory services and includes a message editor to permit off-line message creation.

The package runs on the IBM Personal Computer and the ITT Xtra and compatibles, ITT said. It costs $250.

ITT is located at 100 Plaza Drive, Secaucus, N.J. 07096.

Sysgen offers micro backup

FREMONT, Calif. — A 45M-byte cartridge tape backup subsystem for the IBM Personal Computer, Personal Computer XT and Personal Computer AT was among several products recently announced by Sysgen, Inc.

The Qic-File is a half-height, modem-size subsystem that is said to back up from one disk and restore to another. The product sells for $1,395 for an internal version and $1,495 for an external model.

Sysgen also announced a Winchester disk/streaming-tape backup subsystem for the Personal Computer, Personal Computer XT and AT. The Sysgen XL reportedly gives users a 60M-byte half-height streaming-tape backup drive plus a 20M-byte formatted half-height hard disk. Cost of the Sysgen XL is $3,295.

A six-slot expansion box for the IBM Personal Computer and Personal Computer XT was also announced by Sysgen. It sells for $1,995.

Sysgen is located at 47853 Warm Springs Blvd., Fremont, Calif. 94539.

Seequa Computer introduces Cobra micro, upgrades portables

ODENTON, Md. — Seequa Computer Corp. recently introduced a personal computer that runs Microsoft Corp.'s MS-DOS and Digital Research, Inc.'s CP/M 80 operating systems. The company also announced enhancements to its Chameleon Plus and Color Chameleon portables.

According to the company, Cobra features an Intel Corp. 8086 microprocessor, hard disk, color graphics capabilities and six IBM Personal Computer-compatible expansion slots. Standard features include a Zilog, Inc. Z80A processor for 8-bit, CP/M 80 compatibility; an 83-key keyboard; one double-density, double-sided floppy disk drive; 256K bytes of random-access memory (RAM) expandable to 640K bytes; and 16K bytes of read-only memory (ROM).

Cobra sells for $4,995.

The Chameleon Plus portable computer is said to include three built-in IBM-compatible expansion slots, 8088 and Z80A dual processors, 128K bytes of RAM and 16K bytes of ROM. The product sells for $1,995.

Three IBM-compatible expansion slots also reportedly have been added to the company's Color Chameleon computer, priced at $3,195.

Seequa is located at 8305 Telegraph Road, Odenton, Md. 21113.

SOFTWARE

MANAGEMENT SCIENCE AMERICA, INC.

The Tool Kit

Management Science America, Inc. has announced a two-disk set of utilities that are said to enhance the productivity of Peachtree Software, Inc.'s Peachtext 5000 software.

The Tool Kit is said to include add-ons designed to enhance Peachtext 5000's components, including Peachtext word processor, Random House Electronic Thesaurus, Spelling Proofreader, List Manager and Peachcalc electronic spreadsheet.

The Tool Kit is said to include full support of color monitors, expanded printer support, document formatting templates for Peachtest that can be selected by the user from a menu and used to create original documents quickly and expanded dictionary coverage for Spelling Proofreader. Also included are a new List Manager utility and templates for List Manager and Peachcalc.

Peachtext 5000 runs on the Columbia Data Products, Inc. MPC, Compaq Computer Corp. Portable Computer, Corona Data Systems Personal Computer and Portable Personal Computer, IBM Personal Computer and Personal Computer XT, Eagle Computer, Inc. 1600 and Personal Computer, Texas Instruments, Inc. Professional Computer and the Zenith Data Systems Corp. Z100.

The Tool Kit, priced at $10, comes on two 320K-byte diskettes.

Management Science America, 3445 Peachtree Road N.E., Atlanta, Ga. 30326.

PROJECT SOFTWARE & DEVELOPMENT, INC.

Qwiknet Version 2.0

Project Software & Development, Inc. (PSDI) has announced Version 2.0 of its Qwiknet project management software for Microsoft Corp.'s MS-DOS 2.0 operating system.

According to a spokesman, Qwiknet can manage up to 250 activities on a micro and enable a user to plan the time, money and resources necessary to complete a project. The enhanced version features added functions and documentation to improve the efficiency of planning, scheduling and analyzing cost and resource disbursements.

Version 2.0 is said to permit users to create resource histograms and generate reports from a selection of 20 standard formats. A logic diagram can be printed to show the entire project's activities and their interdependencies.

The software's tabular reporting output has been supplemented with resource and cost histograms, and users can perform project cash-flow analyses, the vendor said.

Version 2.0 of Qwiknet requires a minimum of 384K bytes of memory and two floppy disk drives or a floppy and hard disk drive combination. It is priced at $895, including a mouse interface.

PSDI, 14 Story St., Cambridge, Mass. 02138.

WARNER SOFTWARE, INC.

Desk Organizer for MS-DOS

Warner Software, Inc. has introduced a version of the Desk Organizer software package designed to run under Microsoft Corp.'s MS-DOS operating system.

The latest version of the Desk Organizer will run on the IBM Personal Computer, Personal Computer XT, Personal Computer AT and PCjr as well as compatible systems, the vendor said.

The Desk Organizer is said to be an integrated program that features a number of efficiency tools. Capabilities include filing, phone dialing, calculation, data transfer and word processing, the vendor said.

When run concurrently with another software program in the MS-DOS version, the Desk Organizer's random-access memory demand is reduced to 95K bytes.

The program is priced at $195.

Warner Software, 666 Fifth Ave., New York, N.Y. 10103.

See TOOLS page 112

OR HAVE IT ALL.

That's the choice your customers face.

Pick the new COMPAQ DESKPRO™ over the IBM® PC or *XT* and your customers get a lot more computer for their investment.

One that runs thousands of programs already available—at speeds two to three times faster. One with a dual-mode monitor (amber or green) to display text *and* graphics. One with exclusives like internal tape backup and shock-mounted storage system.

Pick the COMPAQ DESKPRO over the IBM *AT* and they get comparable performance for a better price…without asking customers to sacrifice their investment in PC/*XT*-compatible hardware, software and training.

And, of course, you can start having it all by selling COMPAQ DESKPRO today. So you start profiting today. No competing with "company stores" or company sales forces.

In short, COMPAQ DESKPRO is the only personal computer that can grow from a PC to *XT* to AT level of functionality—easily, affordably, compatibly.

Configure it the way customers want: With one or two diskette drives. One or two fixed disk drives. Or new options like a 30M-byte high-performance fixed disk, high-speed 8087-2 co-processor and internal tape backup for either the 10M-byte or 30M-byte fixed disk.

UNIX™-based operating systems? We run them today. PC DOS Version 3.0? That, too. Networking? Can do. Multi-users? No problem. Multi-tasking? Easy. Tape backup? It's inside. High-resolution text and graphics? Standard. Two speeds? Exclusive.

When you pick the COMPAQ DESKPRO, you *do* have it all.

It simply works better.

COMPAQ DESKPRO™

WE JUST TOPPED THE LONGEST RUNNING LINE OF PRINTERS.

The new 5300 family of printers from Teletype Corporation represents an exceptional value. The entire family combines our traditional reliability with a 200 cps speed that is ideal for business applications. You can choose a keyboard or auxiliary printer, both of which are available in 15-inch tabletop and 9½-inch compact sizes.

From the moment you take a 5300 out of the box and plug it into your system, you'll be amazed at how easy it is to operate. To begin with, you can down-line load or simply push a button on the printer's control panel to set options. And just push another button to select an alternate option set for a different system. A 4-character LCD on the control panel provides all of the status indicators you need.

The 5300 is available with a built-in 300/1200 baud modem that saves desk space and makes it possible for the 5300 to do all dialing and logon functions. So you can access a CPU or timesharing network by simply depressing a key on the detached keyboard.

For printing versatility, the 5300 is hard to beat. It features graphics capabilities as well as emphasized, expanded and compressed printing. And when used as an auxiliary printer, the 5300 is well-suited for use with most ANSI display-based terminals such as the Teletype* 5410 and 5420.

You'll also appreciate the forms handling of the 5300. It is available with adjustable push or pull tractors; a roll paper holder, a supply rack and an accumulator.

Other features that make the 5300 an even better value include an interchangeable platen, acoustic adapter and a carrying case for the 9½" model.

The 5300 also has a built-in self-diagnostic system that lets you know when and where problems exist. And if you can't solve the problem, you can count on our product service organization for help. With offices nationwide, we're able to offer fast response time.

So if you'd like a printer that tops what you have now, check out the latest in our long-running line. Write Teletype Corporation, 5555 Touhy Avenue, Dept. 3223-F, Skokie, IL 60077. Or call 1 800 323-1229, ext. 701.

TELETYPE: VALUE SETS US APART.

*"Teletype" is a registered trademark and service mark of Teletype Corporation.

TOOLS

from page 109

CWAY SOFTWARE, INC.
Cway People, Cway Strategy

Two application packages designed to aid managers with employee appraisals and plan company growth have been introduced by Cway Software, Inc.

Cway People and Cway Strategy run under the IBM PC-DOS and Microsoft Corp. Xenix operating systems and feature menu-driven commands with on-screen instructions, the company said.

Cway People maintains applicant, employee and job files. The product includes an interviewing function that prompts questions about verbal communication, interpersonal skills, job history, education and career goals. Answers are coded and tallied numerically. Other functions focus on screening candidates, employee appraisals and report generation, Cway said.

Cway Strategy reportedly guides the user through building a business definition and solidifying long-term goals. Customer purchase and business environment considerations are used to develop short-term objectives and profit projections.

Each package costs $399 for the PC-DOS version and $499 for Xenix.

Cway Software, 121 W. DeKalb Pike, King of Prussia, Pa. 19406.

LATTICE, INC.
LMK

Lattice, Inc. has introduced LMK, an automated product generation utility for Microsoft, Corp.'s MS-DOS Versions 2 or 3 environments.

Once a user specifies relationships of various system pieces in a dependency file, a single LMK command initiates the automatic rebuilding of the system. LMK can perform any executable command, such as invoking a batch text editor to make replacements in a number of files, applying a file comparator to new and old files, updating a data base or running utilities, the vendor said.

Use of LMK requires 128K bytes of random-access memory and a minimum of 320K bytes of disk capacity.

The price of LMK is $195 per copy.

Lattice, P. O. Box 3072, Glen Ellyn, Ill. 60138.

TEXAS INSTRUMENTS, INC.
LAN:Datastore, LAN:Datacore

Texas Instruments, Inc. has announced data base management software for TI Professional Computers in 3Com Corp. Etherseries local-area networks.

LAN:Datastore and LAN:Datacore were developed by Software Connections, Inc. of Santa Clara, Calif.

LAN:Datastore is a relational data base manager designed for novice users and provides features such as forms design, report writing and query capabilities. Users reportedly can define the information that they want to store and the format in which to store it without learning complex command languages.

LAN:Datacore was designed for application developers and programmers and is said to handle information storage and retrieval, reducing development time in designing applications software. It reportedly offers the same features as LAN:Datastore, except the report writer, which in LAN:Datacore is programmed by the user. LAN:Datacore supports Basic, Fortran, Pascal and assembly, according to TI.

The products are scheduled for delivery this month and are priced at $945 each in a network version and $495 in a single-user version.

TI, P.O. Box 809063, Dallas, Texas 75380.

OPEN SYSTEMS, INC.
Materials Management

Open Systems, Inc. has introduced a materials management application software package for manufacturers using IBM PC-DOS- and Microsoft Corp. MS-DOS-based microcomputers.

According to the company, Materials Management can track a product from production scheduling to inventory of finished goods. The software is said to produce a master production schedule status report and to print parts requisitions and job schedules.

The software package reportedly interfaces with the vendor's inventory module, permitting generation of inventory status/alert reports, price list, inventory evaluation, detail list and sales analysis.

Cost of the package is $695.

Open Systems, 420 Oak Grove, Minneapolis, Minn. 55403.

KEY-1 COMPUTER SOFTWARE
Keytools2 Programming Aids

Key-1 Computer Software has announced a software package consisting of utilities and building blocks to improve application development for the postnovice Basic programmer using the IBM Personal Computer or IBM Personal Computer XT.

Keytools2 Programming Aids reportedly includes a screen-creation utility, a combination of a utility and Basic code that automatically produces multifield data-entry modules, a data-entry test utility and a collection of Basic code routines for searching, sorting and data validation. The price is $95.

Key-1 Computer Software, 178 Spring St., Newport, R.I. 02840.

STSC, INC.
APL*Plus/PC Release 4.0

STSC, Inc. has announced Release 4.0 of the APL*Plus/PC application development system.

The software runs on IBM's Personal Computer, Personal Computer

For remarketers, there's still room at the top.

We're looking for new members for the "4300 Club."

If your company creates application software that will run on an IBM 4300, we invite you to consider matching *your* skills to *our* systems.

In short, IBM is looking for experienced firms that will remarket the 4300—and become what we call Value Added Remarketers.

The standards are high, but for companies that meet them, IBM has much to offer.

To start with, IBM can add strength to your marketing efforts. We can, for instance, help with product literature, with direct mail and with business show support. IBM also has a wide range of professional classes for VARs.

And thanks to an online referencing system used by IBM's own sales force, we can refer prospects with special needs to VARs who have unique solutions.

In addition, IBM offers to VARs that qualify other highly competitive products: System/36, Series/1, System/38, the IBM Personal Computer and the System 9000 family.

For more information on qualifying as an IBM VAR, simply send in the coupon or call 1 800 IBM-VARS, Ext. 90.

XT, Personal Computer AT and compatibles with 192K bytes of random-access memory under IBM's PC-DOS or Microsoft Corp.'s MS-DOS operating systems.

The package contains documentation; keyboard stickers and placard; a character-generator read-only memory or program; and two diskettes containing the enhanced APL language processor, Help files and revised and expanded APL utilities.

Price is $595. Updates to registered users of Release 3.0 cost $90.

STSC, 2115 E. Jefferson St., Rockville, Md. 20852.

SILTON-BOOKMAN SYSTEMS, INC.
Scheduler

Silton-Bookman Systems, Inc. has announced a program that is designed for scheduling training programs and that runs on the IBM Personal Computer, Personal Computer XT, Personal Computer AT and compatible microcomputers.

The Scheduler reportedly handles schedule cutting and pasting, warns of conflicts and prevents double-booking of rooms and instructors. When schedule conflicts arise, the vendor said, the Scheduler provides strategies for resolving them.

The Scheduler is said to print class, room and instructor schedules in a variety of formats. It provides on-line access to all class, room and instructor schedules, the vendor said. The program can operate as a stand-alone tool or can be integrated with the Registrar, the vendor's training and logistics management program.

Requirements for use are an IBM Personal Computer or compatible system with IBM PC-DOS, 128K bytes of random-access memory, two floppy disk drives or one floppy and one hard disk drive and printer. The price is $349.

Silton-Bookman Systems, Suite 222, 4996 El Camino Real, Los Altos, Calif. 94022.

ALCYON CORP.
DFS system

Alcyon Corp. has introduced its DFS system, software which reportedly permits existing applications to run in a multihost network that is transparent to users.

The software reportedly runs on the IBM Personal Computer under Lantech Systems, Inc.'s Unetix or Microsoft Corp.'s MS-DOS and on Alcyon micros under Alcyon's Regulus operating system. The DFS system is said to offer distributed operating system capabilities and to feature a remote access methodology that does not require program modification.

DFS, developed jointly by Alcyon and Lantech, is priced at $450.

Alcyon, 8716 Production Ave., San Diego, Calif. 92121.

CHANCELLOR COMPUTER CORP.
Symgraph

Chancellor Computer Corp. has announced the Symgraph graphics editor for computer-aided engineering (CAE).

According to a company spokesman, Symgraph operates as part of the Chancellor 1000 and Chancellor 2000 IBM Personal Computer XT-based CAE workstations. It can provide design engineers with high-resolution color graphics and can perform schematic capture and physical layout.

Symgraph reportedly offers a resolution of 1,024 by 768 pixels on a 19-in. screen and 640 by 400 pixels on a 13-in. screen. The user can define the color for up to 50 layers of design, Chancellor said.

Symgraph's color coding facilitates the system's hierarchical design capabilities up to 10 levels of nesting. The editor's other graphics features include continuous pan and zoom, five different view and windowing commands and eight drawing and digitizing modes.

Symgraph is priced at $15,000 as part of the Chancellor 1000 system or at $21,000 as part of the Chancellor 2000 system.

Chancellor Computer, 1101 San Antonio Road, Mountain View, Calif. 94043.

LOGICWARE, INC.
Mprolog for IBM micros

Logicware, Inc. has introduced versions of the artificial intelligence language Mprolog for the IBM Personal Computer, Personal Computer AT and Personal Computer XT.

Versions of Mprolog were also introduced for systems running under Charles River Data Systems, Inc.'s Unos; Techtronix, Ltd.'s Uniflex; and Unisoft Corp.'s Unisoft.

Mprolog is said to be a micro version of Mprolog mainframe software.

The software reportedly permits AI applications to be created in modules and allows a full AI program to run in any environment, provided a version of Mprolog exists for it.

Mprolog for the Personal Computer, Personal Computer AT and Personal Computer XT is priced at $725. Mprolog for supermicros leases for $200/mo and is sold for $6,000.

Logicware, Suite 600, 1000 W. Finch Ave., Toronto, Ont. M3J 2V5.

FOX RESEARCH, INC.
10-Base Release 2.0

Fox Research, Inc. has introduced a new version of its 10-Base data base management system (DBMS) that reportedly features a procedural language processor and user-oriented power boosters to IBM's Sequel mainframe software.

10-Base Release 2.0 is a relational DBMS designed to be used in conjunction with local-area networks such as the vendor's 10-Net.

Improvements to Release 2.0 re-

Maxell Gold.

MICROCOMPUTERS

portedly include a date data-type feature, enhanced forms manager, data entry, SELECT command, error messages, multiuser support, batch processing, full screen editor, define/query editor and search function in data entry.

10-Base runs on the IBM Personal Computer, Personal Computer XT, Personal Computer AT and compatibles, the vendor said. It reportedly supports IBM's PC-DOS 2.0 and higher and Microsoft Corp.'s MS-DOS 2.0 and higher, requiring 256K bytes of random-access memory, a cursor-addressable screen with 25-line by 80-char. resolution and two disk drives.

Price is $495 for a single-user version, $895 for a network version. Updates will be available for existing 10-Base Release 2.0 customers for a material-handling charge, the vendor said.

Fox Research, 7005 Corporate Way, Dayton, Ohio 45459.

MAINSTAY SOFTWARE CORP.
Mainstay

Mainstay Software Corp. has announced Mainstay, an application development software package designed to run on IBM's Personal Computer XT and Personal Computer AT.

Mainstay reportedly combines a mainframe-like analytical data base management system with a user interface that can be readily tailored. According to the vendor, the package is designed to allow value-added resellers to build custom software products.

The product reportedly combines virtual memory techniques and an unstructured data base analysis with a user interface for application developers. It is said to include built-in analysis and forecasting capabilities.

The package runs on an IBM Personal Computer XT or AT with 512K bytes of internal memory.

Single copies of Mainstay sell for $1,495.

Mainstay Software, Suite 201, 1745 Stout St., Denver, Colo. 80202.

SYSTEMS

TELEVIDEO SYSTEMS, INC.
Telecolor PC; Telecolor XT

Televideo Systems, Inc. has announced Telecolor PC and Telecolor XT, IBM Personal Computer-compatible microcomputers that provide color and graphics capabilities.

The micros feature an Intel Corp. 8088 microprocessor, 256K bytes of random-access memory, an adjustable 12-in. screen and Microsoft Corp.'s MS-DOS operating system. They reportedly support 16-color selection in text mode and four-color palette selection in graphics mode.

The Telecolor PC has dual 5¼-in. disk drives with 720K bytes of storage; the Telecolor XT features one 360K-byte disk drive and a 20M-byte hard disk drive.

Telecolor PC costs $2,995. Telecolor XT sells for $4,595.

Televideo Systems, 550 E. Brokaw St., San Jose, Calif. 95112

MAI/BASIC FOUR INFORMATION SYSTEMS, INC.
MAI 2000 Management System

MAI/Basic Four Information Systems, Inc. has announced the MAI 2000 Management System, said to run business application software developed in Business Basic for MAI/Basic Four's minicomputers.

The MAI 2000 Management System features Boss/IX, an AT&T Unix-like operating system developed by MAI. Boss/IX is said to be capable of linking with more than 60 other MAI 2000s in a local-area network called Management Assistance General Network, also announced by the company.

Multiple systems are physically connected by two-wire twisted pairs up to 4,000 ft long, with each system connected by a drop cable to a local-area network tap box.

The MAI 2000 is based on the Motorola, Inc. 68010 microprocessor and comes with a main memory of 768K bytes. Each system can hold six

Announcing

The one-stop, international advertising service for micro marketers.

You'll reach microcomputer buyers all over the world with *Computerworld's* International Marketing Service (CWIMS). Because we have the microcomputer market *covered* with an international network of publications. And what a market!

As the need for computerization in government, industry and educational systems all over the world becomes more acute, countries look to the cost-effective, adaptable microcomputer to bring them into the computer age. This means a very lucrative market for the U.S. micro marketer, since international product demand exceeds product supply.

Now, with the help of *Computerworld's* International Marketing Services, you can advertise in twenty magazines devoted exclusively to supplying information to microcomputer users in: Australia (*MicroWorld, Australian PC World*), Brazil (*MicroMundo*), Canada (*PC World Canada*), Denmark (*Micro Verden*), Finland (*Mikro*), France (*Golden, OPC*), Japan (*PersoCom World*), Mexico (*Compu Mundo*), Norway (*Mikro Data, PC Mikrodata*), Sweden (*MicroDatorn, Min Hemdator*), Spain (*Micro Sistemas*), Sweden (*Svenska PC World*), The Netherlands (*Micro/Info*), West Germany (*MicroComputerwelt, PC Welt, Run*). And your advertising message can reach buyers of microcomputer products and services around the world through special micro sections in any of over 40 publications in 25 countries.

Act now—and take advantage of this international demand for microcomputer products. Whether you want to test the market—or locate a distributor or representative—our publications will put you in touch with the right people around the microcomputer world.

For more information on getting international micro coverage, call Diana La Muraglia, General Manager, International Marketing Services, toll-free, at 800-343-6474. In Massachusetts, call 617-879-0700 or return the coupon below.

memory boards of up to 256K bytes each and up to five controller boards. Two disk storage devices are also provided, with either two 5¼-in. Winchester hard disks or one hard and one floppy disk.

The MAI 2000 also comes with two serial ports, expandable to 14. Communications are compatible with IBM's 2780 and 3780 binary synchronous protocols.

The price for the MAI 2000 with 22M-byte Winchester disk drive, 120 char./sec printer, VDT and the Boss/IX operating system is $14,250. Deliveries are scheduled for February.

MAI/Basic Four Information Systems, 14101 Myford Road, Tustin, Calif. 92680.

BOEING COMPUTER SERVICES CO.

EIS Micro Workstations

Boeing Computer Services Co. has introduced four EIS Micro Workstations incorporating the IBM Personal Computer AT.

Two of the workstations are based on the 256K-byte Personal Computer AT Model 068 and two on the 512K-byte Model 099. The EIS workstations reportedly link the Personal Computers to Boeing's Mainstream remote computing services mainframe computers.

In connect mode, the workstations can automatically log on, access EIS data bases, upload and download and emulate an IBM 3270 terminal, Boeing said.

The EIS Micro Workstations based on the Personal Computer AT Model 068 are priced at $5,700, including a one-year Mainstream processing credit of up to $250/mo, and $7,600, including a one-year Mainstream processing credit of up to $350/mo.

The EIS Micro Workstations based on the Model 099 are priced at $7,500, including a one-year Mainstream processing credit of up to $355/mo, and $9,200, including a one-year Mainstream processing credit of up to $425/mo.

Boeing Computer Services, 7980 Gallows Court, Vienna, Va. 22180.

DATAPOINT CORP.

Vista-PC monochrome version

Datapoint Corp. has introduced a monochrome version of its Vista-PC.

The monochrome Vista-PC reportedly can be used in a local-area network and can be linked to other workstations. It is said to be able to display either text or text and graphics and to be priced about $900 less than a version with a color monitor.

The price of the monochrome Vista-PC ranges from $2,870 for a text-only cluster workstation to $5,770 for a 10M-byte graphics workstation.

Datapoint, 9725 Datapoint Drive, San Antonio, Texas 78284.

SORD COMPUTER OF AMERICA, INC.

Sord IS-11C version

Sord Computer of America, Inc. has unveiled a briefcase-size version of its Sord IS-11 Consultant (IS-11C).

The IS-11C reportedly provides a 25-line by 80-char. LCD display with a flip-back screen that can be positioned for maximum readability. Resolution is said to be 640 by 200 pixels, allowing improved display of data for word processing and spreadsheet programs.

Word processing, communications and preprogrammed management utilities are included in read-only memory (ROM). According to the company, the word processing incorporates 14 advanced commands into Copy, Move, Search, Replace and Underline and is the equivalent of the desktop version.

The IS-11C reportedly includes 80K bytes of random-access memory (RAM) and 72K bytes of ROM. An optional cartridge provides an additional 64K bytes of RAM, while a built-in microcassette provides 128K bytes of storage per tape. Standard ports are said to be RS-232C, parallel, printer, bar code and numeric key pad.

An optional ROM pack houses Sord's DB-Pipe data base program, which includes spreadsheet, data base and business graphics. Other optional ROM packs include Sord's I-Basic; I-Trans data transfer program for input to Microsoft Corp.'s MS-DOS, IBM's PC-DOS and Digital Research, Inc. CP/M programs; and I-TSS, a time-sharing module providing links to data banks.

Scheduled for delivery in early 1985, the IS-11C costs $1,495.

IIS

I.I.S. INTELLIGENT INFORMATION SYSTEMS LIMITED

900,000 Ordinary Shares

Price $4.625 per Share

I.I.S. Intelligent Information Systems Limited ("IIS") designs, develops, manufactures, markets and services computer peripheral equipment for use with medium and large IBM and IBM-compatible mainframe computer systems.

IIS marketing efforts have focused on users of large IBM and IBM-compatible mainframe computers in Israel, where IIS is the leading supplier of IBM 3270-compatible terminals. Among the users of IIS products in Israel are Israel's largest organizations, including industrial corporations, banks, educational institutions, insurance companies, and local and national agencies.

In the United States, IIS is concentrating its initial sales efforts on corporations which are party to offset agreements between the United States Government and the Government of Israel. IIS's wholly owned subsidiary is located at 65 Route 4 East, River Edge, NJ 07661 (201) 343-8353.

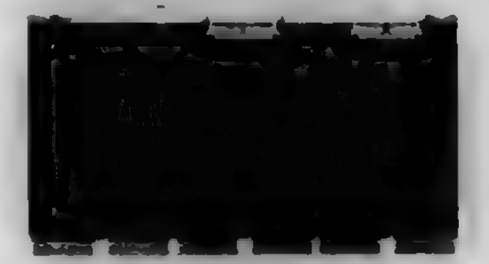
DEC→TO IBM/SNA



Full SNA capability for your DEC computer! Comboard™/SNA gives your terminals access to IBM interactive applications. Data can be transferred between systems, all in the complete *fully supported package*. Comboard/SNA from Software Results.

Proven and reliable. Comboard/SNA is a single-board 256kb communications computer that plugs into your DEC Unibus. Teamed with Comboard software the system is a *cost-effective* solution to troublesome SNA communications problems.

Your DEC emulates an IBM PU Type 2 communication node. You have a *full gateway into your SNA* without passing through a secondary network.

For further information call or write Software Results... the leader in DEC to IBM communications.

and the 680/200 systems.

According to a company spokesman, the systems feature Intel Corp. Multibus architecture and include a central processor; high-speed bus; high-density, dual-ported random-access memory (RAM); and an intelligent I/O controller.

Both systems use a 10-MHz Motorola, Inc. 68000 CPU with on-board memory management designed for zero wait states.

The 680/100 supports between four and 12 users, CIE said. The system comes with 512K bytes of RAM (expandable to 1M byte), a 500K-byte floppy disk drive and up to 92M bytes of Winchester disk storage.

The 680/200 is said to support up to 40 users and to provide between 512K and 2M bytes of RAM and up to 336M bytes of hard disk storage.

The systems reportedly feature dual-bus architecture, using Multibus, to provide a common path for communications among all modules in the system, including memory and direct memory access peripheral device controllers. That feature is augmented by Intel's Local Bus Extension, which provides a 19M byte/sec data path between CPU and memory, a spokesman said.

The intelligent I/O controller is available as an option on the 680/100 and is standard on the 680/200. Each controller incorporates an Intel 8088-2 microprocessor with 64K bytes dynamic RAM and 32K bytes of erasable programmable read-only memory. I/O buffering, input character checking, parity checking and parity generation are provided for up to eight serial devices.

The 680/100 is priced between $14,995 and $30,000, and the 680/200 begins at $29,995, according to the vendor.

CIE Systems, P.O. Box 16579, 2515 McCabe Way, Irvine, Calif. 92713.

TOMCAT COMPUTER, INC.
Tomcat 3200-AT

Tomcat Computer, Inc. has introduced its Tomcat 3200-AT personal computer, said to be compatible with the IBM Personal Computer AT.

The Tomcat 3200-AT is available in two models. The low-end model consists of a 512K-byte CPU with a 1.2M-byte diskette drive only, Tomcat said.

A second, enhanced model includes 640K bytes of memory, a 1.2M-byte diskette drive, a 20M-byte hard disk storage unit, serial and parallel ports and a color board, according to the vendor.

The low-end model costs $2,996. The enhanced model is priced at $4,346.

Tomcat Computer, Suite 508, 548 S. Spring St., Los Angeles, Calif. 90013.

COMMUNICATIONS

SYSTEMS CENTER
Network Datamover-PC enhancements

Systems Center has enhanced Network Datamover PC (NDM-PC), which connects an IBM Personal Computer to a mainframe running IBM's MVS operating system.

The enhancements include a virtual cluster controller connection, the ability to submit distribution work to other computers and the capability to distribute information throughout an IBM Systems Network Architecture, Systems Center said.

Other features include the capability to schedule unattended data transmissions and distribute program information updates to any microcomputer on a network, the vendor said. The product is said to provide a standard interface to microcomputer applications.

NDM-PC costs $2,500 for a local-area network or $300 for single microcomputer connections.

Systems Center, 2988 Campus Drive, San Mateo, Calif. 94403.

NATURAL MICROSYSTEMS CORP.
Watson for the IBM Personal Computer AT

Natural Microsystems Corp. has announced a version of its Watson voice/data system for the IBM Personal Computer AT.

Watson can operate under the AT's primary operating system, PC-DOS 3.0, and consists of a single circuit board, system software and applications software, Natural Microsystems said. The system reportedly allows the computer, in conjunction with a Touch-Tone telephone, to conduct automatic dialing and time billing and to function as a dictating machine, allowing users to edit and rearrange a message before it is transcribed.

Also said to be included are 300 or 1,200 bit/sec modems and the capability to permit the computer to act as an electronic voice calendar.

Watson for the Personal Computer AT is priced between $849 and $998, depending on modem speed.

Natural Microsystems, 6 Mercer Road, Natick, Mass. 01760.

METRABYTE CORP.
MOD-MB

Metrabyte Corp. has introduced its MOD-MB modem for the IBM Personal Computer line.

The MOD-MB reportedly is an intelligent modem that plugs into an expansion slot on the computer's chassis. It is said to be AT&T 212A- and 103-compatible and to feature automatic dialing, automatic answering and 14 other serial commands. Its autodialer reportedly can be programmed to dial either voice or data calls.

The MOD-MB also features an auxiliary RS-232C port for connecting a printer, Metrabyte said.

The MOD-MB is priced at $345.

Metrabyte, 254 Tosca Drive, Stoughton, Mass. 02072.

NOVELL, INC.
Netware 4.6

Novell, Inc. has announced enhancements to its Netware operating system for the IBM Personal Computer AT and PC-DOS 3.0.

Netware 4.6 reportedly supports the computer as a local-area network file server and workstation and provides customized disk drivers for the data storage products of such third-party vendors as Tallgrass Technologies, Inc. and Davong Systems, Inc.

Its Netware/Remote feature reportedly allows remote personal computers to connect to a network as if they were locally attached.

Netware 4.6 is priced at $1,495.

Novell, 1170 N. Industrial Park Drive, Orem, Utah 84057.

AT&T TELETYPE CORP.
SSI Irma

AT&T Teletype Corp. has introduced SSI Irma, a terminal emulation package that allows an AT&T Personal Computer 6300 to emulate an IBM 3278 Model 2 or 3279 Model 2A terminal.

By using either System Network Architecture/Synchronous Data Link Control or Bisynchrous 3270 protocols, the micro can access host software that supports IBM 5540 cluster controllers, AT&T said. Personal computers can tie into a 3270 series network by attaching to a 5544 or 5546 controller port. The product does not require modem or communications line support, AT&T said.

Continued on page 121

PROTOCOL CONVERSION
Expand your 3270 network with low cost ASCII devices!

Now you can integrate personal computers and low cost ASCII devices directly into your IBM 3270 network. With our protocol converters you can add on low cost ASCII peripherals either by using Type A coax attachment or by 3274/3276 controller emulation. Innovative delivers flexibility, simplicity and competitive prices with our family of 3270 products.

Call us today toll free ([illegible]-327-[illegible]), and find out how you can expand your 3270 network easily and inexpensively. Prices starting at just $[illegible].

COAXIAL CONNECTION
- IBM 3270 Type A Coax plug-in card for IBM PC or XT
- IBM 3270 Type A Coax to ASCII Printers
- IBM 3270 Type A Coax to ASCII CRT/Host

3274/76 EMULATION
- IBM 3270 SNA/BSC to (5-24) ASCII Devices
- IBM 3270 BSC to Burroughs/NCR Devices
- IBM 3270 BSC to ASCII Devices/Host (low cost - 3 ports)
- IBM 3270 SNA to NCR/Burroughs Devices

*Additional Protocol Conversions available.

SOLVE YOUR PROJECT MANAGEMENT PROBLEM

Until now, if you wanted in-depth editorial on today's hot issues, one thing's been missing.

FOCUS

INTRODUCING COMPUTERWORLD FOCUS. A new breed of publication with in-depth information on today's hottest topics. It's called **Computerworld Focus.** And it just may be the brightest, smartest, most efficient way you'll ever reach your customers and prospects.

Computerworld Focus is published with the express purpose of analyzing the hottest topics of the day. Not just lip-service, but in-depth editorial, expert views, user opinions, market research facts, analyses, predictions and more.

Who can you reach with **Computerworld Focus?** Hundreds of thousands of your prospects and customers. Start with Computerworld's over 126,000 paid subscribers, then add high pass-along readership, plus bonus distribution at major trade shows.

Since each issue is devoted to a specific topic, you can target your media buy better than ever before. And with help from our Starch issues you can even evaluate the effectiveness of your ads.

So take a look at the topics we'll be dealing with. Then clear the deck for some of the most cost-effective advertising you'll ever do.

MICROCOMPUTERS

Continued from page 119

It includes a circuit card, a version of Digital Communication Associates, Inc.'s Irma emulator program and two file transfer utilities.

SSI Irma costs $1,195.

AT&T Teletype, 5555 W. Touhy, Skokie, Ill. 60077.

POINT 4 DATA CORP.
PC Connection

Point 4 Data Corp. has announced PC Connection, which allows an IBM Personal Computer to tie into Point 4's multiuser Iris operating system.

In Iris mode, the microcomputer works as an Iris workstation, and utilities allow any Personal Computer file to be copied to or from the Iris host, according to the vendor. With a single keystroke, the user reportedly can return to IBM PC-DOS operating system mode.

The product provides two file locking facilities that prevent two users from simultaneously updating the same file. One prevents the locked file from being read while the second allows the user to read but not write in the file, the vendor said.

PC Connection costs $550.

Point 4 Data, 2569 McCabe Way, Irvine, Calif. 92714.

PHILIPS INFORMATION SYSTEMS, INC.
Communications Cosystem

Philips Information Systems, Inc. has introduced its Philips Communications Cosystem, a voice/data terminal designed for use with the Philips P3100 Personal Computer and the IBM Personal Computer.

In a point-to-point network, the Cosystem reportedly allows electronic mail, transmission of data files and several intelligent telephone functions, including use of a 400-name data base. The Cosystem is said to be compatible with existing private branch exchange systems and to feature 92K bytes of internal memory, a 1,200 bit/sec modem and a speakerphone.

The Cosystem is priced at $2,295.

Philips Information Systems, Suite 300, 15301 Dallas Pkwy., Dallas, Texas 75248.

UIS CO.
Vistacom 4.0

UIS Co., a division of Control Data Corp., has released Version 4.0 of Vistacom, a micro-to-mainframe communications software package that reportedly allows an IBM Personal Computer, Personal Computer XT and Personal Computer AT or a Texas Instruments, Inc. Professional Computer to act as an interactive terminal and transfer files to and from a host system.

Vistacom 4.0 includes an increased data transmission rate, a secure file transfer protocol and the ability to interact with the IBM PC-DOS operating system without exiting a Vistacom session.

The Vistacom 4.0 reportedly uses a proprietary data transmission protocol based on the Open Systems Interconnect architecture of the International Standards Organization. The new Files capability is said to allow users to perform a variety of DOS directory and utility functions. Full directory access is available.

The product sells for $200.

UIS, 9300 Metcalf, Overland Park, Kan. 66212.

INTELLIGENT TECHNOLOGIES INTERNATIONAL CORP.
SNA Exchange for Concurrent PC-DOS

Intelligent Technologies International Corp. has announced Systems Network Architecture (SNA) Exchange for IBM Personal Computers, Personal Computer XTs and compatibles running Digital Research, Inc.'s Concurrent PC-DOS operating system. The product is said to allow communication with IBM mainframes via IBM's SNA protocol.

With the product, the Personal Computer user reportedly can communicate with a host while running Digital Research's CP/M 86 and PC-DOS applications. The windowing feature of Concurrent PC-DOS is said to permit the display of IBM 3270, CP/M 86 and PC-DOS applications on the same screen.

SNA Exchange is said to provide SNA/Synchronous Data Link Control communications and emulation of the IBM 3274 cluster controller. The price for SNA Exchange for Concurrent PC-DOS is $895.

Intelligent Technologies International, 151 University Ave., Palo Alto, Calif. 94301.

AGS MANAGEMENT SYSTEMS, INC.
PAC Micro Project Management System

AGS Management Systems, Inc. has announced PAC Micro Project Management System, said to convert PAC Micro data so it can be read by a mainframe.

PAC Micro runs on the IBM Personal Computer, Personal Computer XT, Personal Computer AT and compatibles. The program is said to provide for planning, scheduling, tracking progress and costs and assigning resources.

By connecting PAC Micro to the AGS Management Systems' mainframe project management systems, such as PAC II or PAC III, the data is converted into a format required for mainframe use, the vendor said.

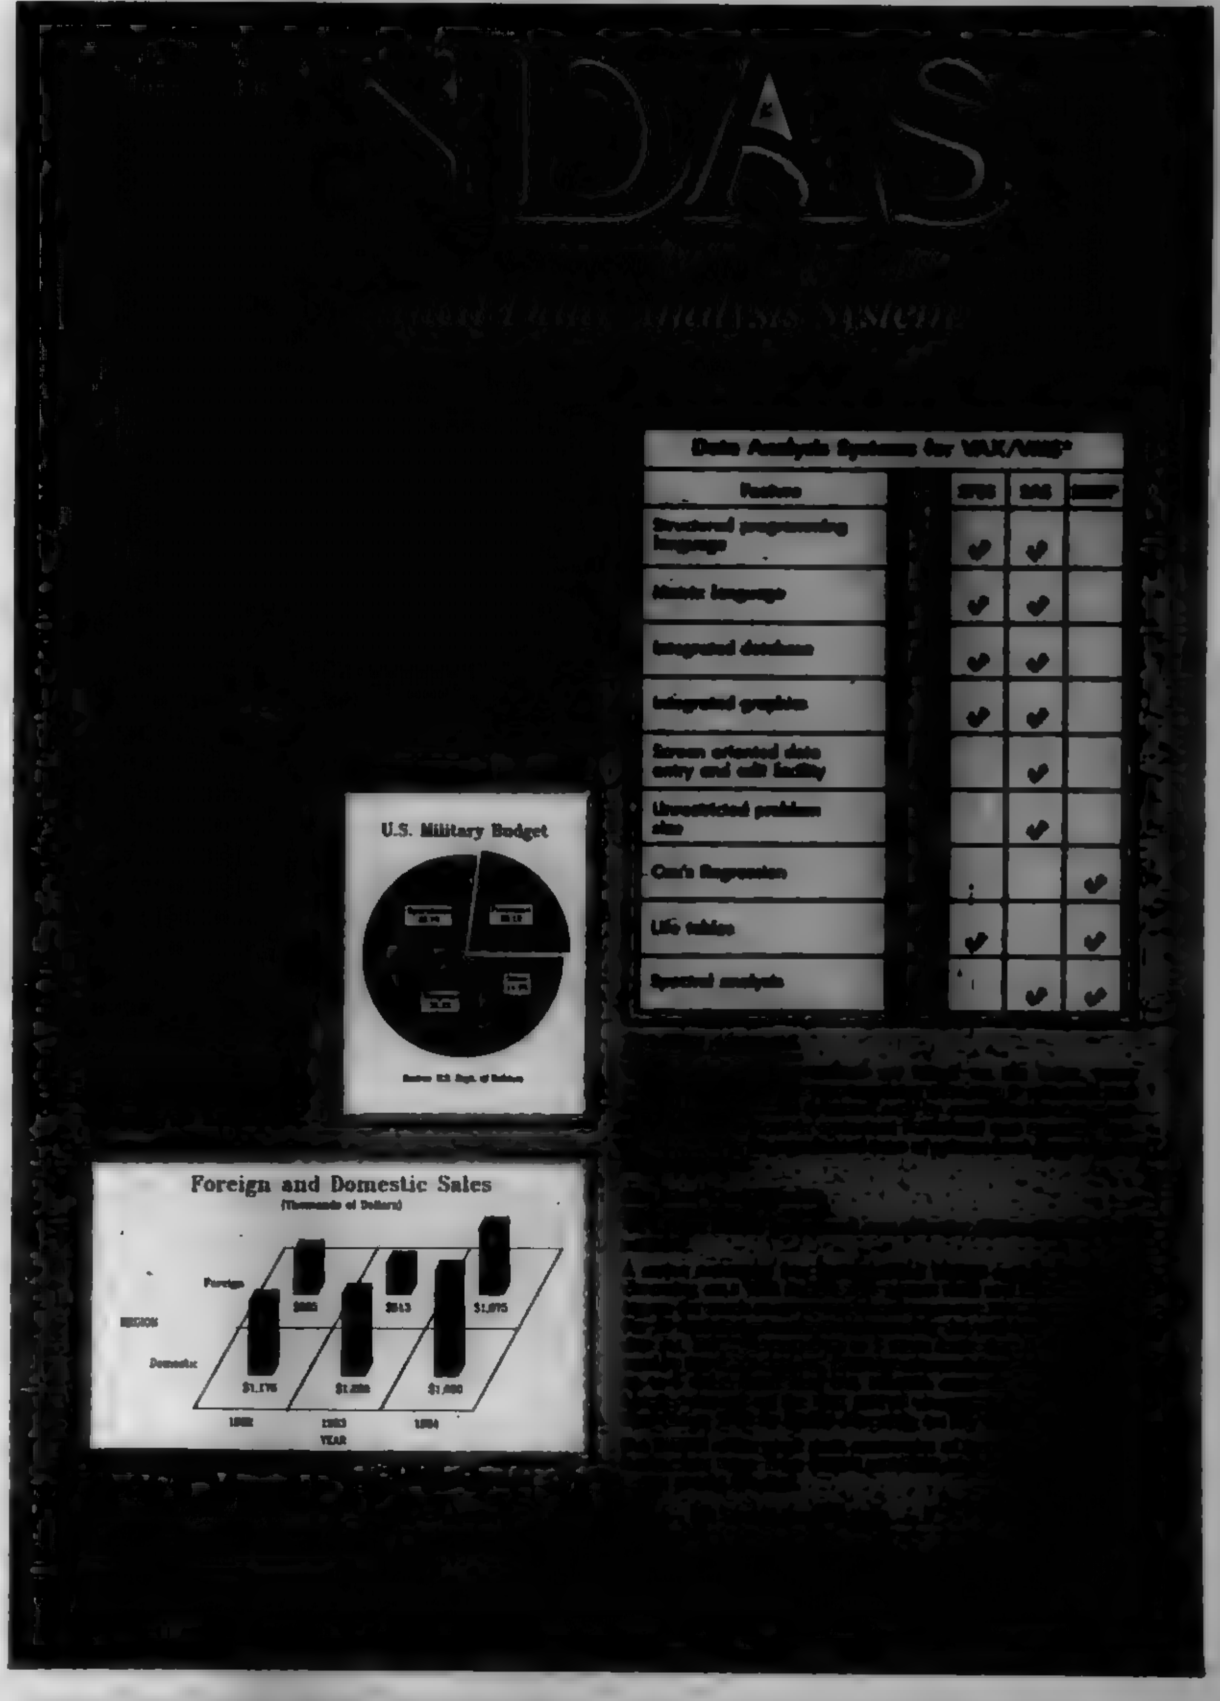
The price for PAC Micro is $990.

AGS Management Systems, 880 First Ave., King of Prussia, Pa. 19406.

THIRD FLOOR SYSTEMS, INC.
Mydesk

Third Floor Systems, Inc. has announced Mydesk, a computerphone and desk management package said

Continued on page 122



Continued from page 121

to allow IBM Personal Computers, Personal Computer XTs, Personal Computer ATs and compatibles to interface to standard private branch exchange (PBX) systems without requiring a modem.

Features reportedly include a personal telephone directory of up to 300 entries, advanced telephone and PBX dialing features, billing time and clock and a calculator. The package also offers one-keystroke access to telephone dialing features, menu selections and on-line, context-related Help, the company said.

The interface board takes up one I/O slot. The recommended configuration includes a micro with at least 128K bytes of random-access memory and IBM's DOS 2.0 or 2.1 operating systems.

Mydesk is priced at $199.

Third Floor Systems, Suite A114, 1630 Oakland Road, San Jose, Calif. 95131.

TELEVIDEO SYSTEMS, INC.
PM/SNA

Televideo Systems, Inc. has announced PM/SNA, which provides IBM Systems Network Architecture capabilities for Televideo's Personal Mini multiuser computer line.

The product reportedly consists of two parts: software that includes a host interface module and device emulation module and hardware that consists of a Synchronous Data Link Control interface card that fits an IBM Personal Computer-compatible bus.

PM/SNA allows up to 15 microcomputers to connect to an IBM mainframe and emulate an IBM 3274 control unit, 3278 display, 3287 printer and 3770 batch terminal, according to the company.

The 3770 batch terminal capability is said to provide file transfers between a Personal Mini terminal and an IBM mainframe.

PM/SNA costs $1,995.

Televideo Systems, 550 E. Brokaw Road, San Jose, Calif. 95112.

KEA SYSTEM LTD.
ZSTEMPC

Kea Systems Ltd. has announced ZSTEMPC, which is said to allow an IBM Personal Computer with IBM's PC-DOS operating system and 128K bytes of random-access memory to emulate a Digital Equipment Corp. VT100 terminal.

According to the vendor, the product allows a user to connect to a DEC system by either hardwire or modem. It reportedly features 132-col. mode, reverse screen, VT100 line graphics set and programmable answerback.

ZSTEMPC supports bidirectional file transfers, concurrent serial and parallel printers and macro programming capabilities, Kea Systems said.

ZSTEMPC costs $150.

Kea Systems, Suite 412, 2150 W. Broadway, Vancouver, B.C., Canada V6K 4L9.

CIE SYSTEMS, INC.
PCworks

CIE Systems, Inc. has released a software link that enables the IBM Personal Computer to communicate with CIE's 680 supermicrocomputer system.

Under PCworks, licensed by CIE from Touchstone Software Corp., the 680 supermicrocomputer running the Alcyon Corp. AT&T Unix-like Regulus operating system is said to act as a network manager.

The package provides file transfer between the 680 and the personal computer, automatically converting the data to the appropriate format, according to the vendor.

The personal computer user reportedly can store files on a local disk and print reports on a local printer or transfer them to the 680 for storage or printout.

Standard RS-232 ports are used to connect the personal computers to the 680, CIE said. Local personal computers may be cabled directly into the system, and remote personal computers may access it through a telephone modem, according to the vendor.

The price of PCworks is

Making the
MICRO-MAINFRAME CONNECTION

(616) 668 2049
Publishers of the Laboratory Computer Letter

$565; $340 for the part of the package installed on the 680 and $225 for the portion on the personal computer, the vendor said.

CIE Systems, P.O. Box 16579, 2515 McCabe Way, Irvine, Calif. 92713.

FOX RESEARCH, INC.
SNA Gateway for Fox 10-NET

Fox Research, Inc. has released a 3270 Systems Network Architecture (SNA) Gateway for its Fox 10-NET local-area network that allows network users with IBM Personal Computers or compatible systems to communicate with IBM mainframes, including the 370, 4300 and 30 series.

Fox and Techland Systems, Inc. of New York jointly developed the hardware/software combination that allows the Gateway unit to act as an IBM 3274 cluster controller.

A User inserts a circuit board in the Gateway unit and software in other personal computers on the 10-NET network. Up to 64 logical units (personal computers or peripherals) can become part of the Fox 10-NET SNA Gateway net.

The Fox 10-NET SNA Gateway, including circuit board, software and documentation is priced at $1,990 for 8 logical units and $3,390 for 16 logical units.

Fox Research, 7005 Corporate Way, Dayton, Ohio 45459.

CYB SYSTEMS, INC.
Unite Series

CYB Systems, Inc. has introduced its Unite series of Unix-based network servers for personal computer networks.

The four models reportedly support from four to 32 users. Based on the Motorola, Inc. 68000 processor, the Unite series is said to feature Multibus architecture and AT&T's Unix System V operating system.

Personal Computer users in a Unite series network reportedly run applications written for their machines' native operating systems or log on to the Unite network server as a terminal and run Unix applications.

To join a Unite network, a personal computer reportedly needs a serial port and 192K bytes of memory. Personal computers with modems may gain remote dial-up access to the Unite series network, according to CYB Systems.

Unite series network servers are available in four-, eight-, 16- and 32-user versions. They are priced at $9,995, $16,995, $24,445 and $53,995, respectively.

CYB Systems, 6448 Highway 290 E., D-111, Austin, Texas 78723.

BUSINESS COMPUTER CORP.
Intellimodem XL, ST and XT

Business Computer Corp. (Bizcomp) has announced three plug-in modems for the IBM Personal Computer line.

The Intellimodem XL, Intellimodem ST and Intellimodem XT operate at 300 and 1,200 bit/sec and offer autoanswer/autodial features, according to Bizcomp. The modems reportedly feature the vendor's Intellisoft communications software, unlimited on-line telephone directories and Xmodem error-checking protocol file transfer. The modems operate in full- or half-duplex and are said to be compatible with Hayes Microcomputer Products, Inc. modems.

The Intellimodem ST reportedly implements the Hayes Smartmodem 1200 command set and can run all tested software written for the 1200. The Intellimodem XT is said to include all the features of the Intellimodem ST, plus a minicard design that will fit into all the short slots of IBM Personal Computers.

Prices are $499 for the Intellimodem ST and $549 for the Intellimodem XT and XL.

Bizcomp, 532 Mercury Drive, Sunnyvale, Calif. 94086.

BULL COMPUTERS.
THE TREE OF
COMMUNICATION.

The tree of communication symbolizes BULL's total commitment to information systems.

As one of the leading international manufacturers of data processing and office automation systems, BULL offers competitive and innovative solutions to all your information management problems, whether special or general, always designed to meet the specific needs of your business.

Moreover, BULL has developed an unmatched know-how in designing communication systems in order to improve interaction at all levels and in any situation. The result: an enhanced competitive edge and a better return on your information and communication investment.

In terms of hardware, BULL offers a wide range, from micro-computers to large scale data processing systems, including distributed data processing and office automation. For BULL, high quality data processing necessarily includes the availability of a full range of constantly updated services, which are under continuous development. To this end, BULL cooperates closely at international levels with software houses, universities, research centers and other manufacturers.

Whether your organisation is large or small, simple or complex BULL Distributed Systems Architecture (DSA) adapts to you and to your needs. It conforms to international standards (ISO) and has the inherent property of accommodating change. DSA is adaptable, flexible, and easy to use.

Strongly present in 74 countries, BULL is wherever you are. So why not let us plant your tree of communication... or help it grow?

from page 123

UNIVATION, INC.
Rainbow LAN Controller

Univation, Inc. has released a controller board that links Digital Equipment Corp. Rainbow microcomputers into a local-area network.

Users connect the Local-Area Network Controller (LAN Controller) to the Rainbow's transceiver device, then hook into Ethernet with a standard Ethernet cable, according to Univation.

Network Research Corp. in Santa Monica, Calif., provides Fusion, the Xerox Corp. Memory Systems (XMS) protocol software needed to implement the network, a spokesman said.

LAN Controller features reportedly include buffer management with three received packets and one transmit packet, four 8-bit data channels and loop-back for test diagnostics.

The cost of the Rainbow LAN Controller is $750. Fusion software carries an additional $750 price tag.

Univation, 1037 N. Fairoaks Ave., Sunnyvale, Calif. 94089.

STORAGE

AST RESEARCH, INC.
Colossus

AST Research, Inc. has introduced a disk subsystem for the IBM Personal Computer family that features a 67M-byte Winchester disk drive and a 60M-byte ¼-in. streaming tape cartridge backup.

Colossus, designed for use with the IBM Personal Computer, Personal Computer XT and Personal Computer AT, features 30-msec access time on the hard disk drive, according to the vendor.

The subsystem, enclosed in a single case, is said to use a modular design to ease service of components and system expansion.

A chassis slot is provided for future boards that will enable Colossus to interface directly with local-area networks, such as the AST-PCnetII, and with non-IBM personal computers.

Shipments are scheduled for January. The suggested list price is $7,499, according to the vendor.

AST Research, 2121 Alton Ave., Irvine, Calif. 92714.

LANCORE TECHNOLOGIES, INC.
PC Core 45; PC Core 75

Lancore Technologies, Inc. has introduced a line of disk/tape mass storage systems for personal computers that allows for the sharing of files and resources on up to seven workstations without application software modifications.

The intelligent file servers, PC Core 45 and PC Core 75, provide up to 75M bytes of formatted capacity and selective and turnkey automatic off-line backup. The units have an Intel Corp. 80186 CPU with 128K bytes of random-access memory, five expansion sockets and a 16-bit data path.

The PC Core 45 unit costs $5,995. The PC Core 75 unit, with a larger Winchester disk and streaming tape drive, is priced at $6,995.

Lancore Technologies, 31324 Via Colinas, Westlake Village, Calif. 91362.

ALLOY COMPUTER PRODUCTS, INC.
Qicstor-Plus

Alloy Computer Products, Inc. has introduced Qicstor-Plus, a subsystem that provides five expansion slots, hard-disk storage and file-oriented streaming tape backup capabilities for the IBM Personal Computer.

The hard-disk capability supports from 20 to 128M bytes of storage, has an access time of 28 msec and is designed as a file-server in a multiuser system, Alloy said.

The streaming tape facility has a formatted capacity of 40M bytes on a cartridge tape and backs up a hard disk at the rate of 2M byte/min, the vendor said. The product requires 256K bytes of random-access memory.

A 20M-byte Qicstor-Plus sells for $5,595.

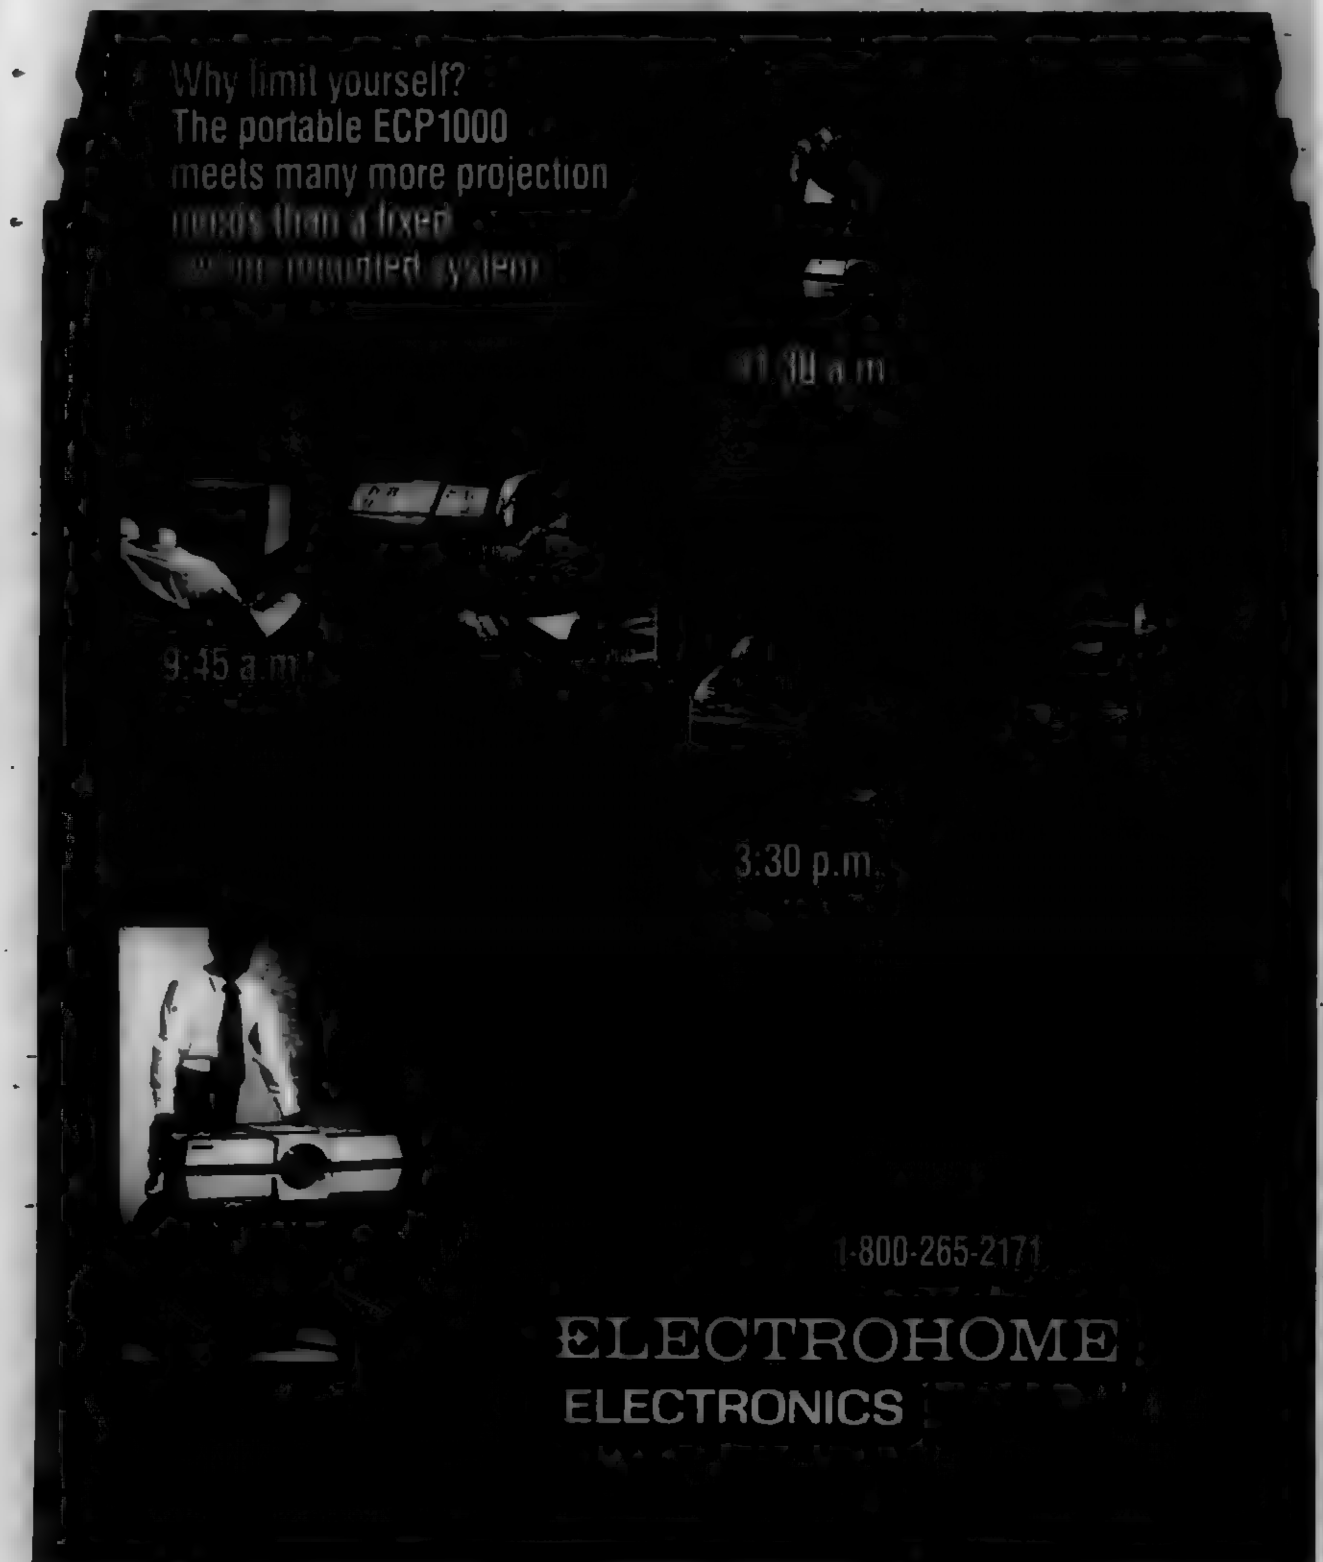
Alloy Computer Products, 100 Pennsylvania Ave., Framingham, Mass. 01701.

RACET COMPUTES LTD.
PCMS-150

Racet Computes Ltd. has announced PCMS-150, a storage system designed for the IBM Personal Computer.

PCMS-150 reportedly consists of a 150M-byte hard disk drive, 150M-byte streaming tape backup and

PROJECT YOUR TERMINAL HERE, THERE AND EVERYWHERE.



MICROCOMPUTERS

operating and diagnostic software. The system interfaces with IBM's PC-DOS operating system and provides large central files with password control, the vendor said.

The system's hard disk storage reportedly can be backed up in less than 30 minutes. The product is said to be compatible with Ethernet networks.

PCMS-150 costs $14,900, according to the vendor.

Racet Computes, 1855 W. Katella Ave., Orange, Calif. 92667.

IOMEGA CORP.
Bernoulli Box version

Iomega Corp. has announced a 5M-byte version of its Bernoulli Box, a removable cartridge disk drive, for Apple Computer, Inc.'s Macintosh microcomputer.

Applications for the Bernoulli Box with the Macintosh are said to include primary, backup and archival storage. The high capacity of each cartridge allows loading of multiple programs, thereby reducing the frequency of floppy disk changes, the vendor said.

The cartridges hold 5M bytes of formatted data and are completely interchangeable from drive to drive, a spokesman said. The unit is said to have an average access speed of 50 msec. Cartridges cost $59 each.

Iomega, 4646 S. 1500 West, Ogden, Utah 84403.

PRINTERS/ PLOTTERS/ PERIPHERALS

PERSONAL COMPUTER PRODUCTS, INC.
Daisylaser 1000

Personal Computer Products, Inc. has announced the Daisylaser 1000 letter-quality laser printer for use with systems having RS-232 serial or Centronics Data Computer Corp.-type parallel interfaces.

The Daisylaser is said to print at a rate of eight page/min and to be based on a Canon USA, Inc. LBP-CX laser printer engine, with a controller developed by Personal Computer Products.

Features include a forms generator that works from standard word processing software such as Micropro International Corp.'s Wordstar, and three read-only memory cartridge slots for font and form loading. Font selection is eight fonts per page standard, with 16 fonts per page as an option.

Daisylaser weighs 59 lb and measures 19.7 in. wide by 16.3 in. deep by 15 in. high. Prices for Daisywriter begin at $3,495.

Personal Computer Products, 11590 W. Bernardo Court, San Diego, Calif.

PANASONIC INDUSTRIAL CO.
TX-12H3P; TR-122MYP; TR-122M9P; BT-P4500D

Panasonic Industrial Co. has introduced four terminals: a 12-in. color terminal, two 12-in. monochrome displays and a 45-in. color terminal.

The 12-in. color display, TX-12H3P, produces 16 colors and features a tilt-and-swivel stand, Panasonic said. The 80-line by 25-char. display reportedly offers 740- by 580-pixel resolution.

The monochrome monitors are said to feature etched faceplates. The 80-char. by 25-line terminals have a bandwidth of 25 MHz and support either graphics or text, the vendor said. The TR-122MYP has yellow characters, while the TR-122M9P has green characters.

The 45-in. display's circuitry provides a 16-color display for the IBM Personal Computer and Apple Computer, Inc.'s Apple III. The BT-P4500D provides 640- by 240-pixel resolution.

TX-12H3P costs $699, TR-122MYP sells for $259, TR-122M9P is priced at $249 and BT-P4500D costs $4,995.

Panasonic Industrial, One Panasonic Way, Secaucus, N.J. 07094.

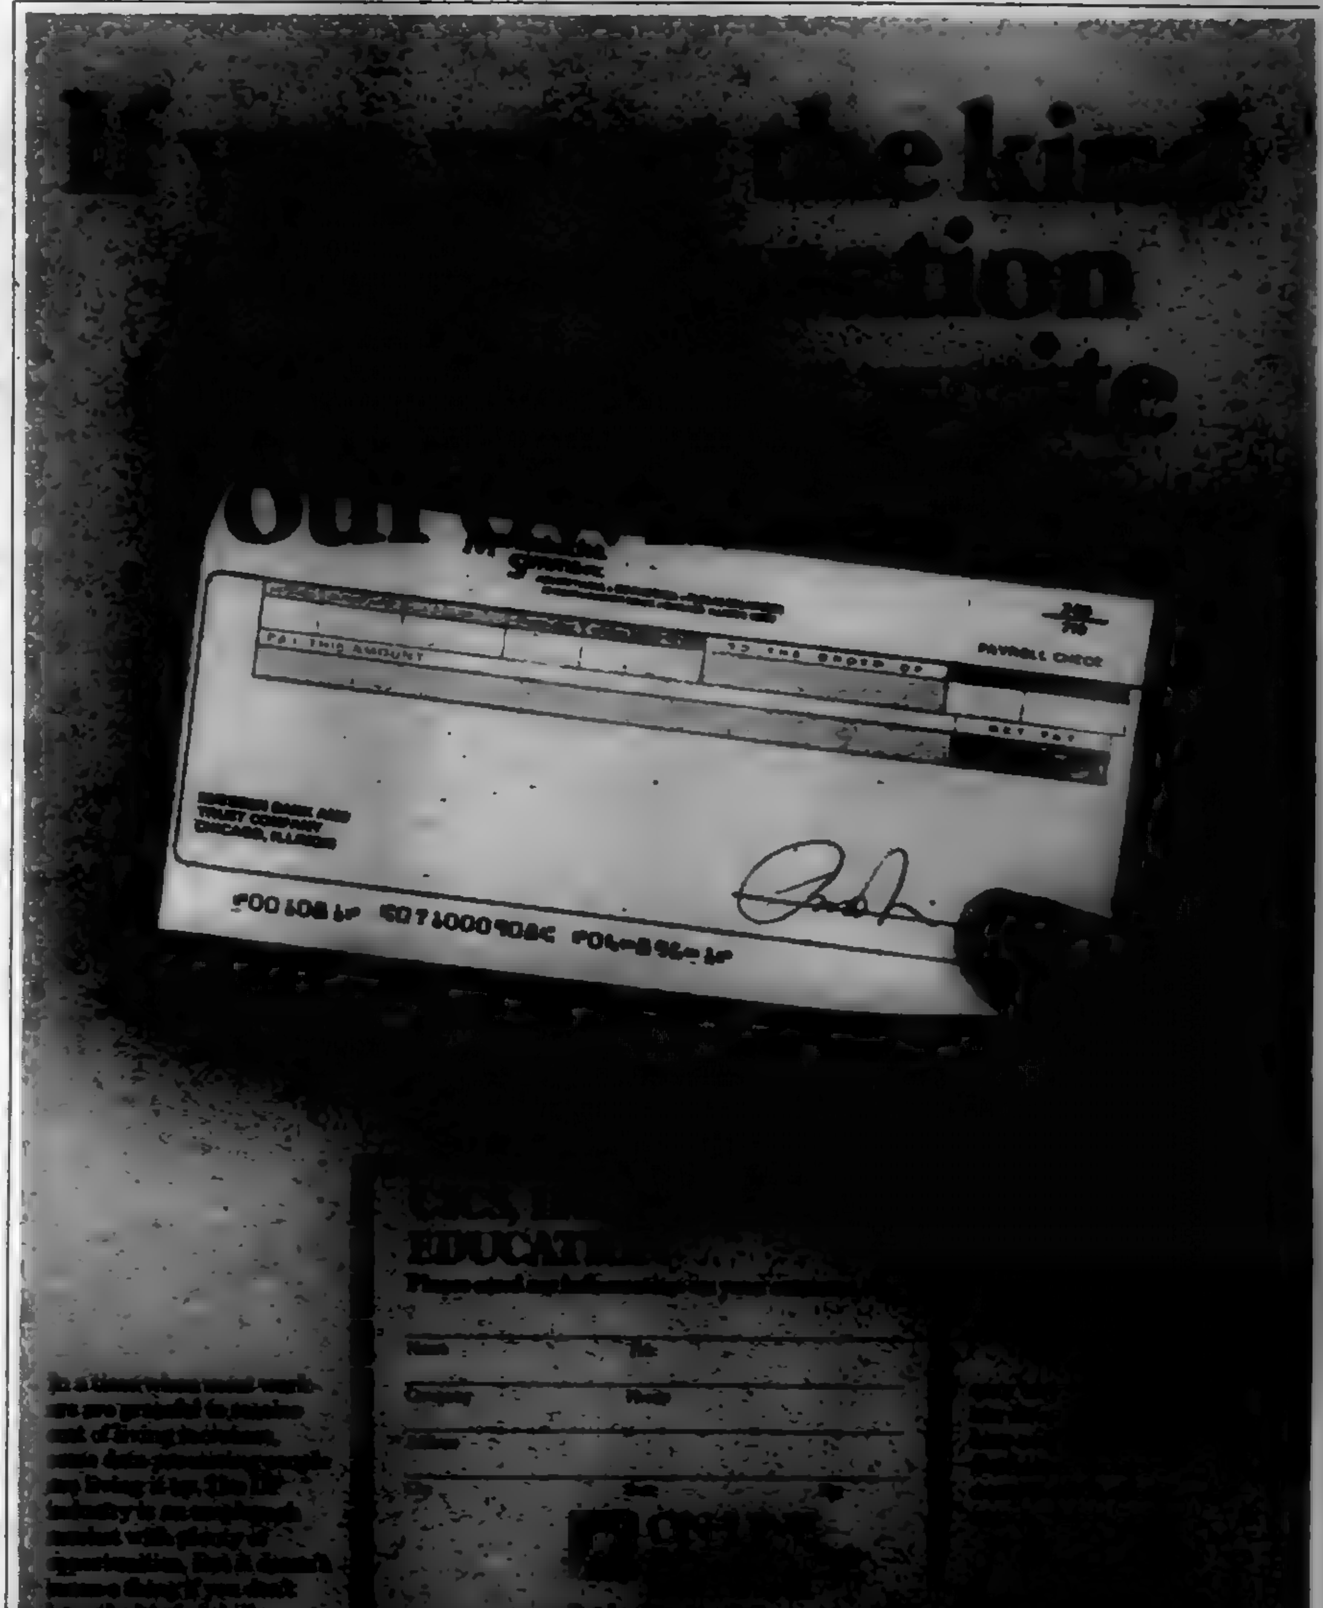
DIGITAL EQUIPMENT CORP.
Letterprinter 210

Digital Equipment Corp. has released the Letterprinter 210 dot matrix printer, said to be compatible with all of DEC's computers. It is also reportedly compatible with IBM's Personal Computer, Personal Computer XT, Personal Computer AT and compatibles.

The Letterprinter 210 can selectively emulate the IBM Graphics Printer and Epson America, Inc. MX80 printers, DEC said.

The printer reportedly

Continued on page 126



Continued from page 125

handles text at 240 char./sec in draft-quality mode and 40 char./sec in near-letter-quality mode and delivers bit-mapped graphics in both DEC and IBM modes. Options include a bidirectional forms tractor, a single-sheet feeder and a user-installable IBM/Centronics Data Communication Corp. parallel interface for personal computer connection.

Price of the Letterprinter 210 is $1,595; two font cartridges and the parallel interface cost $125.

DEC, Maynard, Mass. 01754.

XEROX CORP.
Xerox/Diablo Systems, Inc.
Advantage D25

Xerox Corp. has announced a 25 char./sec letter-quality printer designed to operate with most microcomputers.

According to a company spokesman, the Xerox/Diablo Systems, Inc. Advantage D25 daisywheel printer was designed for heavy office use in word processing and other text- and graphics-related applications.

The product's All-Purpose Interface reportedly allows it to be connected via serial or parallel interfaces to most micros, including the IBM Personal Computer.

The D25 features automatic proportional spacing, automatic carriage returns and bidirectional printing, Xerox said. The printer reportedly offers variable line and column spacing and automatic paper loading. It also accommodates a bidirectional tractor and single-bin sheet feeder.

The printer is priced at $745.

Xerox, Xerox Square 006, Rochester, N.Y. 14644.

C. ITOH DIGITAL PRODUCTS, INC.
Prowriter 7500

C. Itoh Digital Products, Inc. has introduced its Prowriter 7500, a dot matrix printer with graphics capability and optional IBM Personal Computer compatibility.

The Prowriter 7500 reportedly features an 80- to 132-char. column width and prints at 105 char./sec. It is said to be available with either an RS-232C serial port, an IBM Personal Computer-type parallel port or a Centronics Data Computer Corp.-type parallel port. It is said to feature 9- by 9-wire dot matrix and 8- by 8-wire dot matrix.

It is priced at $260.

C. Itoh Digital Products, Suite 220, 19750 S. Vermont Ave., Torrance, Calif. 90502.

TEXAS INSTRUMENTS, INC.
Model 860 XL; Model 865

Texas Instruments, Inc. has introduced two wide-carriage versions of the company's Model 850 and Model 855 printers.

According to the company, the Model 860 XL microprinter prints draft copy at 150 char./sec in a nine-by-nine matrix and correspondence-quality copy at 35 char./sec in a 15-by-18 matrix.

The Model 865 is a letter-quality printer with a 35 char./sec capability in a 32-by-18 matrix, the company said.

The Model 860 XL, available in the first quarter of 1985, sells for $899. The Model 865 sells for $1,299.

Texas Instruments, Data Systems Group, P.O.Box 809063, Dallas, Texas 78350.

VISAGE

from page 107

RAM, one floppy disk drive, one 10M-byte hard disk drive, touch screen and mouse. Prices for the systems, all reportedly available by early 1985, range from $5,995 to $11,650.

Development software bundled with the system includes Visage's Microsoft Corp. MS-DOS-compatible V:DOS operating system; the company's V:Exec 2.0 videodisk virtual device interface; V:Basic, an interpretive Basic compatible with Microsoft's Basic; and V:Paint I and II graphics packages.

Visage also offers interfaces to IBM compiled Basic, IBM Pascal, IBM Macro Assembler, Lattice, Inc.'s Lattice C and Ashton-Tate's Dbase II, each available now for $295. In addition, Learncom, Inc. is offering its System for Authoring Microtraining menu-driven development program for the series.

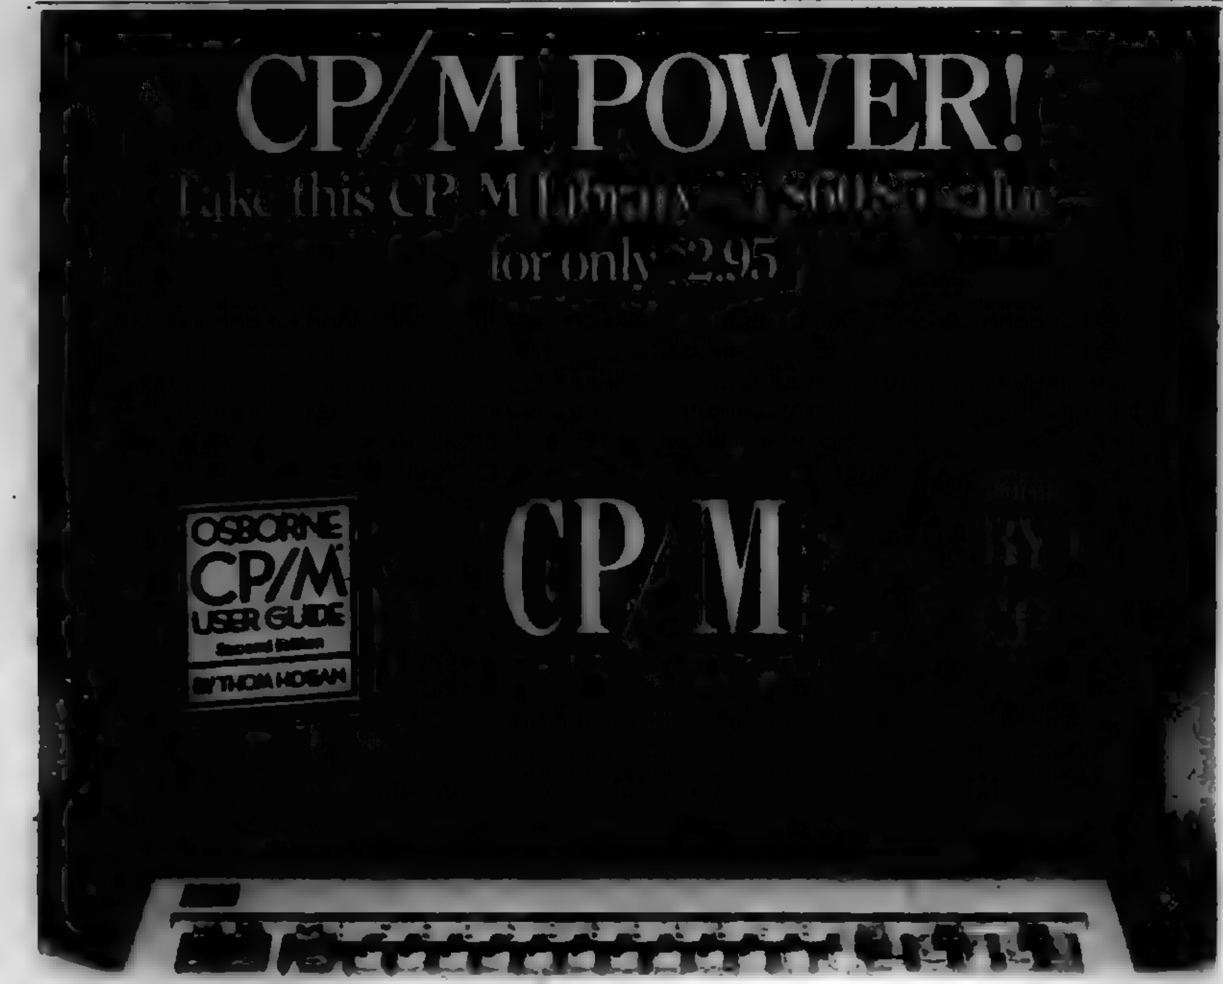
The V:Link 1500 and V:Link 1550 plug-in video controllers are designed for the IBM Personal Computer and compatible machines with at least 256K bytes of RAM. Both offer RGB output and on-board 256- by 192-pixel graphics with 16 colors. The V:Link 1500 accepts 320- by 200-pixel graphics with four colors from an IBM color graphics adapter, while such graphics are resident on the V:Link 1550. The two products cost $1,850 and $2,150, respectively.

Visage's VXP packaged upgrade kits feature a choice of monitors, V:Link boards, software and cables and are priced between $1,850 and $4,715. Among other options are the $975 Pioneer LD-V4000 videodisk player, an $850 bit pad package and a $125 mouse.

Industrial training represents the primary business application for interactive video today, noted Nathan Kalowski, Visage marketing vice-president. "There's a very high return on investment for companies with a large number of people to train or complex products," he claimed. "The more complex the message, the better this media is."

Kalowski predicted that several trends would boost business use of interactive video systems, including use of IBM Personal Computers and compatibles as development and delivery systems, less expensive and more capable videodisk players, lower costs and quicker turnaround in mastering videodisks and increased selection of video programs.

Visage is located at 12 Michigan Drive, Natick, Mass. 01760.



CP/M POWER!
Take this CP/M Library—a $60.85 value—
for only $2.95
OSBORNE CP/M USER GUIDE Second Edition BY THOM HOGAN
CP/M

1) OSBORNE CP/M USER GUIDE.
Second Edition. Thom Hogan.
This revised edition is a comprehensive user manual that is invaluable to beginners and advanced programmers alike. All of the latest CP/M developments are included, with special emphasis given to CP/M-86, the operating system for 8086- and 8088-based microcomputer. It is complete with reference lists and tables, and a full explanation of all CP/M commands and functions. Softbound.
Publisher's Price: $15.95.

2) THE PROGRAMMER'S CP/M HANDBOOK. Andy Johnson-Laird.
Here is the single most comprehensive information source on CP/M you can purchase. Includes descriptions of CP/M's internal structure, the CP/M file system, Basic Disk Operating System, Basic Input/Output System, utility programs, and more. As a daily resource for the serious CP/M systems programmer, this handbook is an absolute must. Hardcover.
Publisher's Price: $27.95.

3) The BYTE Guide to CP/M-86.
Mark Dahmke.
Now you can get the full story on CP/M-86—the program specifically designed for today's most powerful and advanced microprocessors. From one of the leading computer publications, this guide clearly describes how CP/M-86 will operate with microcomputers using Intel 8086 or 8088, including the IBM Personal Computer. All commands and utility programs are discussed, along with application programs and support for high-level languages such as BASIC, Pascal, FORTRAN and COBOL. Softbound.
Publisher's Price: $16.95.

CP/M is a registered trademark of Digital Research, Inc.

The Library of Computer and Information Sciences is the oldest, largest and most respected book club for the computer professional. As a member of The Library of Computer and Information Sciences, not only will you be exposed to key books in a wide range of subjects, but you can purchase your selections conveniently and inexpensively!

MEMBERSHIP BENEFITS: In addition to getting the CP/M Library for only $2.95, when you join, you keep saving substantially on the books you buy. Also, you will immediately become eligible to participate in our Bonus Book Plan, with savings up to 70% off the publishers' prices. At 3–4 week intervals (16 times per year) you will receive The Library of Computer and Information Sciences News, describing the Main Selection and Alternate Selections, together with a dated reply card. If you want the Main Selection, do nothing and it will be sent to you automatically. If you prefer another selection, or no book at all, simply indicate your choice on the card, and return it by the date specified. You will have at least 10 days to decide. If, because of late mail delivery of the News, you should receive a book you do not want, we guarantee return postage.

The Library of Computer and Information Sciences 7-CR5
Riverside, N.J. 08075

Please accept my application for trial membership in the Library of Computer and Information Sciences and send me the CP/M Library (00583), billing me only $2.95. I agree to purchase at least three additional Selections or Alternates over the next 12 months. Savings range up to 70% and occasionally even more. My membership is cancelable any time after I buy these three books. A shipping and handling charge is added to all shipments.

No-Risk Guarantee: If you are not satisfied—for any reason—you may return the CP/M Library within 10 days and your membership will be canceled and you will owe nothing.

COMPUTERWORLD

THE NEWSWEEKLY FOR THE COMPUTER COMMUNITY

MAC

from page 107

In 1984, interest centered on integration, and packages such as Lotus Development Corp.'s Symphony, Ashton-Tate's Framework and Ovation Technologies, Inc.'s Ovation captured the headlines. These packages were disappointing. Symphony has not been as successful as Lotus' 1-2-3. Ashton-Tate has admitted that Framework sales have not reached expectations. Ovation died unborn — a slow, painful death.

Why has IBM Personal Computer innovation slowed? The microcomputer is three years old. When it was first announced, vendors began designing packages not for the Personal Computer of 1981, but for the Personal Computer of 1982 or 1983. They began working on a Personal Computer with 256K bytes of random-access memory (RAM) or a hard disk. When IBM announced these enhancements, vendors were able to roll out their products quickly. Unusual packages were steadily produced.

As one requirement for this trend to continue, IBM had to continue providing more RAM. IBM ran into a roadblock at 640K bytes of RAM because Microsoft Corp.'s MS-DOS operating system was not capable of directly addressing more memory.

This summer, IBM announced the Personal Computer AT, which would run Microsoft's Xenix and address 3M bytes of RAM. But Xenix shipments were not scheduled until the first quarter of 1985, and some developers doubted IBM's commitment to that operating system.

No blockbusters expected

Consequently, there have not been any blockbuster Personal Computer AT products. And there probably won't be any for the next six to 12 months.

As the IBM Personal Computer hit a roadblock, Apple announced the Macintosh. It, too, had a limited amount of RAM: at first 128K bytes, now 512K bytes. But it offered developers a new operating environment with a user-friendly interface and powerful graphics capabilities — features the IBM product lacked.

In addition, the Macintosh promised developers a large base of first-time users, hungry for software.

"Since the IBM market had already been developed, software vendors can have only limited success in it," Lefkowits claimed. "They [vendors] are threatened not only by IBM's recent software announcements, but also by the installed base of 1-2-3, Ashton-Tate Dbase and Micropro International Corp. Wordstar users."

So developers are turning to the Macintosh. "They would rather work with the Macintosh," Lefkowits said. "Even though it is more difficult to develop software for the Macintosh, [the micro] offers companies a better potential return on their investment."

And, for the moment, innovation has become synonymous with Macintosh.

One example is Filevision, by Telos Software Products, which combines DBMS facilities with the Macintosh's graphics capabilities and creates a data base that stores images as well as text. This may be the first of a series of products that truly integrate graphics with traditional applications.

The leading vendors also are making their moves. Lotus has unveiled Jazz, a Symphony-like package for the Macintosh, to positive initial reviews. "The Macintosh gave Lotus an excuse to correct the biggest problem with Symphony," said Morton Rosenthal, chairman of Corporate Software, Inc. of Waltham, Mass. "The user interface in Jazz is much improved; no longer does everything have to go through the spreadsheet."

MINIS

from page 107

ny, whose Cambridge, Mass., firm specializes in research in corporate computing.

Regarding local-area networks, Colony predicted that IBM will find its Personal Computer network directly competing with — and defeating — the IBM Cabling System by 1986. The Cabling System is much more costly, and the Personal Computer Network, which he recommended for those needing a local network, will receive a great deal of third-party vendor support, he said.

As for the departmental resource processor, Colony said it currently faces several barriers, including the need for better data base security on the mini, incompatibility between personal computer and minicomputer software packages and the fact that there currently is "no such thing as a distributed data base."

An additional barrier is the need for software site licensing, so that software may reside on the mini and be downloaded to end users when they need it. "The software industry is going to have to respond to this, because it's coming," he claimed.

A departmental resource processor networked with a group of personal computers will also need to be able to reach up to the corporate mainframe for data not stored locally, requiring a high level of compatibility between all of the computers in the system, he said. "That's why IBM will look so strong in the future," Colony argued.

BECOME AN IMS EXPERT

NEW COURSE ANNOUNCEMENT

SysEd offers challenging "hands-on" training for motivated programmers who want to be real pros and are willing to work.

Our experienced instructors specialize in using real-life programs and design problems. Whether it's IMS Data Base Design, IMS/DB (DL/I) Application Programming, IMS/DC & Message Format Services Programming, IMS Recovery and Restart or IMS Utilities, they encourage students to bring in the specs of their own projects for discussion and analysis.

SysEd students spend one third of class time in actual hands-on workshop sessions with our 4341/II computer. There are six 3270 terminals dedicated to the class. Each student receives an original manual especially designed for each course. The manuals are comprehensive guides and programming models written especially for each course. They are thorough, clear and well organized, and serve as reference manuals long after the course.

Classes are held at SysEd's fully equipped classroom/computer facilities in New York City and Chicago. Class size is limited so applications are accepted on a first come first serve basis.

Customized course offerings are also available for on-site sessions at company installations.

Other Technical Curricula include: CICS, IDMS, VSAM, and MVS. For information call Dave Shapiro (212) 564-9147.

STC files financing plan

Seeks to borrow $80 million from subsidiary

LOUISVILLE, Colo. — Storage Technology Corp. (STC) and its financing subsidiary last week filed a financing plan with a federal bankruptcy court that would allow the company to borrow $80 million from the subsidiary.

The proposed agreement would permit STC to borrow the cash assets of its Storage Technology Finance Corp. Those assets include about $80 million in notes and accounts receivable and about $60 million in accounts receivable that the parent firm collected but did not transfer to its subsidiary.

The agreement provides that the subsidiary's creditors would receive a "superpriority" claim on $44 million of the parent firm's assets. The subsidiary would also have priority claim on another $96 million of the parent's assets, subject to proof that the parent has borrowed additional funds from its unit.

Filed Chapter 11 petitions

Both the parent firm and subsidiary have filed Chapter 11 petitions under the U.S. Bankruptcy Act. Under Chapter 11, a company is protected from creditors' claims while it works out a court-approved reorganization plan with its creditors.

In a separate matter, an industry source confirmed recent published reports that STC has received a $10 million order from IBM for tape drives and controllers. IBM, STC's principal rival in the data storage business, has reportedly been unable to meet demand for its 3803 Model 2 tape controllers because of a shortage in a circuitry part used in the controllers.

"Computer and Communications Buyer," a New York newsletter covering the used-equipment market, reported that IBM will use the tape devices to meet its own internal operations, thus freeing up IBM's tape systems for its own customers.

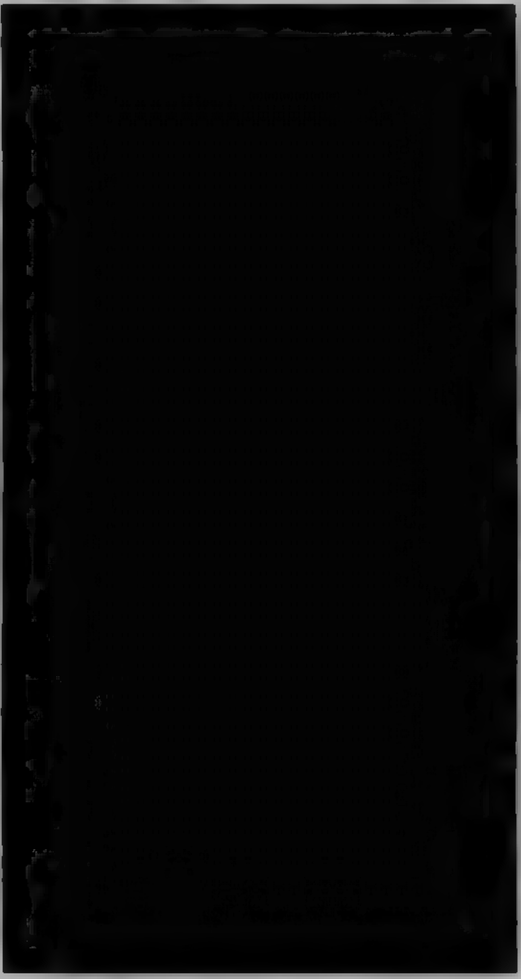
Neither IBM nor STC would comment on the sale of the equipment.

Hearing scheduled

A hearing on the joint financing plan is scheduled today in the federal bankruptcy court in Denver.

The plan already has been approved by separate creditors' committees representing the parent firm and its subsidiary.

Last month, Chemical Bank of New York decided not to go ahead with a previously announced loan commitment of $150 million to STC. STC later announced it would lay off 1,200 workers at its facilities in Colorado and Florida [CW, Nov. 26].



- Honeywell, Inc. plans to sell its Synertek, Inc. semiconductor subsidiary and lay off 1,000 U.S. employees/122
- A Future Computing, Inc. executive predicts that IBM's Personal Computer AT won't make a black sheep of one of its family members, the Personal Computer XT/123
- Boeing Co. expands its efforts in artificial intelligence technology by acquiring a $1.6 million equity interest in a Pittsburgh company specializing in such research/136

Durango shifts focus to compete with IBM AT

By Kathleen Burton
CW West Coast Bureau

SAN JOSE, Calif. — When Durango Systems, Inc. conceived the Poppy II microcomputer last year, IBM's Personal Computer AT was nothing but a gleam in Big Blue's eye. But in an industry where change is a byword, yesterday's good ideas can become tomorrow's headaches.

Durango faces just such a headache today, now that IBM's multiuser Personal Computer AT, scheduled for April release, will compete directly with Durango's Unix-based Poppy II product, a Personal Computer AT look-alike.

"Durango shot an arrow into the wall, and IBM, with the AT announcement, drew a target around it," said Len Baker, a Durango director and partner in Sutter Hill Ventures, a Palo Alto, Calif., venture capital firm that backed the company.

However, IBM's August announcement made the Poppy an immediate industry standard, Baker claimed, largely because of the Personal Computer AT's limited availability. The Poppy's sales have since doubled.

The Intel Corp. 80186/80286-based Poppy II, which can handle as many as 14 users, was initially designed as a general-purpose unit to compete with Altos Computer Systems, Inc. and Fortune Systems Corp. offerings, not IBM's, claimed Durango President Jim Simpson. Although the Personal Computer AT announcement legitimized the Poppy concept, he said, the company cannot survive by going head-to-head with Big Blue.

According to Simpson, Durango must rapidly change direction, searching out market niches and shifting its focus to major OEMs and value-added retailers and dealers. Durango recently signed a major OEM agreement with Molecular Computer, Inc., based here, and is discussing a similar agreement with major IBM Bunch competitors in the $150,000+ computer markets, Simpson said.

Durango also will target smaller, vertical market companies, Simpson said, be-

Treasury's tax overhaul proposal gets mixed reaction

By Mitch Betts
CW Washington Bureau

WASHINGTON, D.C. — The computer industry greeted the U.S. Department of the Treasury's recent proposal for a major overhaul of corporate taxation with a mixed reaction, reflecting the fact that different segments of the industry favor different provisions of the existing tax code.

The Treasury plan generally repeals the business community's most coveted tax credits and deductions in return for reducing the corporate income tax rate from 46% to 33%. The plan is aimed at simplifying the tax code, ridding it of loopholes and eliminating its bias toward certain types of investments, officials said.

Of particular interest to the computer industry, the Treasury plan repeals the 10% investment tax credit but revives the R&D tax credit; replaces the accelerated depreciation schedule enacted in 1981 with a less generous depreciation system; and repeals the preferential treatment for long-term capital gains.

The Computer and Business Equipment Manufacturers Association (Cbema) here strongly supported the Treasury tax reform proposal, particularly retention of the R&D credit and lowering effective corporate tax rates. "For too long, major high-tech companies have suffered under high taxes," said Vico E. Henriques, Cbema president. "We've been paying more than our share, while at the same time, our products were contributing to productivity in every economic sector."

Henriques said Cbema is not concerned about losing the 1981 accelerated depreciation system. "That doesn't bother us because it didn't help us in the first place," he said, noting that the depreciation schedule favors investments in industrial plants and equipment.

In contrast with Cbema's general support of the Treasury plan, small and mid-size electronics firms and venture capitalists were outraged with the plan, saying it would end the preferential tax treatment given to long-term capital gains. (Under current law, the maximum tax rate on long-term capital gains is 20%, rather than the 50% maximum rate applied to ordinary income. The Treasury plan would tax the profits of investors in start-up enterprises the same as other income, although gains through inflation would be discounted.)

The American Electronics Association (AEA) in Palo Alto, Calif., strongly opposed the capital gains proposal, arguing it could cut off the investment capital that has fueled the growth of high-risk electronics firms.

Dean O. Morton, AEA chairman and the chief

ALL 1200 BPS MODEMS GO 1200 BPS.

SO WHY DO MORE PEOPLE BUY OURS?

Ours work.

And keep on working. In fact, Racal-Vadic modems work where other modems won't. Over the lowest quality phone lines. And under the worst possible conditions.

Which explains why our 1200 bps modems outsell everyone else's by 2 to 1.

Part of the reason we're so reliable is the parts we use. Our vendor qualification program is one of the most extensive this side of Mt. Fuji. And we're even tougher on ourselves.

We inspect, test, burn in and re-test every component that goes into our modems. Then we put our modems to the test. Not just in the factory, but in the field.

It's our way of making sure every Racal-Vadic modem performs up to your expectations. As well as ours.

Which is just what you'd expect from Racal-Vadic. The company that knows the most about modems. After all, we invented the full-duplex 1200 bps modem. Years before Bell. And built the first triple modem as well (incorporating 103, 212A and VA3400 protocols).

Today, 15 years and a million 1200 bps modems later, we also offer the widest selection.

12 models in all. Both central and remote site. With features such as auto-dialing, auto-answer, leased-line capability, coherent detection and more.

Service is built in, too. With our remote diagnostics, we can test your modem right over the phone line. And rest

assured, our nationwide service personnel are as reliable as our modems. And nearly as quick on a call.

One last reference. All the major telecommunications networks have selected our 1200 bps modems as the standard. Which makes them the modems called on most.

And the ones you should be using.

So the question is not whether to buy our 1200 bps modems.

The question is, how many would you like?

For more information, call 800-543-3000, Operator 507. In California, (408) 946-2227. Or write if you have the time. Racal-Vadic, 1525 McCarthy Blvd., Milpitas, CA 95035.

Honeywell plans layoff of 1,000 workers at Synertek

By David Olmos
CW Staff

MINNEAPOLIS — Honeywell, Inc. last week announced plans to lay off 1,000 employees at its semiconductor subsidiary, Synertek, Inc., and said it is making plans to sell the unit.

The layoff will affect most of Synertek's 1,200 U.S. employees at facilities in Santa Clara, Calif., and Santa Cruz, Calif. A substantial number of the 500 employees working at a Synertek facility in Singapore also will be laid off, Honeywell said.

The company said there will be no layoffs at its Synertek plant in Bangkok, Thailand, which will remain open to handle packaging and subcontract work while the business is offered for sale.

The unit experienced delays in new product development, which the company attributed in part to high turnover of engineering personnel in Silicon Valley.

The subsidiary's design center in Munich, West Germany, will also not be affected by the layoff, according to Honeywell.

Kathy Toonheim, a Honeywell spokeswoman, said that discussions are being held with interested parties about purchasing Synertek, but she would not elaborate on the purchase.

In a statement, H. D. Elverum, Honeywell executive vice-president, said the company "examined several alternatives for Synertek, but all of them included continued losses and unacceptable investment levels."

The unit's primary products are low-density read-only memory (ROM) chips that are used in video games, personal computers and other consumer electronics products.

As the video game business has declined sharply in recent years, so have Synertek's sales.

"The major ROM business is doing very poorly," said a spokeswoman for the Semiconductor Industry Association, a trade association in San Jose, Calif.

"Obviously, anyone who is heavily directed in that market is not doing well now," she added.

Synertek sustained large operating losses in 1983 and 1984, Honeywell said.

A company spokeswoman said the unit was unsuccessful in its efforts to diversify by manufacturing semicustom chips for industrial markets.

The unit experienced delays in new product development, which the company attributed in part to high turnover of engineering personnel in Silicon Valley, she said.

Honeywell said it expects to take a substantial write-off of the assets and reserves for costs related to the layoffs in the fourth quarter. However, according to Toonheim, it was too early to determine the amount of the write-off.

Exec predicts XT survival despite doomsayers' forecast

By Kathleen Sullivan
CW West Coast Bureau

SAN FRANCISCO — When IBM introduced the Personal Computer AT last August, many observers said the announcement of the Intel Corp. 80286-based computer signaled the beginning of the end for one of its other Personal Computer family members — namely, the Personal Computer XT.

But Ron Ward, executive vice-president of Future Computing, Inc., a Richardson, Texas-based market research group, said he believes the Personal Computer XT will retain a solid footing in the company's microcomputer lineup.

Speaking at a recent seminar, Ward said the system will endure because the Personal Computer XT, along with the Personal Computer, brings in the bulk of the firm's microcomputer revenue.

'Workhorse units'

"The [Personal Computer] and XT combinations are the workhorse units; they are the cash cows of the company's Personal Computer line," Ward said.

But more important, Ward said, IBM will continue to offer a "Personal Computer-speed" machine because it has recognized the importance of offering a full range of micro products, from home computers to stand-alone business machines to multiuser systems, and will continue to follow that strategy.

IBM's product family will continue to evolve, however, in order to stave off competitors and meet changing market conditions. Looking ahead to 1988, Ward predicted the possible additions and adaptations to IBM's product line:

- The Personal Computer II, to be introduced in 1985, will represent a "cost-reduced Personal Computer" and will be based on Intel's 8088 microprocessor.
- IBM will introduce a briefcase-size, battery-powered portable computer that uses 3½-in. floppy disks in mid-1985 or early 1986.
- In 1985, IBM will extend the power of its PCjr by adding 256K-byte chips and a hard disk drive. In addition, a portable Personal Computer AT will be introduced.
- By 1987, the Personal Computer AT will be upgraded with 256K-byte chips and the addition of optical disk storage. That same year, IBM will introduce a 80386-based successor to the AT that will use 1M-bit chips and will feature an optical disk.
- In 1988, IBM will unveil a 80286-based ATjr. By then, the firm will be "questioning the viability of its 8088-based product line," Ward said.

He indicated that 1985 heralds "revival time" for the microcomputer industry. With IBM's recent product introductions, the market is poised for new growth.

New market opportunities

In some ways, the market opportunities in 1985 will parallel those of 1982, when hundreds of companies joined the industry following the introduction of the Personal Computer, according to Ward. Existing companies will discover new market opportunities in 1985, and new products will be introduced.

However, added Egil Juliussen, Future Computing's chairman, differences exist between the two situations that should also be noted, especially in the supply-and-demand picture. Shortages of the Personal Computer gave rise to the Personal Computer-compatible industry in 1982, he noted. While Juliussen predicted that the demand for the AT will exceed the supply in 1985, he said the shortage will not be as great as in 1982 and 1983.

He said IBM's Entry Systems Division, which produces the Personal Computer line, is better prepared to handle the demand, having increased its manufacturing capacity by a factor of 10. Also, the market itself has changed; in 1985 the industry will experience slower growth rates and a slower expansion of its dealer base.

There's a market for your product abroad.

You can reach the right people in the major computer markets throughout the world. The people who make the buying decisions — in countries already importing more than $3 billion in computer hardware, software and supplies.

CW International Marketing Services gives you one, efficient source for direct contact with the leading local computer publications in the world's major computer markets. How can we do this for you? We have a wide network of editorial offices around the world and provide first hand marketing information to our clients. Plus, we have over 10 years experience in the publishing industry.

We're a division of CW Communications/Inc., publisher of *Computerworld* and the world's largest publisher of computer-related newspaper and magazines.

CW International Marketing Services makes it easy.

We'll translate your ads for you and give you production services to meet the specifications of any or all the newspapers and magazines we publish or represent — and — we'll even bill you in dollars. What's more, when you place your advertising through CWIMS, you save the V.A.T. (value-added tax). It's as easy as advertising in your local publications.

We'll even help you with market facts, and, in the case of People's Republic of China, we can arrange for you to give product and marketing seminars there!

You can run your ads in our periodicals in these countries:

Argentina
Australia
Brazil
Canada
Chile
Denmark
Finland
France
Greece
India
Italy
Japan
Korea
Mexico
Norway
People's Republic of China
Saudi Arabia
South Africa
Southeast Asia
Spain
Sweden
The Netherlands
United Kingdom
West Germany

IBM's albatross: A history lesson for micro makers

By David C. Dykstra
Special to CW

Second of two parts

IBM was one of the first personal computer makers with its line of 5100 series computers, which it introduced in 1975. The first models had a small screen and a cumbersome operating system and computer language for small computers. They did not include word processing or other individual productivity tools, such as electronic spreadsheet, data base or file management packages. They also did not use the Basic programming language. These computers were, therefore, misdirected toward accounting and business management, not toward good, single-user applications.

IBM sold many of the 5100 series machines on the strength of the IBM name, and many independent developers wrote software packages to run on these computers. In the following years, more computers were sold based on the number of packages that were available. Several thousand packages were available for the 5120, which was the last of this series. Unfortunately, many customers who bought 5100 models based on the quantity of software found the quality of the packages and software vendor support not very good.

In the meantime, some of the other major companies in the computer industry were making and marketing personal computers for appropriate, single-user applications. For example, Wang Laboratories, Inc. was marketing personal computers for word processing and engineering uses and Hewlett-Packard Co.'s line was directed toward engineering. Lanier Business Products, Inc. and Lexitron/Raytheon Data Systems Co. were specializing in word processing.

The retail personal computer industry received its initial impetus from Radio Shack, with its chain of retail outlets and large potential computer- and technology-oriented customer base. Apple Computer, Inc. and Commodore Business Machines, Inc. began marketing through third-party outlets. All three included Basic or other relatively easy programming languages, and low-cost word processing packages were available.

The introduction of Software Arts, Inc.'s Visicalc, available for most personal computers, (except the IBM 5120 because of its inappropriate operating system) gave the personal computer industry a tremendous shot in the arm. Visicalc and other similar and enhanced packages have made the single-user computer a valuable tool for increasing productivity.

In 1979 and 1980, sales of IBM's 5120 computer had leveled off at an estimated $1 billion per year. This represented, by far, the largest share of the personal computer market of any company. Customer complaints, however, were growing, and the product's deficiencies were becoming more evident. Many of the 5120 software developers had abandoned ship and were supporting programs for more state-of-the-art products.

In 1981, IBM introduced the Personal Computer with one of the most effective advertising campaigns and public relations blitzes that the computer industry has experienced. The discontinuation of the 5120 was not announced until long after the fact. By the time the media realized that IBM had discontinued the 5120, few wanted to report it because it was not news. IBM had not only successfully launched a new product, but it had quietly buried an albatross.

> ***Most business failures will be those of opportunists who fail to heed sound management practices. There will be a larger share of failures by those who try to go head-to-head with Big Blue.***

IBM will continue to grow and prosper. There will continue to be many business failures in the computer industry. Most will be the failures of opportunists who fail to heed sound management practices. There will be a disproportionately larger share of failures by those who try to be IBM-compatible and go head-to-head with Big Blue.

The total number of companies in the computer industry will continue to grow as entrepreneurs invent new products and identify new needs. Many emerging niche markets will become future major markets. The companies that continue to be innovative and serve their customers' needs will continue to grow.

Dykstra is president and owner of Dykstra Consultants, a Newport Beach, Calif.-based independent consulting firm. He teaches at the Irvine campus of National University and is the author of Computers for Profit, *recently published by Reston Publishing Co.*

MAN AGAINST THE PAPER DELUGE

Q: How Many People Are Afraid Of Your 4-GL/DBMS?

A: None, If You Have EZNOMAD.

That's right. EZNOMAD is a major extension of NOMAD2 that pulls novice and infrequent end-users into the mainstream of mainframe computing. EZNOMAD's screen-driven environment requires no key words, system commands, or knowledge of syntax for operation.

With EZNOMAD, your end-users can sit back and follow a series of English-language instructions, menus, and pick-and-point screens. Now, those busy "management types" who "never have the time" to learn mainframe computing don't need to take the time. Infrequent users no longer need to "relearn" the system every couple of months.

EZNOMAD's micro-like capabilities access essentially all of the functions and power of NOMAD2. Imagine a senior manager in your company developing databases, creating applications, maintaining databases, and writing ad hoc reports — without your help.

Your senior management will not only be pleased with the capabilities of EZNOMAD, they will also be delighted with the cost of EZNOMAD—its's free to all NOMAD2 licensees.

In other words, you get the ease-of-use of a micro and the tremendous power and flexibility only a mainframe can deliver. And the price is right.

It's nice to know that when you pick NOMAD2 as the 4-GL/DBMS for your company, EVERYBODY will know first-hand that you've made the right choice.

EZNOMAD is the latest innovation in end-user computing from Dun & Bradstreet. NOMAD, now NOMAD2, has evolved over the years to keep pace with the demands for providing business professionals with maximum computing power. EZNOMAD is a major stride in that direction.

NOMAD2:
An Innovation In End-User Computing From Dun & Bradstreet

DunsPlus: The Micro Solution That Reflects The Way You Do Business

You've heard the buzzwords: user friendly, integrated; smarter, faster, cheaper. But when you push the rhetoric aside you're still asking the same question, "Why can't I get a system that solves more problems than it creates?"

You can. It's called DunsPlus and it's built to respond to your information-related business demands without creating demands of its own.

DunsPlus gives the IBM PC XT a built-in business environment. This lets you mold DunsPlus to fit the way you do business.

Within the DunsPlus environment is a software base of the best. Lotus, MultiMate, Western Union electronic mail (to name but a few), are all ready for immediate use. But additional programs to solve your unique problems can also be added with ease.

Instant, yet controlled, access to your choice of mainframes and subscription databases is also a part of the DunsPlus environment. And transferring data throughout the system is as easy as moving a piece of paper from the In Box to the Out Box.

Immediate end-user productivity is not an issue: DunsPlus is a menu-driven system requiring minimal keystrokes for maximum results.

Installation is not an issue: DunsPlus is installed by IBM.

End-user training is not an issue: Training and support are part and parcel of DunsPlus.

Flexibility is not an issue: Any part of the DunsPlus solution--hardware, software, or service--can be tailored to meet your precise business needs.

In fact, there are no issues. DunsPlus does what you want, the way you want it--now.

Designing systems that reflect the way you do business is business as usual for us. NOMAD2, the premier 4th-Generation-Language/DBMS from D&B Computing Services, has made us a leader in the field of information management services. And as your needs evolve, so do we. DunsPlus is just the latest step in translating technological advances into usable business tools --tools that reflect the way you do business.

GSA's Section C micro purchases expected to rise in '85

By Andrew Mohr
Special to CW

The General Services Administration (GSA) has issued its schedule contract solicitation for the purchase of microcomputer hardware, software and maintenance. The solicitation encompasses a wide range of end-user computers, including standalone personal computers, portables and multiuser, multitasking equipment servicing numerous users.

Known as the Section C schedule, it is one of the government's primary contractual vehicles for purchasing microcomputers and related products. During fiscal year 1984, the government spent approximately $50 million on microcomputers purchased from Section C vendors. The amount spent on microcomputers under Section C this year is expected to rise substantially.

GSA schedule contracts are indefinite quantity contracts awarded to numerous vendors.

To ensure that the government receives a fair deal, GSA negotiates discounts from a vendor's commercial price list before awarding a schedule contract to a vendor. After award, the government is not obligated to buy any goods or services from the contractor.

According to the solicitation, GSA will award a single Section C schedule contract for each make, model or line of hardware offered. Vendors offering equipment under the schedule must also offer maintenance and repair services.

However, GSA may award separate schedule contracts for third-party maintenance service.

Software may be sold either together with hardware or as a separate item under software-only schedules. In a change from the current schedule practice, agencies may procure only one of the same model software package for each micro acquired. If an agency desires to purchase two or more of the same software package, then it must acquire the software from the software-only schedule vendor, whose price for the package will generally be lower than that of schedule vendors offering both hardware and software.

Manufacturers and dealers may bid on the Section C schedule solicitation. Dealers bidding on the Section C schedule solicitation must obtain a product support letter from the manufacturer of the equipment proposed to ensure a source of supply for the duration of the contract.

It should be noted that agencies are not required to use Section C and may procure micros, software and maintenance from nonschedule vendors. But to do so, agencies must comply with the more rigorous rules governing the acquisition of nonschedule products.

Mohr practices at the law firm of Cohen & White in Washington, D.C., specializing in federal procurement and computer law.

Suit settled against Telink for $3 million

NASHVILLE, Tenn. — Northern Telecom, Inc. said last month that it had settled a legal claim against one of its former contractors, Telink, Inc., which has agreed to pay a $3 million settlement.

The claim alleged that Telink, a Santa Ana, Calif., subsidiary of Burnup & Sims, Inc., had violated the federal Racketeer Influenced and Corrupt Organizations Act in connection with a $24 million microwave, private-branch exchange and telephone contract in San Diego county.

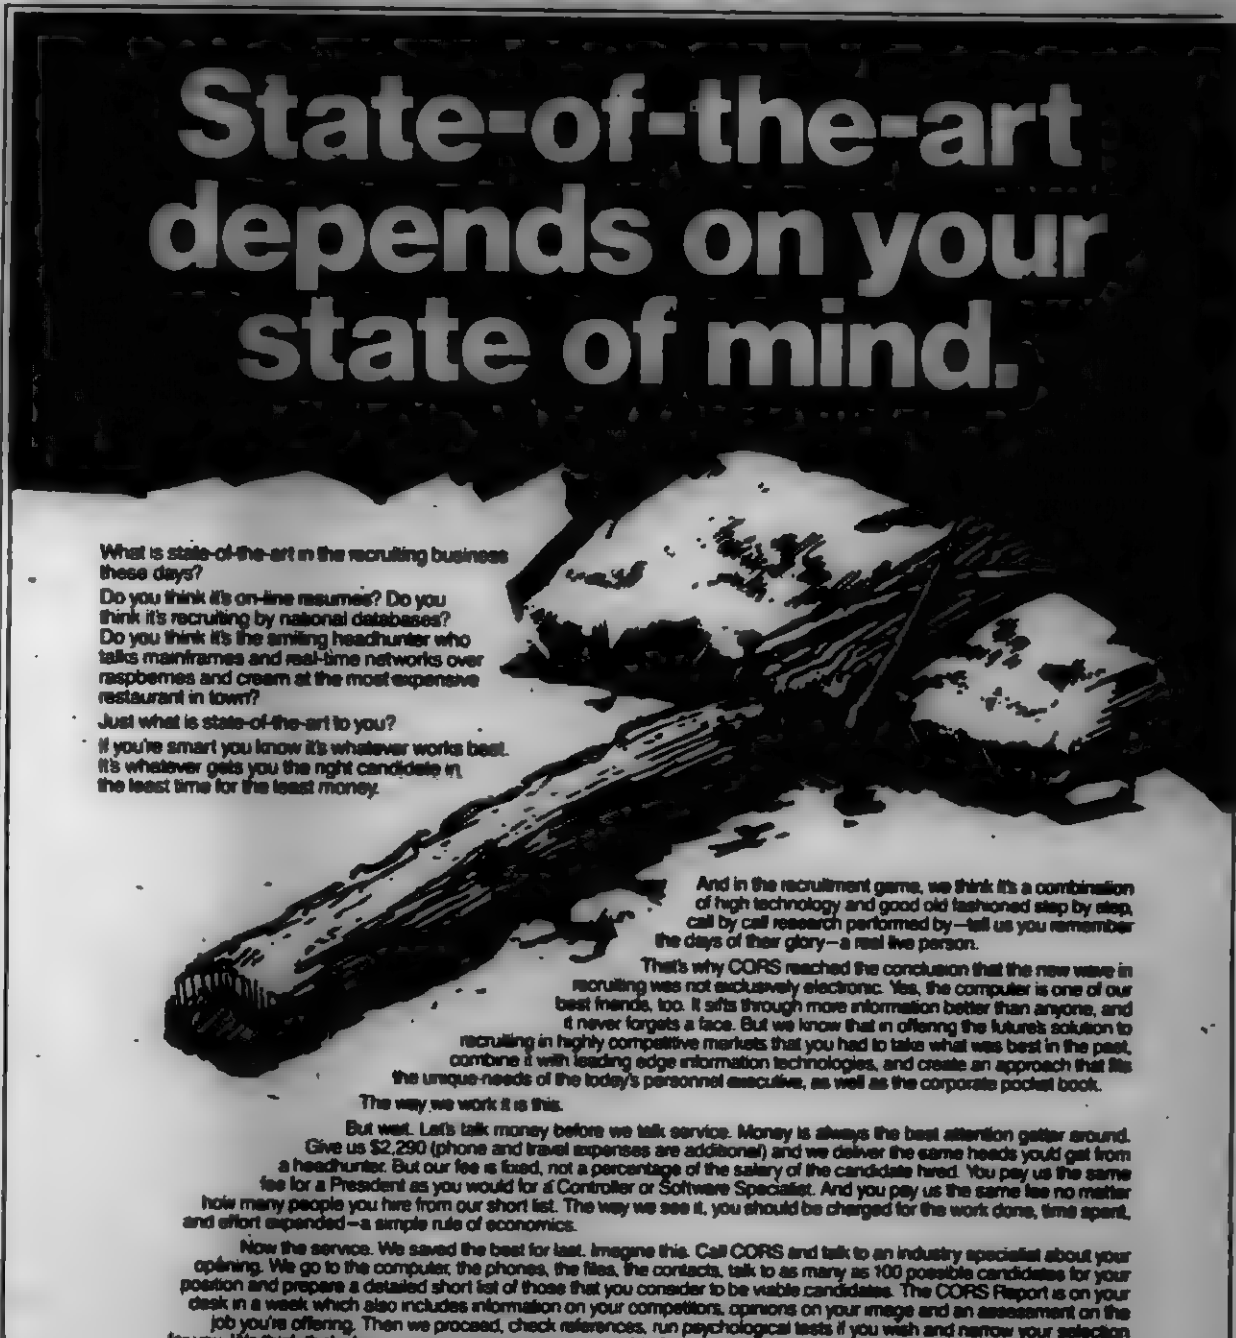
Under terms of the settlement, Telink has agreed to pay all trade debts owed Northern Telecom, as well as damages and legal expenses associated with the two-year legal dispute. Northern Telecom said that the total settlement is $3 million, with payment of damages guaranteed by Burnup & Sims of Plantation, Fla., and by an independent bonding company.

Telink also agreed to dismiss with prejudice a lawsuit it had filed against Northern Telecom charging wrongful termination of Telink's factory-authorized contractor agreement. Northern Telecom said it will pay no damages for suit dismissal.

Last month, Telink, two of its executives, Burnup & Sims and 11 other individuals — including some former county officials — were indicted by a federal grand jury on charges of racketeering, mail fraud and wire fraud in connection with the San Diego County contract and other telecommunications contracts.

Northern Telecom said the settlement with Telink came before the indictment was issued.

In June 1982, the San Diego County Board of Supervisors voted to award the telecommunications contract to Telink. Northern Telecom, which manufactured the system called for in the award, bid $5.6 million less for the contract. The award resulted in a lawsuit and a grand jury inquiry.



State-of-the-art depends on your state of mind.

What is state-of-the-art in the recruiting business these days?

Do you think it's on-line resumes? Do you think it's recruiting by national databases? Do you think it's the smiling headhunter who talks mainframes and real-time networks over raspberries and cream at the most expensive restaurant in town?

Just what is state-of-the-art to you?

If you're smart you know it's whatever works best. It's whatever gets you the right candidate in the least time for the least money.

And in the recruitment game, we think it's a combination of high technology and good old fashioned step by step, call by call research performed by—tell us you remember the days of their glory—a real live person.

That's why CORS reached the conclusion that the new wave in recruiting was not exclusively electronic. Yes, the computer is one of our best friends, too. It sifts through more information better than anyone, and it never forgets a face. But we know that in offering the future's solution to recruiting in highly competitive markets that you had to take what was best in the past, combine it with leading edge information technologies, and create an approach that fits the unique needs of the today's personnel executive, as well as the corporate pocket book.

The way we work it is this.

But wait. Let's talk money before we talk service. Money is always the best attention getter around. Give us $2,290 (phone and travel expenses are additional) and we deliver the same heads you'd get from a headhunter. But our fee is fixed, not a percentage of the salary of the candidate hired. You pay us the same fee for a President as you would for a Controller or Software Specialist. And you pay us the same fee no matter how many people you hire from our short list. The way we see it, you should be charged for the work done, time spent, and effort expended—a simple rule of economics.

Now the service. We saved the best for last. Imagine this. Call CORS and talk to an industry specialist about your opening. We go to the computer, the phones, the files, the contacts, talk to as many as 100 possible candidates for your position and prepare a detailed short list of those that you consider to be viable candidates. The CORS Report is on your desk in a week which also includes information on your competitors, opinions on your image and an assessment on the job you're offering. Then we proceed, check references, run psychological tests if you wish and narrow your selection for you. We think that when you pay even our very reasonable fee, you have the right to expect your job to get a lot easier.

So if you're ready to try our version of state-of-the-art, give us a call. Let's talk about what happens when high technology joins forces with plain old fashioned good sense.

If you'd like to receive more information, or would just like to talk about how CORS may be able to help meet your current needs, please call Tom DeBourcy, Director of Marketing, 1-800-323-1352. (Within Illinois, (312) 773-8555.)

Boeing acquires AI interest

PITTSBURGH — In an effort to expand its development of artificial intelligence technology, Boeing Co. recently said it has acquired a $1.6 million equity interest in the Carnegie Group, Inc., an AI company here.

Boeing also said it has agreed to contracts with the Carnegie Group valued at $4 million or more over four years for the development of knowledge-based software systems.

Four scientists from Carnegie-Mellon University founded the Carnegie Group in February 1983. The company specializes in designing and developing knowledge-based systems for the manufacturing process, such as sensor-based machine control and diagnosis, and knowledge-based management decision-support systems.

Last year, Boeing established an AI center in Bellevue, Wash., operated under the aegis of Boeing Computer Services Co., a division of the Seattle-based aerospace giant.

Robert L. Dryden, president of Boeing Computer Services, said the agreement would allow the company to expand its AI programs by gaining access to technologies from the Carnegie Group.

George Roberts, general manager of the Boeing unit's Advanced Technology Applications Division, said Boeing "will perform a portion of [its] contract work on advanced technology products at the Carnegie Group facility in Pittsburgh."

AT&T offers program to ensure Unix-based software portability

NEW YORK — AT&T recently announced a software program said to be designed to ensure the portability of application software running under its Unix System V, future releases and various System V derivatives offered by AT&T licensees.

The principal element of the AT&T program is the System V Interface Definition, a document that reportedly defines the relationship between an application program and System V.

The document defines a minimum set of system calls and library routines that should be common to all operating systems based on System V. The remaining commands and utilities have been grouped into a logical series of optional extensions to the basic definition, AT&T said.

AT&T said that the goal of the program is to have applications written under the System V definition execute unchanged on any system that conforms to that definition.

AT&T is located at 195 Broadway, New York, N.Y. 10007.

Fujitsu units to run Pick

SANTA CLARA, Calif. — Fujitsu Microelectronics, Inc., a subsidiary of Japan's Fujitsu Ltd., has announced that it has entered into a licensing agreement.

The licensing agreement is to offer the Pick and Associates, Inc. Pick operating system on Fujitsu business computers.

According to a Fujitsu spokesman, the company has not decided which of its processors will be equipped with the Pick operating system and what those systems will cost.

He said Fujitsu products with Pick, a multiuser operating system, probably will be released during 1986.

ISI, ADR reach DBMS agreement

WALNUT CREEK, Calif. — Integral Systems, Inc. (ISI) and Applied Data Research, Inc. (ADR) have announced a marketing agreement.

The agreement is said to enable ISI's on-line, interactive human service system to operate with the ADR/Ideal fourth-generation software development system and the ADR/Datacom/DB relational data base management system (DBMS).

ADR will assist ISI in developing versions of its payroll and personnel system for ADR's relational DBMS.

AEA fills three board positions

PALO ALTO, Calif. — The American Electronics Association (AEA) recently elected three corporate executives to its national board of directors.

The new directors will serve on the AEA's 52-member national board. They are Horace G. McDonell Jr., president and chief executive officer of Perkin-Elmer Corp.; William T. Ylvisaker, chairman and chief executive officer of Gould, Inc.; and Charles E. McKittrick Jr., vice-president of governmental programs at IBM.

The AEA is located at 2600 El Camino Real, Palo Alto, Calif. 94306.

TELECOMMUNICATIONS USERS:

It's All Here!

Attend the first, the most comprehensive and the most important telecommunications conference and exposition of the year . . .

THE SEVENTH ANNUAL

Communication Networks '85

CONFERENCE & EXPOSITION WASHINGTON, D.C./JANUARY 28-31, 1985

Whether you've been in the telecommunications field for one year or ten, you've never seen things changing so fast. It's exciting . . . complex . . . confusing. That's why you need to attend COMMUNICATION NETWORKS '85.

Even if you can spare only one day, it will be worth your while to get a look at the very latest in telecommunications products and services — data communications equipment, including modems, multiplexers and high-speed T1 class transmission equipment . . . hardware and software for Local-Area Networks . . . electronic PBXs . . . satellite transmission . . . fiber optics . . . new low cost, long-distance services . . . and more.

750 EXHIBIT BOOTHS, OVER [illegible] COMPANIES

The exhibits alone will be an education — new products and services offered by some of the world's leading companies will be on display, including AT&T, Digital Equipment Corporation, GTE, Hewlett-Packard, IBM, ITT, RCA, and more.

FULL CONFERENCE PROGRAM

Come to the exhibit hall only or plan to attend any of the seminars and presentations with such speakers as James Martin, Arch McGill, Dennis Patrick and 200 other speakers and panelists. Both introductory and advanced sessions will be held. Free bus service will be provided between the conference location and conference hotels. For complete conference program details, call 800-225-4698, toll free. (In Massachusetts, call (617) 879-0700.)

SAVE $5 ON ADMISSION TO EXHIBITS

Bring this special coupon to the Washington Convention Center with $5 cash. It's worth $5 off the regular $10 exhibit registration fee. Exhibit hours are:

Tuesday, January 29 — 10 AM-5 PM
Wednesday, January 30 — 10 AM-5 PM
Thursday, January 31 — 10 AM-3 PM

You'll also get to meet exhibitors informally in their hospitality suites, plus enjoy all the fun and excitement of the Nation's capital city.

And you'll be eligible to attend a free conference session and to win one of several prizes, including an AT&T Personal Computer.

DON'T MISS COMMUNICATION NETWORKS '85 in Washington, D.C. — the most important telecommunications conference this year.

COMMUNICATION NETWORKS
CONFERENCE & EXPOSITION
Washington, D.C. / January 28-31, 1985

CONDUCTOR: The MIS Approach to End-User Access

Today—end-users need greater access to data. And MIS needs better control. To solve both problems, TSI introduced CONDUCTOR.

CONDUCTOR lets end-users get the data they need. CONDUCTOR selects, manipulates and delivers data to any end-user environment. Without programming. And CONDUCTOR gives MIS more control than ever over quality and integrity, with a new degree of security.

While others have tried to solve the end-user problem, they've only addressed a small part. CONDUCTOR goes for the big picture. So remarkably different, there's virtually nothing else like it.

CONDUCTOR is the latest innovation in software from Dun & Bradstreet. As such, it joins NOMAD, now NOMAD2, the premier 4-GL/DBMS from D&B Computing Services, and DunsPlus, the "people literate" microcomputer that reflects the way you do business.

Find out about TSI's CONDUCTOR today. We're sure you'll like the way it helps you CONDUCT business.

COMPUTER INDUSTRY

SUPERSHORTS

Computer Sciences Corp. has received a $14.1 million subcontract from IBM for services in the design competition phase of the Federal Aviation Administration's (FAA) advanced automation system program.

During the 36-month design phase of the program, IBM and a team led by Hughes Aircraft Co. will develop competitive designs for the advanced automation system. The FAA will then select one contractor to produce and install the system. This will provide new computer software, new processors and new controller work stations, known as sector suites.

■

Magnetic Peripherals, Inc. announced that it plans to reduce the work force at its Oklahoma City plants. Approximately 20% of the current full-time work force will be terminated or reassigned as production ceases by year-end 1984.

The decision to discontinue production at the plant stems from the poor market for floppy drives caused by severe price erosion.

■

Hyundai Group, Korea's largest company, has announced its new $40 million microelectronics facility in Santa Clara, Calif..

The new 100,000-sq-ft facility would house headquarters, marketing, engineering and manufacturing operations for Hyundia's wholly owned U.S. subsidiary, Hyundai Electronics America.

■

Beehive International Ltd. has announced that its wholly owned subsidiary, **Beehive Ireland Ltd.**, is entering into an orderly and voluntary wind-down of its manufacturing facility located in Fermoy, Ireland.

Beehive International is in the process of signing agreements with the customers of Beehive Ireland to continue the supply of Beehive products to those customers directly from Beehive's Salt Lake City plant.

Beehive Ireland intends to pay all sums presently owing to suppliers and to work out acceptable arrangements with its bank and with the Irish development authority with respect to certain loans and grants it has received.

■

Onyx+IMI, Inc. announced that it has consummated an agreement with **Computer Memories, Inc.** to sell the technology, manufacturing rights, inventory and assets for a new family of half-height, 5¼-in. Winchester disk drive products for which development by Onyx+IMI has been substantially completed.

The agreement provides for the sublease of certain facilities and grants Computer Memories a worldwide license to use Onyx+IMI's patents, trade secrets and other proprietary information for the development, manufacture and sale of these half-height products.

Onyx+IMI previously announced its plans to divest itself of its disk drive division. The company had estimated that it would be necessary to establish a $10 million aftertax reserve associated with the divestiture.

■

Gould, Inc. has opened a corporate office in China.

The new office in Beijing will coordinate all of the sales and marketing activities for Gould's four electronics business segments with Chinese government industrial ministries.

In July, the company also signed a 10-year licensing agreement with the China National Machinery and Equipment Import and Export Corp. in Beijing for the manufacture and assembly of industrial computers called programmable controllers.

■

The Foxboro Co. and **Hewlett-Packard Co.** have announced the formation of a strategic partnership designed to provide integrated information networks for use in the process industries.

The agreement focuses on an OEM arrangement that makes available information-based systems using Foxboro process control technology in combination with HP distributed data processing and real-time systems.

■

Xidex International, a division of Xidex Corp., announced that it has signed a three-year equipment, raw materials and technology agreement with the **Shanxi Provincial Electronics Industry Corp.** of China. A dollar amount was not disclosed.

The agreement calls for Xidex to provide hardware, raw materials and technical support for a complete floppy disk assembly facility to be in operation in Shanxi province by early 1985.

■

General Electric Information Services Co. has announced its new disaster recovery services business. Located in Schenectady, N.Y., the disaster recovery services facility contains mainframe equipment from Honeywell, Inc.; IBM and Hewlett-Packard Co., as well as related peripheral devices, telecommunications links, office and work space.

Disaster recovery services provide a "hot" site facility for use by subscribers whose own computer facilities have been destroyed or disabled. This service is designed to fit the needs of Fortune 500 companies operating their own data centers.

■

D.W. McArthur, group vice-president, information systems group, at 3M Corp., has been elected chairman of the board of the **Computer and Business Equipment Manufacturers Association (Cbema). Richard Dunglas**, group vice-president, U.S. marketing and service, Honeywell Information Systems, Inc., was elected board vice-chairman.

Ronald Gallier, vice-president of

government affairs for the Multigraphics division of AM International, Inc., has been elected chairman of Cbema's joint plans and policies committee. **A. Raymond Daniels**, director of industry standards and relations at NCR Corp., was named vice-chairman of plans and policies.

■

Applied Computer Techniques Ltd. (ACT), a UK firm, has announced the formation of a Santa Clara, Calif.-based company that will be responsible for overseeing U.S. marketing efforts of ACT's Apricot microcomputer line.

The new company, **Apricot, Inc.**, will receive approximately 20% of its initial capital of $20 million from ACT. The balance of the funds required for working capital and for financing the initial promotional expenditure is expected to come from ACT's own shareholders and other institutional investors.

■

Ing. C. Olivetti & Co., S.P.A. and **Filenet Corp.** have announced an agreement in which Olivetti will distribute overseas the recently introduced Filenet document-image processor system. The equipment will be sold directly by Olivetti, which will also provide field service support.

■

South Korea's **Daewoo Telecom Co., Ltd.** has signed a long-term contract with U.S. vendor **Leading Edge Products, Inc.** to provide the American firm with personal computers designed and manufactured by Daewoo Telecom.

The products will be marketed by Leading Edge in North, South and Central America and in Europe and Australia. The companies will market the products jointly in Asia and Africa.

■

The Napa Division of Ramtek Corp. has selected **Artel Communications Corp.** to provide fiber-optic systems for communications in its advanced, high-resolution computer graphics systems.

The Napa Division will market Artel's fiber-optic interfaces as an optional feature in its computer graphics systems.

■

Deltak, Inc., a Prentice-Hall, Inc. subsidiary, and **Software AG of North America, Inc.** have announced an agreement to codevelop and comarket multimedia and computer-based training for Software AG software products.

■

Network Research Corp., Santa Monica, Calif., and **Spartacus Computers, Inc.**, Bedford, Mass., have entered into a joint marketing agreement making available a high-performance connection between IBM mainframes, IBM and compatible personal computers and non-IBM workstations.

■

Sytek, Inc. announced last month that it has filed a registration statement with the U.S. Securities and Exchange Commission regarding its proposed initial public offering of two million shares of common stock.

The estimated offering price is between $10 and $12 per share. The proposed new offering consists entirely of newly issued shares to be sold by the company, which intends to use the proceeds to repay bank debts, purchase capital equipment and add to working capital.

MERGERS AND ACQUISITIONS

Xidex Corp., Mountain View, Calif., and **Evotek Corp.**, Fremont, Calif., jointly announced that an agreement has been reached under which **Oktel**, a wholly owned subsidiary of Xidex Corp., will acquire 100% of the common stock of Evotek.

Oktel will move from its Campbell, Calif., facility to the Evotek facility.

■

Linear Corp., Carlsbad, Calif., has purchased controlling interest in **Security Science Corp. of America, Inc.**, Scottsdale, Ariz. Terms of the acquisition were not available.

■

An agreement in principle has been reached on the purchase of the **Monroe Systems for Business** division of **Litton Industries, Inc.** by a group of private investors headed by Jeffry M. Picower and H. V. Williams and including Robert F. Kane, Monroe's president.

The leveraged buyout is subject to the completion of definitive agreements, approval by Litton's board of directors, financing and certain governmental approvals. Terms of the proposed transaction were not disclosed.

■

Computer Task Group, Inc., Buffalo, New York, announced it has acquired **Amtec Systems Corp.** of Los Angeles. Terms of the acquisition were not available.

■

Aquix Advanced Systems Corp., Farmingdale, N.Y., has agreed in principle to acquire **Players Computer, Inc.**, also of Farmingdale, and, concurrently, establish an additional DP service support facility at the World Trade Center in New York.

The acquisition is subject to several conditions, including the approval of the transaction by the shareholders of Player's Group Companies, Inc.

■

Control Data Corp., Sunnyvale, Calif., announced the acquisition of **Computer Marketing Association** (CMA). CMA is a vendor of maintenance services for computers manufactured by Digital Equipment Corp. Terms of the agreement were not disclosed.

■

American Computer Hardware Corp. (ACHC), Santa Ana, Calif., and

MERGERS

from page 141

Systech Corp., San Diego, announced the completion of the purchase of Systech's Burroughs Corp. interface division by ACHC. ACHC is currently expanding its product lines and becoming a more visible company to both the general computer industry and to the computer-buying public. With this acquisition, ACHC acquires an existing working interface for use with the Burroughs line of minicomputers.

Terms of the agreement between the firms were not available.

■

Motorola, Inc., Schaumburg, Ill., announced the acquisition of **CTX International**, Sunnyvale, Calif., for an undisclosed amount of cash. The privately held company will become part of Motorola's newly formed enterprises organization.

■

Printronix, Inc., Irvine, Calif., announced it has completed the acquisition of **Anadex, Inc.**, a privately held California-based company that is engaged in the design, manufacture and sale of serial matrix computer printers. The acquisition was completed through a merger of Anadex into a newly formed, wholly owned subsidiary of Printronix in exchange for 380,948 shares of Printronix common stock.

The new subsidiary will continue to conduct business with its former management under the name Anadex.

■

Money Management Systems, Inc., Waltham, Mass., has been acquired by **Strategic Information, Inc.**, Burlington, Mass. Terms of the acquisition were not disclosed.

■

Seagate Technology, Inc. and **Grenex Corp.**, Scotts Valley, Calif., jointly announced that they have reached an agreement in principle for Seagate's acquisition of Grenex in exchange for not more than 3.5 million shares of Seagate common stock.

The transaction is subject to completion of a definitive agreement, approval from the board of directors of both companies and the Grenex shareholders and customary regulatory approvals.

■

MTI Systems, Port Washington, N.Y., a division of Ducommun, Inc., announced that an agreement in principle has been reached to acquire **Cgdatacom, Inc.**, Pittsburgh. Details of the purchase agreement were not disclosed.

■

Computer Identics Corp. announced it has reached an agreement in principle with **N.V. Bekaert S.A.**, a Belgian corporation, whereby Bekaert would purchase 500,000 shares of Computer Identics common stock.
stock

The two companies recently announced an intent to form a joint-venture Belgian company to sell, service and manufacture bar code systems and equipment in Western Europe.

■

Communications Corp. of America (CCA), Dallas, announced the completion of an agreement with **Telic Alcatel** and **Thomson-CSF Telephone.**

Telic and Thomson, both French companies affiliated with Compagnie Generale D'Electricite, a $7 billion international company headquartered in Paris, purchased one million shares of CCA's common stock at $10 per share.

Under the terms of the agreement, Telic and Thomson have a two-year option to purchase from CCA up to 2.5 million additional shares of common stock at $10 per share.

CCA further announced the signing of a distributorship agreement with Thomson CSF Communications wherein CCA will be a nationwide distributor of the Opus key system products manufactured by Thomson CSF Communications.

■

American Bancservice Corp. has acquired **Vertimax Corp.**, Lakeland, Fla., a microcomputer software company, in exchange of stock. Terms of the agreement were not available.

■

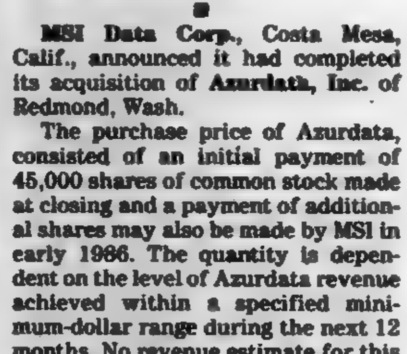
McGraw-Hill, Inc., New York, acquired, for cash, the capital stock of **Occidental Consulting Group, Inc. (Oxicon)** of Lafayette, Calif.

Oxicon produces a series of test instruments, or profiles, that are used by businesses to screen and select the best candidates for specific jobs. The system was designed to help businesses improve their selection of employees, and thus increase productivity and reduce turnover.

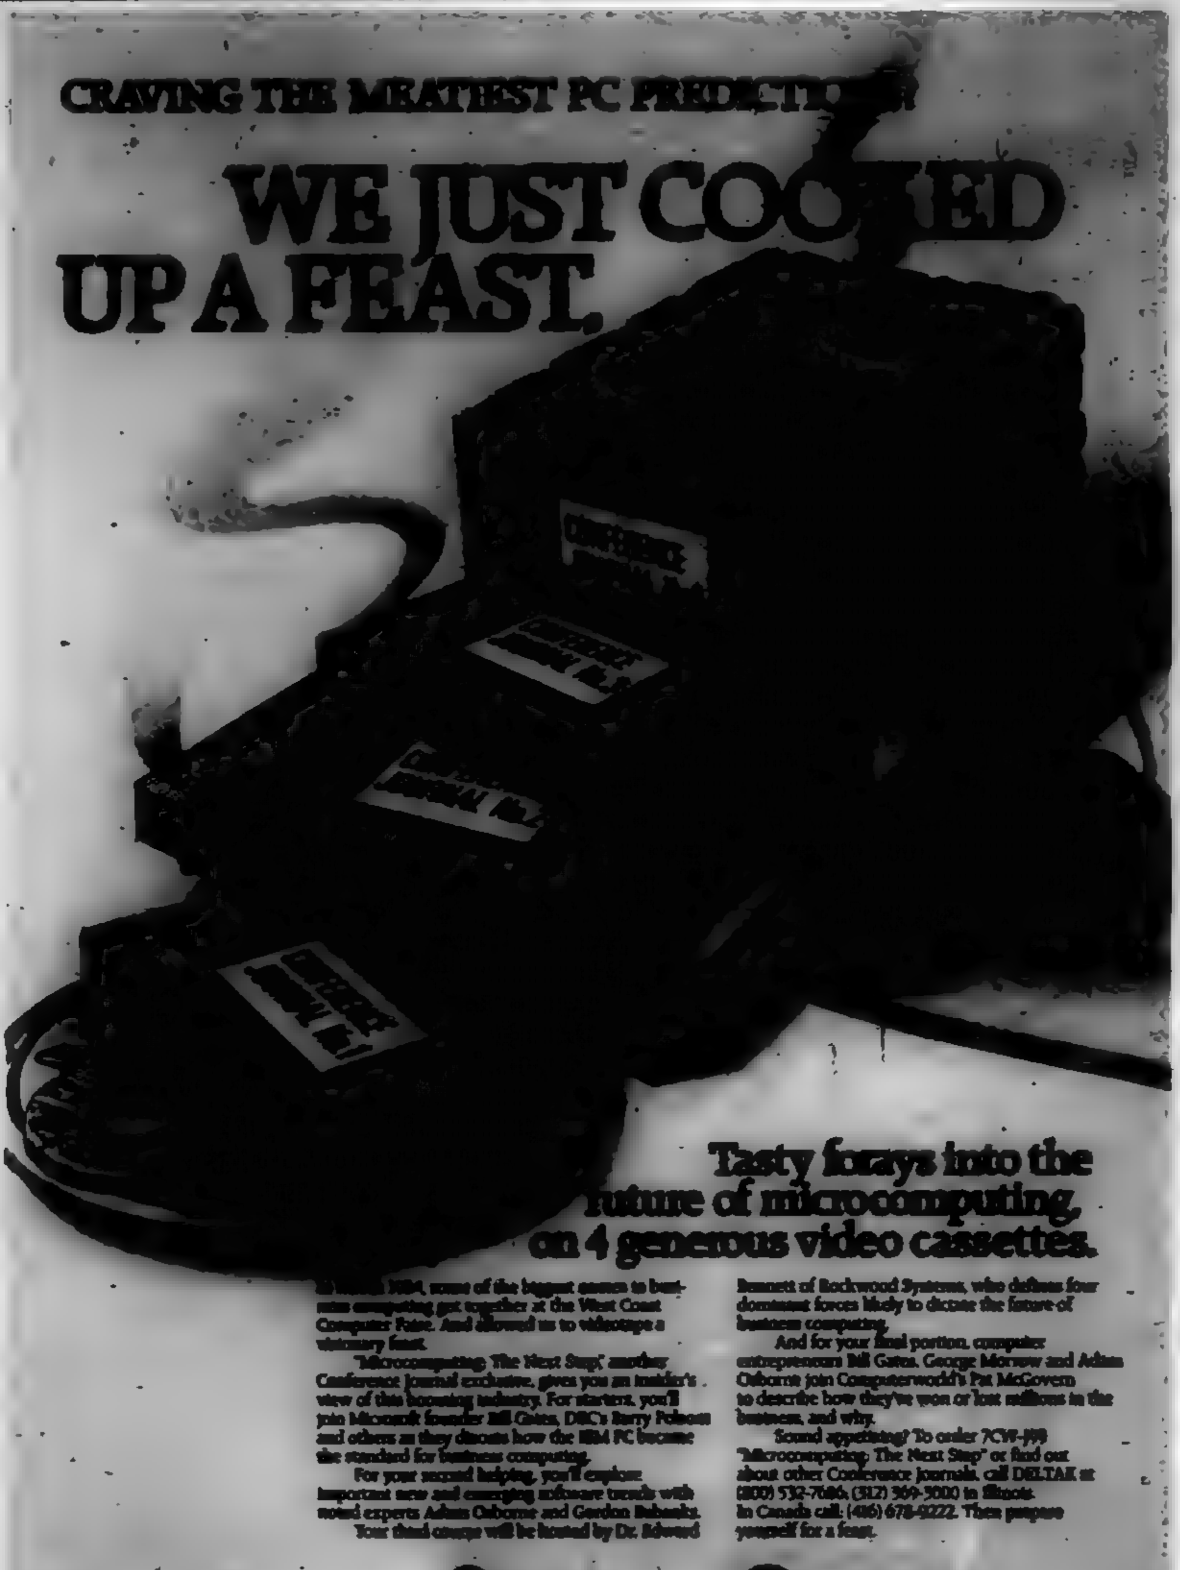
■

MSI Data Corp., Costa Mesa, Calif., announced it had completed its acquisition of **Azurdata, Inc.** of Redmond, Wash.

The purchase price of Azurdata, consisted of an initial payment of 45,000 shares of common stock made at closing and a payment of additional shares may also be made by MSI in early 1986. The quantity is dependent on the level of Azurdata revenue achieved within a specified minimum-dollar range during the next 12 months. No revenue estimate for this period was given, but MSI did say that the 1984 level is expected to be between $5 million and $6 million.



'A real increase in this computer crime lately.'



CRAVING THE MEATEST PC PREDICTIONS?

WE JUST COOKED UP A FEAST.

Tasty forays into the future of microcomputing, on 4 generous video cassettes.

[illegible] 1984, some of the biggest names in business computing got together at the West Coast Computer Faire. And allowed us to videotape a visionary feast.

"Microcomputing: The Next Step," another Conference Journal exclusive, gives you an insider's view of this booming industry. For starters, you'll join Microsoft founder Bill Gates, DEC's Barry Folsom and others as they discuss how the IBM PC became the standard for business computing.

For your second helping, you'll explore important new and emerging software trends with noted experts Adam Osborne and Gordon Eubanks.

Your third course will be hosted by Dr. Edward Bennett of Rockwood Systems, who defines four dominant forces likely to dictate the future of business computing.

And for your final portion, computer entrepreneurs Bill Gates, George Morrow and Adam Osborne join Computerworld's Pat McGovern to describe how they've won or lost millions in the business, and why.

Sound appetizing? To order 7CW-J99 "Microcomputing: The Next Step" or find out about other Conference Journals, call DELTAK at (800) 532-7686, (312) 369-3000 in Illinois. In Canada call: (416) 678-9222. Then prepare yourself for a feast.

BTU, Ulvac form company to market chip processing equipment in Japan

NORTH BILLERICA, Mass. — BTU Engineering Corp. said it has formed a joint venture with Ulvac Corp., a Japanese company, to market semiconductor processing equipment in Japan.

The new company, Ulvac-BTU, will initially market diffusion, oxidation and chemical vapor deposition systems made by BTU. The joint venture company plans to build its own system eventually, using technology and components provided by BTU.

Ulvac is a manufacturer of high-vacuum semiconductor production equipment.

According to BTU, the joint venture company will begin operations at a plant in Chigisaki City, Japan, but will eventually move to a new manufacturing facility in Tsukuba Science City, a large research center near Tokyo.

BTU said Ulvac-BTU plans to produce 30 to 40 processing systems during its first year of operation.

NEC, Corvus to develop controller

LAS VEGAS — Corvus Systems, Inc and NEC Corp. recently announced an agreement here to develop a single-chip controller for Corvus' Omninet local-area network.

Presently, the controller function for Omninet is implemented with a three-chip set developed by Corvus, a company based in San Jose, Calif.

According to the firms, the Cmos single-chip controller will be manufactured and distributed by Tokyo-based NEC to Corvus and Omninet licensees.

Corvus claimed the one-chip version will allow simpler and lower cost implementation of the transporter than the three-chip set. It will also provide higher performance and expanded functionality, according to the company.

from page 129

operating officer of Hewlett-Packard Co., stated, "The capital gains differential is the very lifeblood of America's high-risk, high-technology companies."

Morton said the 1978 reduction in capital gains rates sharply increased the volume of venture capital investment.

"During the eight years prior to the reduction in capital gains rates, investments made available to venture capital funds averaged only $50 million per year. In 1983, $4.1 billion in new risk capital was made available for investment in new ventures and growth companies," Morton said.

Charlotte LeGates, a spokeswoman for Cbema, said the association is not concerned about the capital gains proposal. "That's really a small-company issue and not significant to our members," she said.

Ashton-Tate appoints chief

CULVER CITY, Calif. — Ashton-Tate announced last week that Edward M. Esber Jr. has been named chief executive officer. Esber succeeds David C. Cole, who abruptly resigned the position of chairman and chief executive officer in late October.

The microcomputer software company also announced that Carmelo J. Santoro, who had served as active chairman since Cole's resignation, has resigned the interim position. Santoro, who is chairman of the board and chief executive officer of Silicon Systems, Inc. in Tustin, Calif., will continue to serve on Ashton-Tate's board.

Esber joined Ashton-Tate in May as executive vice-president in charge of marketing and sales. He has since been appointed chief operating officer and was elected to the board of directors.

Executive committee planned

Ashton-Tate also announced the formation of an executive committee that will perform the functions of chairman and concentrate on long-term planning, according to the company.

Ashton-Tate said it has no immediate plans to fill the vacant chairman's position.

Last month Cole was appointed president and chief operating officer of Ziff Corp., a company that has holdings in informatioh services companies and computer publications.

POPPY

from page 129

cause they are risk-takers and are driven more by price and performance considerations than are Fortune 1,000 companies. "The Fortune 1,000 [firms] are in a freeze, waiting [for] the clash of the titans [between IBM and AT&T] to eventually resolve itself," he said. "Who knows how long that will take?"

Robert Lefkowitz, director of microcomputer systems software research for the market research firm Infocorp of Cupertino, Calif., and a former Durango employee, said "the company has been in serious trouble for the last three years" and has not been profitable for more than two years. One strength, however, has been aggressive overseas sales, which account for half of Durango's sales, and a strong, though relatively untested, manufacturing capability.

With product life cycles now averaging three years, Lefkowitz said, "the clock is already ticking on the AT." And because the Poppy is months ahead of IBM's product, OEMs making hardware "build-or-buy" decisions may opt for Durango's product, he said.

On the downside, however, the personal computer shakeout has made both vendors and venture capitalists nervous. This may impact Durango, which is now in "a cash-poor, production ramp-up mode," Lefkowitz said. Vendors may insist on stricter cash payment terms in the short run, and future financing may be hard to obtain. Lefkowitz said the total venture capital investment in Durango after more than seven rounds of financing since 1977 is approximately $17 million.

Infocorp predicted the Unix market to reach $2 billion this year.

Looking for IMS Productivity Tools?

Take a close look at APS/IMS...
APS/IMS is the application productivity system that for the first time, offers a strategic solution for IMS DB/DC and CICS/DL1 users.

With APS/IMS, you won't have to settle for a development tool that meets just a few of your productivity requirements. APS/IMS incorporates screen and application "painting," prototyping capabilities, and procedural and macro language support into a single, integrated architecture. With APS/IMS, your development staff can design, prototype and implement batch and online applications in a fraction of the traditional time and cost — without sacrificing performance or funtionality.

And APS/IMS won't force your development staff to learn a new language or adopt a new design methodology. APS/IMS is fully compatible with your existing source-level interfaces and generates native-level COBOL source code, without adding any run-time overhead.

...via the "FAST TRACK" Evaluation
Your time is important. That's why SAGE has developed an evaluation process that's quick and thorough: In 1-½ days, our "FAST TRACK" will give you an indepth conceptual and technical overview of the APS/IMS product plus a "hands-on" workshop session. You'll meet with our technical support staff, product development managers and corporate executives to gain the complete product knowledge you need to make an informed decision.

So if timing is critical, schedule a "FAST TRACK" session. Just call 800-638-8703 and ask to speak to a "FAST TRACK" Representative.

YES, I am interested in APS/IMS.
☐ Timing is critical. Tell me about FAST TRACK.
☐ Please have a representative contact me.
☐ Please send me information.

SOFTWARE DEVELOPMENT MANAGER

Impell Corporation has recently joined forces with Combustion Engineering and has achieved a recognized position within the AEC industry. We are a successful growing leader and have embarked on a well-funded joint CAD/CAE venture with a major turnkey vendor. We are seeking an aggressive and highly motivated individual to lead a newly formed software development team. The successful candidate will report to the Director of our new product development group and will be based in the San Francisco Bay Area.

To become a part of this ground-floor opportunity, we require 8 - 10 years' software development experience, preferably with a start-up organization. Must be capable of making decisions along with problem solving. Strong understanding of state-of-the-art hardware and workstation technology required. Computer Science degree or equivalent also required.

We offer an outstanding compensation package, including incentives and a full range of benefits. If you have a high motivation to succeed and feel you can make a significant contribution to a start-up group such as ours, forward your resume to: **Deborah Sakurai-Norita, Technical Recruiter Dept. # C-4210 Impell Corporation, 220 Montgomery Street, San Francisco, California 94104.** EOE M/F/Handicapped.

ACT is an Equal Opportunity/Affirmative Action Employer

VM SYSTEMS PROGRAMMERS

35 Hour Week! Easy Work

If that's what you really want, these jobs aren't for you. [illegible] VM/SP system software products, if you want growth and recognition for your ideas and work—read on.

We need two people: (1) A top VM/SP Systems Programmer with good CP internals knowledge and outstanding coding and debugging skills; experience with other systems is desirable. And (2) A Junior Systems Programmer or Trainee with VM/SP experience. Both will be involved in more than one of the following, depending on interest and skills: product planning, development and documentation; system maintenance; utility development; customer and internal user support.

What you can do is more important than what you have done—we want ability and the willingness to work hard, rather than a great resume. If you think you'd fit, please write to:

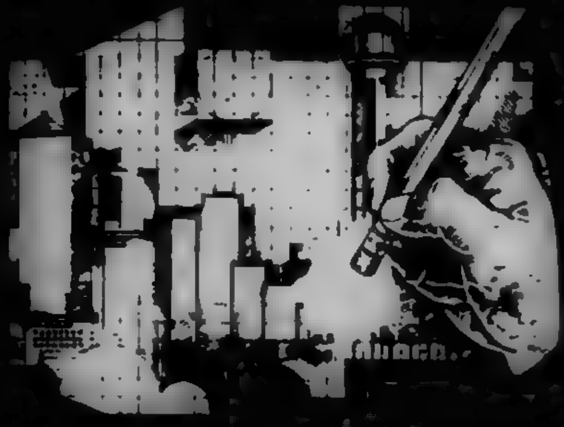
[illegible] Professionals



[illegible] we put your ideas to work.

Look to Dallas for a dynamic place to live.

At E-Systems you will have opportunities that most engineers just dream about — opportunities to work on long-term projects that will put you on the leading edge of technology in command and control, reconnaissance, and other highly advanced electronics systems.

Plus, with a career at E-Systems in Dallas, you will have the opportunity to enjoy everything that makes Dallas one of the most enjoyable and livable areas in the United States.

There are other pluses: salaries and benefits at E-Systems compare with the best anywhere; and, the long tenure of service our employees provides contributes to the stability and continuity of our professional force.

If joining E-Systems in Dallas means a move, we will help you with *our* personalized relocation program. Dual career assistance is an integral part of *our* program.

Right now, E-Systems is interested in talking to the following Software Professionals:

DATA BASE ADMINISTRATORS: Responsible for building and managing large database systems for VAX and/or IBM hardware systems. Requires a degree plus five years experience structuring, algorithm development and fail safe techniques.

SOFTWARE ENGINEERS: Responsible for designing software to operate digital image/signal processing controllers. Requires BS (MS) EE/CS plus fluency in structured FORTRAN, PASCAL, ADA, and/or Assembly languages. BW, C', O/S, I/O interfaces and/or communications background a plus.

Contact **Ann Olson** for these positions.

PROJECT LEADERS: Responsible for assisting software development managers with definition and implementation of tasks in software project planning, procedures, Unit Development Folders, proposal writing and cost estimation of government-type programs. BSCS, EE or Math with six plus years experience. Experience with VAX, PASCAL and MIL-Spec standards required. These individuals will eventually assume roles in software management.

SENIOR SOFTWARE ENGINEERS: Responsible for implementing the tasks defined below on software development projects. These engineers will report to project leaders. BSCS, EE or Math with six plus years experience in definition, design, development and delivery of software systems, utilizing VAX or Motorola 68000 computers. Required fluency in PASCAL, structured FORTRAN, MACRO-11 or Assembly languages. Experience with Mil-Spec standards required.

SENIOR VMS SPECIALIST: Responsible for definition, development and enhancement of software development environment on VAX systems. BSEE (MS) or CS with seven plus years related experience with VAX systems in PASCAL fluency required. Must be VMS internalist within I/O driver systems. Defense environment background a plus.

Contact **Gary Hunt** for these positions.

SOFTWARE ENGINEER: Responsible for design, coding, and testing of system level software. Position requires minimum of BSCS/or BSEE degree with at least two or more years experience with the VAX 11/750 or 780 and VMS operating systems. Experience in one or more of the following areas is desirable: MIL-Standard documentation, UYK series computers, and real-time signal processing architecture.

BUSINESS PROGRAMMER ANALYST: Responsible for development and maintenance of on-line systems in an IBM OS/MVS IDMS CICS environment. Must have a college degree in Business, MIS or related field, and three to five years experience developing/maintaining on-line systems, supporting Accounting, Manufacturing or Purchasing/Inventory control.

DATA BASE ADMINISTRATOR: Responsible for the installation of IDMS in an IBM OS/MVS environment, for the design and maintenance of the data base and related data dictionary, and for the development and enforcement of standards and procedures for its usage. Requires a college degree and three to five years data base Design/Administration experience.

Contact **Bob Webber** for these positions.

If you are looking for new career challenges, then E-Systems Garland Division could be what you are looking for. We will offer you the opportunity to develop new ideas in a *warm, friendly* atmosphere where people *really* care about you. Qualified candidates are invited to contact the specified Staffing Specialists for those positions they represent, at: **E-Systems, Inc., Garland Division, P.O. Box 660023, Dept. 41LK, Dallas, Texas [illegible]**

Boeing Dayton RDB

The Boeing Company has a world-wide reputation for pioneering at the leading edge of technology. And for providing quality products and services, on-time and within budget. This tradition of excellence is especially visible at Boeing Computer Services, where we constantly face and meet the challenges of explosive growth in demand for integrated information services.

Now, we are assembling a team of talented, dedicated individuals like you to help us meet our newest challenge the development of a **Requirements Data Bank (RDB)** for the Air Force Logistics Command in Dayton, Ohio. The RDB will provide an efficient, effective, and economical logistics and repair requirements forecasting system. Helping to maximize support by the Air Logistics Centers to USAF operational and war readiness objectives. The RDB will be a fully-automated system using large-scale IBM mainframes (3081), MVS, CICS, ADR DBMS & Utilities, Basic IBM Utilities and COBOL.

If you have experience utilizing the above systems (particularly IDEAL & ADR's DATCOM DB), Boeing welcomes the chance to talk with you concerning the many challenging opportunities that will be created for:

- **System Integration & Test Engineers**
- **Logistics Analysts**
- **Software Systems Analysts**
- **Hardware Systems Analysts**
- **Programmer/Analysts**
- **Training Analysts**

We offer a comprehensive compensation program. A Security clearance will be required for these challenging positions. For more information, send resume and salary history, in strictest confidence (principals only) to: Susan Feliciano, Dept RDB-1 7980 Gallows Court, Vienna, VA 22180. An equal opportunity employer.

If you are looking

to recruit computer professionals,
your first step should be to advertise
in COMPUTERWORLD Classifieds.
Chances are, it will be the step needed.

We're the number 1 trade newspaper for the computer industry. It makes sense, then, that advertising in COMPUTERWORLD should be the first and most logical step to take when searching for quality computer industry professionals.

With exposure to over half a million readers, there are bound to be plenty of people who are looking for what you have to offer. This means a greater number of responses to your advertisement and a wider selection of candidates from which to choose. And you shouldn't have to look any further.

COMPUTERWORLD publishes every Monday with an ad deadline of 10 days prior to each issue date. You may send in copy to be pubset or camera-ready material (velox or negative) via the mail. We provide telecopier service and will also take ads over the phone.

Our mailing address is COMPUTERWORLD, Classified Advertising, 375 Cochituate Road, Box 880, Framingham, MA 01701. Or call for more information at 1-800-343-6474 or, in Massachusetts, (617) 879-0700.

We're Hiring Data Processing Professionals

Central and South West is a two plus billion dollar electric utility holding company offering competitive salaries, excellent benefits and stable working conditions. Our Information Services Department, as host center, provides services in a multi-company environment.

Our primary system software is MVS/SPI with JES2. Additionally we use TSO/SPF, COBOL ROSCOE, and Command Level CICS. Our data base is IDMS. We were recently chosen to be one of Cullinet's beta sites for their new development software! We use Cullinet's 4th generation languages—ADS/O, OLM, CULPRIT, etc.

Each of our current openings needs people with proven analytical skills and user interface experience in addition to technical knowledge and abilities.

If we're the type of company you are seeking, and your experience is from a similar environment, please send your resume *and* salary requirements to the Employee Relations Department. Principals only.

Programmer/Analyst
(Business Applications)
Typical project assignments include construction project management, land management system, corporate shareholder system, etc.
Will provide technical expertise in system design, problem determination and system maintenance efforts. Should have JCL skills and online experience (CICS, VSAM) plus exposure to data base concepts.

Sr. Programmer/Analyst
(Engineering Applications)
Multi-project assignments offering multi-company exposure will include CAD/CAM, VM/CMS, transmission design, etc.
Will provide scientific/engineering expertise in system design and implementation efforts. Should have prior scientific/engineering application experience plus IDMS experience.

Programmer/Analyst
(Engineering Applications)
Initial assignment to the mining information management project will result in the development of a total, stand-alone system using state-of-the-art technology.
Will provide online and data base technical expertise in system design and problem determination efforts. Should have related technical skills developed from manufacturing related assignments. IDMS, ADS/O experience important.

Central and South West Corporation
P.O. Box 220164 • Dallas, Texas 75222

Central and South West Corporation is one of the nation's leading electric utility systems, having annual revenues of more than $2 billion. With corporate headquarters in Dallas, CSW serves more than four million people through its operating companies in Texas, Oklahoma, Arkansas and Louisiana.

Equal Opportunity Employer

COMPUTER GRAPHICS DEVELOPMENT

WYETH LABORATORIES, a leading pharmaceutical firm, is seeking an experienced individual with a background in computer graphics software development to work in support of clinical research applications. This new high-level position is now available with our Biomedical Data Systems group in Radnor, a highly attractive Main Line Suburb of Philadelphia.

Responsibilities of this position will emphasize systems analysis and computer programming in support of new and existing software systems. Using state-of-the-art hardware, the individual will coordinate all aspects of graphics support with medical researchers (physicians, medical writers, etc.) including development of new display techniques, assessment of new technology, and administration of personnel training. Supervision of one junior staff member will also be required.

Applications will be developed using the TELL-A-GRAF and DISSPLA graphics software packages in conjunction with PL/1. Knowledge of these software packages is required as is experience in developing applications systems on large-scale IBM computers. The successful candidate must be results-oriented and possess effective communications skills. Educational requirements include a Bachelor's degree in mathematics, computer science, or the sciences. An advanced degree (Master's level) is highly desirable.

This position offers an excellent starting salary and includes an attractive package of fringe benefits. Qualified individuals are invited to apply by forwarding a resume to: Personnel Department.

Beautiful surroundings in South Carolina and a complete relocation package are included. To $32,400.

Manufacturing Systems Analyst. South Carolina manufacturer of heavy equipment seeks an Analyst who understands and relates to manufacturing users. Three years of manufacturing background in an IBM OS environment needed. IMS DB/DC knowledge, MRP and Process Control are definite pluses. Nice rural location close to a major suburban vicinity. To $34,000.

Banking Programmer Analyst—Great Location. Join the processing shop of one of the leading banks in New Orleans. Excellent suburban data center location for a P/A with SHAW Commercial Lending Package experience. Large scale multiple IBM 308X systems under OS/MVS utilizing CICS and COBOL. To $28,500.

Programmer Analyst. Leading 2 billion dollar bank seeks an IBM OS/MVS COBOL Programmer with commercial lending systems background. SHAW Package experience desired. State-of-the-art shop, major expansion. New Orleans. To $29,000.

Senior Analyst Programmer—New Development. Major IMS development project offers excellent opportunity for a Programmer with a minimum of three years COBOL DB/DC experience. Suburban New Orleans location, excellent relocation and benefits. To $35,500.

Programmer Analyst—Major Development. Fortune 500 company in Atlanta seeks individual with RPG III, System 38 experience to participate in major new development projects. To $32,000.

Programmer Analyst—Banking. Leading Florida financial institution has multiple openings to develop banking applications in state-of-the-art IBM environment. CICS knowledge preferred. To $30,000.

Merchandising Systems Analyst—High Visibility. Major retailer seeks Analyst with three or more years experience in merchandising systems in a major retail environment. Large development projects, data base environment. Full relocation to Baton Rouge. To $32,000.

Project Leader—Communications Systems. Opportunity to supervise a staff of five, supporting IMS/DC, CICS, NCP/VTAM in multiprocessor MVS/XA environment. Requires good managerial and interpersonal skills. To $42,700.

RPG Programmer Analyst—Increase Salary Every Six Months. Largest privately owned drug store in the U.S.A. with corporate headquarters in New Orleans seeks RPG P/A with accounting experience. Working knowledge of DOS/VSE and CICS is desired. Excellent benefits package, and six month reviews. To $30,000.

SOUTHWEST

(Arizona, Texas, Oklahoma, Nevada, Utah)

IMS Programmer Analysts—Rapid Growth. An expanding Houston financial institution is adding to staff due to increased market activity. They seek several individuals with banking application development experience with IMS DB/DC exposure. Hogan a plus. To $38,000.

Financial Business Analyst—Scottsdale Arizona. Major division of Fortune 500 company seeks Systems Analysts for new financial applications development. B.S. in Accounting with MBA preferred. Strong financial systems experience and training in IMS DB/DC and Structured Methodology provided. To $43,000.

Senior Database Analyst—High Visibility. Progressive Houston-based firm seeks senior with IDMS skills. Opportunity for great management visibility. Will be groomed to direct the activities of the DBA team. Heavy IDMS DB/DC skills required. To $48,000.

Communications Software Specialist—Satellite Communications Development. Develop software for a new service offering to the energy exploration industry. Will lead the team in developing state-of-the-art data communications technology. Requires Data Communication software experience on 16 Bit Micros. Some international travel! To $65,000.

Programmers/Systems Analysts—One of the Best. Major growth is being experienced by this exceptionally well-run Houston organization. Opportunity exists for degreed professionals with less than three years of total experience. Requires OS/COBOL experience. Will learn SAS, FOCUS, TELL-A-GRAF and more. Multiple locations. To $40,000.

Programmer Analyst—Energy. Large petroleum corporation with headquarters in Tulsa seeks a professional with two years of OS COBOL and accounting applications experience. CICS and IDMS experience preferred. To $30,000.

Systems Programmer—Learn MVS. Oklahoma corporation seeks qualified Systems Programmer with a minimum of three years experience as Systems Programmer. State-of-the-art environment. To $46,000.

Programmer Analysts—Data Center Expansion. Manufacturing corporation with headquarters located in Tulsa suburb seeks Programmers for its small but growing data processing center environment. Three years experience with CICS background desired. To $32,000.

EDP Auditor—New Position. Rapidly expanding Oklahoma corporation seeks a professional with a minimum of one year EDP auditing experience. To $30,000.

Marketing Representative—Management Potential. Major national corporation located in Tulsa seeks an experienced data processing Marketing Representative to cover a large, lucrative territory. Career path leads to sales/management. Estimated first-year earnings $45,000.

Data Base Analyst—New IBM System. Oklahoma-based corporation seeks a professional for its state-of-the-art IBM data center. A minimum of three years IDMS design experience preferred. To $45,000.

Programmer Analyst—New Development. Industry leader located in rural Oklahoma seeks a professional for its DOS/VS and CICS environment. One year of DOS COBOL experience desired. To $24,000.

Programmer Analyst—Unique Benefits. Major transportation corporation seeks professionals with PL/1 coding experience and IMS applications exposure. Tulsa location. To $35,000.

IMS Programmer Analysts—Rapid Growth. An expanding Houston financial institution is adding to staff due to increased market activity. They seek several individuals with banking application development experience with IMS DB/DC exposure. Hogan a plus. To $38,000.

Lead Development Analyst—Relocation Package. Outstanding opportunities are available to participate in a major software development effort with this Houston-based firm. Three-plus years of COBOL or FORTRAN experience using PRIMOS sought. Will provide relocation assistance. Rural location. To $40,000.

Senior Database Analyst—High Visibility. Progressive Houston-based firm seeks senior person with IDMS skills. Opportunity for great management visibility. Will be groomed to direct the activities of the DBA team. IDMS DB/DC skills required. To $48,000.

Lead Development Analyst—Relocation Package. Outstanding opportunities are available to participate in a major software development effort with this Houston-based firm. Three-plus years of COBOL or FORTRAN experience using PRIMOS sought. Will provide relocation assistance. Rural location. To $40,000.

Microcomputer Development—Unique Projects. Dallas-based company seeks several Microcomputer Systems Software Programmers to participate in leading edge systems. Assembly or 'C' required. To $38,000.

Programmer Analyst—New DB/DC Projects. Corporate staff of a rapidly expanding Dallas Fortune 500 organization seeks experienced professionals with strong OS/COBOL background. All applications projects are new and involve IMS DB/DC. To $35,000.

Senior Systems Analyst—Move Into Management. Large financial institution in Dallas seeks banking systems design professional with four or more years experience to be groomed for promotion. To $40,000.

Programmer Analyst. Big 8 firm looking for person with OS/COBOL/CICS/VSAM and solid developmental skills for a high-visibility product. Dallas location. To $37,000.

Senior Analyst—Exposure to Senior Corporate Management. Large financial services organization in Dallas seeks Internal Systems Consultant. Banking systems background preferred. To $46,000.

ALC Programmer—Dallas Location. Leading software development firm in Dallas seeks a professional to develop data base software on IBM system. CICS is preferred. To $40,000.

Systems Programmers. Two IBM OS firms in Austin are seeking Systems Programmers with MVS internals experience. VM or CICS experience a plus. To $45,000.

Programmer Analyst. Person with two or more years insurance systems experience sought. IBM environment in a fast-growing, Austin-based company. To $35,000.

Systems Programmers. San Antonio-based firm seeks person to develop new operating systems and utilities. State-of-the-art technology, for both civilian and military applications. Language experience sought is Assembler and/or "C." To $40,000.

Manager of Systems Software. Nationwide firm seeks a seasoned software developer with heavy UNIX internals to manage their micro software development. Forth Worth location. To $60,000.

Senior Online Programmer Analyst—New Expansion. National computer service company needs strong OS COBOL or ALC Programmers with on-line experience and leadership skills. Rapidly growing firm. To $43,000.

IMS Database Analyst—Growth Opportunity. Prestigious Phoenix-based company seeks experienced IMS DBA. Extensive logical and physical design of multiple databases, DBD, PSB gens, standards, security and back-up/recovery experience sought. Excellent career growth potential. To $43,000.

Communications Systems Engineer—World-wide Travel. Phoenix-based company requires individual to design world-wide data/voice communications network. Requires extensive exposure to IBM, SNA/SDLC, X.25, and network design. Exceptional ground-floor opportunity. To $50,000.

Assembler Programmer Analysts. Phoenix-based data center is expanding to handle the transaction services for travel industry. Needs three qualified Programmer Analysts to develop new systems and on-line system requirements and procedures. Excellent benefit package and travel discounts through corporate plan. Will consider training Senior Assembler Programmer Analysts in ACP systems. Cross training in IMS applications available. To $45,500.

Microprocessor/UNIX/C Systems Developer. Phoenix-based manufacturer of integrated hardware and software systems based on 8086 and M68000 products seeks Senior Software Engineers with five years experience in development of real-time system executives for micro systems. Strong Assembler and one high level language (PASCAL or C) preferred. B.S.E.E. or extensive experience with hardware design required. M.S.E.E. a plus. This company is a separate division of a Fortune 500 company based in Phoenix. Continued business growth of over 30% per year. To $41,000.

Senior Programmer Analysts—Multiple Openings. Major financial institution based in Las Vegas is planning new development expansion in 1985. Need experienced Programmer Analysts familiar with the banking industry who can perform analysis and specification of new systems. Will also be involved in the development cycle through implementation. Excellent professional growth opportunity with the ability to live in the suburbs and enjoy Lake Mead and surrounding outdoor sports activities. To $39,000.

Programmer Analyst. Expanding Fortune 500 firm plans OS/MVS financial systems development using COBOL. They seek a Programmer Analyst with three or more years experience. CICS training provided. Excellent career prospect in Albuquerque with low cost of living and no commuting problems. To $28,000.

New Development Group—Many Positions. Fortune 500 vendor in Phoenix is expanding on-line applications systems development group. Will develop new software products. Positions available for all levels. COBOL and Systems Programmers and Communications Specialists sought. Extensive training. To $42,000.

Data Base Analyst—IMS or IDMS Design. Leading firm seeks person to provide technical support both internally and to clients. Currently developing entirely new version of existing software in new area. Beautiful Texas hill country location. To $45,000.

Systems Analyst. Person with two or more years with a Systems 38 and RPG III sought. Position will lead to responsibility for a totally new shop being set up in San Antonio. Will be second in command in a large environment and line staff. To $35,000.

Programmer Analyst. State-of-the-art IBM shop including IMS DB/DC, seeks Programmer Analyst. This is a new systems development effort in San Antonio. Enjoy the South Texas sunshine. To $34,000.

UNITED AIRLINES

1985 brings with it continued expansion of the nation's leading airline's sophisticated, IBM-based data processing environment. Our dynamic, charged growth at our Corporate Headquarters Complex in northwest suburban Chicago has resulted in a need for experienced data processing professionals.

SYSTEM DESIGN ANALYSTS

These positions determine how systems interact with each other in addition to designing and resolving problems for complex systems utilizing strong project management techniques. Peripheral responsibilities may include maintaining specific software/applications and serving as Team Leaders.

SR. PROGRAMMER ANALYSTS/ PROGRAMMER ANALYSTS

Responsibilities will include estimating and designing enhancements, programs or functions from user requirements, as well as researching and resolving programming problems and investigating, designing and implementing problem solutions.

Candidates for all of the above positions must have a minimum of 2-5 years programming experience in a COBOL, CICS, IDMS, OS/MVS environment. Computer Science degree preferred. Strong analytical and interpersonal/communication skills are essential.

United offers salaries commensurate with experience, dual career paths, and frequent salary reviews, as well as pass/reduced fare air travel privileges. For confidential consideration, send a resume, including salary history, to: **Professional Employment/EXOPX-HC, United Airlines, P.O. Box 66100, Chicago, IL 60666.** *Equal Opportunity Employer.*

DEC TOPS-20 SYSTEMS PROGRAMMER

Southern California

A major California manufacturing/engineering firm is seeking a highly qualified TOPS-20 Systems Programmer who will be responsible for generation, maintenance and troubleshooting of TOPS-20 operating system and associated systems programs. Position will provide CAD technical support, interface and multi-vendor network communications support. Must have DEC 20 assembly skills. Multi DEC CPU environment to include DEC 20's, VAX 11/790's and a VAX 730. Cross training available. 1986 migration to next generation CPU architecture planned. This is a highly technical engineering environment. Candidates must have a high degree of technical motivation and state-of-the-art curiosity. 3-5 years TOPS-20 systems programming required. BS degree in technical sciences highly desirable. Relocation package available. Salary up to 45K. Interested candidates forward resume to Box CW-B4104, Computerworld, Box 880, Framingham, MA 01701.

Gold Circle

MANAGER — ON-LINE SYSTEMS

We are currently seeking a results-oriented professional interested in joining one of the most technologically advanced IBM shops in Columbus.

Our present environment consists of an IBM 3081 mainframe with an MVS-SP operating system. In order to qualify for this opportunity, experience with a large scale IBM mainframe is necessary and exposure to an OS environment is preferred. A college degree in an appropriate discipline or equivalent work experience is needed. In addition, the successful candidate will possess excellent leadership and planning abilities, exceptional oral and written communication skills, and will have several years of hands-on experience with IMS DB/DC systems programming.

This position will oversee and direct the activities of the CICS and IMS DB/DC Systems Programmers. This group manages the on-line systems, provides technical support of the on-line systems software and related products. They also become involved with Information Systems teams by evaluating on-line application systems during development, and handling profiles of on-line applications systems prior to production.

The incumbent will possess 4-5 years of on-line experience and will have "up through the ranks" experience with IMS DB/DC systems generations, performance tuning and internals. Prior exposure to CICS would be helpful.

To learn more about the Gold Circle challenge, our progressive compensation program that includes an excellent relocation package and the exciting, affordable life-style in a new era of growth for Columbus, our state's largest city, CALL Julie Smith COLLECT at (614) 459-3589 or send your resume and salary history to: GOLD CIRCLE STORES, Executive Placement, Dept. L, P.O. Box 63, Worthington, Ohio 43085.

SYSTEMS/PROGRAMMERS

We have been retained by a prestigious client to recruit, evaluate and submit candidates for the following openings:

MVS/SP or MVS/XA
(Internals, Installation, tuning)
ACF/VTAM/NCP
(Internals, Installation, tuning)

Offering an excellent compensation and relocation program. Upward mobility is a reality. Desirable community with reasonable housing.

Candidates who wish to explore, should send resume to Mr. Keres. All inquires will be handled with complete CONFIDENCE.

MacArthur, Church & Keres
440 Regency Parkway Drive
Omaha, Nebraska 68114
(402) 393-7333

OREGON STATE UNIVERSITY

MILNE COMPUTER CENTER DIRECTOR: Applications are invited for the position of chief administrative officer for a center with 70 employees and a $3.2 million budget. The center offers computing services for instruction, research and administration. Administrative experience is essential; masters degree required, doctorate preferred. Academic rank will be associate professor or professor depending on qualifications. Application deadline is January 31, 1985. Interested persons should contact: S.A. Stone, Chairman, Search Committee, College of Engineering, OSU, Corvallis, OR 97331. OSU is an AA/EOE and complies w/Sec. 504 of Rehab. Act of 1973.

---

* PROGRAMMERS *

TAKE A SHOT

At An Opportunity To Design And Implement Systems At The

PREMIER BANK OF THE SOUTHEAST!

A copy of your resume and a 20¢ stamp is a small investment in your career. Make it NOW!! You just might find a future you've been looking for — but didn't think existed.

NCNB Executive Management has committed support for our Systems Division to facilitate replacement of current major systems to keep pace with our march toward interstate banking as the Southeast's largest bank holding company.

Challenges exist for Programmer/Analysts and Systems Analysts with two or more years' experience involving major development projects. Key areas of interest at present are FUNDS TRANSFER, DEPOSITS (HOGAN), and BANKCARD SYSTEMS, but exposure to banking applications is not an absolute requirement. **Primary emphasis is being placed on those candidates who can demonstrate a record of successful achievement on projects significant enough to be considered — MAJOR DEVELOPMENT.**

Successful candidates will enjoy a state-of-the-art environment at the Corporate Headquarters in Charlotte consisting of twin 3081's with MVS/XA and IMS DB/DC . . . an environment where they will be considered professionals. Additionally, in Carolina — the Sunbelt living's great! The natural beauty here enhances our quality of life with shimmering lakes, majestic mountains, and uncrowded beaches . . . all easily reached from our location. Our climate is conducive to a vast array of recreational activities . . . year-round! And culturally, we are as sophisticated as any major metropolitan area.

Please forward a resume outlining your role in systems development efforts and your current salary to:

In Software Development the alternatives are many, but the choice is clear.

For a quarter century, one company has been clearly recognized as the leader in software development. Year after year, Applied Data Research continues to define and redefine "state-of-the-art" for the software products industry. Our leadership is evidenced by our success in the development and sale of the most widely accepted and highly advanced IBM mainframe and microcomputer products.

ADR is continuing to create many new and interesting positions for qualified individuals who are seeking greater challenges and increased rewards in their endeavor for career growth. Currently, we have positions available in **Princeton, NJ** and **Dallas, TX** for persons experienced in the following:

- **SYSTEMS SOFTWARE DEVELOPMENT**
  - 4th Generation Languages
  - Data Base Management Systems
  - Word Processing/Electronic Mail
  - Performance Measurement/Capacity Planning
  - PC/Mainframe Communications
  - Operating System Extensions
- **TECHNICAL SUPPORT SERVICES**
  - Data Base Administrators and Consultants
  - MVS/DOS/VM Technical Support
  - Systems Programmers (MVS/VTAM/NCP)
  - Systems Analysts/Programmers (DB/DC)
  - Human Factors

ADR offers a comprehensive benefits package, liberal relocation assistance and compensation fully commensurate with your experience. For consideration, please forward your resume or call **Gary Johnson, (201) 874-9000, APPLIED DATA RESEARCH, INC., Route 206 & Orchard Road, CN-8, Princeton, NJ 08540.**

An Equal Opportunity Employer

DIRECTOR
SYSTEMS ENGINEERING

The Seattle Department of Administrative Services is seeking a Director of its Systems Engineering Division to direct the planning, acquisition and maintenance of data processing software systems in support of user departments' program applications. Job responsibilities include:

- Manage 70 data processing professionals
- Maintain 200 production application systems
- Develop several large new systems in 1985-86
- Implement a user oriented fourth generation environment
- Manage an active Information Center

The successful candidate must have held progressively responsible positions, with a minimum of 3 years of management experience and 3 years of professional experience in data processing, systems analysis, or management consultation. A baccalaureate degree in Computer Science, Business Administration, Engineering, Mathematics, Quantitative Methods or related field may substitute for 1 year of the required professional experience.

The ideal candidate should have practical experience in the following areas:

- Managed a fourth generation data processing environment
- Successfully managed large multi-year projects
- Successfully managed in large organizations with changing environments

Salary range: $46-$54K plus attractive vacation and benefits package. Please mail cover letter and resume, including the names and phone numbers of at least 2 recent job related references to:

Department of Administrative Services
Attn: Systems Engineering Director
Recruitment Panel
400 Yesler Building, 5th Floor
Seattle, WA 98104

(Principals Only)

Applications must be received no later than December 28, 1984.

AFFIRMATIVE ACTION/
EQUAL OPPORTUNITY EMPLOYER

DATA PROCESSING PROFESSIONALS

1985 STARTS TODAY

We know that December is a difficult month in which to make a career move, but it is an excellent month to reflect on your career goals and make plans for the new year. Our recruiters will begin interviewing now for a variety of exceptional career opportunities that will be available in early 1985.

We feel this will be an excellent opportunity for you to learn more about Evangelical Health Systems, Chicago's largest multi-hospital health care system, and our state-of-the-art IBM shop. We are seeking individuals experienced with IBM large mainframe systems, using an MVS, VTAM, CICS and DL/1 environment. Exciting new projects have created unique opportunities for:

PROJECT LEADER SYSTEMS DEVELOPMENT

Our systems development area needs someone who can direct and prepare project plans, insure project feasibility, provide technical support and assist project staff. This candidate should have 6 years experience in areas of programming, systems analysis, project control and management. Experience in a hospital environment is a plus.

SYSTEMS ANALYST II

This position analyzes and evaluates existing or proposed systems and provides guidance to user areas in the application of systems analysis to business and medical problems. This candidate should have 2-3 years experience in systems analysis and be knowledgeable of all processes involved in the design of the utilized business and medical systems.

INSTALLATION SPECIALIST

You'll identify and recommend information system educational needs, then assist in the development and preparation of training programs/workshops needed to insure effective and efficient installation of systems and enhance staff and user skills. Strong interpersonal skills are essential as you work closely with Information Systems personnel to insure the implementation of systems within specified time frames and a thorough understanding of applications being developed for end users. A background in information systems implementation is essential as you participate in a variety of special projects providing support to FSI and other information systems personnel. A degree in Computer Science, Business, Hospital Administration or equivalent experience and previous exposure to education related to information systems training are required.

PROGRAMMER ANALYST III

The qualified candidate will have a minimum of 4 years experience in programming analysis and design. Health care a plus. Software experience required: MV, Panvalet, PL/1, DL/1 and CICS. PCS/ADS would be helpful. Written and verbal communication skills are essential for coordination of projects.

PROJECT LEADER - PROGRAMMING

Our programming services area has a key position available for an individual who can direct the programming and installation of new computer and manual support systems developed in-house and purchased from software vendors. Reporting to the Manager, Applications Programming, you will provide direction for Programmers and Programmer Analysts assigned to project implementation. A Bachelors degree in Business Administration, Computer Technology or a related area, 5-6 years experience in the analysis, design, programming and development of complex systems and good interpersonal skills are required. Previous project leadership experience is preferred.

SYSTEMS PROGRAMMER II

You'll be responsible for installing and maintaining various systems software to insure effective implementation, performance and interaction with other components within the operating system (MVS, VTAM, CICS and DL/1 environment). You will monitor and analyze system performance and perform appropriate technical applications to tune systems software, and assist in the development or enhancement of documentation standards and procedures. To qualify you should possess applicable technical education or 2-4 years data processing experience in areas such as applications programming or computer operations. Prior work experience (1-2 years) as a Systems Programmer within an IBM installation is preferred.

We provide excellent starting salaries, complete benefits and real opportunities for professional growth. While you establish your career objectives for 1985, learn more about Evangelical Health Systems by sending your resume in complete confidence:

Product Manager

Let NCR's UNIX*-based systems strengths advance your career

NCR's the name for long-term dedication to the UNIX marketplace. Our systems advances – that reflect new market needs – provide the right environment for keen professionals. Right now we have an excellent opportunity for a highly qualified individual to oversee UNIX-based business systems development.

In this newly-created position, you'll report to our Director of Product Management at NCR's Engineering and Manufacturing operation in Columbia, SC. Your key role involves guiding our application of UNIX-based system to OEM, Office Automation Distributed Processing, and General Business Applications.

Your product vision will be challenged to establish product strategies to assure a continued line of competitive products. Product plans to realize these strategies will be developed using a combination of NCR development and purchased software/hardware. A broad base of exposure to both-product development and sales/marketing is required to function effectively in this position.

You must have at least a BS in Computer Science or Engineering; a minimum of 2-4 years in product development, marketing or direct sales, and knowledge of budgeting and microcomputer markets. Demonstrated ability to plan, schedule and monitor development programs is essential.

We will reward your talent with an excellent salary, outstanding benefits, ample career room and a strategic role in our $3.7 billion computer company. For immediate confidential consideration please send resume and salary history to Mr. Gordon Davidson, Dept. M-56, NCR Corporation, 3325 Platt Springs Road, West Columbia, SC 29169 or call collect 803/796-9250.

SYSTEMS ANALYST

Excellent opportunity for a capable individual to work with management in the direction, definition, and implementation of computer-based banking applications. This position will be directly responsible for defining and analyzing user specifications, determining feasibility, preparing documentation and will also act as liaison between the user and the programming staff. This challenging position requires 3 years systems-analysis experience in the banking industry. Send resume to:

Connecticut On-Line
Computer Center
P.O. Box 636
165 Darling Drive
Avon, CT 06001
EOE

SENIOR PROGRAMMER/ANALYST

Minimum 4 years experience with System 34/36, RPG and SSP. Minimum 2 years experience with Mapics costing and associated modules. Excellent communications skills and ability to work directly with users and incorporate their requirements into final system specifications and implementation required. Competitive salary and fringe benefit program.

Send resume to:

ANEMOSTAT PRODUCTS DIVISION
DYNAMICS CORPORATION OF AMERICA
P.O. Box 1083
Scranton, PA 18501

HIRING?

More computer people read Computerworld than any other newspaper in the United States - more than half a million computer people every week.

And, among our 529,650 readers at user organizations, about half claim to look at recruitment ads at least every other week (only a small percentage say they never look at recruitment ads).

No wonder Computerworld carries more recruitment ads for computer people than any other publication.

To place your ad or to get a rate card with complete details on Computerworld Classifieds, call or write:

PROGRAMMER ANALYST

The Halcon SD Group, Inc., a subsidiary of Texas Eastern Corporation is currently seeking a Programmer Analyst with a minimum of 5 years experience using COBOL and FORTRAN to do analysis and programming of various types of applications. The successful candidate must be capable of handling a project from beginning to end. Familiarity with VM/CMS, VSAM and data base management systems a plus.

The Halcon SD Group is engaged in four major fields of activity: research and development of chemical processes and catalysts, manufacturing of catalysts, design and construction of petrochemical plants worldwide and computer technology. We offer a congenial atmosphere, a comprehensive benefits package and an attractive starting salary. Interested applicants should forward resume to:

K. Lazarus

INTERNAL REVENUE SERVICE
NATIONAL COMPUTER CENTER

Martinsburg, West Virginia
is recruiting for

SYSTEMS PROGRAMMERS
GS-334-12 ($30,549 to $39,711)

Our Systems Software Staff consists of highly experienced IBM systems programming professionals working in a creative and challenging environment of multiple large-scale IBM processors, loosely-coupled under MVS/SP-JES2 operating system with multi-access spool (MAS). We also support a large Comten NCP telecommunications network for our applications programmer/analysts and DBMS users. In 1985, MVS/XA will be planned, generated and installed at NCC.

Applicants should have in-depth knowledge of MVS/SP-JES2, SMP, TSO/ISPF, ALC, and VSAM. They should be proficient in oral and written communications related to systems software and hardware topics for user support.

NCC is located in Wild, Wonderful West Virginia near the white water Shenandoah River, Blue Ridge Mountains, historic Harpers Ferry, and the Appalachian Trail. Serene country living at nature's doorstep, yet within 1½ hours of the urban, metropolitan areas of Washington, DC and Baltimore, MD. NCC is the nucleus of the twelve major IRS computer centers across the United States which support the U.S. tax administration system.

To apply, please send your SF-171, OPM Form 1170 and OPM Form 1203X to: **Personnel Office, Internal Revenue Service, National Computer Center, P.O. Box 1208, Martinsburg, West Virginia 25401.** Application material may be obtained from any Job Information Center, with the Office of Personnel Management or any Federal Personnel Office. U.S. Citizenship is required.

CLOSING DATE: January 10, 1985

EOE

DATA PROCESSING

Jos. A. Bank Clothiers, an expanding company and a subsidiary of the Quaker Oats Company, is looking for the following computer professionals to join our rapidly growing Data Processing Department operating under an IBM 4341 DOS/VSE environment. We have a full range of applications including manufacturing, mail order, merchandising, inventory, purchasing, point-of-sales, payroll and financial. We emphasize data base and on-line. We are a people-oriented company that is committed to providing career growth with training and a productive work environment. We offer a very competitive salary and benefit package, including a bonus and dental plan.

SR PROGRAMMER ANALYST

Candidates must have 3-6 years experience in systems analysis, design, and implementation using the following software tools: COBOL, DL/1, CICS, DMS, and VSAM. The chosen candidates will work as lead members of various project teams under broad instruction of project managers.

PROGRAMMER ANALYST

Candidates must have 2-5 years experience in programming analysis, and testing with COBOL, CICS, and VSAM. DL/1 and DMS will be pluses. The chosen candidates will join certain project teams as members with high recognition.

PRINCIPALS ONLY, AGENCIES NEED NOT CALL

To be considered, send resume with salary requirements or contact personnel between 9 a.m. and 11 a.m.

COORDINATOR FOR ADMINISTRATIVE COMPUTER SERVICES

UNION COLLEGE OF NEW YORK

The Office of Computer Services is seeking an Administrative Services Coordinator, one of three senior positions in the department. The successful candidate will have 3-5 years of data processing project management experience, a proven ability to work with individuals and groups, and very good communication skills.

The Coordinator is responsible for all administrative software and services, and oversees the activities of programming project teams involved in software development and maintenance.

Union College is a highly selective independent residential college of about 2,000 undergraduates, offering liberal arts, engineering and computer science curricula along with a small graduate program.

The College is located in New York State's Capital District Area near the Adirondacks, and the region offers a wide variety of educational, cultural and recreational opportunities.

The position is available January 1, 1985. Special consideration will be given to candidates with any of the following: an advanced degree in an appropriate discipline, expertise with the HP3000 computer system, or management experience in an academic environment. The college encourages applications from women and minority group members. Salary $27,000 to $33,000 DOE; fringe benefits generous. Write, including full resume plus contact information for three references, no later than December 21, 1984 to:

George R. Richards, Director of Personnel
Union College, Schenectady, N.Y. 12308

PROGRAMMER/ANALYST

Heritage Publishing, the nation's number one producer of special events publications and a leader in telemarketing has two openings for experienced system/36 programmers. Successful applicants will have two years S/36 experience using RPG II and a strong background in accounting and/or a printing/publishing/typesetting environment. Good skills in an interactive/communications environment also a plus.

We offer twenty-six years of stability, dynamic growth and diversification, excellent salary and benefits, and all the opportunity you can handle. Located in beautiful central Arkansas where the living is outstanding year-round.

Send detailed resume including salary requirements to: P.O. Box 9067, North Little Rock, Arkansas 72119—Attn: Charlie Tracco

No agency calls will be accepted.

Heritage Publishing

Director of Computer Services

$3371 to $4098 per month ($40,452 to $49,176 annual salary). Bachelor's plus at least 4 years recent experience with information processing at the supervisory or management level. Experience with HP 3000 desirable. Closing date to file DISTRICT application is January 4, 1985.

Send resume to
Program Management Systems,
28011 Evergreen, Suite 305,
Southfield, MI 48076

EDUCATION

Your Strategic Career Choice

Does your career need a strategic boost? If so, you should consider Dartmouth's professional program in the design and management of information systems.

Our two-year Master's program is designed to equip tomorrow's information systems managers to play a leading role in the design and development of effective business solutions to business problems. We offer a blend of technological, management, and communication skills, and a record of career advancement.

Students in Dartmouth's CIS Program spend one term as interns in a variety of sponsoring organizations. On campus, they study the broad fundamentals of information systems, networks and distributed processing, current analysis and design methodologies, database management systems, communication and management skills crucial to effective planning and implementation, and the social, ethical, and organizational issues related to information systems. Case studies and guest lectures by practicing managers of information systems and professionals-in-residence are regularly featured.

If you have previous experience in the computing field but want to be equipped to assume more responsibility and leadership, why don't you consider joining us next year? For more information, write:

SECURITY YOU CAN BANK ON... ONLY FROM RANDOLPH.

As an important part of the First National Bank of Boston, one of the nation's oldest and leading financial institutions, Randolph has a built-in financial stability that continues to be unique in the third-party computer leasing industry.

In 1972 The Bank of Boston purchased Randolph's S/360 assets through a subsidiary, Firstbank Financial Corporation, to become the first bank in the United States to enter the business of leasing and financing computers.

SAVE MONEY WITHOUT LOSING SLEEP. This kind of financial security gives assurance that Randolph will continue to provide high-quality lease-financing for all of IBM's computers and related equipment . . . to live up to the terms and conditions of its agreements . . . provide upgrades . . . and fulfill all of its commitments . . . and at the same time save you 30% to 70% of your hardware dollars.

THERE ARE OTHER KINDS OF SECURITY. At Randolph, our people have an average of 18 years in the DP industry . . . from 360's to 3084's. They know all about alternative financing to be sure, but they also know their way around a DP department and the hardware in it. This kind of professionalism is important where you get into situations that involve upgrades and reconfigurations.

CALL OR WRITE FOR OUR RATES. You'll find our rates low and terms flexible. Call now. Joseph B. Kelly, Jr., Executive Vice President, 800-243-5307.

COMPUTERWORLD CLASSIFIEDS--
--PROGRAMMED TO HELP YOU

The computer industry is dedicated to developing greater efficiency and valuable time-saving resources for the business world.

Well, so are ***Computerworld Classifieds.***

And we can deal with a lot of problems. Our classifications include:

Position Announcements – To help you find the computer professionals right for you.

Positions Wanted – For individuals seeking full-time, permanent positions - no company ads are allowed.

Buy, Sell, Swap – For those seeking to buy, sell or lease computer equipment.

Time & Services – For companies who want to offer computer timesharing or other computer-related services.

Software For Sale & Software Wanted – Used for buying & selling software packages.

Business Opportunities – For those seeking individuals or partners in computer-related business ventures, mergers, or franchises.

Real Estate – For those seeking to sell or lease office space suitable for computer rooms or computerized businesses.

Bids & Proposals – Used to request for bids on equipment or to invite proposals for desired computer acquisitions.

Here's the data you need to know to place your ad:

The deadline for classified advertising is ten days prior to the issue desired. (That's six working days prior to the issue date). Ads may be sent in by mail. For camera-ready ads, a velox or negative is required. For ads to be typeset by us, enclose a layout if needed, along with any logos or artwork you would like to include in the ad. These must be dark and clear for reproduction purposes.

Our ad takers will be happy to take smaller sized ads over the phone. We can provide simple line borders for you, if desired.

We also provide telecopier service at extensions 410 and 451.

The open line rate is $10.35 per line and there is a minimum size ad of 2 column inches (28 lines) at a cost of $289.80. Column inches are calculated by multiplying the number of columns wide by the number of inches deep that your ad is. Depth increases in half-inch increments and we accomodate up to 5 columns. Column widths are as follows:

1 column – 1 13/16" or 11 picas
2 columns – 3 13/16" or 23 picas
3 columns – 5 13/16" or 35 picas
4 columns – 7 13/16" or 47 picas
5 columns – 9 13/16" or 59 picas

If you wish a box number to be assigned to your ad, it will cost an additional $15.00.

First-time advertisers must send either payment or a purchase order along with their ad.

So, whatever the problem, simply supply us with the data we need to help you on your way to a solution, quickly and efficiently.

If you wish to reserve space, or would like more information, call us at 1-800-343-6474 or (in Mass.) 617-879-0700. All materials should be sent to:

> “In short, System W is a mature, well-rounded product supported by years of experience in the decision support field and by a company whose reputation is above reproach. Therefore, without hesitation, we would recommend that anyone in the market for a state-of-the-art decision support system not overlook System W in their evaluation.”

— Data Decisions, Cherry Hill, New Jersey, September, 1984.

More than 100 top corporations chose Comshare's System W decision support software in the last 18 months. Teamed with IBM mainframes, System W untangles the information management challenges that face business professionals. Especially the big payoff ones like performance reconciliations, problem analysis, forecasting and electronic management reporting.

Data Decisions, an independent research and publishing firm, has evaluated System W, too. And it says that companies seeking a competitive edge in business planning and analysis should put System W to the test.

You should read the *Data Decisions* evaluation before your company makes a major investment in decision support software.

For your *free* copy of the full *Data Decisions* report, call Chris Kelly at Comshare toll free: 1-800-922-SYSW (In Michigan call: 313-994-4800). Or mail your business card to: Comshare, P.O. Box 1588, Ann Arbor, Michigan 48106.

IBM warns users of potential harm to head disk units

By Tom Henkel
CW Staff

RYE BROOK, N.Y. — IBM has notified the approximately 10,000 users of its 3380 disk drives that using certain types of air-conditioning system antibacterial agents can cause head disk assembly problems, including head crashes.

IBM said it has discovered that a small percentage of 3380 users developed head disk assembly problems in buildings that use organometallic biocides, principally those that incorporate tin oxide. The biocide is a chemical used in certain types of air-conditioning systems to prevent growth of bacteria in stagnant water. Scientists blame such bacteria for causing potentially fatal illnesses, such as Legionnaires' disease.

An IBM spokeswoman said less than 2% of 3380 customers have actually reported head disk assembly problems traceable to use of the chemical. IBM

DP fight brews at GM

Transferred workers seek to keep benefits

By John Desmond
CW Staff

FLINT, Mich. — General Motors Corp. data processing employees are fighting on two fronts — in the courts and via a fund-raising effort — against the perceived loss of benefits resulting from their scheduled transfer to Electronic Data Systems Corp. on Jan. 1.

A suit filed in U.S. District Court here Nov. 19 on behalf of two individuals alleges that the loss of certain retirement benefits by workers being transferred from GM to EDS is a violation of federal pension law. The suit was filed by attorney Jules Olsman of Southfield, Mich., on behalf of Thomas Omans and Gary Cattin of the GM Technical Center in Warren, Mich. The automaker acquired EDS for $2.5 billion in a merger approved by stockholders on Oct. 18.

[illegible]

Meanwhile, in an action that may eventually have broader repercussions, a corporation called Legal Fund to Restore Benefits, Inc. has been formed by several transferred GM employees to raise funds and bring focus to the legal efforts.

One GM systems analyst said that each worker is being asked to contribute $100 until $50,000 is raised, and the analyst said he is very confident that goal will be reached. More than 300 workers attended an LFTRB meeting here in late November, and meetings have since been held in Detroit and Lansing, Mich.

GM and EDS are both required to respond to Olsman's suit within 20 days after being served. Olsman said the

CAB prepares to ride off into 'sunset'

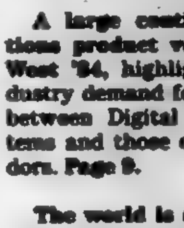
By Mitch Betts
CW Washington Bureau

WASHINGTON, D.C. — An independent agency of the U.S. government will actually go out of business Dec. 31. It will terminate, disappear or "sunset," as it is euphemistically called here. This unprecedented event is having some unprecedented effects on the agency's data processing office.

The independent regulatory agency headed for extinction is the Civil Aeronautics Board, a victim of U.S. Congress' 1978 decision to deregulate the airline industry.

When Congress passed the Airline Deregulation Act of 1978, the reaction at the CAB's DP shop was a mixture of shock, disbelief and uncertainty. "It was an emotional roller coaster here for the last two or three years," according to Bradley H. Hoke, chief of the DP division for the past 10 years. "We didn't know if we were going to have a job from one day to the next."

Hoke, in a recent interview, said that after the legislation passed and the CAB's regulatory powers were whittled away, the DP budget was tightened, the aging hardware could not be replaced and the DP staff dwindled from a high of 67 to a low of 15.



CW photo by M. Betts

Hoke.

After years of unsettling rumors about the agency's fate, Congress settled the issue this year by approving the Civil Aeronautics Board Sunset Act, which states that the CAB will cease to exist Dec. 31, and most of its remaining regulatory functions will be transferred to the U.S. Department of Transportation.

"It was pretty obvious (after passage

Cobol-80 nears final stages

Ansi committee close to completion of draft standard

By Paul Gillin
CW Staff

Drained by more than five years of continuous debate and facing increasing pressure from the international community, the American National Standards Institute (Ansi) X3J4 subcommittee, which is formulating the Cobol-80 standard, has begun its final steps to pass the draft standard into the last stages of acceptance.

If all goes smoothly, the draft could be sent to the parent Ansi X3 committee in April, X3J4 members said last week after the committee wrapped up its final meeting of the year. "We can see light at the end of the tunnel," said Jerome Garfunkel, president of Jerome Garfunkel Associates, Inc. in Litchfield, Conn., and a member of the X3J4 committee.

However, because of lengthy approval processes, a standard will not be approved until late 1985 at the earliest, they said. The document must still be approved by two other Ansi groups, either of which could call for more changes to the proposed standard.

But further changes are not likely to come from X3J4, members said. "The sentiment of the committee is to get on with it," said Lemuel Skidmore, vice-president of Online Systems Support, Inc. in Kensington, Conn., and vice-chairman of the X3J4 committee. "I think at the next meeting we will vote to pass the standard along to the [Ansi] X3 committee."

The X3J4 committee completed another round of public comment Nov. 14. At its most recent meeting in La Jolla, Calif., in mid-December, the group drafted responses to the 23 comments that were received.

The committee will reconvene in February in Baltimore to consider the final responses. If no substantive opposition arises, it will vote to initiate a ballot for X3J4 members to vote on the proposed standard, Skidmore explained.

The X3J4 committee will then reconvene in April to tabulate the ballots and probably to submit the proposed standard to the parent Ansi X3 committee. The X3 committee will then be responsible for sending the proposal to the Board of Standards Review, the Ansi committee that decides whether or not to approve the standard.

Skidmore called late 1985 an optimistic date for implementation. He noted that changes could be called for at any stage of the approval process, delaying the standard further.

Garfunkel said action by the International Standards Organization (ISO) in February to adopt a draft international standard before approval by the X3J4 committee has contributed to the Ansi group's willingness to proceed.

The ISO standard is parallel to the "Pink Book," which is now under consideration within Ansi. If the Ansi standard can be implemented as it now stands, it would lead to identical standards at both the national and international levels.

"That is very much on the minds of the committee right now for selfish reasons," Garfunkel said. "IBM, [Honeywell, Inc.] and the rest don't want to have to support two separate compilers."

IBM's VS Cobol II not Cobol-80-based

[illegible]

Ronald A. Frank, 1934-1984

MONT VERNON, N.H. — Ronald A. Frank, managing director of the Frank Communications Group and a former *Computerworld* editor, died last week after an extended illness. He was 50 years old.

A graduate of Farleigh Dickinson University in Teaneck, N.J., Frank joined *Computerworld* in July 1969 as a technical news editor. He left the newspaper as a senior editor/communications in September 1979.

Long-time acquaintance William Leitch, general manager of the Communications Networks national telecommunications conference, said Frank, a regular speaker at the conference, will be missed. "We were always surprised at what superb ideas came out of such a small package," Leitch said.

Frank

Molly Upton, a fellow editor during Frank's tenure at *Computerworld* and currently director of publications at International Data Corp., remembered him as a man "who kept a lot of us honest." Frank, according to Upton, was a man with "very high standards."

Before joining *Computerworld*, Frank had worked at Bendix Corp. and as a technical writer at Honeywell, Inc.

A member of the Institute of Electrical and Electronics Engineers, Inc., he held an MBA degree from Babson College, Wellesley, Mass., and had been pursuing a Ph.D. at Boston University.

He is survived by his wife and two children.

Memorial contributions can be made to a scholarship fund being established by another of Frank's fellow ex-*Computerworld* editors, Vic Farmer. Farmer resides at 14 Catherine St., Newport, R.I. 02840.

What's the news?

Hard as we try to give our readers the most complete information available, some good news and feature stories never reach us.

Are you involved in an unusual application of DP technology in your company? Have you implemented successful cost-cutting strategies? Is something in your DP shop not working as designed? Know any unsung heroes? Heard any hot news about vendors? Are you aware of technology or management trends the trade press is overlooking?

If so, we'd like to hear from you. *Computerworld* has established a reader hot line for information regarding items of interest to the computing community. Call us toll free at (800) [illegible]. Ask for Suzanne White, assistant managing editor.

We can't be everywhere — but our readers are.

MIGRAINE

How do you spell relief from the pain of Documentation? (S-Y-D-O-C.)

Call (201) 568-9700.

Cut your COBOL Maintenance costs.

QUESTION: Which is a bigger headache? The COBOL-documentation problem or the high-cost-of-maintenance problem?

ANSWER: Both

* * *

We're not kidding. Documentation and high maintenance costs are both parts of the same big headache. Here's why:

1. THE PROBLEM BEGINS WITH DOCUMENTATION: And it begins right at the program-development stage.

Most programmers hate to document. And although they may think they are producing well organized programs, they really have no way of judging. If they produce badly organized programs, they will inevitably produce badly organized documentation, too. One always equals the other.

2. BAD DOCUMENTATION LEADS TO COSTLY MAINTENANCE: Even if the documentation started out being accurate, it's probably never been updated. When modifications occur, someone's got to go back and attempt to divine the underlying logic before new code can be inserted. A long and costly operation.

No wonder COBOL maintenance may consume as much as 75% of your entire budget!

FAST RELIEF WITH SYDOC: Our Structured Documentation System takes the documentation problem off the shoulders of your programmers and puts it where it belongs—on the computer:

- **SYDOC HELPS YOU DEVELOP STRUCTURED PROGRAMS.** It not only provides structured documentation, it is also a very useful guide for the production of structured COBOL programs. Flaws and inconsistencies can be spotted at the development stage. And corrected before they start driving your maintenance costs up.

As a manager, you will—for the first time—have a tool to standardize both your documentation and the quality of your programs.

- **SYDOC MAKES IT EASY TO MODIFY EXISTING PROGRAMS.** It can analyze "orphan" programs without adequate documentation and tell you everything you need to know about the program's structure, logic, variables and relationships. Armed with this knowledge, the maintenance problem shrinks.

No longer is it necessary for skilled programmers to spend days searching for clues about the program's logic. SYDOC makes all necessary information available quickly and easily.

But the best way to find out about SYDOC is to try it. If this remedy doesn't work you'll just have to try another—A-S-P-I-R-I-N.

NLRB to review GM DP workers' unionization efforts

Hearings planned for next month; elections granting UAW representation may follow

By John Gallant
and John Desmond
CW Staff

DETROIT. — Hearings before the National Labor Relations Board (NLRB) are scheduled to begin next month on the attempts by some soon-to-be-transferred General Motors Corp. DP workers to win representation by the United Auto Workers union (UAW).

The NLRB told *Computerworld* last week that preliminary hearings will be held Jan. 7 to review four petitions the UAW submitted in late November on behalf of salaried GM DP employees seeking to become members of the union. The petitions were signed by workers at four GM facilities who were concerned about the perceived loss of benefits involved in the transfer of GM's DP and communications employees to the payroll of Electronic Data Systems Corp. (EDS) [CW, Nov. 12].

Following the hearings, the NLRB may approve elections for workers at four GM units — the Fisher Body facility at the GM Technical Center in Warren, Mich.; a unit at the GM assembly facility in Willow Run, Mich.; and the GM Photographic Division and the GM Information Systems and Communications Activities unit at GM headquarters in Detroit.

> *'We will vigorously oppose any effort to form a union in EDS. We feel strongly against the unionization drive because there is no need for it. There is no place for it within EDS. I am confident that no union is going to be formed.'*
>
> Ken Riedlinger, senior vice-president, EDS

A UAW spokesman was quoted in local press reports as saying that the petitions seek UAW representation for 324 workers at those units, although the union would not confirm that figure. If elections are held, a simple majority vote by workers in the proposed bargaining units would make the employees members of the UAW. GM currently employs some 7,000 DP workers at more than 115 locations within the U.S and another 3,000 at facilities outside the country. On Jan. 1, the automaker's U.S. DP staff is scheduled to be transferred to EDS, which was acquired by GM for $2.5 billion in mid-October.

According to a UAW spokesman, the drive for union representation began in early November after several GM DP workers approached the UAW following EDS' unveiling of its salary and benefits package. The spokesman said the union then began holding informational meetings — which sources within the automaker's DP operations said were attended by several hundred employees — and later sponsored petition drives within GM facilities.

Although the UAW declined to discuss the number of facilities involved in the petition drive, a union spokesman was quoted earlier as saying that, in addition to the four named units, the UAW was attempting to organize 25 other U.S. locations where GM DP workers are employed.

Several sources within GM's DP operations, who asked not to be named, said the unionization efforts were spawned by fears of a reduction in benefits following the transfer of workers to Dallas-based EDS. In addition to the UAW petition drive, employee concerns have manifested themselves in proposed legal action against GM and its newly won subsidiary (see story page 1).

The sources said workers were upset over the loss of annual cost-of-living allowances and overtime pay, changes in the structure of retirement plans and reductions in dental, vision and dependent health care benefits. EDS maintained that the transferred workers would be compensated for benefits changes with what the company described as a generous stock giveaway plan [CW, Nov. 12] and merit raises larger than those generally awarded by GM.

NLRB regulations require that at least 30% of the employees in a proposed bargaining unit sign the petition seeking elections for union representation. Although the UAW would not specify the percentage of GM workers involved in the petition drive, a union spokesman confirmed an earlier statement that more than 60% of the workers in the four units had signed.

"We are pleased with the progress of the campaign," the UAW spokesman said. "There will probably be separate elections for each petitioning unit. How many workers eventually come into the union depends on how many elections are held and how many of those elections are successful. If any of the units vote to join the union, we intend to arrange bargaining [with EDS] right away."

According to Henry Chiles, assistant to the regional director for Region Seven of the NLRB, the preliminary hearings will focus on the structure of the proposed bargaining units. Discussions will likely involve the job titles to be included in the units and the size of the employee groups for which elections could be held.

"The NLRB really controls the time period for the elections. It can be as short as a few weeks, or it could be months," the UAW said.

'UAW effort to increase rolls'

According to Ken Riedlinger, senior vice-president with EDS, only a very small percentage of GM employees actually want union representation. "I think it is the UAW trying to get the salaried workers to unionize, rather than the other way around," he said. "The thing you need to understand is that this is really not a GM/EDS issue; this is an effort by the UAW to increase its rolls. It really has very little to do with the merger.

"EDS is certainly opposed to any union occuring within EDS, and we will vigorously oppose any effort to form a union in EDS," Riedlinger said. "We feel strongly against the unionization drive because there is no need for it. There is no place for it within EDS, and I am very confident that no union is going to be formed."

One GM DP worker, a former UAW member, said he would not support the union's efforts. "The union takes everybody to the middle," he said. "If you are a highly motivated, success-oriented employee and the guy sitting next to you just wants to collect a paycheck and be comfortable, you are both going to get the same pay. I am not interested in being in the middle. I am interested in being on top."

EDS

from page 1

deadline will be reached this week.

Asked to comment on Olsman's suit, EDS Senior Vice-President Ken Riedlinger said, "It has no merits, and I think you will find that we will win. There are preliminary legal — I hate to use the word maneuverings — actions being taken in response to that suit. We are investigating their allegations." GM spokesman William Winters had no comment on the suit. He confirmed that the EDS retirement package does not include early retirement after 30 years of service, as does GM's package.

Attorney Donald Gasiorek of Somers, Schwartz, Silver and Schwartz, P.C. of Southfield, who said he was asked to get involved with LFTRB by some GM employees, said taking on GM would be "an expensive proposition."

"Their intent is to retain the benefits they had at GM," Gasiorek said of the LFTRB backers. "The question is how good is it for EDS to suddenly wind up with 10,000 disgruntled employees. You don't want people so distraught it has an impact on productivity," he added.

Neither GM nor EDS spokesmen had any reaction to the fund-raising activities. GM spokesman Winters said he was aware of the fund and added, "All I know is what I read in the paper." A spokeswoman for EDS said last Wednesday the company was not aware of the LFTRB fund.

Both lawyers said the actions are unusual, because when the larger company — GM — acquired the smaller company — EDS — the employees of the larger company were apparently given the same benefits as the employees of the smaller company.

"Usually, a smaller subsidiary becomes part of the larger whole. Here, you have the reverse. GM is putting the employees in a smaller subsidiary and reducing their benefits," Gasiorek said. According to Olsman, "The whole transaction is going to break significant new legal ground in the area of employment law. Everyone is at a loss to find a precedent."

He added, "GM offers a better benefits package to its employees than EDS does. You're talking about the biggest corporation in the world. If it works in uninterrupted fashion for GM, no one would be surprised to see [Ford Motor Co.] and [Chrysler Corp.] do it. It is an excellent move from management's point of view. They save the company hundreds of millions of dollars in benefits."

The two legal actions differ in scope. "I'm relying on statutory authority, and they're relying on case law evolved over seven years," Olsman said . He noted that his suit alleges a violation of the federal Employment Retirement Income Security Act, because employees who would have been eligible to retire after 30 years of service with GM would not have the same benefit at EDS. Olsman called this a "wrongful deprivation of vested pension rights."

Citing a case of potential hardship resulting from the transfer, Olsman said he was approached by two GM employees with multiple sclerosis, who at times have had to take disability leaves from GM. "GM gives them disability benefits; EDS doesn't have them," Olsman said. "If these people fall into a situation where they have to leave work, they're out. There's no legal protection for them" at EDS, Olsman said.

An EDS spokeswoman disagreed with Olsman, saying that any "preexisting condition" that qualified for health benefits at GM would also be covered by EDS.

Airlines ready DP centers in anticipation of Sierra

By John Desmond
CW Staff

TARPON SPRINGS, Fla. — The Sierra series of mainframes has not yet been announced by IBM, but users with bulging processing demands are nevertheless preparing their data centers for an anticipated 1985 arrival of the high-end IBM series.

Analysts project that the initial Sierra will offer at least 29 millions of instructions per second (Mips) processing power at a price more favorable than 3081 series mainframes.

The heavy Mips-using data centers at commercial airlines, which process on-line reservation systems, are especially anxious for Sierra's arrival. According to Gerald Doherty, director of computer operations at Trans World Airlines, Inc. (TWA), "The demands are such that we will need another large uniprocessor in an early-1985 time frame."

Doherty said TWA's data center currently uses a 3033 CPU in tandem with high-performance version 3083 CPUs. "To help us bridge from our current capacity through 1985, we've implemented a support processor using an IBM 3033 in a form of multiprocessing," Doherty said. In a method transparent to users, the 3033 is used to answer all inquiries on seat availability, while the 3083s perform the reservation function. "The 3033 is thought of as a helper processor," Lewis said.

If the Sierra is delayed beyond its expected spring announcement, Doherty said, "other individual packages can be off-loaded based on need. But you do reach a practical limit for that concept to work. If Sierra is not announced in early 1985, we'll have to move additional loads to helper processors." Another possibility is to upgrade the helper 3033s to 3083s, he said.

Anticipated MVS/XA-only support

United Airlines, Inc. is converting its mainframes to the MVS/XA operating system in preparation for Sierra, which is expected to support only extended architecture, according to James Peyton, systems engineer with United's Chicago data center.

In its three data centers, United runs 9083s and 9081s, which are 3083 Model JX and 3081 Model KX specially modified by IBM for the airline industry. If Sierra is announced in the spring, United plans to replace its 9081s with Sierras, Peyton said. If Sierra is delayed beyond the summer, when United will need more processing power, the company will either go to a 3084 configuration or buy another processor, neither of which is as attractive an option, Peyton said.

To move from a 9081 to a 3084 Model QX, United would have to spend approximately $500,000 to make the 9081 look like a 3081, and in the process "enhanced Thermal Conduction Modules would have to be yanked out and more standard products installed," Peyton said. United would then have to upgrade the 3081 to a 3084, he said. "That is not financially attractive to us, because there is no migration path from a 9081 to a 9084; there's no such box," Peyton said.

Projections that Sierra would offer more processing power in the same or less floor space are also attractive to United, which has limited floor space in its data centers.

Dalton Wiley, American Airlines, Inc.'s manager of capacity planning, said, "We want Sierra now. We need more capacity." American is running its reservation system on four 9083s running the Airline Control Program (ACP). Since ACP would not run on an extended-architecture-only machine, American is now investigating what code changes would be needed to allow the software to run in extended architecture mode, Wiley said.

Wiley also said it is difficult for him to plan because the product's details are so uncertain. "What we're really after is some information as to whether it will be [extended-architecture-only]," he said. "We need some [specifications] so we can do some planning." He said American will consider entering IBM's Early Ship Program when the product is announced "if that's what it takes to get it early."

American has a backup plan should Sierra be announced later than expected. "Our contingency is to run more than four machines simultaneously," Wiley said. Changes by American's own programmers will allow up to eight CPUs to run ACP concurrently to gain needed capacity, he said. But the fallback position has the drawbacks of "investment in today's technology when tomorrow's is right around the corner," as well as the added complexity of more multiprocessors plus added personnel and operations costs, Wiley said.

Airlines are not the only users planning for Sierra. When the long-term 3033 mainframe lease of Martin Marietta Data Systems, Inc. in Orlando, Fla., runs out in 1985, the company plans to obtain a month-to-month lease in order to bring in Sierra sooner, according to E. Britt Crawford, manager of performance and tuning. His shop runs a total of six 3033 and 3084 mainframes. "We feel the Sierra will be available in June," he said, but if the product is delayed beyond July or August, "we'll have to decide on another 3080 series" mainframe, he noted.

SYSOUT Management Made Easy With $AVRS

UNTIL NOW there has not been an integrated approach to the management and archival of SYSOUT and SYSLOG. $AVRS, from Software Engineering of America, solves this problem by completely automating the management and storage of this critical JES output.

$AVRS features and benefits:

☑ savings in printer and paper costs
☑ savings in personnel costs
☑ comprehensive production and test JCL error checking
☑ immediate access to JCL of failing jobs through any terminal
☑ complete ISPF-like interactive and batch retrieval facilities
☑ ability to produce statistical analysis of SYSOUT using $AVRS commands
☑ archival and retrieval of SYSOUT by class, name, time, etc.
☑ increased data center security

$AVRS is saving thousands of dollars daily at over 200 data centers by providing efficient and cost effective management and archival of SYSOUT and SYSLOG.

To obtain further information on how
$AVRS can benefit your installation, call
SOFTWARE ENGINEERING OF AMERICA at [212] 206-7660
150 Fifth Avenue, New York, NY 10011.

SOFTWARE ENGINEERING OF AMERICA SEA

IBM AT falls short in Personal Computer compatibility

By Edward Warner
CW Staff

Early corporate users of the IBM Personal Computer AT say the unit is not as IBM Personal Computer-compatible as they had expected and that its optional 20M-byte hard-disk storage unit has faulty data sectors. But on the whole, they are happy with the machine, and some are even planning to buy it instead of the IBM Personal Computer XT.

Introduced in August, the Personal Computer AT features an Intel Corp. 80286 microprocessor that is nearly twice as fast as the Intel 8088 in the Personal Computer. It also offers from 256K to 3M bytes of random-access memory (RAM), a choice of 1.2M- or 360K-byte diskette drives, 20M-byte hard-disk storage and a somewhat redesigned keyboard.

The users, few of whom had worked with the AT for more than a month, said they like the AT's speed and storage capacity and would put it to use for work with spreadsheets and data base management systems (see story page 7). They tempered their praise with some criticism, however.

Software incompatibility

Most complaints centered on compatibility with the software, storage peripherals and add-on boards designed for the Personal Computer. Several users also voiced unhappiness with the inability of the AT's 1.2M-byte diskette drives to write in a format that can be read by the 360K-byte drives of the Personal Computer.

According to Richard Strauss, vice-president for products at Corporate Software, Inc. in Waltham, Mass., only about 35% of the Personal Computer's software base has been certified as usable on the new machine. He indicated that most popular applications packages will run, but Max Hughes, vice-president of systems and computing at the pharmaceuticals division of New York-based Pfizer, Inc., said he is unable to use Ashton-Tate's Framework integrated package. A version of Framework has since been announced for the AT.

Compatibility problems have also arisen when some users tried to insert communications add-on boards for the Personal Computer into one of the eight expansion slots of the AT. Roy Hill, chief programmer in the technical support section of Michigan Blue Cross/Blue Shield, said he found the Hayes Microcomputer Products, Inc. Smartmodem board would not work in any of his firm's four ATs.

Bad disk sectors

For users with the 20M-byte internal hard disk, the most common complaints involved disk sectors. Bob Lane, microsystems consultant for Merrill Lynch Pierce Fenner & Smith in New York, said one 20M-byte storage unit has 40K bytes worth of bad sectors with which his office is stuck until the disk's data can be backed up and the disk reformatted.

An IBM spokesman, meanwhile, admitted that 20M-byte storage units had been shipped with as many as 10 faulty sectors but added that the units were still in line with IBM's requirement of a minimum capacity of 21.8M bytes of usable storage. "We do not ship drives that fall out of an acceptable range of quality," he said.

Other problems cited by users included the following:

- Inability to access full potential RAM. The current lack of access, under IBM's PC-DOS operating system, to the AT's full potential for 3M bytes of RAM, led Moore McCormack Resources, Inc. to put off an AT purchase, at least for now, according to its controller, Andrew Langlois.
- Backup system needs. One user criticized what he called IBM's failure to offer a backup storage system for the AT, while another said the AT is not compatible with the popular Iomega Corp. Bernoulli Box storage system for the Personal Computer.
- Keyboard only slightly changed. Several users said IBM has yet to incorporate what they see as needed changes to the Personal Computer keyboard. Instead, they said, changes found in the AT keyboard are small but are still significant enough to confuse users.
- Screen update speed. Though the AT recalculates data quickly, one user said it is somewhat slow in updating screens of information.

Another corporate user pointed out that the AT can be upgraded from 512K bytes to its full 640K-byte RAM capacity only by addition of a 128K-byte memory add-on board available only from IBM.

Some users have no problems

On the positive side, problems with the 20M-byte hard-disk unit are not being reported by all users. Five corporate micro specialists said they had experienced no problems with their ATs' hard disk, but one of them, Hank Kee, vice-president for personal computing at New York's Chemical Bank, said he encountered other issues with the machine.

Kee said that among those issues was what he termed the lack of a viable backup system from IBM. Streaming tape drives are available from third-party vendors, he noted, but users must otherwise establish backup using a series of diskettes.

Another corporate user knocked the machine's lack of a detachable keypad, something he said would be especially useful for entering data to a spreadsheet. He said his firm's AT users find the AT's keypad so debilitating that they usually use the numbers at the top of the keyboard for numerical entries.

Why are users having problems with the much heralded machine? According to micro industry analyst Aaron Goldberg of Framingham, Mass.-based International Data Corp., IBM is "letting the power users [of the AT] shake it down fully" while making a profit on AT sales.

Power users most tolerant

The power users, Goldberg claimed, "will be the most tolerant of faults" and will put the machine to its toughest tests.

Dan Spinner, chief operating officer of Management Information Software, Inc. in New York, said problems with the 20M-byte hard disk were arising because IBM is "pumping them out much faster than they can get good quality control." An IBM spokesman responded to Spinner's claim by saying the drives are tested throughout their manufacturing process.

Though some users are enamored enough of the Personal Computer AT to see it as the eventual standard for their firms, others are not promoting the machine until they satisfy their concerns about users' needs, the Personal Computer AT's compatibility and its hard-disk quality problems.

The wait is the drawback

The greatest problem for users of the IBM Personal Computer AT may not be software incompatibility with the IBM Personal Computer, hard-disk data losses or getting used to a somewhat rearranged keyboard.

It could be the wait.

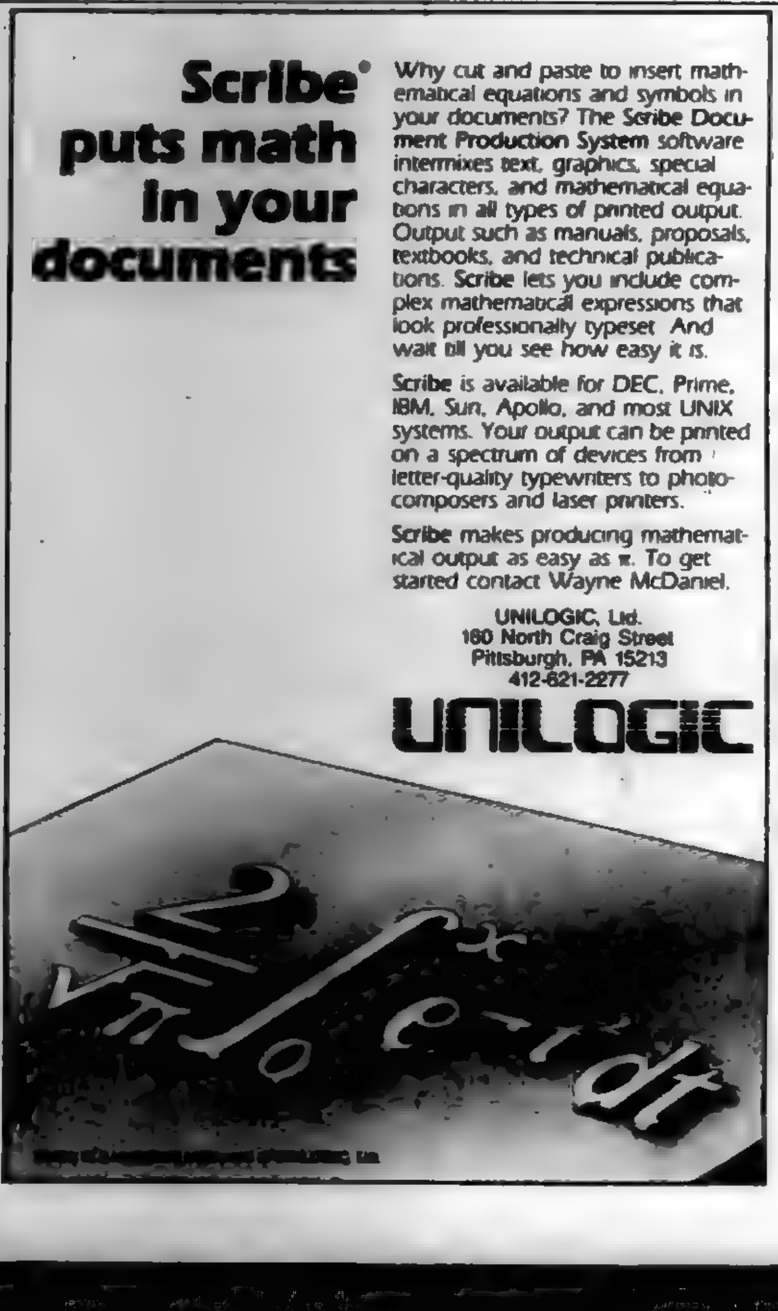
The Commercial Banking Group of San Francisco's Wells Fargo Bank, N.A. was among the first to order Personal Computer ATs, purchasing those units shortly after the machine was introduced Aug. 20, according to the group's senior systems analyst, Kingsley Mar. Mar said he is now "pacing the loading dock. They are due any day now."

The Budd Co., a Madison Heights, Mich., automotive parts manufacturer, also was an early buyer of the Personal Computer AT but does not expect to receive its first unit until early next year, reported Larry Hamilton, management information services director

Overall, "availability is a pain," according to Rich Reed, microcomputer manager with Cigna Corp. of Bloomfield, Conn., which has 10 to 20 ATs on order. Reed, who placed his order about a month ago, said his supplier has told him that orders being placed now will not be filled until March.

All that should change, however, according to data compiled by International Data Corp. (IDC), a Framingham, Mass., research firm. Though AT shipments in 1984 will total only 35,000, IBM will ship as many as 300,000 ATs by the end of next year, according to IDC analyst Steve Bosley.

Ironically, the demand for new machines may have limited the supply of demonstration models as well, according to Cigna's Reed. Reed said the AT loaned to his office by an IBM sales representative had seen so much intensive duty at other sites that, when it arrived at Cigna, "it looked like it had been dropped off a truck."



Scribe® puts math in your documents

Why cut and paste to insert mathematical equations and symbols in your documents? The Scribe Document Production System software intermixes text, graphics, special characters, and mathematical equations in all types of printed output. Output such as manuals, proposals, textbooks, and technical publications. Scribe lets you include complex mathematical expressions that look professionally typeset. And wait till you see how easy it is.

Scribe is available for DEC, Prime, IBM, Sun, Apollo, and most UNIX systems. Your output can be printed on a spectrum of devices from letter-quality typewriters to photocomposers and laser printers.

Scribe makes producing mathematical output as easy as π. To get started contact Wayne McDaniel.

CAB from page 1

of the Sunset Act] that deregulation was a fact and was not going to be turned around," he said.

For Hoke, this was an important step because it meant he could begin planning for the transfer of the DP division's personnel, hardware, software and magnetic tapes to the DOT computer center. "The fate of the [Civil Aeronautics Board] had to be decided first, before we could get into that [planning] detail," he said.

During the last six to nine months, Hoke and DOT officials have worked out details on how to transfer hardware, maintenance contracts, personnel, software, data services and magnetic tapes. The applications programs and data files will not be changed by the transfer, so no new user training will be needed, Hoke pointed out.

"Our basic objective has been to make the transition without any serious degradation of support services," Hoke said. "We're in excellent shape right now" for the transfer on Jan. 2-3, he said.

Although most of the CAB's peripherals will be transferred directly to the Transportation Computer Center, Hoke said DOT officials insisted on replacing the CAB's mainframe with an IBM 4381. The old CAB mainframe, installed in 1976, is an IBM 370/158 Model II, which Hoke explained is an IBM 370/158 fitted with a dynamic address translation facility to make the CPU equivalent in throughput to an IBM 370/168.

By replacing the old CPU at the same time as the transfer, Hoke said, "I guess you could say we're killing two birds with one stone."

At DOT, the receiving end of this transfer, absorbing the CAB hardware will go smoothly because the modern Transportation Computer Center had the space, power and air conditioning available to handle the additional equipment, according to Don Southern, special projects officer.

But Southern said the installation of about 60 terminals and a communications network for the new users has been a headache. He said that high-level managers were slow to decide which users would be performing particular functions and in what offices. Until recent meetings resolved those details, it was difficult to plan how many remote cluster controllers were needed or how to run coaxial cables from the computer room to the offices, he said.

Hoke will join DOT's Office of Information Systems and Telecommunications Policy, while his staff will move to the Research and Special Programs Administration. "If we felt like boat people, this would be a terribly traumatic experience. But the reception we've had has been one of respect — very positive — and we're grateful for that," Hoke said.

Only INNOVATION (not even IBM) supports a STAND ALONE BACKUP program or provides a STAND ALONE program that supports XA mode

WHEN DISASTER STRIKES while your processor is running in XA mode or 370 mode . . .

- SAR automatically determines running mode (XA or 370)
- XA mode support saves critical time in a disaster/recovery mode
- XA mode support makes operator procedure simpler and less error-prone
- XA mode support eliminates the need to maintain an alternate IOCDS to use in 370 mode for SAR

INNOVATION's SAR provides the fastest RECOVERY.

SAR supports dumping of disk volumes, data sets, or tracks when no operating system is available.

STAND ALONE BACKUPS Since you can use the DUMP feature of SAR to backup the volume before the restore, STAND ALONE BACKUPS eliminate the need to keep a spare volume to do restores in case the system pack goes down.

VM USERS SAR backup and restore functions are supported under VM.

STC, others eye tin oxide

By [illegible]
CW Staff

While IBM reportedly determined that organometallic biocides can cause damage to some of its disk drives, makers of competing products using the same basic technology do not appear to be as worried.

IBM-compatible disk drives manufactured by Memorex Corp. and Storage Technology Corp. (STC) use the same flow-through technology which draws air through the drive's head disk assembly for cooling. But neither firm has been able to identify head disk assembly failures caused by tin oxide contamination. Spokesmen for both Memorex and STC, however, admitted that their drives have been in the field roughly half as long as many IBM 3380s. The spokesmen both said IBM's 3380 head disk assembly problems developed after the units had been operating for about a year. The bulk of STC and Memorex 3380-compatible drives has been installed in the past four to six months.

Randy Watson, STC's disk product manager, said his company is also recommending that users discontinue use of organometallic biocides in computer rooms. But Watson said there only appears to be a potential for damage to head disk assemblies when tin-oxide-based biocides are introduced into air-conditioning systems in large quantities. Watson contended that if the chemical is used in the quantities recommended by chemical manufacturers, the environment should be safe for disk drives.

STC originally decided to recommend that the use of organometallic biocides be restricted to chemical manufacturers' recommended levels. But since chemical manufacturers' recommended levels for the biocide appear to differ, STC decided to alter its position. STC researchers have discovered that many air conditioner maintenance personnel consistently misuse organometallic biocides. Watson explained that organometallic biocides are typically introduced into water flowing through an air-conditioning system at rates greater than the recommended dose of roughly five drops per 1,000 gallons of water.

Memorex has not yet determined whether organometallic biocides are having an adverse effect on its 3680 drives. Memorex has not discovered any 3680 head disk assembly problems directly attributable to tin oxide contamination. The three other makers of 3380-compatible disk drives, Control Data Corp., National Advanced Systems, Inc. and Amdahl Corp., each said their 3380-compatible drives use a sealed head disk assembly unit and therefore appear to avoid tin oxide contamination problems.

Groups to push VDT bills

WASHINGTON, D.C. — Two national labor groups last week launched an 18-state lobbying campaign for legislation on VDT safety. The Service Employees International Union (SEIU) and 9 to 5, the National Association of Working Women, plan to use their "collective clout" to push for VDT legislation in each of the 18 states targeted, according to Elaine Taber, program director at 9 to 5.

Karen Nussbaum, president of District 925 of the SEIU in Cleveland and a 9 to 5 director, said the "Campaign for VDT Safety" will consist of a traditional effort to lobby for the legislation. Letter-writing campaigns, educational programs and discussions with legislators are planned in each state.

Discussions will focus on two types of legislation: bills addressing VDT ergonomics, requiring installation of things like adjustable keyboards and chairs and glare reduction screens, and a bill giving employees a "right to know" the specifications of VDT machines.

To date, VDT safety bills have only been filed in Massachusetts, which has the earliest filing deadline, 9 to 5's Taber said. That bill, sponsored by 9 to 5, the SEIU and the AFL-CIO, deals primarily with ergonomic issues. It makes the state's Department of Labor and Industries responsible for enforcing regulations on semiannual inspections of VDTs, eye exams for employees and transfers of pregnant VDT workers.

NAS reassigns personnel

MOUNTAIN VIEW, Calif. — In an effort to "streamline operations to better deal with the increasingly competitive data processing industry," National Advanced Systems Corp. (NAS) on Dec. 10 reassigned some of its 1,150 U.S. employees and placed others on surplus status, according to a company spokesman.

The employees include roughly 70 people from headquarters and field services, according to an anonymous source. Personnel on surplus status will be paid for 30 days, during which they can interview for positions within National Semiconductor Corp., the parent company of NAS. After that period, these employees will officially be laid off.

The employee cutback is part of an NAS corporate directive to reduce the company's expenses by 20%, according to the anonymous source, who was uncertain what percentage the personnel changes would contribute. The NAS spokesman said that chances are very good that all employees will find jobs within National Semi, which has a worldwide work force of 42,000.

3380

from page 1

is recommending that all users of 3380, 3370 and 3375 disk drives discontinue use of the organometallic biocides. The spokeswoman added that, so far, only 3380 users have actually reported head disk assembly problems, and only they have been formally notified of the potential problems. International Data Corp., a Framingham, Mass., market research firm, estimated that IBM has installed roughly 90,000 3380s at approximately 10,000 user sites.

The IBM spokeswoman added that a notice, which has already been added to IBM technical documents, includes the 3370 and 3375 disk drives as a precaution. She said no head disk assembly problems have been reported on the 3370s and 3375s.

While IBM is not recommending that users stop using biocides, it is recommending that use of organometallic biocides be discontinued. Other biocides apparently do not have an effect on the IBM disk drives. A spokeswoman emphasized that while the organometallic biocides can cause problems in IBM equipment, there is no apparent health risk to workers in buildings where the chemicals are used.

The potential problem stems from the basic design of 3380, 3370 and 3375 head disk assemblies. These units draw air from the computer room to equalize pressure and cool the head disk assembly. While the air passes through a three-stage filter that can eliminate particulate matter down to the submicron level, the biocides enter the head disk assembly in a gaseous form.

Ford Motor Co. in Dearborn, Mich., has experienced 3380 head disk assembly problems, which IBM attributed to tin oxide contamination. A Ford executive, who asked not to be identified, called the contamination a nuisance that took several months to resolve. "It wasn't like all the 3380s were going down at once," he said, noting that only a small number of the firm's 3380s actually developed head disk assembly problems.

IBM recommended that Ford stop using the organometallic biocide and clean the tin oxide residue out of the computer room. Ford complied but still experienced intermittent head disk assembly failures, although the frequency of the failures appeared to decline. The failures continued to diminish with time, the executive said, noting that about three months after discontinuing use of the organometallic biocide, "the problem appears to be behind us."

Other large users of IBM disk drives whose air-conditioning units used the organometallic biocide also admitted experiencing a higher than normal incidence of head disk assembly problems when contacted last week. But they could not say whether the problems were attributable to the organometallic biocide used in their shops.

The IBM spokeswoman declined to explain exactly what potential problems the organometallic chemicals can cause, but she said 3380s that have developed head disk assembly problems attributable to tin oxide contamination have been replaced without charge. Some industry observers contend the buildup of tin oxide on read/write heads and disk platters can cause head crashes. Others, however, contend tin oxide contamination can cause other mechanical problems within the head disk assembly, such as short circuits in read/write head and actuator arms and damage to the disk media.

Bob Arnold, a technician with Empire Engineering, Inc., a Quincy, Mass., air-conditioning contractor specializing in computer room systems, noted his firm does not recommend the use of organometallic biocides because they have been known to cause mechanical problems with other types of machinery, such as the machinery used in air-conditioning systems. Arnold added that relatively few buildings use air-conditioning systems that require the biocides.

Communications tools in spotlight at Dexpo West '85

CW AT DEXPO WEST

By Jeffry Beeler
CW West Coast Bureau

ANAHEIM, Calif. — Like most other users, customers in the Digital Equipment Corp. orbit are increasingly demanding gateways to the non-DEC world and networking capabilities of their own.

In response, hardware and software vendors have recently stepped up production of DEC-oriented communications aids, according to Steven Barth, marketing vice-president for Expoconsul International, Inc.

Probably nowhere was the DEC community's growing emphasis on systems integration more clearly in evidence than at the sixth national DEC-Compatible Industry Exposition (Dexpo) West '84 here Dec. 11-14. Of the approximately 280 vendors that exhibited at last week's Dexpo at the Disneyland Hotel Convention Center, 60 or 65 were demonstrating communications products, Barth said.

Hardware, software split

Barth, whose Princeton, N.J.-based company sponsored Dexpo, characterized the data transmission aids as split fairly evenly between hardware and software. On the hardware side were offerings like fiber-optic links, modems and statistical multiplexers. Software packages included local networking facilities, electronic mail programs and micro-to-mainframe links.

Many of the communications products displayed had already been on the market for quite some time, like IBM's family of Device Attachment Control Units, which reportedly allow IBM processors to swap information with their DEC counterparts.

But a few of the Dexpo-showcased transmission aids made their formal industry debut at the show. Some newcomers included the following:

■ Ross Systems, Inc.'s Maps/Microlink, a software package that reportedly enables spreadsheets running on an IBM Personal Computer to share data with Ross' DEC VAX-based accounting and decision-support applications.

■ Data Processing Design, Inc.'s Wordlink, which reportedly allows IBM Personal Computers or Personal Computer XTs supporting Wordstar or Multimate to gain access to VAX series mainframes.

■ A Univation, Inc. controller board that is said to permit DEC Rainbow personal computers to be tied together to form full-fledged local networks.

■ National Information Systems, Inc.'s Teleport II, a program that reportedly connects micros such as Rainbows and IBM Personal Computers to each other or to larger CPUs such as VAXs, Decsystem-10s and Decsystem-20s.

■ An enhanced release of Exceptional Business Solutions, Inc.'s WPS-80, a Rainbow-based word processing package that, for the first time, can transmit documents among DEC micros running CP/M.

■ Able Computer, Inc.'s Softswitch feature, which, with the vendor's Attach terminal system, reportedly allows users of DEC Unibus processors to gain access to host CPUs, data files and applications.

Ross Systems' Maps/Microlink costs $10,000 and is available from its developer at 1860 Embarcadero Road, Palo Alto, Calif. 94303.

National Information Systems' Teleport II, by contrast, costs $5,000 for a basic license covering one mainframe and five micros and is available from the company at Suite 130, 20370 Town Center Lane, Cupertino, Calif. 95014.

Data Processing Design's Wordlink sells for a one-time fee of $1,300, plus $200 per Personal Computer and is available from the vendor at 1400 N. Brasher St., Anaheim, Calif. 92807.

Univation's local network controller board is priced at $750, with the associated software costing an additional $750 and can be bought from the firm at 1037 N. Fairoaks Ave., Sunnyvale, Calif. 94086.

The enhanced release of Exceptional Business Solutions' WPS-80 package costs $195 and is available from Suite J, 11738 Moorpark St., Studio City, Calif. 91604.

Able Computer's Softswitch communications feature licenses for a one-time fee of $1,000 and is available from Able at 3080 Airway Ave., Costa Mesa, Calif. 92626.

Integration with other systems

For Barth, the comparatively heavy concentration of communications-oriented products and vendors reflects a growing desire among DEC users to integrate their systems, not just with other DEC equipment models but with competitive gear as well — especially IBM's.

"Most of the people attending this show . . . want to find ways of getting more out of their current systems by attaching them to products from other vendors," he said.

Especially appealing to DEC users, he added, is the prospect of connecting their systems to the growing population of IBM micros or of integrating Big Blue's mainframes with VAXs operating in manufacturing and engineering environments.

Just published:

MVS TSO

Concepts • Commands • SPF • CLIST

If you're developing programs under OS/MVS, you're probably using some type of time-sharing system. If that time-sharing system is TSO, a new book called *MVS TSO* is for you. It zeroes in on the tasks a programmer has to do most often, so you can master TSO in a hurry.

Here's what you'll learn, whether you're using native TSO or SPF (a menu-driven version of TSO)

- how to create or change a data set or a library member
- how to allocate, display, print, rename, delete, move, or copy a data set
- how to compile, link-edit, and execute a program interactively
- how to debug a COBOL program interactively—that is, how to monitor the program's execution, look at the contents of data fields, watch the order in which subprograms execute, and so on
- how to start and control background processing for batch jobs (a background job doesn't run in your time-sharing region, so your terminal's not tied up as the job executes)
- why you have to use native TSO commands for some functions even if SPF is available on your system

In short, you'll learn everything you need to know to use TSO commands or SPF for program development.

For experienced TSO users:
How to use command procedures

MVS TSO will also teach you how to use command procedures, or CLISTs. A CLIST is a series of TSO commands and statements that are executed in sequence (it's roughly equivalent to a JCL procedure). In this book, then, you'll find out:

- how to create and execute a simple CLIST for a specific job
- how to create and execute a generalized CLIST that can be used in a number of situations
- how to write a complex procedure that uses facilities much like those of a high-level language
- when and why you should write a program in a high-level language instead of using a CLIST

2 reasons why this book works

1. A technical subject like TSO is easier to master if you have plenty of practical examples to study. That's why *MVS TSO* is loaded with illustrations. For example, you'll find:

- before-and-after screen images that show you what values to enter into a screen and what the result will be
- TSO command formats that clearly explain each operand
- sample CLISTs
- schematic drawings that show how TSO works and how it relates to MVS

These illustrations not only help you understand TSO in the first place. They also serve as handy references when you're working at your terminal.

What's more, they teach you the basic patterns of TSO commands and SPF options. So you won't have any trouble looking up new features in the IBM manuals or other references when...and if...you need them.

2. This book is organized in a way we've found works well. After chapter 1 (an introduction to MVS and TSO), the book is divided into 3 parts: one each on SPF, TSO commands, and CLIST. So if SPF isn't available at your installation, you can skip that part and concentrate on native TSO. If you already have TSO experience, you can go directly to the part on CLIST.

In other words, you can study the parts you want to, when you want to.

So why wait to become a TSO expert?

Get a copy of *MVS TSO* today. I think you'll be delighted at how quickly you'll master TSO.

Our unlimited guarantee

You must be satisfied. Our books must work for you, or you can send them back for a full refund...no matter how many you buy, no matter how long you've had them.

Practical texts on JCL and utilities

OS JCL teaches you how to code job-control language for everyday applications that involve sequential, direct, ISAM, or VSAM files. If you're a TSO user, this book will help you understand why you have to supply JCL for some TSO jobs and what that JCL should be.

Why take the time to write a program in a high-level language when you can use a utility program instead? *OS Utilities* teaches you to use 13 time-saving utilities, including IEBGENER, IEBPTPCH, IEBISAM, IEBUPDTE, IEFBR14, Sort/Merge, and IDCAMS.

DP chief at U.N. keeps tabs on worlds' worth of data

NEW YORK — Sidney Cashton has the world on an IBM. Global economic and social statistics are his daily bread.

Cashton joined the United Nations back in 1962 as a senior statistician. He is now an assistant director in charge of New York Computing Services, the group that provides computer systems and services to some 35 user offices throughout the organization, including Unicef, the U.N. Development Program and the World Hunger Organization.

Cashton

His department specializes in applications that track world population, national economies around the globe, international health and hunger — "everything from soup to nuts," Cashton said.

"I've seen data processing grow from using an outside service bureau, spending $10,000 a year for statistical processing, to what we have today, which is not an extremely large shop but a good-size shop serving a multitude of users," he explained.

"We have 85 people here that handle programming, analysis, development work and data entry for the United Nations. We use two computers, an IBM 3081 and an IBM 4381 with [40G] bytes of disk storage, and we have about 300 terminals hooked onto our systems," Cashton said.

But the magnitude of DP operations at the U.N. cannot really be measured in taking inventory of the equipment or by looking at Cashton's $5.5 million annual DP budget. The work done by the DP department here is far-reaching, serving users all over the world. Each word processing application, for instance, is custom-made because every U.N. report must be available in several languages (see story page 11).

"We've had multiple language capability on the mainframe since day one," he said. "What we did is, we got together with IBM and designed a train for the printers that contains the capability to print each line in combinations of English, French, Spanish and Russian. So the word processing capability that we now have got its start in the data processing department."

The scope of the organization also includes communications linkages with United Nations offices in Geneva and Baghdad [Iraq]. "We hope in the near future to link up Vienna and Bangkok [Thailand]," Cashton added.

> *'We are continually involved [with a flat budget] trying to ensure that we give the users adequate response with adequate facilities for their needs. It becomes extremely difficult after a while.'*
>
> — Sydney Cashton, assistant director, New York Computing Services

One of Cashton's more recent responsibilities has been to set policies for the selection of the personal computers and related software, "which has been slowly making its way into the U.N," he said.

Primary applications

He reported that personal computers were primarily requested by managers for spreadsheet applications, word processing and management information tools. He expects to have about 50 microcomputers in-house by the end of this year and around 200 by the same time next year.

Cashton said his biggest challenge for 1985 is "meeting the needs of the users — which are constantly growing — with the flat budget that's available to us.

"We are continually involved trying to ensure that we give the users adequate response with adequate facilities for their needs," he explained. "It becomes extremely difficult after a while."

Micros would compound problems

Asked if he thought the influx of personal computers would relieve some of the demands placed on him by end users, Cashton — a self-proclaimed personal computer advocate — said personal computers would only compound his problems.

"The [personal computer] used in an industrial complex such as this is not usually a device that is used in a stand-alone fashion," he maintained. "In most instances, the people are using subsets of data that is available on the host computers. They're really just an adjunct to the large computer.

"I think they're great, but I don't think we have reached the point where we know how to use them effectively," he concluded.

Office management strategies on bill at annual AMS conference

PHILADELPHIA — A business film festival, symposiums on high technology and advanced management and a special panel titled "Managing the Office of 1990 and Beyond" will headline the 66th annual Administrative Management Society (AMS) International Conference June 16-19 at the Wyndham Plaza Hotel here. The conference also will feature a computer and office show June 17-19 at the Franklin Plaza Exhibition Hall.

Discounts of $25 are available for registrations before April 1. Discounted nonmember prices are $425, including five meals, or $305 without meals. Discounted member prices are $395 with meals or $275 without meals. Single-day registrations are also available.

The AMS is located at 2360 Maryland Road, Willow Grove, Pa. 19090.

IBM 3274 Users.
Multidrops And
32 Coax Channels
on 1 Coax Cable.

That's right! Now, you can multiplex all the data between your IBM 3274 controller and up to 32 IBM 3278/9 terminals or printers on one RG-62A/U coaxial cable. Transmission distance is up to 3000 feet. No more hassle of pulling bundles of coax cables through overcrowded ducts. Most likely, the one required cable is already installed.

As a unique feature, the Fibronics FM-1670 System supports multidropping from that single coax cable to as many as four clusters of terminals or printers. Exciting flexibilities in network architecture are now possible.

For new installations, we recommend and offer a fiberoptic interface with the capability to transmit data up to a mile.

Here's more! The FM System offers simultaneous operation with two IBM 3274 controllers, back-up paths between multiplexers, and full diagnostics.

Interested? Call us now. We're offering on-site demos and prompt deliveries at very affordable prices.

U.N.'s OA veteran saves her ammo for big problems

Structured approach to change allows focus on what's 'new or going wrong'

By Susan Blakeney
CW Staff

NEW YORK — She moved from data processing into office automation instead of vice versa. She was an office automation manager before the term existed. Her biggest success is that everything she has implemented is doing what it is supposed to be doing.

This was how Carole Thompson described her career to *Computerworld* during a recent interview here. Thompson is the Coordinator of Technological Innovations in the Department of Conference Services (DCS) at the United Nations and has seen a hefty amount of innovation during her 19-year tenure with the U.N.

In the late 1970s, Thompson was selected from the U.N.'s data processing department to introduce Wang Laboratories, Inc.'s word processing system to the DCS. The DCS is a 1,700-member body that handles all meeting-related work at the U.N.

Thompson noted, "It's the largest department in the U.N. We handle the scheduling of meetings, interpreting, translations and reporting. We print and reproduce in six languages [English, French, Spanish, Chinese, Russian and Arabic] about [illegible] documents a year."

> *'In a world where there are no standards, keeping up with changing technology — the unknown — is the most difficult thing.'* — Carole Thompson, U.N.

Automating the department was no small task, and was further complicated by a fairly hostile user community that stalled the implementation of the project for more than a year. Eye strain, radiation and backaches were the cries from the would-be users. Thompson's DP background did not fail her, and she assembled a management committee and staff representatives to tackle the issues with which she was so familiar. After a long tug-of-war, the equipment came in.

"Ironically, we became known as the department that set the standards. People always call us for our guidelines. We've got a regular ophthalmologist; we let the people design their own work spaces; we've got some of the best ergonomic chairs around," Thompson said.

Her philosophy on introducing change is simple. Unlike plopping a typewriter on someone's desk, bringing in office automation requires a definite structure, she said.

"It's best if you concentrate on building a strong infrastructure so people won't be totally dependent on you. Each time you implement a system you have to pick a technical specialist — someone to act as systems expert and supervisor to train people and maintain the system. You have to off-load the day-to-day technical responsibilities as soon as possible.

"This way, I can keep my department small and lean, which is what I prefer," she added. "I only want to hear about things that are new or going wrong. This can only happen once you get rid of the day-to-day stuff."

Thompson has derived a great deal of satisfaction from knowing that people are comfortable and relaxed at work, and "they're not going home exhausted," as they had been before the automation.

She made a sports analogy about one of her biggest ongoing challenges: "You're shooting at a moving target. In a world where there are no standards, keeping up with changing technology — keeping up with the unknown — is the most difficult thing.

"You're essentially forced to decide what to order for a given application before all the facts are in. You have to plan far enough in advance to construct your budget accordingly. In a sense, you're forced to budget only knowing half the story."

To date, Thompson has automated the English, French and Spanish groups at the U.N.; the Arabic group will be on-line during 1985, and the Russian and Chinese groups will soon follow.

She said she is happy with the way things are going and "delighted at the fact that it all works."

Directories List 32,000 D P Users

Each directory of computer installations lists 16,000 computer users covering the NY Metro Area (NY, NJ & CT), and the Mid-Atlantic States (PA, VA, MD, DC, WV & DE).
Each site includes a profile of the hardware installed, software installed, (languages, databases, etc.), consultants used, future plans, applications and DP executives' names, titles, and phone numbers. An index provides quick access to 133 cross-references by hardware, software and industry. Price: NY-$370 and MA-$295. Call (212) 683-0606. Computer Management Research, Inc. 20 Waterside Plaza, NY, NY 10010.

Get the graphics picture in March Special Report

What do users want from graphics systems and software, and how can DP managers best meet their needs? Find some answers in Computerworld's March Special Report on graphics systems.

The Special Report will focus on mainframe and microcomputer graphics and the blurring line between the two. It will examine computer-aided design for microcomputers and easy-to-use graphics for mainframe systems. The report will feature both stand-alone and integrated applications and will discuss emerging graphics standards.

Contributions to the Special Report should take one of two forms: either a tutorial article discussing issues or trends or an application story outlining a particular user firm's experience.

Articles may range from four to six typed, double-spaced pages. Artwork, such as charts, graphs and photographs, is also welcome.

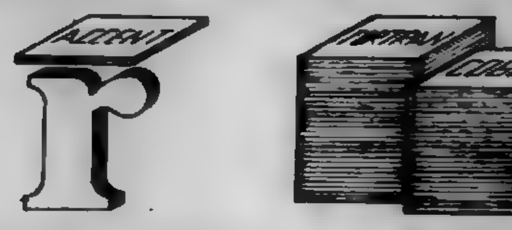
Authors should include a brief biography and a telephone number at which they can be reached.

The submission deadline for the March Special Report is Jan. 25.

If you have a story you would like to tell, an issue to speak on or any questions to ask, contact Janet Fiderio, Special Reports Editor, Computerworld, Box 880, 375 Cochituate Road, Framingham, Mass. 01701.

'Heck dad, I meant computer software!'

ACCENT R CUTS CODE 80%!



More power for your DEC-10/20, VAX*

CUT CODE
ACCENT R can cut your code up to 80%. ACCENT R's 4th generation language incorporates a unique concept that models the various data processing components. These models result in 80% less code than required by FORTRAN or COBOL.

SAVE TIME
Less code means less programming and debugging time. But that's not the only way ACCENT R can save you time. ACCENT R's powerful non-procedural language provides a complete range of commands so end users can easily add, change and delete data items.

CUT COSTS
Naturally if you save time, you save money. Programmers produce more applications in less time. End users generate their own reports and put less demand on the data processing professionals. And both programmers and end users are happier. Satisfied employees means less turnover.

SAVE YOUR SANITY
If you are using a DEC 10 or 20 now but see a VAX in your future, rest easy. ACCENT R is migratable software. DEC 10/20 today, VAX tomorrow. A syntactically identical version makes migration easy; special pre-release pricing makes it affordable.

*VAX version available late 1984

Geisco repositions as telecommunications carrier

Firm to market Softran-based interface, file transfer, connector, communications software

By Bryan Wilkins
CW Washington Bureau

ROCKVILLE, Md. — General Electric Information Services Co. (Geisco) recently announced plans to reposition itself from a remote computer services company to an enhanced telecommunications provider offering electronic software distribution.

Geisco, a subsidiary of General Electric Co., said it will offer users electronic software distribution through its network warehouse software supplies and distribute — in conjunction with Bonneville Telecommunications Corp. of Salt Lake City — products to multiple points via the unused portion of FM radio waves. The firm has also released four software packages for the micro-mainframe environment.

Geisco said it has spent $80 million to develop its enhanced product line, which will be commercially available by the end of 1985, according to Bob McCalley, general manager of enhanced telecommunications operations.

The electronic software distribution service through Geisco's Mark III network is aimed at the 1,000 to 3,000 users who make up the Fortune 1,000 market, McCalley said. "The whole intent [of our repositioning] is to move information from intelligent providers," he added.

The areas of emphasis for Geisco, McCalley said, were value added, intelligent networking, office communications, micro integration with mainframes, professional services, electronic data interchange and remote computing.

McCalley said the company, which recently added GE's Intelligent Communications Services division as part of its business, has been beta testing the new software distribution products for one year outside and inside the company.

The major products announced by Geisco were based around its Softran Services, an electronic software management and distribution system. Users will be able to electronically distribute their own proprietary software programs, data files, test messages or spreadsheet templates. Additionally, Geisco also said it intends to be a retail distributor of commercially available software packages for micros and mainframes.

Softran is priced at $100 per package, plus there is a charge for each transaction — typically $6 to $24 per electronic download.

Softran is composed of two elements: an administrator module on Geisco's Mark III service and an end-user module for each micro. The administrator maintains a library of software for browsing and selection. The administrator can permit or deny end-user access to software and track usage for audit control.

Micro-mainframe packages

Four micro-mainframe software packages associated with Softran released by Geisco were:

- The Systems Interface, which provides enhanced interactive communications between micros and public network services such as Compuserve, The Source, Dow Jones and Mark III services. It is priced at $50.
- A File Transfer Utility, allowing rapid, error-free transmission of binary and Ascii data between micros and Mark III services over asynchronous communications lines. It is priced at $100.
- The Connector, which provides error-free data exchanges between micro spreadsheet packages and data files residing on Mark III service in an automatic reformatting conversion. It is priced at $100.
- Mark III Professional Workstation, a full screen micro-mainframe communications software package with flow control, full screen editing, print spooling and file transfer. Available electronically and by diskette, it is priced at $100.

Geisco also announced an agreement with Bonneville that will permit point-to-point and point-to-multipoint communications using satellite feeds to FM radio stations, which then transmit data over the FM subcarrier frequency to users who can receive information with addressable devices.

Bonneville has current contracts with 50 FM radio stations in 50 U.S. cities, according to President Kenneth J. Bentley. Two-way communications with a data provider and the end user via the FM satellite is made through the Geisco network.

Bentley said the service currently in operation can be used by grocery and other retail chain stores to transmit pricing changes, advertising promotions and other announcements, as well as stock and commodity price changes.

The end-user receiver/demodulator that translates the FM feed into an RS-232 communications port on a micro is manufactured by Bonneville and costs $610.

Finally, Geisco said it would also provide Quik-Ware, an electronic software warehouse users may browse through at $10/hr in search of software packages.

Realia COBOL.
Migration without migraines.

Until recently, you had to abandon the business computer language when you developed microcomputer application software. The available micro COBOLs were inadequate—too limited, too slow. The best alternative—the XT/370 or AT/370 using IBM's COBOL—was very expensive and still too slow. To get acceptable performance, you had to retrain your programmers in Pascal or C.

Realia COBOL is the cure for such headaches.

Realia's compiler supports most IBM VS/COBOL and VS/COBOL II features, such as:

- COMP and COMP-3 data
- SELECT assignment names
- Multiple entry points
- GOBACK, EJECT, and SKIP statements
- Structured programming extensions of VS/COBOL II

You can download mainframe systems for development, maintenance, and testing. Productivity will soar.

You can compile faster with Realia COBOL than in most mainframe environments, even on floppy-based systems. Compile-time options allow cross-reference, brief and full code listings, and helpful features like subscript and decimal value checks.

Our interactive debugger lets you follow the program source, display and modify data, and set breakpoints using the normal optimized machine code.

The results are startling.

Our users report that their systems run up to 20 times faster when compiled by Realia COBOL. That's compared to our nearest micro competitor. The ratio is up to 100 times faster when compared to any of the others.

On the IBM PC AT, your programs can run at 370/148 to 370/158 speed. Realia's file system really makes your machine deliver, giving it a distinct edge over Pascal or C. Our indexed file system even has full key compression and buffer controls just like VSAM. The generated code is pure MS-DOS, so it can be run on most of the 8088/8086 machine family.

And you can sell your programs without paying us a royalty fee.

Realia COBOL is priced at $995, including one year of maintenance and upgrades. Subsequent maintenance and upgrade contracts are currently priced at $125/year/copy. Available for the IBM PC, PC XT, 3270 PC, PC AT, PC-compatibles, and the TANDY 2000.

Realia COBOL. What a relief.

IBM, IBM PC, PC XT, 3270 PC, XT/370, PC AT, and AT/370 are registered trademarks of International Business Machines Corporation. MS-DOS is a registered trademark of Microsoft Corporation.

DP forecasters often still in dark despite CPE tools

Conferees cite impact of fourth-generation languages, capacity shortages as concerns

By Kathleen Burton
CW West Coast Bureau

> *'DP managers still tend to underestimate future capacity resources consistently because of poor forecasting, changing specifications and pilot samples that are too small.'*
>
> —Bert Palermo, manager of Computer Performance Evaluations at Crum & Forster Insurance, Inc.

SAN FRANCISCO — Though sophisticated computer performance evaluation (CPE) tools are flooding the market today, forecasting future computing needs is still a hit-or-miss proposition for many DP professionals.

So said a group of CPE analysts and end users surveyed at the recent International Conference on the Management and Performance Evaluation of Computer Systems here.

In addition, several users voiced concerns over the assimilation of personal computers into the DP environment, the impact of fourth-generation languages, the lack of integration between systems and the recent increase in capacity shortages due to improper planning by users.

CPE tools flooding the market

Bert Palamaro, manager of computer performance evaluations at Crum & Forster Insurance, Inc. of Morristown, N.J., said that even with the sophisticated CPE tools that are flooding the market today, DP managers still tend to underestimate future capacity resource needs consistently because of poor forecasting, changing specifications and pilot samples that are too small.

Palamaro also said the most promising new CPE tools are those for measuring and forecasting networking performance and for transferring networked data to mainframes for analysis and integration.

According to Palamaro, the most important criterion a data processing manager should use to judge these new CPE tools is, "will they help our department meet the service levels that have been set?" The object of CPE tools is to allow installations to maximize the returns on their hardware and software investments, he said.

Dr. Hubert Engelbert, assistant vice-president at Irving Trust Co., a financial management firm based in New York, claimed that exceptional new CPE products have recently emerged fpr evaluating network performance and for Dasd management.

Users may face capacity shortages

Despite these product improvements, however, Engelbert said that many users will underestimate the impact of new applications on capacity and performance and will face severe capacity shortages over the next several years as a result. "Commonly, new applications have a much more demanding impact on systems than was originally planned for," he warned.

Lionel Silva, a data processing capacity planner at Amdahl Corp. in Sunnyvale, Calif., said that some CPE tools, such as a recently released MVS real-time analyzer presently being manufactured by several vendors, are "breaking new ground in the industry."

According to Silva, personal computers will play an increasingly important role in CPE capacity planning. "Attitudes have changed, and now corporations see personal computers as an asset to be managed, not just as an unintegrated orphan child," he said. However, Silva cautioned, users do not always know if a microcomputer will add to or subtract from a system's capacity, a problem that often results in severe capacity shortages for unsophisticated users.

Problems of inadequate capacity are also due to the increasing use of fourth-generation software languages, which, he said, require a great deal more processing than lower level languages.

George Simon, an analyst for the Teleprocessing and Technical Services Division of the Prudential Insurance Co. in Fort Washington, Pa., said that CPE tools have not been able to keep up with the pace of change in hardware technology, with the result that lack of integration between systems is the major problem facing the data processing world today.

According to Simon, another critical problem in the industry is that, because of their widely divergent needs, users and capacity planners speak different languages. As a result, he said, users and operational CPE planners are often at loggerheads on critical CPE issues.

Report on user satisfaction with WP systems released

DELRAN, N.J. — Datapro Research Corp. has released a report on user satisfaction with word processing systems.

The report was based on the firm's seventh annual survey of more than 27,000 users of word processing systems, in which 3,400 responses were tabulated.

According to Datapro, users rated their equipment against 10 criteria concerned with systems operation and reliability, peripheral reliability, responsiveness and effectiveness of service, technical support, actual performance compared to anticipated performance and overall satisfaction.

The study found that manufacturing companies reported the greatest usage of word processing systems, with government and educational institutions, banking and financial organizations and insurance and legal firms continuing as major users. The study also revealed that purchase is the most popular means of acquisition.

Datapro said the highest ranked systems were NBI, Inc.'s Oasys 3000, Oasys 8 and Oasys 64, followed by the CPT Corp. 8500 Series and 8000/8100, the Compucorp Omega 60 and the Exxon Office Systems Co. Exxon 500.

The report, rating 63 word processing systems, costs $29 and is available from Datapro, which is located at 1805 Underwood Blvd., Delran, N.J. 08075.

Speech Tech '85 show to focus on voice I/O applications

NEW YORK — The Speech Tech '85 Voice I/O Applications Show, sponsored by Media Dimensions, Inc., is scheduled April 22-24 at the Vista International Hotel here.

Attendees will be able to discuss voice I/O applications for telecommunications, defense electronics, robotics, medical instrumentation and quality control and as aids to handicapped workers .

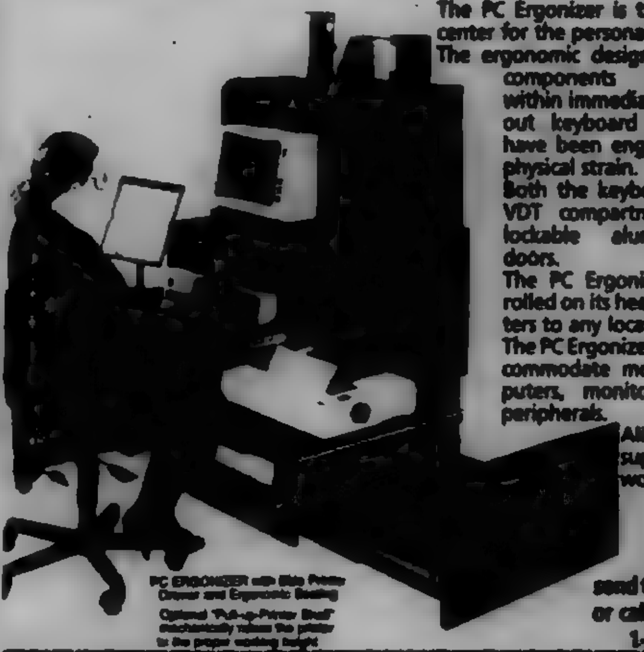
The scheduled keynote speaker is Michiyuki Uenohara, executive vice-president of R&D at NEC Information Systems, Inc. in Japan. Other speakers include Richard Wiggins from the computer science department at the University of Texas; Janet Baker, president of Dragon Systems, Inc.; and Edward Neuberg, research manager at the National Security Agency.

The conference will feature field trips to facilities using voice devices, a tutorial for potential users and vendor exhibits.

The registration fee is $195 for three days and $75 for one day.

Media Dimensions may be reached at P.O. Box 1121, Gracie Station, New York, N.Y. 10028.

THE NEW PC ERGONIZER,™
EVERYTHING AT YOUR FINGERTIPS,
AT A PRICE WELL WITHIN YOUR REACH.



PC ERGONIZER with Side Printer Drawer and Ergonomic Seating
Optional "Pull-up-Printer Shelf" mechanically raises the printer to the proper working height

The PC Ergonizer is the ultimate workcenter for the personal computer.
The ergonomic design puts all systems components and workspace within immediate reach. The pull-out keyboard and workshelves have been engineered to relieve physical strain.
Both the keyboard and optional VDT compartments come with lockable aluminum tambour doors.
The PC Ergonizer can be easily rolled on its heavy duty carpet casters to any location.
The PC Ergonizer is designed to accommodate most personal computers, monitors, printers and peripherals.
All in one attractive, superbly constructed workcenter.

WASHINGTON UPDATE
Mitch Betts
CW Washington Correspondent

Tax reform proposal may deter start-ups

WASHINGTON, D.C. — Officials from the American Electronics Association (AEA), at a recent press briefing, expressed concern that one provision of the Treasury Department's proposal for tax reform could choke off the venture capital needed by high-risk computer start-up firms.

William G. Moore Jr., newly elected AEA chairman and president of Recognition Equipment, Inc. of Dallas, told reporters he had sent a telegram to President Reagan commending the Treasury plan in general but strongly opposing termination of the capital gains tax preference section for high-risk investments [CW, Dec. 10].

Moore said the lower capital gains tax rate, in effect since 1978, has stimulated growth in the electronics industry and created new jobs.

Loss of the tax preference would sharply reduce the ability of small, start-up firms to get investment capital and weaken the industry's competitive position in world trade, he said.

The AEA supports Treasury proposals to lower the industry's effective tax rate and revive the 25% tax credit for research and development. Moore said these benefits would help the large, established firms but added that the small start-up firms would be harmed by the capital gains tax hike.

President Reagan vetoes NBS robotics program

WASHINGTON, D.C. — President Reagan recently vetoed legislation that would have created a $250 million federal research program at the National Bureau of Standards (NBS) to foster robotics and other automated manufacturing techniques.

Congress had approved the legislation (H.R. 5172) earlier this year as part of the NBS budget authorization for fiscal 1986, with support from the Robotic Industries Association [CW, Oct. 22].

In a statement detailing his objections to the bill, Reagan said that the variety of research, development and education programs would cost $250 million during fiscal years 1985-1988 and would "represent an unwarranted role for the federal government."

Reagan said, "Decisions on how to allocate investments for research on manufacturing technologies are best left to American industry." Furthermore, he said the proposed programs "could also serve as the basis for a federal industrial policy to influence our nation's technological development," an approach strongly opposed by the administration.

Commission supports Cabinet department

WASHINGTON, D.C. — The President's Commission on Industrial Competitiveness will recommend creation of a Cabinet-level Department of Science and Technology and a permanent federal tax credit for R&D expenditures, a commission spokeswoman confirmed recently. The panel held its final meeting Dec. 7.

The spokeswoman said the new Cabinet department is needed to "transform the current, fragmented formulation of policies for science and technology into one that would be far more effective in meeting long-term goals." Further explanation of the proposal is expected when the commission releases its final report in January or February.

The commission, chaired by John A. Young, president of Hewlett-Packard Co., was created by President Reagan on June 28, 1983. Its charter was to "review means of increasing the long-term competitiveness of United States industries at home and abroad, with particular emphasis on high technology and provide appropriate advice to the president through the Cabinet Council on Commerce and Trade and the Department of Commerce."

Infomart site of Uniforum '85 conference

DALLAS — Uniforum '85, the International Conference of Unix Users, will be sponsored by Usr/Group at Infomart here Jan. 21-25.

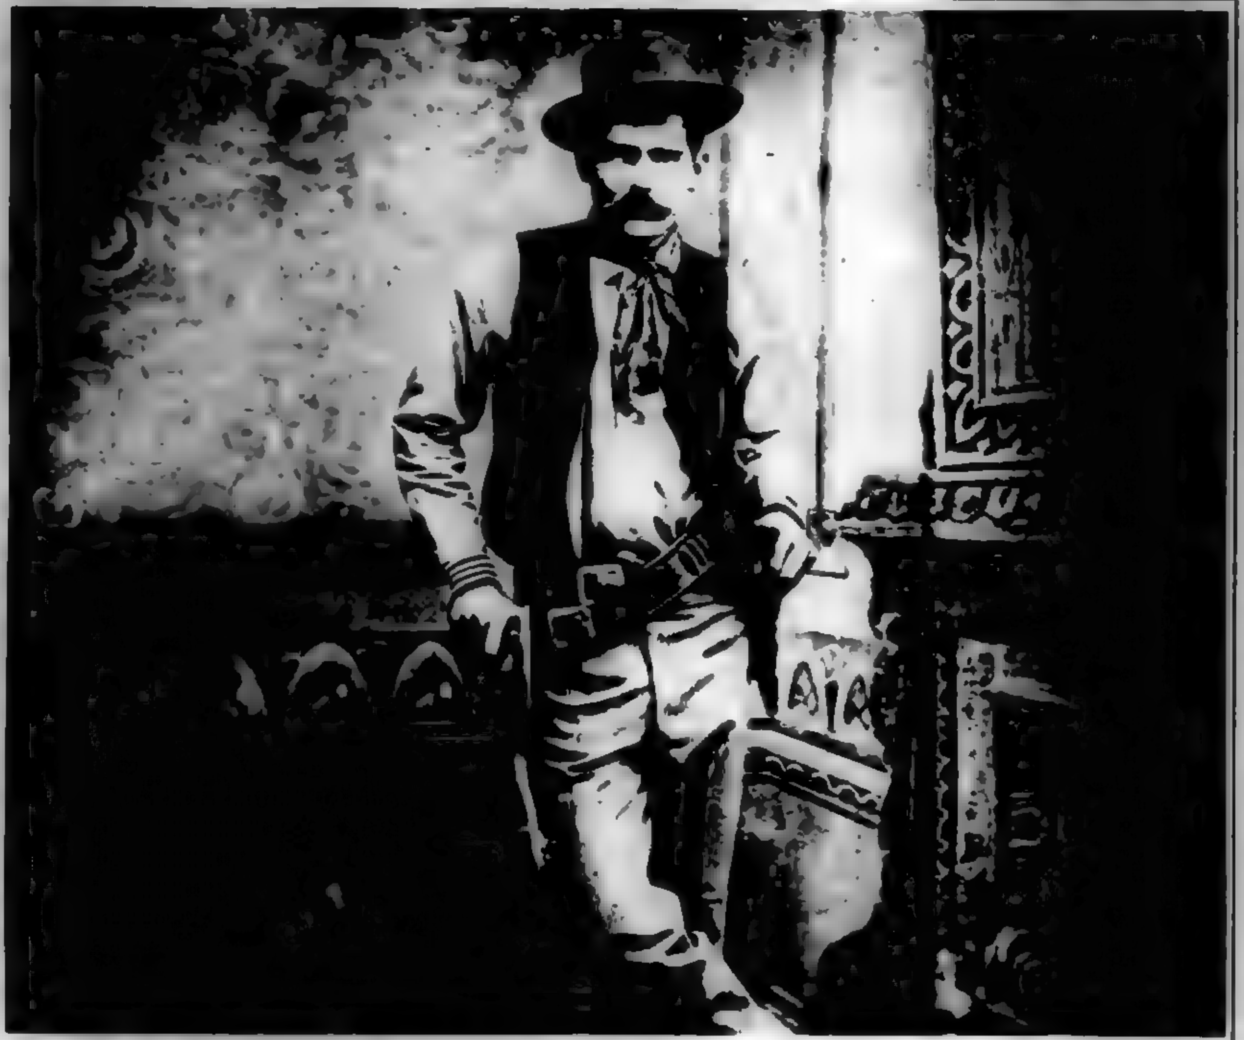
Fourteen all-day tutorial sessions will be held Monday, Jan. 21, and conference sessions are scheduled in four tracks: office systems, personal computers, engineering/programming and market trends.

Vendors of AT&T's Unix hardware, software and services will exhibit their products at the international event.

Registration prices are as follows: for the show only, there is no fee if preregistered, and registration is $10 on-site; for the tutorials, there is a $100 fee if preregistered and it costs $150 on-site; and the price for the conference is $125 in advance and $175 on-site.

Special conference rates apply for members and students.

More information is available from Uniforum, which is located at Suite 205, 2400 E. Devon Ave., Des Plaines, Ill. 60018.



OUTDRAW THE COMPETITION FOR ONLY $500

Extend the capabilities of your IBM PC. With DFDdraw from McDonnell Douglas Automation Company, you can now draw and edit Data Flow Diagrams, using DFDdraw's automated template of all data flow diagram graphics symbols and its comprehensive diagram manipulation features.

DFDdraw features include scaling and sizing for changing diagram dimensions, and pan and zoom for easy editing and viewing. DFDdraw simultaneously moves data flows and text. Hardcopy can be provided on both the Epson FX80 or FX100 printer and Hewlett-Packard desk plotters.

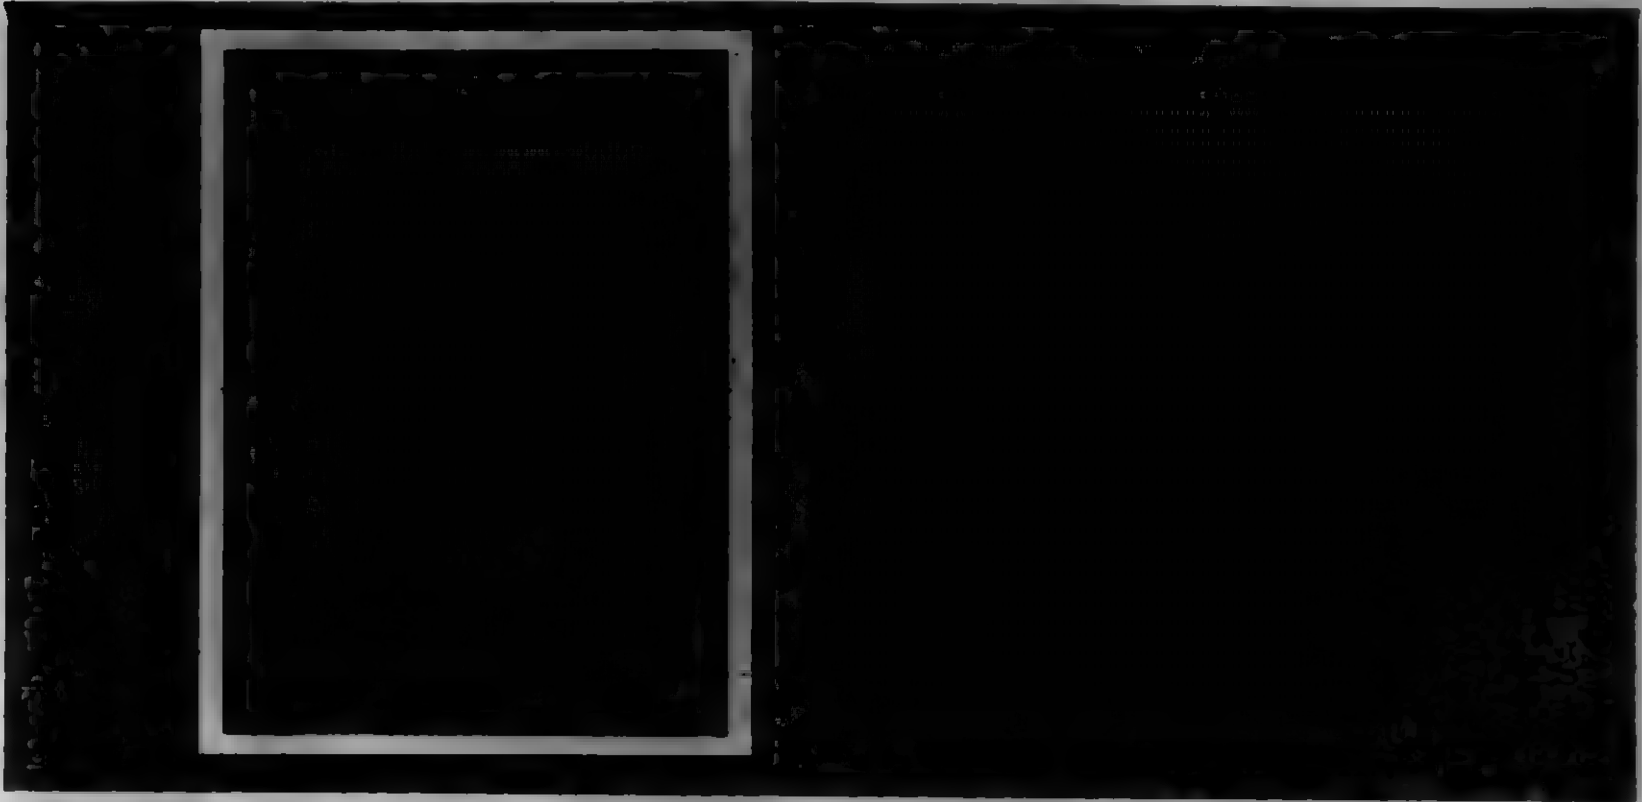
DFDdraw operates on an IBM PC, XT or AT having at least 256K memory, with standard IBM color monitor and color graphics monitor adaptor. Compatible products are also supported.

The price is impressive, too— just $500. So expand your PC. Order DFDdraw today.

A demonstration disk is available for $15. Send check or money order to McDonnell Douglas Automation Company, Dept. K277, Box 516, St. Louis, Missouri 63166. Or ask us to bill you.

You can also order by calling us at 1-800-325-1087. In Canada, call (314) 233-8997.

McDonnell Douglas Automation Company
ON THE INFORMATION FRONTIER.



The American Electronics Association (AEA) is composed of 2,700 member companies. The members represent various aspects of the electronics industry, including manufacturers and suppliers of computer systems and peripherals, semiconductors and other components. The organization claims that 75% of its membership is small companies employing fewer than 250 people.

Recently, Computerworld *Senior Editor/Systems Tom Henkel interviewed the newly named chairman of the organization, William Moore. Moore, who is also president of Dallas-based Recognition Equipment, Inc., began the one-year term as AEA chairman Nov. 30. For the past two years, Moore has served as a member of the AEA's executive committee, and he has been a director of the organization for the past four years.*

Q *The AEA has been warning that the U.S. might lose its competitive edge in the world electronics market. So far, those predictions have not come true. Has the AEA changed its position?*

The relative position of the U.S. in the electronics industry is still of concern to us. One area where the U.S. will probably lose its edge this year is as an exporter of electronic equipment. We had a positive balance of trade last year, but marginally so. It looks like we are going to have a negative balance of trade in electronics this year.

There are a lot of reasons for this. One is the strength of the dollar, which affects our ability to sell products overseas. Another reason is the cost of capital, or the cost we have to pay vis-a-vis our Japanese competitors in getting capital for our businesses. The AEA continues to focus its lobbying activities in those areas. We'd also like to see the dollar become a reasonable standard for international trade without being an inflated dollar.

Q *What about the trend of more companies manufacturing overseas?*

I think you are always going to see that. There are a lot of incentives — not only access to foreign markets but also tax incentives for high-tech companies to go overseas. But you have to put that into context. The manufacturing side of the high-tech business this year became the largest manufacturing sector in the U.S., with 2.3 million jobs and a $50 billion payroll. That is like four steel industries. The industry has been growing, and there have been a lot of new jobs created. If we continue at this growth rate, we will continue to create a lot of U.S.-based jobs.

Q *Many start-up companies develop products that are closely patterned after successful products. For example, there was a flood of compatible products after IBM unveiled its Personal Computer. Currently, many companies are announcing workstations based on Motorola, Inc. 68000 series microprocessors. How do you feel about these look-alike products?*

I have more of a personal opinion than an AEA opinion. Basically, what you are talking about is the free market action in the entrepreneurial part of the computer business.

Take, for example, the problems that the floppy disk companies are having. It was very easy for someone to get a bunch of technicians together, put them in a garage, go out and get $2 million in venture capital and develop a floppy disk. But the market simply would not support that many products. So the people with the more marginal products are falling by the wayside.

You could argue the venture capitalists were excessive in financing all these companies. But in the net venture capital market between August 1982 and August 1983, almost anything they floated would sell. We had some excesses, and we're paying a price for those excesses now.

> *'A lot of these vendors [of look-alike products] are very resilient. If they try once and don't make it, a lot of them go back and try again.'*

Q *How do you view the long-term impact of look-alike products on U.S. vendors' ability to develop innovative products?*

It probably leads to a fair amount of conservatism from a user's point of view. Once he's been burned once or twice by this phenomenon, he probably favors the major vendors, such as the standardization around IBM or IBM-compatible products.

But does it limit innovation? I don't think so. I think what you really end up with is the survival of the fittest. In fact, a lot of these vendors are very resilient. If they try once and don't make it, a lot of them go back and try again.

Q *But if many small companies possess that resilience, what does that mean to users? For example, what is the user of a 68000-based workstation to do if ten years from now the supplier is developing Lisp machines or Ada machines?*

Over time, the market is much less responsive to the entrepreneur for that reason.

> *'The Japanese will dominate [the optical disk area] because it will be a commodity product supplied to various vendors.'*

Q *One advantage to look-alike products is that they are typically developed with inexpensive off-the-shelf components. That has led some industry observers to believe computer systems are becoming a commodity. Do you feel this is a trend? What future impact to you feel it will have on the electronics industry?*

It has become fairly clear over the past few years that the Japanese are extremely competitive when it comes to commodity products. We have seen them dominate in the random-access-memory development area. We are also beginning to see the same thing in the optical disk area; the Japanese will dominate because it will be a commodity product supplied to various vendors for personal computers, home entertainment and big systems.

But when you get into the systems side, although you may use commodity products to piece together your system, it is clearly the systems software, the operating system and the overall performance characteristics of the system itself that are most important. And I think that is where the U.S. will be preeminent, both as a manufacturer and exporter. You just have to understand that it is very difficult for us, given our short-term profit orientation, to be consistently cost-competitive in investing the amount of development funds you need to have these first-rate commodity products.

Q *The term "industry standard" is applied to many products in the electronics business. How do you feel about standards developed by recognized standards organizations such as the International Standards Organization and the American National Standards Institute?*

The best thing that has happened to the computer business, in my opinion, has been the proliferation of the personal computer. Because now you have people like you and me trying to plug a printer into a printer interface, trying to initialize a disk and trying to load a very fundamental piece of

See MOORE page 16

Firm to launch satellite-based micro teletext system

By John Dix
CW Staff

NEW YORK — A two-year-old company here is readying an information distribution system that will marry satellite and teletext technology to enable information providers to disseminate data to personal computer users.

Satellite Network Delivery Corp., which was founded with seed money from the Tribune Co. of Chicago and recently raised more than $2.5 million from a private placement by Cralin & Co., an investment banking and retail brokerage firm in New York, is building a teletext-based network targeted at business use.

Capacity of the company's Business Teletext Network (BTN) will be leased to information providers such as brokerage houses, investment services and publishers. These firms reportedly will use the system to distribute business information, provide quotation services for securities and commodities trading, distribute advisory services and broadcast electronic mail to personal computer users outfitted with special decoders.

A central BTN computer facility in New Jersey will accept real-time data from information providers. After formatting the data for network use, this computer will transmit the information via satellite to television studio receive-only satellite earth stations located in the top 75 markets across the country.

Data inserted in VBI

Participating television stations, many of which the company has already reached agreements with, will be outfitted with BTN-provided electronics that will insert the received data into the broadcaster's vertical blanking interval (VBI) for distribution like regular television signals. The VBI is the black line that appears between picture frames when the vertical hold on a television goes out of whack.

Information bundled into the VBI will be broadcast to and received by addressable tuner/decoders that service subscribers will attach to their personal computers. The memory and intelligence of the personal computer, coupled with the decoder's memory, will enable the user to view the information as it is being received or save the information for later use.

BTN plans to retain control of all user decoders, which will enable it to add and delete subscribers by remotely turning the decoders on and off. The identification number of each decoder will also enable BTN to address closed user groups or filter out information for delivery to specific subscribers.

When completed, the BTN network will reportedly be capable of supporting hundreds of concurrent information services. Each of these services can operate at its own speed.

Users will reportedly be able to use their personal computers and a single tuner/decoder to seize and save information — either directly or in an unattended mode — from several subscriptions, even if they are transmitted at the same time. Additionally, the decoders can be equipped with a decryption capability to lessen the likelihood of service piracy.

The company anticipates that the network will be used during business hours to distribute real-time information and that after-hours it will be used mainly to distribute larger amounts of data. A subscriber's personal computer, interfaced with a 9,600 bit/sec tuner/decoder, would enable a user to capture 5M bytes of information in an hour and a half, the company estimated.

In practice, an information provider could use this capability by downloading a large data base once every three weeks, for example, and update that information daily to keep it current, the company reported.

Although service costs are still uncertain, the firm estimated that user decoders will sell for approximately $300. Information providers network contract costs will reflect projected use. The network is scheduled to be operational by the end of next year.

MOORE

from page 15

software. Suddenly, the users of computers are no longer taken in by the idea of some all-encompassing set standards that will make their lives easy.

From this point forward, other than broad standards — such as how to shake hands in a communications protocol — standards are going to become less important because the user is more sophisticated.

The reason IBM was so dominant in the 1950s and 1960s was the user didn't want to be bothered. He wanted someone to hold his hand for him. And IBM was great at that.

***Q** How do you feel about the so-called "de facto" standards that center around popular products? Are these really industry standards or simply market trends that will change in a short time?*

Standards really mean that you have second and third sources for something.

I want to know that if I choose an Intel Corp. microprocessor as the basic building block of a system, there will be three or four other sources of supply — especially if IBM buys everything Intel builds. So I want to make sure there is a standard to make that particular chip.

Then there are interconnect standards. Basically, I want to know how I get onto a network, but it is more analogous to the telephone network.

What we are really looking forward to is to allow all these computer terminals to be able to talk to each other over some common network.

BECOME A VSAM EXPERT.

SysEd's new 5-day VSAM course will make you a VSAM expert. You'll not only learn how VSAM works, but *how to make it work well*, and what to do if things go wrong. Even if you're already using VSAM, you'll gain a better understanding of its capabilities a flexibility . . . like how to select among the options VSAM offers for configuring data sets, both batch and on-line.

Our hands-on case study instruction begins the very first day. You'll write and test three real-life programs and use Access Method Services on our own 4341/II computer. There are eight 3270 terminals dedicated to the class. You'll receive individual attention from our experienced teachers, and you'll want to bring your actual programming and debugging problems to class.

SysEd's VSAM course contains the most up-to-the-minute information available anywhere, including the latest features and capabilities of VSAM, and is in line with state-of-the-art hardware.

SysEd courses are held weekly and on weekends at our training centers in New York City, Chicago, San Francisco and Dallas. On-site courses at your own computer installation are also available. *Classes are limited.* For early enrollment or more information call Dave Shapiro (212)564-6147

Is Your Payroll Tax System Hogging Your Time?

Chances are your payroll taxing software is hogging unnecessary amounts of time, money and resources. BSI-TAX can change all that.

You can save because BSI-TAX is the most extensive software for payroll taxing ever developed.

- Easily updated by non-DPers
- Not compiled for tax changes in five years
- 400+ consecutive tax updates supplied without an error
- Available in COBOL and RPG III for minis and mainframes

Put payroll tax changes in the payroll department. Get rid of the payroll tax hog. With BSI-TAX you save time, money and resources.

XEROX

Xerox announces a 15-year headstart in Artificial Intelligence.

You've read the announcements. Lots of companies are climbing aboard the AI bandwagon.

But if you're looking for an AI system that you can use *right now,* no other company can offer you the experience, the resources and the commitment of Xerox.

Fifteen years ago, Xerox pioneered systems that were fundamentally different from those used by regular computers, that could think not only sequentially, but symbolically, that could mimic various reasoning processes of human intelligence—deduction, induction, classification and inference, among others.

The result is today's Xerox AI System, a combination of 1108 or 1132 workstations, software such as Interlisp D and LOOPS, our knowledge engineering tool, and the training and support to make it all work together.

Because our AI system can sift through mountains of data, evaluate them and arrive at intelligent conclusions, it has already proven invaluable to major corporations, government agencies, universities and research laboratories.

By helping oil companies investigate geological clues, it's saving millions of dollars in exploration costs. It's helping doctors think through physiological patterns, symptoms and clinical tests to diagnose disease. It's helping computer companies configure complex systems and financial analysts plot strategies.

The Xerox AI System is also Ethernet compatible and an integral part of Team Xerox, a wide array of products, people and services to meet all your information needs.

Team Xerox

Fill out the coupon and find out about what no other major corporation can offer you.

The keys to Artificial Intelligence are at Xerox.

CCDA statistics show 90% of Canada's programs illegal

Software piracy, plagiarism cost manufacturers millions of dollars, increase prices

By Laura Jo Gunter
Special to CW

TORONTO — Just one out of every 10 software programs in use in Canada is a legally produced program. The remaining 90% of the programs here are either pirated or plagiarized, according to statistics from the Canadian Computer Dealers Association (CCDA).

In dollars and cents, this means a considerable loss to software manufacturers, society at large and even the end user. Industry analysts in the U.S. estimate that in 1984 alone, U.S. software producers will lose $700 million in revenues to illegally copied programs.

Similar figures are not available in Canada, but the CCDA estimates that 10,000 jobs are lost annually in the software industry due to piratings. This costs the Canadian economy as much as $100 million per year.

Perhaps surprisingly, piracy also hurts the end user. Software companies must raise the price of their programs to compensate for revenues lost to pirates. Scott Brown, technical public relations director for Ashton-Tate of Culver City, Calif., admitted that this phenomenon has caused his company to increase prices for its software. The reason, he said, is that there are three to seven times as many pirated copies of the company's software circulating than there are legitimate programs.

The actual act of piracy can be as innocent as a student following the teacher's instructions to copy a disk. It can also be as irredeemable as someone being in business solely to copy the valuable results of the labors of others. With nearly no overhead, the pirate can undercut the originator by so much that the originator has little chance of competing.

Obviously, it is the latter case that worries most legitimate software producers. This kind of piracy can take one of three forms. The first type is the commercial pirate working out of a storefront, often going under the title of "software review club."

"This is the major way that pirates get around the law," maintained Bruce Hampson, president of the CCDA. "They tell the customer that he has to pay $10 for a copying charge and then he can take the program home to evaluate it. After the evaluation, the customer is on his honor to destroy the copy and buy a legitimate program, but nobody will. They [the pirates] can claim that they're charging a copying fee and not selling anything, so they're not breaking the law."

This is not to condemn all review clubs. There are legitimate clubs that loan software for review and have it returned in much the same way as a book library system.

Then there are the pirates inside corporations. In this case, the pirates are saving money by buying one program and then making several copies to be distributed among other employees.

This small network of users also fits the last type of pirate known as the "home hacker." These people copy software to sell or give to a small market, usually friends. This group is the largest in terms of the number of people involved but is the least likely to be prosecuted, Latner said, because they usually deal with less expensive software, such as game programs, in small quantities.

Because of piracy, software companies are developing sophisticated copy protection for their products. This makes it difficult, if not impossible, for a legitimate user to make a backup copy in case something happens to the original.

"It's also hard to put software onto the hard disk," claimed Glen Siegel, president of the Personal Computer Club of Toronto. "It [copy protection] makes life more difficult. If you ruin the master disk, then you're out of luck until you get a new one."

Robert Mittler, director of information services at Bristol Aerospace Ltd. in Winnipeg, Canada, said that he would not mind the hassles if it would help the software developer.

Gunter is a staff writer for Computer World Canada, *which is published by Rattray Publications Ltd. of Toronto.*

SAS users meet set

RENO, Nev. — Users of SAS Institute, Inc.'s SAS family of products will get an opportunity to discuss new applications and discover new techniques at the 10th annual SAS Users Group International (Sugi 10) conference to be held at the MGM Grand Hotel here March 10-13.

According to SAS Institute, more than 2,500 users of SAS products are slated to attend the conference, which will kick off with a Sunday evening opening session hosted by SAS Institute. Sessions will cover such topics as capacity planning and evaluation, systems software, econometrics, time series and operations research, education and consulting, graphics, information systems, interactive techniques, microcomputers and minicomputers.

In addition to the sessions and a roundtable luncheon discussion, SAS/Graph users will submit their best efforts in the first SAS/Graph Competition and Exhibit. Entries will be submitted for "Best Presentation of Data" and "Most Creative Use of the Software."

Registration for Sugi 10 costs $75. More information is available from SAS Institute, Box 8000, Cary, N.C. 27511.

GETTING COLD?

My small, profitable and growing Computer Service Bureau in WARM, comfortable Southern California is FOR SALE.

If you are a dynamic salesperson, a top-notch programmer, and a smart businessperson this could be the opportunity you've been looking for. At $200,000 it's priced at less than 0.6 times gross and I'll finance up to 40% of it. Write to: CW-84105, Computerworld, Box 880, Framingham, MA 01701.

IBM 34/36

More than 9,000 companies use Para Research software systems to make their computer a more productive business tool. Quality and reliability have made Para Research software a standard among IBM users. It's proven in companies from the Fortune 500 to companies with 50 employees. It's backed by comprehensive documentation and responsive customer support.

Good program design and clear documentation make our systems user-friendly. No complicated procedures involved. With Para Research software you get quick response and timely and accurate reports to improve every area of your business. We also offer accounting software for the IBM /36.

GENERAL LEDGER $3,000

A multi-company system for up to 99 companies and departments. Run different periods and different accounting years concurrently. Run each company in the GL independently. Create a unique chart of accounts for each company. Run different year-end closings. Print financial statements for each company. Design your own report formats. Out-of-balance and data entry errors are flagged to insure accuracy. Complete audit trails are provided. Allows for both fixed and variable recurring journal entries, accrual reversals can be automatically generated. Consolidates up to 48 companies into one. Strategic Ratio creates 30 different financial ratios to analyze assets, liabilities and equity.

ACCOUNTS PAYABLE $1,800

Handles every facet of accounts payable—from invoicing through issuance of checks. Various management reports provide up-to-date information on all payables plus complete audit trails. Cash requirement reports help you set payment priorities and take advantage of cash discounts. Displays open-payables for each vendor on your CRT. Allows you to take a discount amount after discount date, select a single batch of vouchers for updating to open payables file, and report status of every vendor on a vendor analysis report. Multiple line distribution for up to 19 accounts. System flags vouchers for payment.

PAYROLL $1,800

Payroll provides up-to-date costs of specific tasks for every department in your company. Employee master files for salary, hours and other payroll items are easy to maintain. User-friendly prompts provide the customer with complete instructions for each procedure. Up to nine deduction types for each employee. Multiple payroll data reports including check register, W2 forms, QTD 941s and 10 other reports. Runs payroll for 99 companies and for any combination of companies. Provides void check register. Stores YTD and QTD data.

FIXED ASSETS $2,000

A complete depreciation scheduling program that produces two-year projections. Figures depreciation over user-specified fiscal periods based on either the 1982 Economic Recovery Act using the Accelerated Cost Recovery System, the 1983 Reduced Basis ACRS or twelve other standard depreciation methods. Separate depreciation for federal tax, state tax and book. A series of management reports track depreciation schedules, report changes in those schedules, give projections over a two-year period. Complete tracking of assets including identification labels.

ACCOUNTS RECEIVABLE $1,800

Improves bookkeeping efficiency and reduces administrative tasks. Available in either open item or balance forward methods. For both methods, the system has cycle billing capability and allows printing of all statements on file or statements for specific customers. You can obtain up-to-date status of customer records, including current balance, all aging information and credit status checking.

INTERNATIONAL REPORT

CW International News Network

AUSTRALIA

SUMMER HILL — An expert system that provides quantitative measurement of the performance of software and systems will be the first project of an artificial intelligence research center to be established here next month.

The Productivity Research Center will be created by software consultant David Tow, with the backing of the Systems Research Institute of Australia in Perth. The system, called the Spacer 9 system, will reportedly provide audit and comparative evaluation and review.

BRAZIL

BRASILIA — Two policies on privacy are now under debate here in the Brazilian Congress. At issue is the recovery and use of information kept in a public data base. The latter proposal, seen as the more far-reaching of the two, is seeking to keep more information safe from potential government surveillance.

ITALY

ROME — IBM Europe President Kaspar Cassani told the European scientific press here recently that the company will award an IBM Europe Prize for the best European scientist in 1985. He also announced the establishment of a scientific engineering center here to be made available, free of charge, to 15 European engineers.

JAPAN

TOKYO — IBM Japan Ltd. has recently begun full-scale production of 5¼-in. hard-disk drives for the IBM Personal Computer XT. The drives reportedly will be available in 10M-, 15M- and 20M-byte configurations.

■

TOKYO — Densan Co. Ltd. has unveiled its Idea 2000 microcomputer, which runs on Unix 4.1 and operates at speeds up to 20M bit/sec using a local bus, the vendor said. The system is being targeted at schools, laboratories and in distributed, office automation and computer-aided design environments. Densan also announced that it will begin exporting its products on a large scale to the U.S.

■

TOKYO — Fujitsu Ltd. has announced a 16-bit personal computer, the FM-16 Bata, for business use. The machine is based on the Motorola, Inc. 80186 microprocessor and the Japanese CP/M 96 Kanji operating system. It reportedly handles Kanji character processing.

■

TOKYO — Nippon Telegraph and Telephone (NTT) has unveiled its Captan videotex service. The system currently lists 310 information providers and 1,790 terminals in use.

ENGLAND

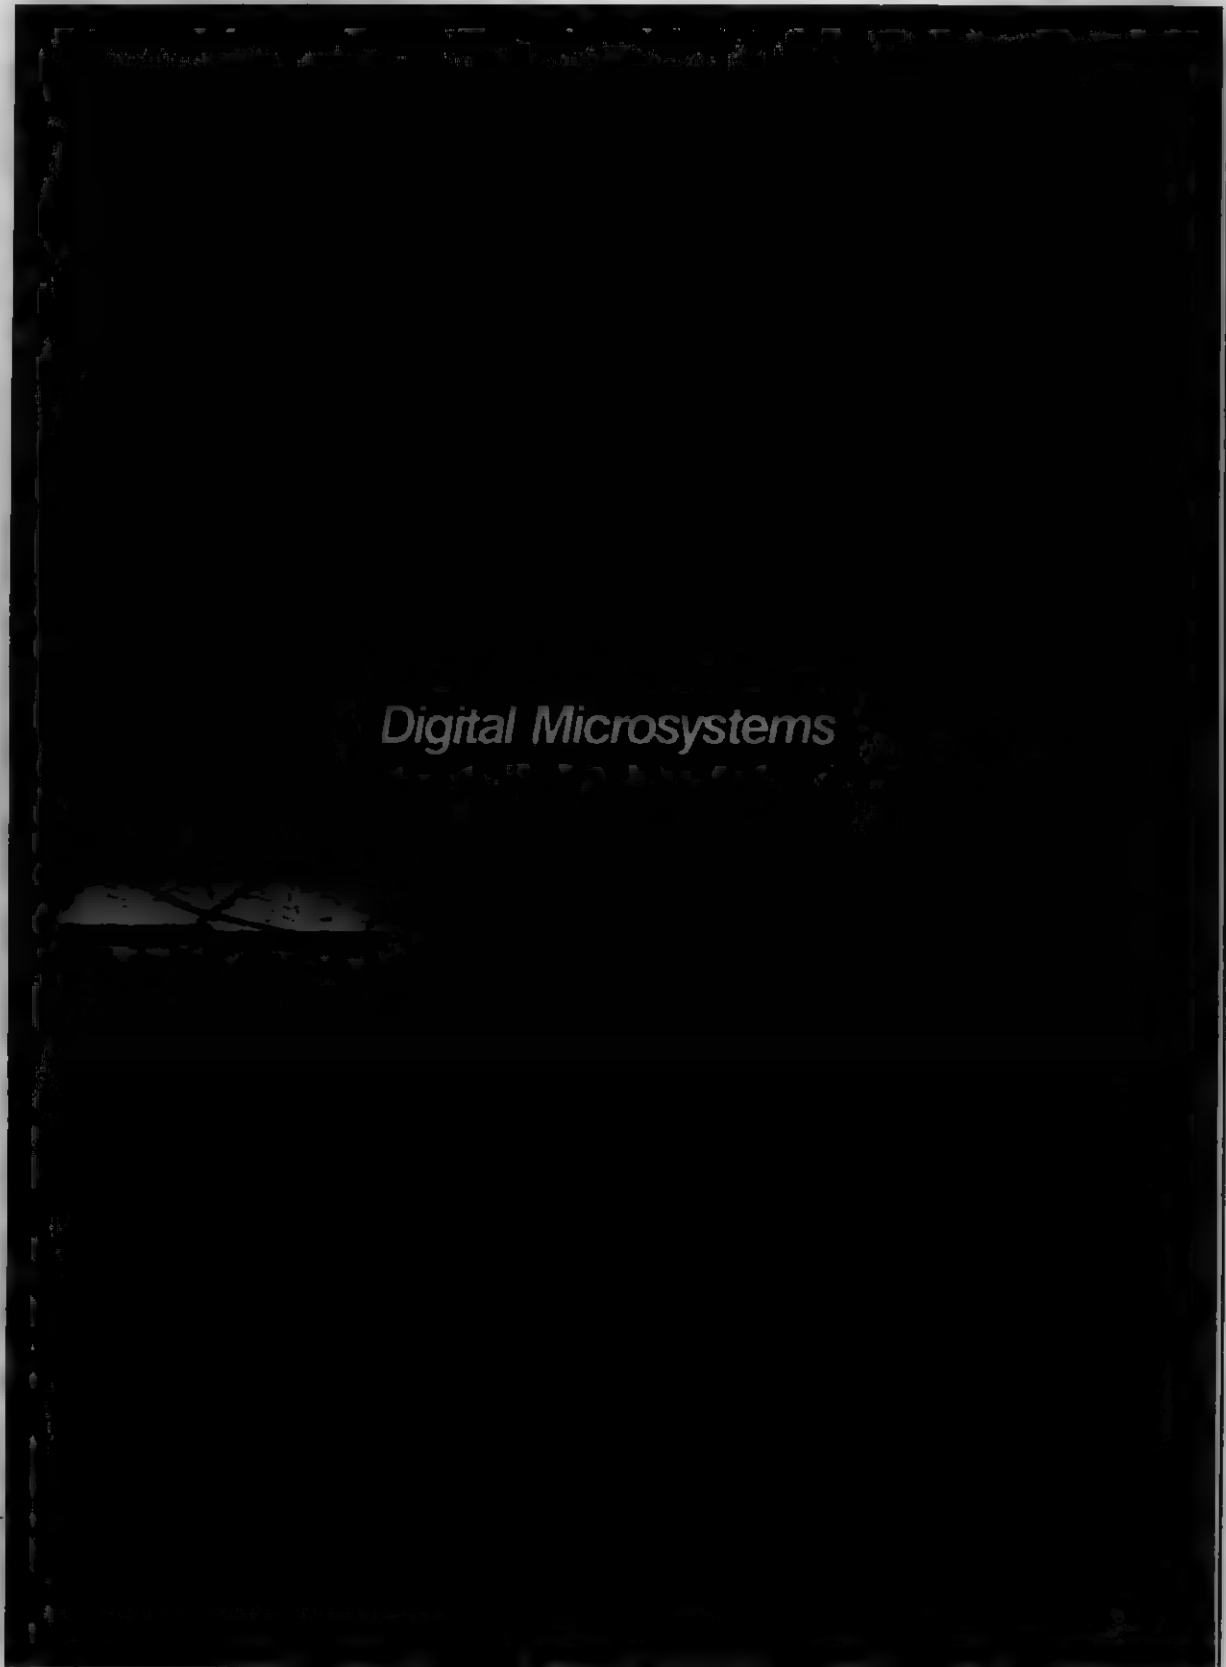
LONDON — The UK has gained a major presence in the Chinese computer market with the establishment of a $50 million joint venture company to produce microcomputers in China. The UK consortium, headed by Rair Computer Corp., will reportedly provide the Chinese with the knowledge and equipment needed to establish their own micro industry.

■

LONDON — Embarrassing news greeted Control Data Corp. here with the revelation that the Russian PS 2000 supercomputer, recently sold to India, is based on CDC technology. The system was originally conceived as a Soviet-CDC joint project, but the U.S. government forced the American vendor to pull out of the project. The PS 2000, which is said to be in the 400 million to 600 million floating-point operations per second range, makes the USSR the third independent source of supercomputers in the world.

WEST GERMANY

MUNICH — IBM is being accused of selling its machines for low prices through the back door in order to undercut competitors here. At the same time, the German subsidiary of the Swedish lessor ICS is thought to be profiteering on IBM's 40% university discount policy by leasing discounted machines to German universities and reselling them to commercial users for full price.



NEW LIFE FOR 1401 PROGRAMS

CS-TRAN converts your 1401 OBJECT programs to COBOL for the mainframe or mini of your choice.

CS-TRAN is the ONLY translator that accepts your OBJECT programs, patches and all, yet allows you to include actual COBOL paragraph names and record definitions.

If you'd like more details about new life for your 1401 programs just call or write:

The Right Information at the Right Time...at No Charge to You!

The MIS Dilemma

Today's data processing professionals are asked to turn equal attention to the detail of day-to-day operations, as well as continually viewing new and critical industry issues. They are asked to be, at the same time, practiced technicians, inspiring managers, and masters of all that's new and current. They are expected to keep top management informed of the big picture, yet pay particular attention to the smaller issues and dilemmas they face each day within their departments.

Comdisco believes this is a near impossible task.

The "COMLINE" Solution

Comdisco's Professional Information Resource Team is loaded with valuable experience and knowledge that you need in today's changing times. To help you meet these challenges, we have launched an ongoing program of concisely-formatted reports, featuring issues we feel will most impact your company, your data center, and yourself.

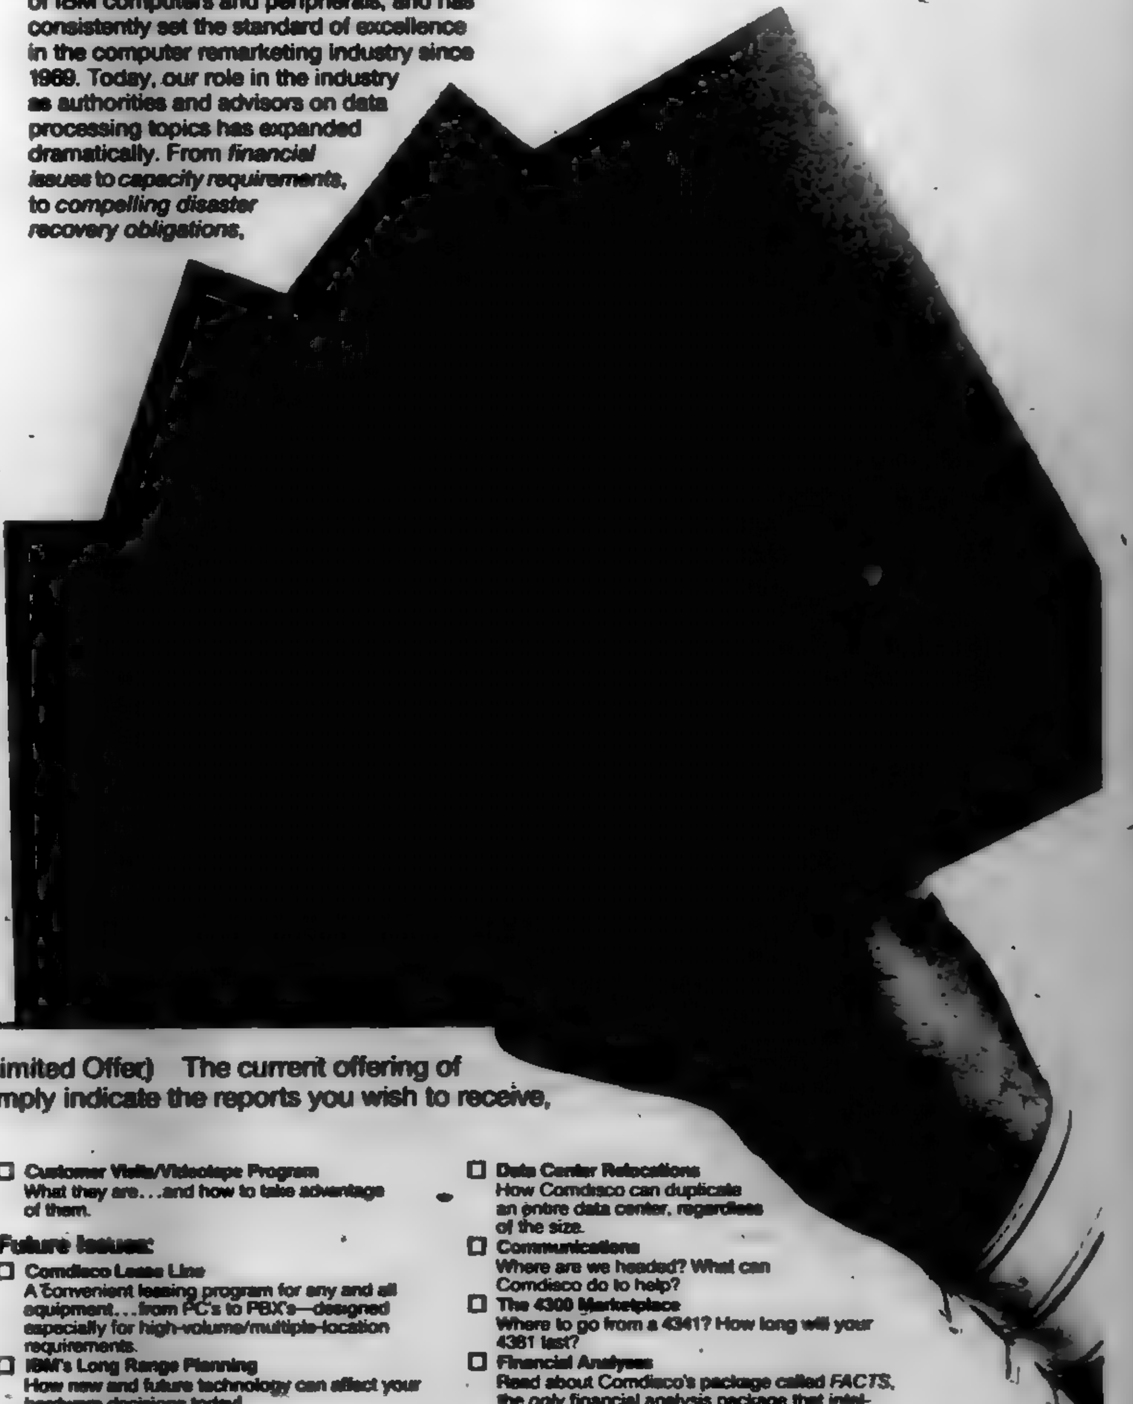
The new series, entitled *Comline Reports*, is a means through which industry professionals can take advantage of the experience and information which flows daily within our technical, financial and marketing channels.

Why Comdisco?

Comdisco is the world's largest remarketer of IBM computers and peripherals, and has consistently set the standard of excellence in the computer remarketing industry since 1969. Today, our role in the industry as authorities and advisors on data processing topics has expanded dramatically. From *financial issues* to *capacity requirements*, to *compelling disaster recovery obligations*, Comdisco professionals are making the effort to keep you informed of the issues. To thousands of Comdisco customers, our name and our standard of quality service is second nature. To those of you who would like to learn more about the expanding scope of our services, as well as subscribe to our *Comline Reports*, we invite you to clip the coupon below.

COMDISCO®

Comdisco, Inc.
6400 Shafer Court
Rosemont, Illinois 60018
312/698-3000



Order Your *Comline Reports* Today! (Limited Offer) The current offering of *Comline Reports* is specified below. Simply indicate the reports you wish to receive, and mail us the coupon today!

Current Issues:

- ☐ **Large Mainframe Update: The Used 3080 Market**
  How to take advantage of lower cost, used 3080's until IBM's new systems are delivered.
- ☐ **XA Migration: The Hardware Solution**
  The "path of least resistance"...But is it for you?
- ☐ **The DASD Market: 3350's versus 3380's**
  New technology is not a good enough reason for choosing 3380's. A combination of 3350/3380 may work best!
- ☐ **Core Recovery: The Prelude To A Disaster Recovery Program**
  The sensible way to get a *Disaster Recovery* Program in motion.
- ☐ **Customer Visits/Videotape Program**
  What they are...and how to take advantage of them.

Future Issues:

- ☐ **Comdisco Lease Line**
  A convenient leasing program for any and all equipment...from PC's to PBX's—designed especially for high-volume/multiple-location requirements.
- ☐ **IBM's Long Range Planning**
  How new and future technology can affect your hardware decisions today!
- ☐ **Choosing A Leasing Company**
  The pitfalls, and how to avoid them; a brief history of leasing; and an analysis of ICC.
- ☐ **Data Center Relocations**
  How Comdisco can duplicate an entire data center, regardless of the size.
- ☐ **Communications**
  Where are we headed? What can Comdisco do to help?
- ☐ **The 4300 Marketplace**
  Where to go from a 4341? How long will your 4381 last?
- ☐ **Financial Analyses**
  Read about Comdisco's package called *FACTS*, the *only* financial analysis package that intelligently deals with choosing hardware.

PROTOCOL CONVERSION

Expand your 3270 network with low cost ASCII devices!

Now you can integrate personal computers and low cost ASCII devices directly into your IBM 3270 network. With our protocol converters you can add on low cost ASCII peripherals either by using Type A coax attachment or by 3274/3276 controller emulation. Innovative delivers flexibility, simplicity and competitive prices with our family of 3270 products.

Call us today toll free ([illegible]), and find out how you can expand your 3270 network easily and inexpensively. Prices starting at just [illegible].

COAXIAL CONNECTION
- IBM 3270 Type A Coax plug-in card for IBM PC or XT
- IBM 3270 Type A Coax to ASCII Printers
- IBM 3270 Type A Coax to ASCII CRT/Host

3274/76 EMULATION
- IBM 3270 SNA/BSC to (5-24) ASCII Devices
- IBM 3270 BSC to Burroughs/NCR Devices
- IBM 3270 BSC to ASCII Devices/Host (low cost - 3 ports)
- IBM 3270 SNA to NCR/Burroughs Devices

*Custom protocols available - Call to discuss your special application.

Computer-related training available for handicapped

By Donna Raimondi
CW Staff

STAMFORD, Conn. — Thirty of the top Fortune 500 companies are giving gifts of money, time and hope here to a group of handicapped people.

The companies are funding a program run by the Biped Corp. that trains handicapped workers to become computer programmers, according to Kathy Jarvie, instructor/coordinator at Biped. The one-year school, which is free of charge to enrollees, teaches Cobol, Basic, JCL and dump analysis to the physically handicapped and offers classes in additional subjects such as microcomputers and data bases, according to Jarvie.

The school's graduates have found jobs in a variety of businesses, she noted, and it usually costs the hiring business nothing for special equipment or accommodations.

At present, GTE Telenet Communications Corp. and Union Carbide Corp. contribute $70,000 to $80,000 worth of computer time each year, Jarvie said, and companies, including American Can Co., Xerox Corp., Reader's Digest Association, Inc., Texaco, Inc., IBM and Perkin-Elmer Corp. donate money, equipment, office supplies and anything else the school needs to do its job.

Representatives from donor companies sit on all school committees and advise the school staff on what job skills are in demand, Jarvie said, helping it to fulfill realistic business community needs.

Industry provides a better program

The program was started in 1980 by Joseph LaMain, Jarvie said. "LaMain was a programmer/analyst at the time, and he worked for the Easter Seal rehabilitation center in New Haven, Conn. He thought that industry would provide a better program, with less red tape, than any government agency could," she said.

The program now operates centers in White Plains, N. Y. and Stamford, Conn., Jarvie said. Twelve students are accepted into each program from the more than 200 who apply at each location. Each program has two teachers, she said.

The program accepts students with almost any handicap, including blind, deaf and quadriplegic people, Jarvie said, but it is not easy to get accepted. Jarvie administers IQ tests to all applicants, looks over medical reports and high school or college records. The student then sits with a psychologist for four hours and performs a number of computer aptitude and reading comprehension tests, she said.

The classes comprise a variety of age groups and education levels, Jarvie said. This year, two of the students she taught had master's degrees and two were straight out of high school, she said.

In addition to course work, the students are taught business etiquette, dressing for success and a variety of business related skills.

"We run the program like a company," Jarvie said. "We teach the students about status reports, presentation arts and other skills that the corporations tell us the students need to be ready for employment." The instructors hold students responsible for reporting equipment problems to vendors and seeing to it that repairs are made, she noted. "They basically run the company with my guidance," she added.

After completing the course, the new programmer receives a certificate and goes through a committee — made up of members of the sponsoring companies — for placement.

More information is available from Biped, 26 Palmers Hill Road, Stamford, Conn. 06902.

IBM Software Notes

News for the DP professional

BancOhio is constantly improving its products and services, with help from IBM's DB2.

Managers at BancOhio Are Banking on DB2

"DATABASE 2 (DB2) is an efficient vehicle for providing our top management with financial and analytic details," says Jack Kiger, Vice President and Director of Data Processing at BancOhio in Columbus, Ohio.

The bank, which has more than 250 branches throughout the state, has been testing DB2, IBM's full-function relational data base system, for a year and a half. "In that time, we did a 22 man-year MIS project in only 24 man-months," reports Kiger.

The key to this outstanding productivity is DB2's powerful Structured Query Language (SQL), which makes corporate data available—simply, economically and with full data security and control.

Through its Query Management Facility (QMF), DB2 provides end users with a friendly interface to SQL, including a full set of helps and prompts. Users can query the data base directly, ask the system to generate reports or create their own unplanned reports.

But DB2 is much more than an end-user product.

It's a full-function relational system that lets professional programmers develop complex applications with greatly improved productivity. It provides them with the facilities they need for backup, recovery, restart and security. These functions can be incorporated in an application by simple statements and need little explicit programming.

With these security provisions, transactions are well protected. This means that DB2 can handle online applications while maintaining the integrity of the corporate data resource. Thus DB2 can meet the full range of needs: production work as well as end-user query and reporting services.

"Our experience with DB2 has been beneficial," Kiger adds. "From the standpoint of stability and ease of use, it's the best product IBM has delivered to us." ■

A NOTE TO THE READER

To keep you informed of software developments at IBM, we will publish *Software Notes* on a regular basis.

Software Notes will bring you news of programs that help make systems and people more productive. It will feature articles on high-productivity packages such as DB2, IBM's full-function relational data base system, and application development tools such as the Cross System Product Set. And it will tell you about users' experiences with IBM software.

We'll also let you know about new software courses and other IBM offerings that can help you get the most from your DP resources.

More *Software Notes* appear on the next page.

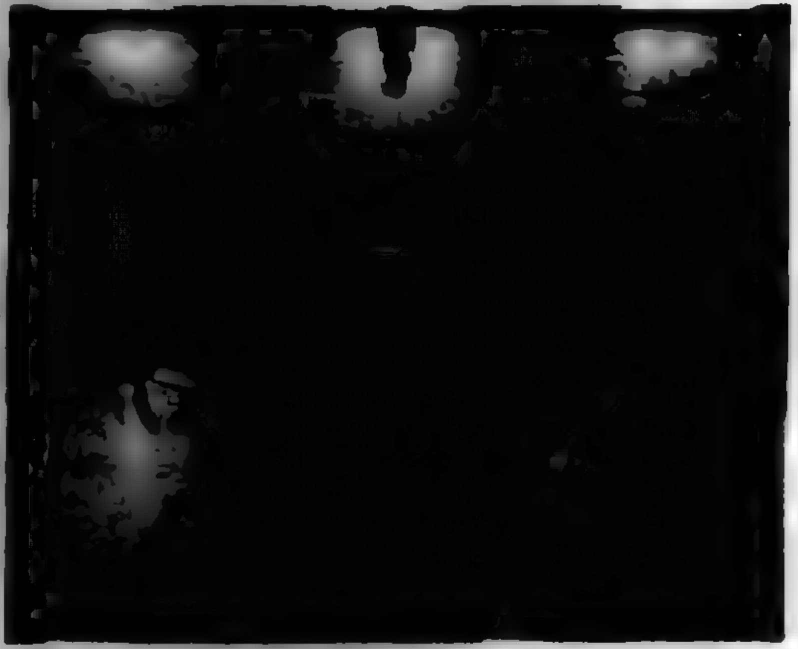
IBM Software Notes



Evaluator (rear) works with a piece of IBM software. Observers note her efforts and record them.

'Usability' Labs Help Make IBM Software Easy to Use

It's one thing to create software that works. It can be quite another to make that software easy for users to learn and operate, and to support it with documentation that's easy to follow.

Dr. Lewis Branscomb, IBM's chief scientist, puts it this way: "It shouldn't be necessary to read a 300-page book of instructions before using a computer, any more than it is before driving a new automobile."

That's why, prior to release, IBM evaluates many pieces of software for "usability." We've taken a scientific approach to this process in Usability Laboratories located in cities across the United States.

The evaluators are people who have not had software experience.

In each lab, we've set up a complete office environment, attractively decorated and comfortably furnished. On each desk is an IBM workstation which supports the software to be evaluated.

Here, evaluators at the workstations are handed the instruction manuals and assigned the task of putting a piece of software through its paces. As each evaluator works, he or she is observed and recorded. Every interaction on the workstation screen is recorded too.

Through this feedback we've learned a lot about our software—and our documentation. We've also made software, such as the IBM Business Management Series, a lot simpler to use. ■

IBM Offers Courses on IS Management

If you're interested in learning about management issues related to information systems, or in getting advice on training, or in just keeping current yourself, you'll be interested in the offerings of IBM's Information Systems Management Institute.

The institute offers over 38 courses in six information systems areas: Information Systems Planning, Applications Development, Service Management, Information Asset Protection, End User and Personal Computing, and Personal Development and Management.

The courses seek to help users increase their productivity in data processing. Lasting from two to five days, the courses are offered in over 25 cities and are taught by staff instructors who combine years of teaching with practical knowledge.

To order a free catalog of courses, just return the coupon at right. ■

The Cross System Product Set Aids Programmers at Corning

Through an innovation in application development, Corning Glass Works, Corning, New York, has eliminated most of the detail work involved in conventional programming.

The innovation is the Cross System Product Set from IBM.

With this program, a developer can complete every phase of a project interactively at a terminal. This includes defining and validating screens, files and logic; testing and debugging a program; running trial executions and putting the application into production.

The Cross System Product Set is especially effective as a development facility for applications designed to run under CICS, or in distributed 4300 and 8100 systems.

According to Steve Grace, Supervisor of Application Development Technology at Corning, "The program's interactive nature and extensive debugging aids lend themselves to developing applications quickly and accurately."

What's more, the Cross System Product Set requires fewer special CICS skills on the part of the programmer. Such features as trial screens and quick prototype executions improve communication between DP personnel and end users.

The program runs on all 4300 and 30XX series operating systems and on the IBM 8100 with DPPX/System Program. It's portable, so that an application developed on one supported system can be run on another.

Mr. Grace sums up Corning's experience with the Cross System Product Set like this: "As a result of its many benefits, we've been able to satisfy user requirements faster and more economically." ■

RACF Helps Protect Data At United Student Aid Funds

"We are pleased with the enhancements of the IBM Resource Access Control Facility (RACF)," says Dan Roddy, Manager of Data Center Support for United Student Aid Funds, Indianapolis, a nonprofit corporation which guarantees and services student loans.

"In particular, a new system of resource definition in RACF, called 'generic profile checking,' makes administration much simpler. Most data sets can be protected using only the first-level qualifier," Roddy adds.

Profile checking is just one of the many features that make RACF easy to implement and maintain. Flexibility of design and structure is another. In addition, with RACF you need not modify your operating system or system-level software such as CICS, IMS, DB2 or HSM.

RACF uses list orientation, a simple technique for access control. With little effort, you can establish ownership and control over your resources. You can also designate who else may have access—and how much access.

RACF has features which make it easy to demonstrate that the controls have worked.

Positive control, excellent security, simple maintenance and administration: These are the benefits that make RACF a widely accepted access control product. And RACF is designed to work closely with such IBM operating systems as MVS and MVS/XA. ■

System used in protest

Students stage futile attempt to crash computer

By Donna Raimondi
CW Staff

OBERLIN, Ohio — Student activists here tried but failed to overload the campus computer system to bring attention to their demands that Oberlin College divest itself of stock in South African companies.

In response to an open plenary session of the school's board of trustees in the Mudd Learning Center — where the library and computer center are housed — a splinter group of the Student Coalition Against Apartheid decided to bring down the computers in protest of the stock holdings, said John Harvith of the school's public relations office.

"The student organization got together to determine how to protest, and the organization as a whole decided not to use computers to do it," Harvith said, but four to six students did it anyway.

"They were not sophisticated about it," said Kevin Weidenbaum, director of academic support services at the college. "It's possible that if a consultant had not come in and told me what was happening, we wouldn't even have noticed," he said.

The protesters decided to run programs that would grind on the system, Weidenbaum said, and several students sat at terminals with an old Basic assignment — a long iteration process to find sets of integers in a given equation, he said. Others did "even sillier things" he added, like setting up loops to keep the printers spewing out garbage printouts.

At the peak of the protest, the computer was running an average load, Weidenbaum said. "These are not hackers with novel and interesting ways to crash the computer," he added. Some of the student protesters had never used their accounts before, and the students did not really know what they were doing, he said.

The target computer was a 10-year-old Xerox Corp. Sigma 9 that is not used much anymore, Weidenbaum said. Students also tried to bog down the college library's automatic circulation system by checking out and returning huge numbers of books — another ploy that failed, he said.

"We deactivated a couple of student accounts because of it," he said, but no further disciplinary action will be taken.

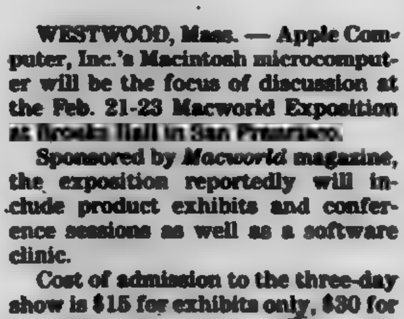
Apple Macintosh subject of meet

WESTWOOD, Mass. — Apple Computer, Inc.'s Macintosh microcomputer will be the focus of discussion at the Feb. 21-23 Macworld Exposition at Brooks Hall in San Francisco.

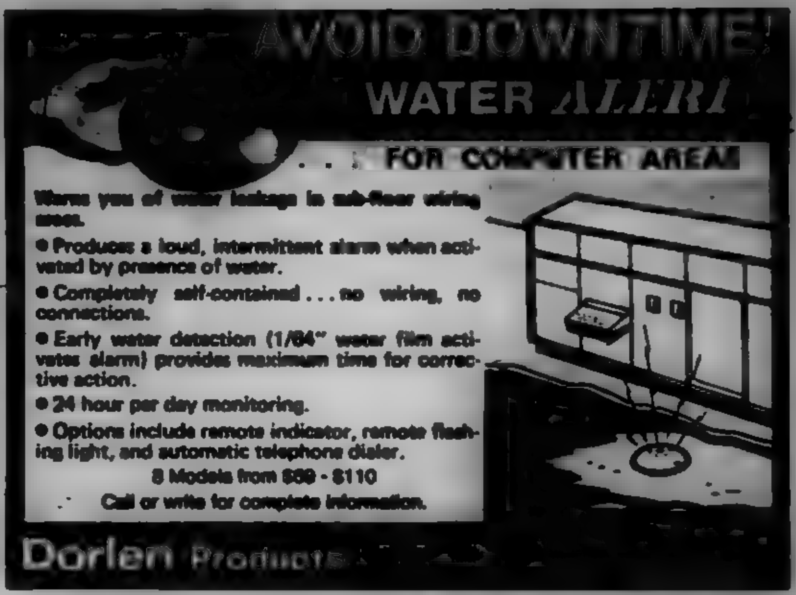
Sponsored by *Macworld* magazine, the exposition reportedly will include product exhibits and conference sessions as well as a software clinic.

Cost of admission to the three-day show is $15 for exhibits only, $30 for exhibits and conference. Charge for students is $5 for exhibits only, $15 for conference and exhibits.

More information can be obtained from Mitch Hall Associates, P.O. Box 860, Westwood, Mass. 02090.



"Do you remember the good old days . . . and the Christmas parties?"



AVOID DOWNTIME!
WATER ALERT
. . . FOR COMPUTER AREAS

Warns you of water leakage in sub-floor wiring areas.

- Produces a loud, intermittent alarm when activated by presence of water.
- Completely self-contained . . . no wiring, no connections.
- Early water detection (1/64" water film activates alarm) provides maximum time for corrective action.
- 24 hour per day monitoring.
- Options include remote indicator, remote flashing light, and automatic telephone dialer.

8 Models from $89 - $110

The New Cincom: 10
the only software ve

Finally, there's one software vendor offering a single family of integrated products capable of meeting all of your corporate, departmental and personal information software needs—The New Cincom Systems. Our TIS™ family of integrated products is improving performance and productivity in major organizations around the world. Here are just 10 of the many reasons why your organization should be considering TIS:

#1 Relational Data Management Technology

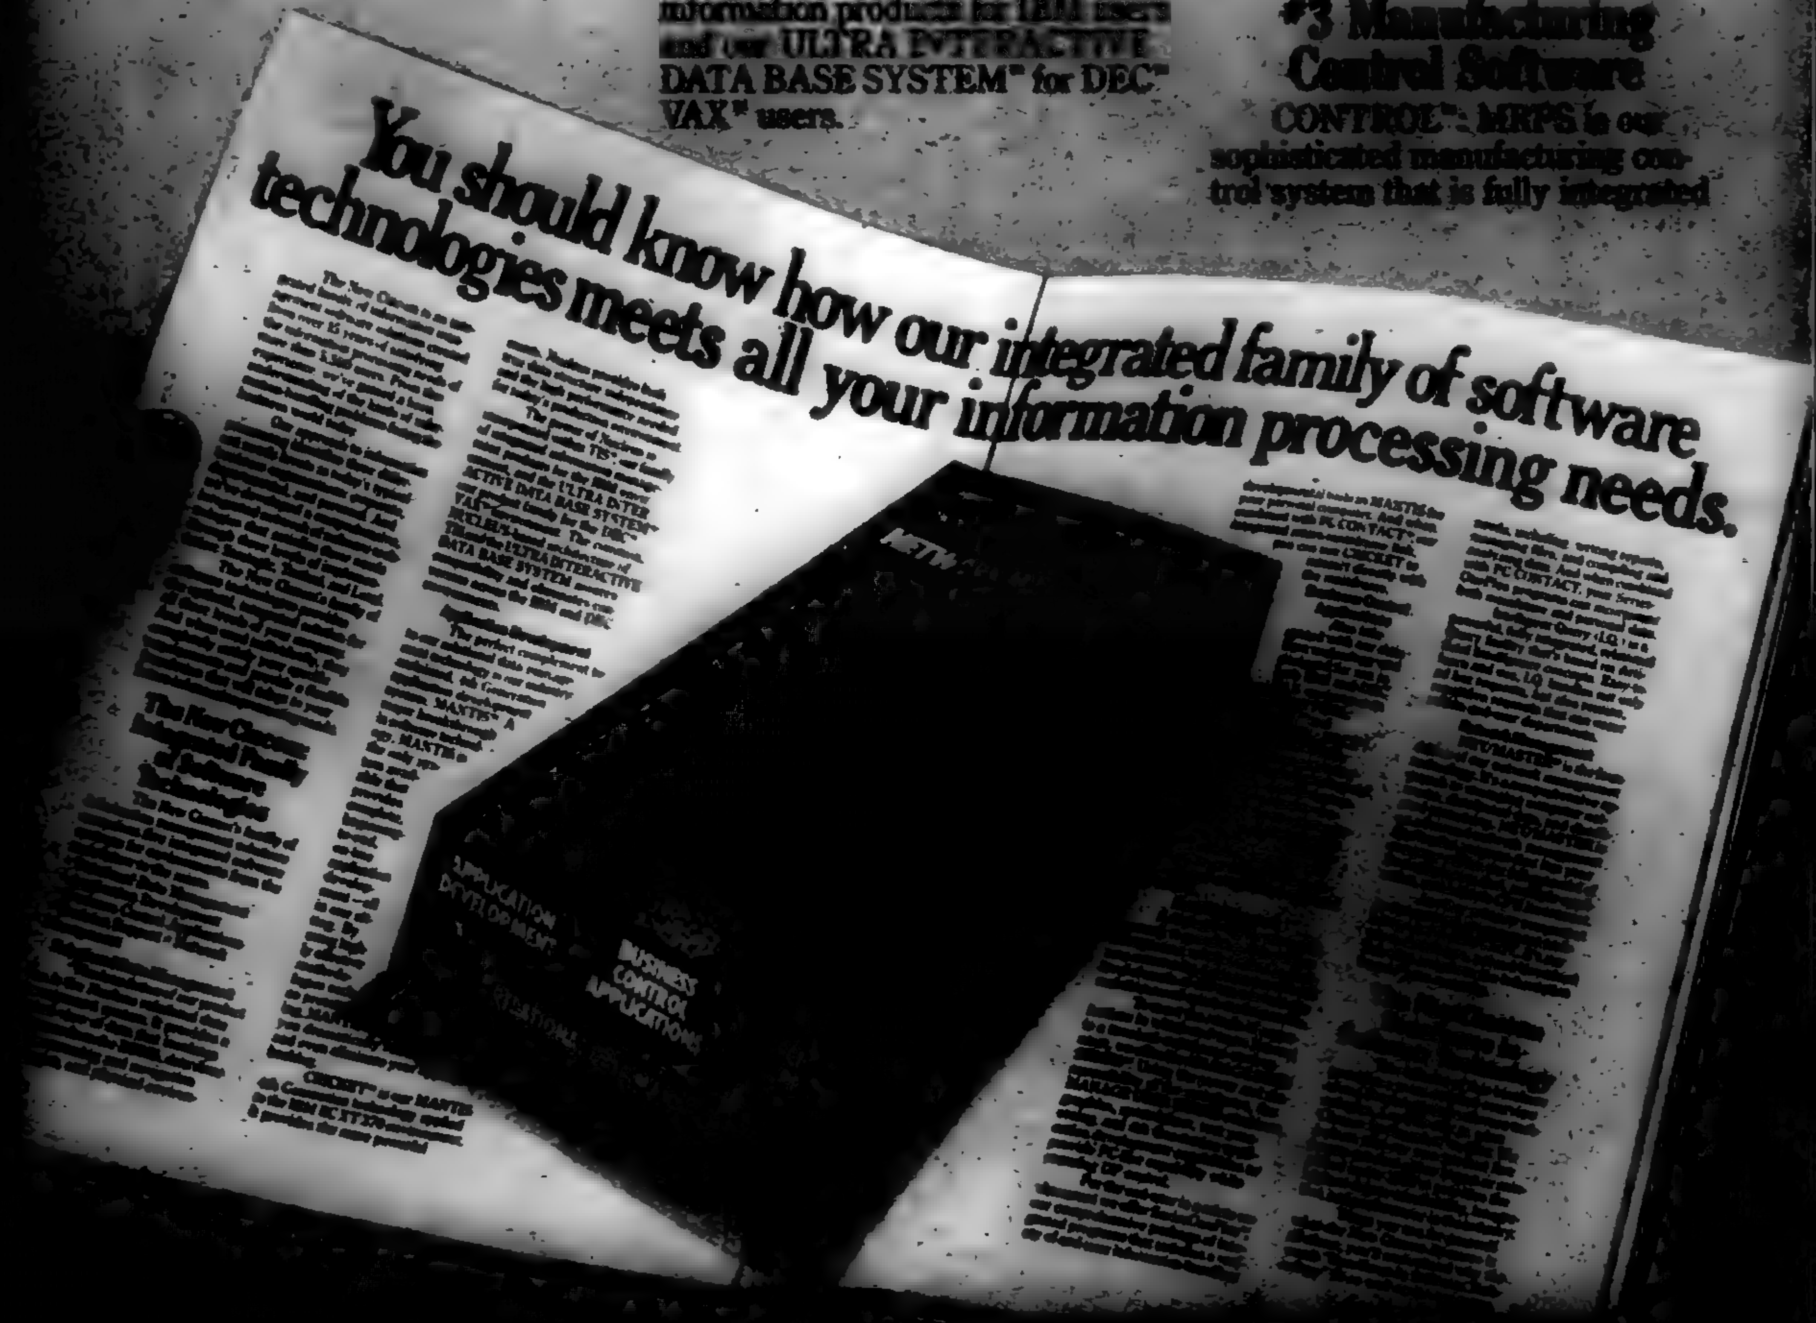
Powerful relational data management technology forms the "nucleus" of our integrated software family. Using a unique "Logical View" concept, all applications operate directly with "derived relational tables." As a result, we can provide complete data structure independence, as well as the high performance needed for today's production environments. This relational technology is the nucleus of both our TIS family of information products for IBM users and our ULTRA INTERACTIVE DATA BASE SYSTEM™ for DEC™ VAX™ users.

#2 Fourth Generation Application Development

The perfect complement to our relational data management technology is our industry acclaimed 4th Generation application development system, MANTIS™. In more than 1,500 complex production environments, MANTIS is dramatically reducing the application backlog through its powerful ability to "prototype", refine and commit the application to production in one interactive sitting.

#3 Manufacturing Control Software

CONTROL™: MRPS is our sophisticated manufacturing control system that is fully integrated



You should know how our integrated family of software technologies meets all your information processing needs.
APPLICATION DEVELOPMENT
BUSINESS CONTROL APPLICATIONS

reasons why we're
ndor you'll ever need.

with our relational data management technology. A complete closed-loop system, MRPS is improving the productivity and profitability of over 125 IBM and DEC VAX manufacturing environments around the world.

#4 Financial Control Software

CONTROL: Financial is our sophisticated financial accounting and control system which molds to the way you do business. Integrated directly with MRPS, CONTROL: Financial includes Accounts Receivable and Credit Management systems with Accounts Payable soon to follow.

#5 Advanced Network Management

NET/MASTER™ is one of the most recent additions to the TIS family of integrated products. Very simply, NET/MASTER is an advanced network management system that takes the complexity out of managing a sophisticated IBM computer network and lays the groundwork for distributed data base processing.

#6 The [illegible]

[illegible]

access multiple file types stored in the corporate data base for Decision Support manipulation.

#7 Micro Decision Support Software

For comprehensive micro-level Decision Support we offer SeriesOnePlus™*. SeriesOnePlus includes file management, spreadsheet, graphics, reporting and word processing components that are all integrated through a unique "BUS" architecture. Because the system is designed exclusively for business situations, SeriesOnePlus complements any mainframe-micro network strategy.

#8 Mainframe Decision Support Software

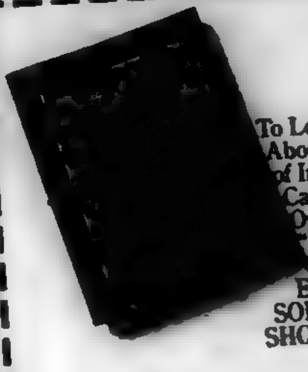
The recently introduced MANAGE USER SERIES™ provides powerful Decision Support capabilities for the mainframe user. The MANAGE USER SERIES combines graphics, text processing and application development tools to enhance the use and display of corporate data.

#9 [illegible]

[illegible]

integrated technologies has been released since 1981. And, quite frankly, we believe TIS provides the highest degree of reliability, integration, performance and value in the industry.

But don't take our word for it. We invite you to personally compare TIS with what our competitors are offering. Then you'll understand why the words "Excellence In Software Technology" fit so well under our name.



To Learn Even More About the TIS Family of Integrated Products, Call Or Write For Our Brochure: "THE NEW CINCOM: WHAT EVERY INFORMED SOFTWARE BUYER SHOULD KNOW."

BOOK REVIEWS

LOCAL-AREA NETWORKS IN LARGE ORGANIZATIONS
By Thomas Madron

The author's premise is simply stated: It costs a large organization more not to install a state-of-the-art local-area network than it does to build one — in the long run, of course.

Madron is in favor of the broadband approach, based on his experience as manager of Computer Services at North Texas State University. Nearly seven miles of trunk line, 3,000 outlets and several hundred nodes cover the campus in a broadband network that is still evolving.

The "manager's briefing" subtitle aptly reflects the book's purpose of bringing readers up-to-date on the issues without overwhelming them with detail.

Technical terms are defined, but Madron clearly regrets the kind of network debate based on technical comparisons of systems. The relevant question is not what networking scheme is better technically; the manager should ask himself, "What problems do I need to solve?"

Paperback, 150 pages, $16.95, ISBN 0-8104-6805-2. Hayden Book Co., 10 Mulholland Drive, Hasbrouck Heights, N.J. 07604.

ALAN TURING: THE ENIGMA
By Alan Hodges

No one in the computer industry really needs to know 587 pages worth of Alan Turing's life. Much of this biography, in fact, you don't even want to know — his until-now secret affairs with schoolmates and his predictably awkward passage through public school in England, for instance.

Turing the mathematician helped crack Germany's World War II code. Turing the designer devised the Automatic Computing Engine ("with a memory capacity of a minnow") at the time the Electronic Numerical Integrator and Calculator was taking shape in the U.S.

Decades ago, he debated the virtues of infallibility and intelligence as machine attributes. He wrote: "It is easy for us to regard [a human mathematician's] blunders as not counting and give him another chance, but the machine would probably be allowed no mercy. In other words then, if a machine is expected to be infallible, it cannot also be intelligent."

Could even an intelligent machine produce a sonnet the equal of Shakespeare's? Turing answered in 1949 that this question was "perhaps a little bit unfair because a sonnet written by a machine [would] be better appreciated by another machine."

After arrest for his sexual relationships, Turing submitted to hormone therapy. A year later, June 7, 1954, he poisoned himself.

Author Andrew Hodges laboriously researched one of the most intriguing minds in computer history and apparently felt compelled to write down everything he found. The result is that Turing loses the mystery that first draws you to him. He is no longer an enigma.

Paperback, 587 pages, $10.95, ISBN 0-671-52809-2. Touchstone Books, Simon & Schuster, 1230 Avenue of the Americas, New York, N.Y. 10020.

DIAGRAMMING TECHNIQUES FOR ANALYSTS AND PROGRAMMERS
By James Martin and Carma McClure

Another James Martin book, you ask? This one, with writing sidekick McClure, calls on the DP executive to prepare for the coming revolution — computer-aided systems analysis and computer-aided programming. It is a revolution that goes beyond structured programming: A computer will generate code from the systems design that the designer creates on his graphics screen.

Martin and McClure take analysts, programmers and their managers on a walk through conventional diagramming — a kind of refresher course. The authors picture Warnier-Orr and Michael Jackson diagrams, flowcharts, structure charts and much more in great detail.

This book is less an argument for one point of view than an explanation of many views on diagramming.

Hardcover, 396 pages, $40, ISBN 0-13-208794-4. Prentice-Hall, Inc., Englewood Cliffs, N.J. 07632.

BOOKS OF NOTE

Pie shop deserts old system for speech board accounting

LONG BEACH, Calif. — A restaurant chain is saving up to $5,000 in service bureau fees by using microcomputers with speech boards to process daily sales and bank deposit reports from its restaurants.

Marie Callender Pie Shops, Inc. based here, had been receiving its daily reports for several years from Automatic Data Processing, Inc. (ADP) on a contract through Crocker Bank. That service required the restaurant accountants in the field to read their daily reports over the telephone to ADP operators, who keyed the data into ADP's system for daily downloading to a printer at the Marie Callender headquarters. There, the data was keyed into Marie Callender's Texas Instruments, Inc. 990/12 Model 53 minicomputer.

The chain wanted a new system and stumbled upon it when the minicomputer was being serviced.

"I got onto the idea when a TI serviceman was servicing the mini; and I noticed that he was calling Texas and punching numbers into the phone. It looked like he was communicating with a computer. He was using the phone to order parts. I thought we [could] use something like that here," said Frits W. Van Oppen, an internal consultant for Marie Callender.

Marie Callender purchased two TI Professional Computers equipped with TI's Speech Command Hardware Kit and TI's Speech Command System. Including the cost of off-the-shelf software, a memory expansion card and developing an application to handle the report accounting, the company spent $20,000 for the systems. Van Oppen said that cost should be recovered in January or February as the company saves the $4,500 to $5,000 it was paying to ADP.

The micros were installed in September, and the 58 company-owned restaurants and coffee shops were added to the reporting network in phases through mid-October.

Today, each restaurant makes daily reports that take from one to two minutes.

Touch-Tone preferred

Callers now familiar with the procedure prefer Touch-Tone input to the micros over talking to a service bureau operator using a CRT, Van Oppen said. Because it uses voice playback for verification, the micro is slower than the CRT operator, who verifies no data. The program that Marie Callender's staff wrote makes several tests of the data and will not accept the result if the entry is unbalanced.

"One of the big improvements over ADP is the editing capability. ADP didn't do any editing, which means making sure that the data is valid and that the details for the deposits agree with the total of the deposits. If they didn't agree before, ADP would throw them into the edit column. The [personal computer] forces the caller to resolve the problem before the call is terminated," Van Oppen said.

He added that the only expense for the remote restaurants is the cost of a telephone call. When making a report, a caller uses a standard Touch-Tone telephone to punch in details such as the restaurant identification number, the previous day's sales, the number of bank deposits and the number of credit card sales. The caller responds to voice prompts recorded by headquarters office manager when the system went on-line.

Van Oppen noted that the company appreciates the savings and the data integrity and that office personnel are happy with the system because it eliminates the need to key data into the minicomputer. "There's no cost at all at the store end, and it's much cleaner on our end," he said.

WHY OUR CONTRACT PROFESSIONALS HAVE BETTER JOBS.

unix

Our UNIX® specialists select from a variety of fascinating short-term and long-term projects. They spend their professional time profitably, working on leading-edge assignments for firms that appreciate their expertise.

If you are a UNIX specialist, call us. (617) 449-6685.

We locate quality contract positions for you —locally or anywhere nationwide. And we handle every detail, so you can devote yourself to professional growth and success.

Show us that you're good, and we'll take care of the rest.

It's really very simple: A DCA network can integrate all your datacomm equipment—IBM or non-IBM—into one flexible, efficient system. We call it Integrated Network Architecture (INA). And it offers many remarkable advantages.

Like network transparency: Our hardware is compatible with all hosts and terminals —synchronous or asynchronous. So you're free to use less expensive async terminals and modems.

Host selection: With INA, any async terminal in the network can access any host in the network. Including IBM hosts, packet mode hosts and public data networks. And any 327X terminal can access any host running 3270 BSC.

High speed transmission: You can transmit combined voice and data at speeds up to 1.544 MBPS.

Modular hardware: You can upgrade and expand your network simply by adding—instead of replacing—low-cost DCA components.

And since data is routed through a network processor instead of a dedicated host, no host software is involved and no extensive programmer training is required.

Simplicity. Flexibility. Efficiency. Savings. Chalk them up to INA. From DCA, 303 Research Drive, Norcross, Georgia 30092. Call us toll-free: **1-800-241-5793.**

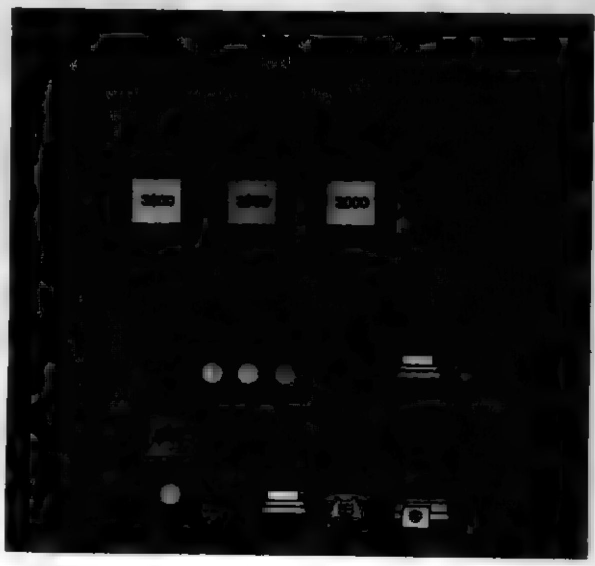
The HP 3000 compu

However much you change, you're going to need both office automation *and* distributed data processing. Fortunately, one company gives you both in a single system.

Hewlett-Packard's HP 3000 is a fully compatible family of computers, ranging from a new system that handles as few as two users to a distributed mainframe that connects up to 400. You can run the same software right up the line.

And all of our systems can change and grow right along with you. Whenever you're ready for upgrades and additions, you simply plug your existing programs into the new systems. No recompiling. No time and money wasted on conversion.



A small, but mighty, addition.

The new HP 3000 Series 37 Office Computer, the latest member of the family, puts the power of the HP 3000 within the reach of smaller budgets.

So now you can afford to give your branch offices and departments their own systems. And they'll still remain part of your overall DP picture with links to other systems.

In the office, the HP 3000 is the heart of our Personal Productivity Center. This integrates the information people need to get their jobs done more productively.

It provides an interface for a wide range of workstations, peripherals and personal computers, including our Touchscreen

ter. One family fits all.

Personal Computer and The Portable, as well as IBM PCs. And it allows them to interact directly with the HP 3000. So your people won't have to learn DP commands.

You'll communicate better with HP AdvanceNet.

Our communications go well beyond this office network. With HP AdvanceNet, they extend to links with other HP 3000s, in the same building or on the other side of the world. And to your mainframe computers, ours or IBM's.

Currently, more than 10,000 HP 3000 systems are working in networks so effectively that our communications were voted #1 in a national survey.

A Datapro poll also rated our service #1. So you get more than office automation and data processing in a single system. You get all the support you need from a single company.

For a demonstration of the single solution for both sides of your company, contact your local HP office listed in the white pages. Or write for complete information to Susan Curtis, Hewlett-Packard, Dept. 003203, 19055 Pruneridge Ave., Bldg. 46T, Cupertino, CA 95014.

In Europe, write Michael Zandwijken, Hewlett-Packard, Dept. 003203, P.O. 529, 1180 AM Amstelveen, The Netherlands.

We'll fit you no matter how much you change over the years.

Productivity. Not promises.

EDITORIAL

Who's liable for DP security?

We went to some lengths last week in this space to make a case for the U.S. government's mass computerization of personal records, despite all the warnings to the contrary heard during this year of George Orwell.

Our point was that while the potential for harm to our civil liberties is ever present, the zeal to protect those liberties has acted as a defense against that potential harm.

During the past month, a titillating story has unfolded that makes a mockery of the term "system security," but this time in the private sector.

A reporter for *Newsweek* wrote an article in November casting youthful hackers in a bad light — to say the least — and recommended their punishment befit a serious crime. As television apparently no longer provides the vicarious thrills it once did to keep the youth of America preoccupied, hackers angry at the reporter broke into his credit files kept at TRW, Inc. They then posted the reporter's credit card numbers, purloined from the not-so-secure credit files. These were kids, using micros, telephones and modems, who have ingested a healthy dose of unmitigated gall and disrespect for privacy.

The hackers then proceeded to make life utterly miserable for the reporter, alerting others, via electronic bulletin boards, to make harassing phone calls to him. They also held what may be the first all-electronic "court" to decide what "sentence ought be imposed on the reporter."

A couple of points: First, the hackers probably found breaking into TRW's credit files as easy as stealing a bank's password, which probably involved nothing more than picking through garbage for discarded computer printouts.

Second, this wasn't the first time in very recent history that someone broke into TRW. The company, which maintains credit records on millions of private citizens (120 million records, according to *Newsweek*), had its files illegally accessed in June [CW, July 2]. That time, the hackers apparently were content just to break in, leaving the files intact.

But in the more recent incident, the hacking was done with a vengeance and with a specific target in mind. Someone said, "Let's get this guy; I know just how."

TRW said it has done what it can to make its system secure. Clearly, that is far from enough and a poor excuse for allowing, if not inviting, more of the same.

Yes, there are laws against hacking. There are also laws against littering. Get caught doing either, and you're not likely to end up in jail.

Clearly, the responsibility for security rests with companies like TRW that dispense potentially volatile information on private citizens and with these companies' clients who use personal credit information like the Lenox (Mass.) Savings Bank, whose password was used in the illegal entry to the reporter's credit information. And if these companies cannot assume responsibility for security of personal files, what would happen if they were government agencies?

LETTER

Siding with employees

Concerning the article "GM employees win some, lose some in transfer to EDS" [CW, Nov. 12], it should be realized that takeovers like this always produce touchy situations for employees caught in the middle, though EDS has had more than its share of problems in this regard. However, EDS Senior Vice-President Ken Riedlinger's statement that "I don't think there is a company in the world that pays greater attention to the needs of employees than EDS" is absurd and must not go unchallenged.

The fact is EDS does not extend to its employees some basic benefits that are universally accepted, such as shift differential for hourly employees on night shifts and pay for accumulated vacation time not taken when an employee leaves the company. The firm did not give hourly employees time and a half for overtime until forced to by a court.

Additionally, the strict dress code, military atmosphere, policy of escorting employees out the door instantly when they resign, merciless after-hour demands put on its programmers and the infusion of H. Ross Perot's personal values into the regulations by which EDS employees must abide are great infringements on the rights of the people who work for EDS.

EDS has long recognized that many of its employees were quite unhappy with EDS policies. They have used internal surveys and commissioned outside help to identify the problems and made some changes based on the results. But the fundamental way EDS treats its employees has not changed.

Those lovable cash robots

LECHT ON SCIENCE
Charles P. Lecht

"I love those money machines," my friend said. No hassle; just walk right up, dial in your code, take a little quiz and if you pass it, the money machine pays off in twenties, tens, ones and sometimes even twos."

His statement got me thinking that almost all the people I work with, including me, use automated teller machines (ATM) — euphemistically referred to as money machines. While I don't know if I would ever go so far as to say that I "love" them, I must confess that they've proven to be an enormous convenience to me, and as far as I can see, to everyone else. They may qualify as the first white-collar robot in the history of mankind that most people actually like; in fact, some seem to love them.

For example, working New Yorkers seem to prefer them to lunch. Homemakers bring their kids in station wagons, which they leave double-parked with the motor running and a kid at the wheel, while they race in to use the machine. Often, a tail-wagging dog is seen in line. My Kerry blue terrier, Mozart, can't pass the place I use without lunging toward its door as he does in front of the deli.

Let's face it, we'll miss and perhaps never really be able to do without the clean-shaven, necktied, young teller who raised his eyebrow when given a withdrawal slip, checked your signature against his record card and begrudgingly handed over the cash. Or the sweet, crisply dressed woman who knew your entire financial history and tried to discourage you from wild spending by commenting on the weakening economy and what austerity measures a lame-duck president was likely to take after Christmas.

But, as much as we may miss this human interaction, we cannot let it stand in the way of progress and must bid it good-bye in favor of those lovable (oops, I said it) little cash-machine robots. Anyway, now you may withdraw more cash than you ought to with the confidence that no one but your computer knows.

Some ATMs are dressed like Santa Claus for the holidays. Because so many people will use ATMs for the first time this Christmas, I thought I'd give some practical advice on the subject.

First of all, I want to confirm that once having identified yourself to the machine by keying in your code name and answering all the multiple-choice questions correctly, the lovable robot's gaping, steel mouth usually opens to provide you with cold, hard cash. No recriminatory, guilt-producing remarks are made, nor does the robot change its expression. You are now free to go on a spirit-uplifting spending spree.

Visit machine alone, at night

This being an imperfect world, not all cash withdrawal encounters with an ATM actually produce cash. It's extremely rare that the machine is at fault (although they do run out of cash) and far more likely that you are (having run out of credit). While failure at the machine doesn't inspire the disapproving stares of a bank employee, it's usually better if you visit the machine alone at night if there's any doubt that you'll succeed in your contemplated transaction.

When you do this, it may be wise to ensure that a policeman is within earshot. Lose a video game, and no one pays attention; an unsuccessful session with an ATM can attract it. Most ATMs are situated in such a way that people awaiting their turns, accompanying friends or peering through windows may figure out what you're up to in visiting the machine, especially if you display any kind of negative emotion during use.

I advise that a transaction that doesn't produce the cash you wanted, especially around the holidays, should be responded to with a smile, as though the denial message on the tube were nothing more than confirmation of a large excess. Leaving disgruntled can cause others to wonder why you've been turned down and may inspire them to exhibit standoffish or aloof behavior. Mumbling "I guess it's out of cash," and posting a sign to that effect is unwise. If someone decides to try to use the machine anyway, it can ruin your credit with local merchants.

Faceless automation and societal breakdowns

If you have a friend waiting for your transaction to produce cash that you were going to turn over as a loan or, worse, as a loan repayment, and none appears, you may do well to curse faceless automation as the source of too many societal breakdowns and laughingly express a longing for the good old days when you could talk to someone to straighten the matter out there and then. Of course, you must make sure the bank isn't still open.

It's better not to take children under 13 to an ATM that is dressed as Santa because of the still unproven but suspected aftereffect of a hard-to-cure machine attachment in the still-believing-in-Santa child. And never send any kid under, say, 150 lb, however trustworthy he may be, to the money machine without first hiding a transmitter in his clothing. Remember, there's no bespectacled teller to see the child who's asking for the cash but plenty of people to watch him get it.

And, never key in your secret code with a baby who is on the verge of reading perched on your arm. Later on, he'll be able to reach the keyboard and gaping robot's mouth and, well, kids will be kids.

On rare occasions, our lovable cash robots break down and turn over more cash than you've asked for. Some have been known to exhibit extreme generosity by turning over all the cash they've got, hiccuping it out $200 at a time. The odds of this happening are very low, but I thought I'd mention it before I close.

Suppose the machine does start to hiccup up all its cash, what should you do? Procedures for handling this vary from bank to bank, so my advice ends here. But my instincts tell me that you may want to avoid rejoicing or kissing the lovable robot. Better to look disgusted, punch it, angrily tear up some withdrawal slips, and take the money and run. Happy holidays.

Lecht is chairman of Lecht Sciences, Inc., a New York-based think tank specializing in computer and communications technologies.

DBMS role in fourth-generation languages

READER'S PLATFORM
[illegible] Zearfoss

With the current proliferation of user-friendly fourth-generation languages, there has also been an increase in the number of so-called user-friendly data base management systems. Many fourth-generation languages claim to be or include their own DBMS. As with other data processing terms, the term DBMS has been kicked around quite a bit, being applied to anything that uses indexed files. To what extent do these languages offer fully functional DBMS capabilities?

To answer this question, we should first identify the essential characteristics of a DBMS. I believe that there are four such characteristics a DBMS must provide.

- The ability to define logical access paths/methods that are distinct from the physical access paths/methods.
- The ability to define a logical unit of work.
- The ability to share data between various users and applications.
- Adequate recoverability and auditibility.

The lack of support from fourth-generation languages for a logical unit of work is a fatal flaw to their claim to provide DBMS capabilities.

Let's examine these characteristics in more detail and see if a fourth-generation language approach can provide the functions necessary for each.

The first logical access paths/methods, is in a traditional DBMS accomplished through pointers and/or secondary indexes. A fourth-generation language will create alternate paths through the data in the same way but will often not need to be told at file definition time what physical means to use to accomplish this logical access. (If physical means must be specified in a fourth-generation language, these specifications are considerably simplified from those necessary for a traditional DBMS.) The advantage of this is that time, effort and expertise need not be spent up front to develop a file which may be viewed in different ways. A disadvantage is that tuning for minimal usage of computer resources through these logical accesses is much more restricted, a disadvantage that will have less and less impact as man-hour costs rise and computer costs fall. Fourth-generation languages do a fine job of providing users with file views.

The second characteristic, a logical unit of work, can be considered to be a grouping of one or more transactions that must be either completed or aborted as a whole, if the data they operate against is to retain its integrity.

For example, consider the transfer of $1,000 from one account into 10 accounts of $100 each. It should be obvious that for this transfer to be completed properly, 11 separate update actions must be performed. (The $1,000 should be deleted from the first account, and 10 separate additions of $100 should be made against the other accounts.) By defining this transfer as a logical unit of work, one can expect a traditional DBMS to complete or reject the transfer.

A traditional DBMS supports a logical unit of work through two concepts. The first of these is the data queue. When, during a logical unit of work, changes are made to the data, these changes are written to the data queue and are not written back to the file until this logical unit of work is complete. Thus, if an abend occurs during an update action within a logical unit of work, none of the changes

See DBMS page 40

Zearfoss is a member of a newly formed Pittsburgh-based data base design group that develops subject data bases.

VIEWPOINT

DBMS from page 39

made by prior update actions within this logical unit of work are applied to the file. In this way, the integrity of [redacted]

At this point, the second concept, dynamic back out, takes over. Dynamic back out removes all the changes written to the data queue by the update actions for an unsuccessfully completed logical unit of work. This frees up the data queue for receiving changes from other update [redacted]

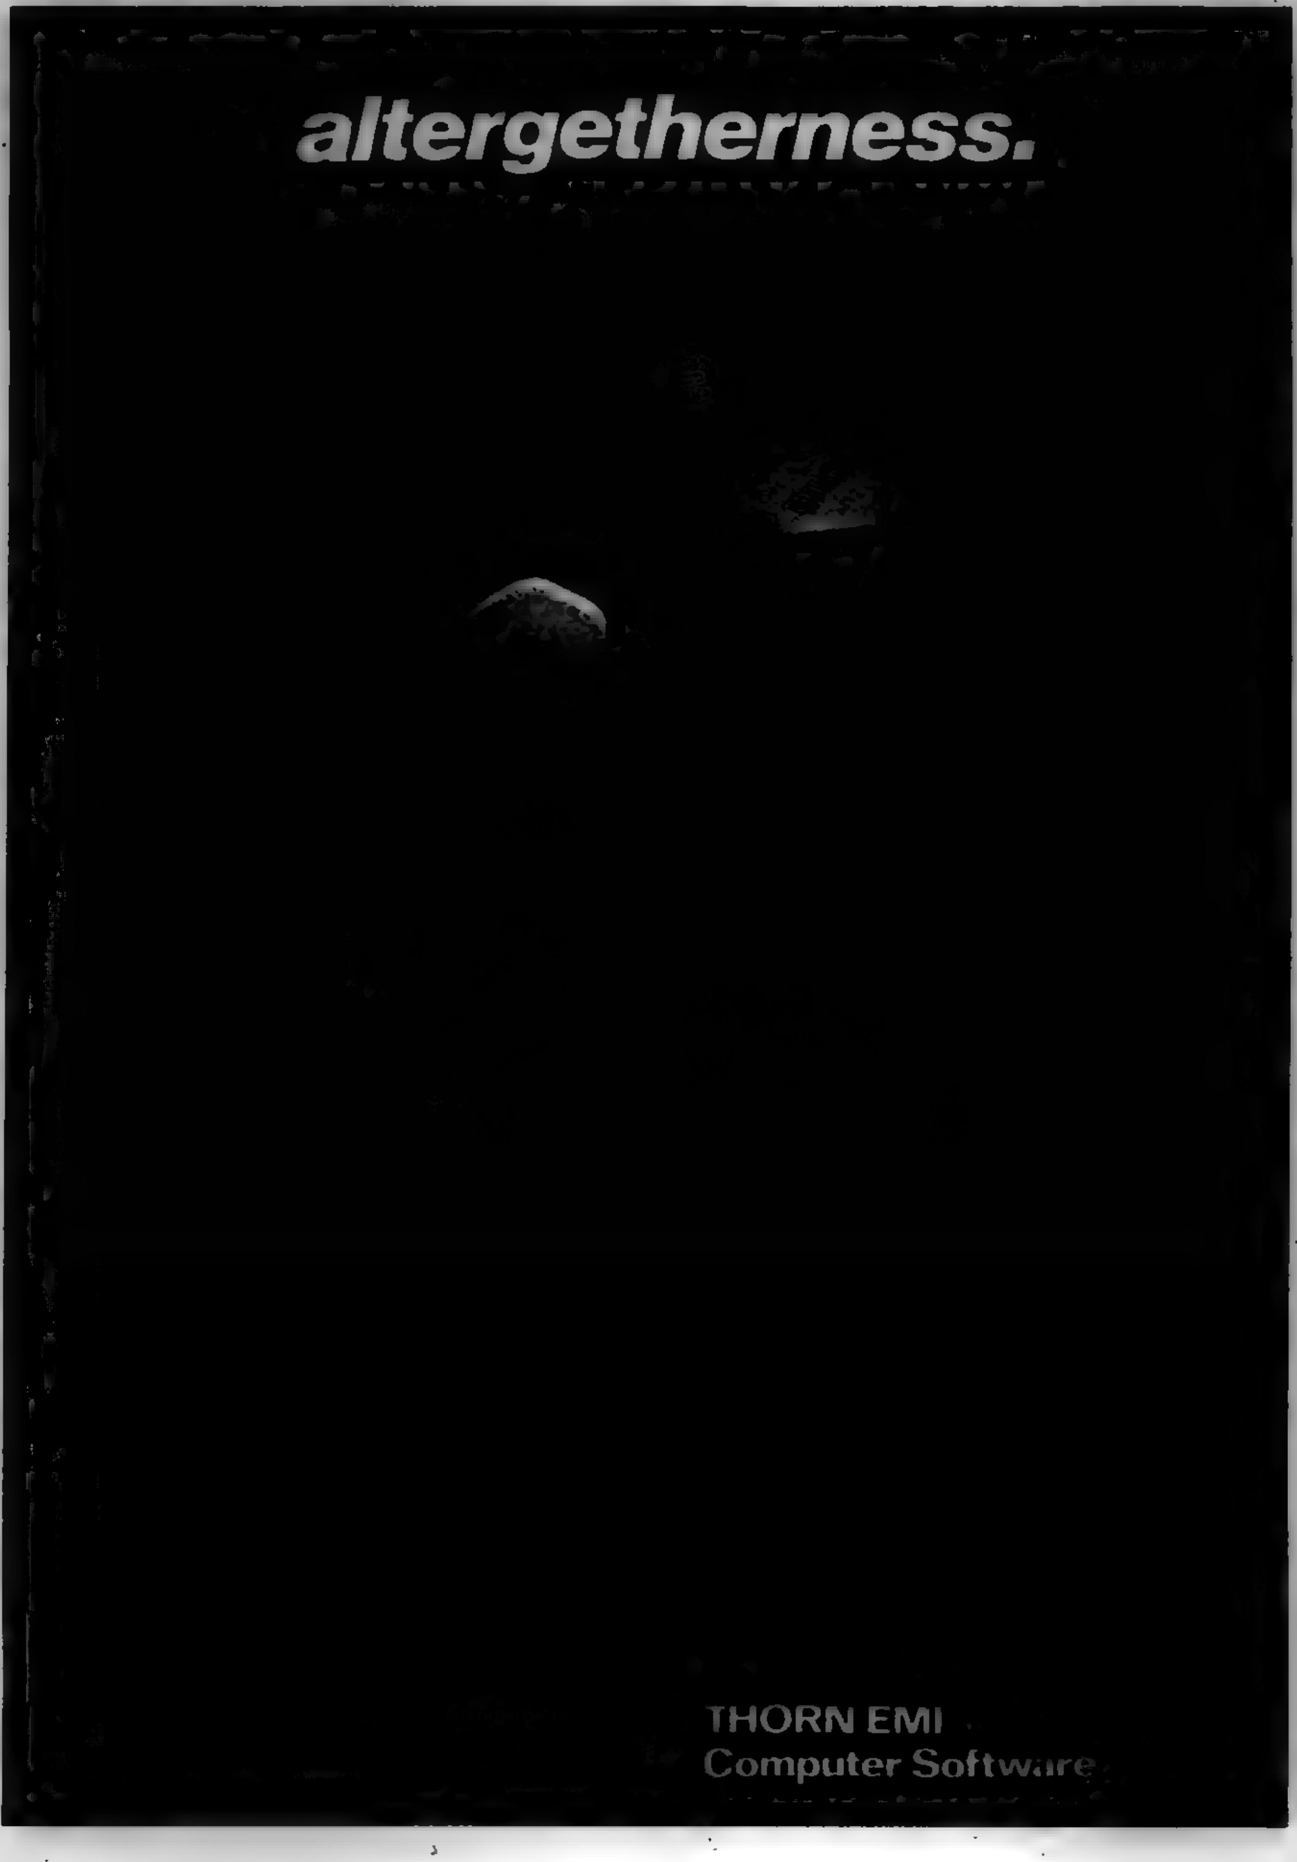
To the best of my knowledge, no fourth-generation language supports the logical unit of work characteristic. A fourth-generation language will provide data integrity to the data base call level, but as seen from the example above, this is not always sufficient to guarantee data accuracy. The lack of support from fourth-generation languages for a logical unit of work is a fatal flaw to their claim to provide DBMS capabilities.

Data sharing is the third characteristic, and one that, for the most part, fourth-generation languages satisfy. Files may be updated by more than one user simultaneously. However, there is an aspect of data sharing that fourth-generation languages do not address. This is program isolation, the resolution of data contentions. Since fourth-generation languages fail to provide for a logical unit of work, they must treat each data base call as a separate, recoverable action. This means that a procedure is unable to lock out any other procedure from using any data base record other than the one referenced by its most current call. If one considers the example of the $1,000 transfer given earlier and adds to it a separate transaction to update one of the receiving accounts, one can see where problems may occur. Since fourth-generation languages provide no data contention checks, it is up to the programmer to supply code for all possible conditions of [redacted]

The final characteristic, recoverability and auditability, refers to whether sufficient and usable logging of activity and updates against the file are maintained. In my experience, fourth-generation languages do not provide adequate logging capabilities. This means that logging functions must be created anew for each application. Worse yet, there can be no vendor-supplied utilities for reading a self-developed log file. Thus, it becomes the responsibility of the programmer to supply the code that will ensure that auditability and recovery can take place.

What can we conclude from all this? If the four characteristics I mentioned earlier are accepted as essential for a DBMS, then we can say that fourth-generation languages only partially satisfy two of these characteristics and entirely fail to support another one. This means that if you still wish to use a fourth-generation language as a DBMS, you will be forced to accept systems where your programmers coded the routines to resolve data contentions and provide auditability and recovery and where, because of a lack of data queues and dynamic back outs, the integrity of the data within this system can never be assured.

I believe that fourth-generation languages are extremely powerful and flexible tools for creating data processing systems and, as they continue to evolve, will play a larger and larger role in the overall data processing world. However, for the present, they provide incomplete DBMS capabilities and should not be used as such.



EDS from page 38

In 1980, EDS started requiring programmers to sign three-year, $9,000 promissory notes before taking part in EDS' programming training course. This unusual move was deemed necessary to keep programmers from leaving. Surely this would not be necessary if EDS "takes care of every legitimate employee need."

EDS is unique in many ways. It has been innovative, provided excellent education and developed very good computer systems. If EDS would like to take pride in its uncompromising methods, that is one thing. But Riedlinger's claims are just not true. EDS has gained a well-deserved reputation as a company out of touch with its employees' needs.

Micro-mainframe links pose array of security risks

By Owen Boyd
Special to CW

The driving force behind micro-mainframe technology is simple: Today's end user wants to get at his mainframe data with his personal computer. He wants to manipulate that data, and he wants to have the ability to update these mainframe data bases in real time and interact with his data without having to wait on DP to perform batch runs.

The new technology he is using to do this is the microcomputer-mainframe link.

This tool allows companies to be more productive and to compete on a higher level at a faster pace than ever before. But with this freedom of access come some very serious security risks. Before a plan is described to offset these risks, it is important to understand how the technology works.

Before link technology, it was possible to access the mainframe, but it was a tiresome process. First the user had to key all of that data into his personal computer. Often the data was inaccurate or old, leading to the danger of making bad decisions. Once the user had done his analysis on the personal computer, there was no way for him to update directly the mainframe data bases with the results of his analysis — he needed to enter the data again.

Micro-mainframe link software, in the simplest sense, allows the passing of data from the mainframe data base to the micro and from the micro to the mainframe.

Users can now access live mainframe data, select what they want when they want it and manipulate the data in unrestricted ways. In some cases, they have the option of updating the mainframe in real time. While the benefits are striking, so are the security implications.

A typical user of a micro-mainframe link might be a controller who is trying to close his month-end books. Suppose it is the last day of the month, and he has per-

See LINK page 48

Boyd is manager of product marketing and systems at McCormack & Dodge Corp., a vendor of a micro-mainframe link.

Avoid system design troubles by taking one block at a time

Second of a two-part series.

By Mike Ruggera
Special to CW

A typical procedure used when approaching the problem of developing a major system that consists of subsystems is to view the system as a single project. An effort is then made to analyze the data needs of all the subsystems and then integrate those needs into a composite data base design.

The complete schema is written and all the anticipated subschemas are written. Work begins on programming the first subsystem. Usually there are some unanticipated data requirements necessitating changes in both the schema and subschema. These changes cause some programs to be modified or rewritten because techniques that result in a lack of independence between the data and the programs have been employed. This results in some time and cost overruns, but the subsystem is completed.

Then work is begun on the second subsystem. The project manager believes he has a good feel for how long this subsystem will take to develop and prepares time estimates and work plans. The programming begins. Invariably, there are unanticipated data requirements. The schema and subschemas have to be changed. As a result, not only do the programs in this subsystem have to be modified or rewritten, but the programs of the first subsystem also have to be modified or rewritten. This is because they are tied to the structure of the data base. Consequently, when the second subsystem is completed, it overruns its time and cost estimates by about 20%.

The project manager usually believes he understands how to estimate the third subsystem and includes an inflation of 20%. The anticipated but unknown data

Honeywell offers HDMS in U.S.

MINNEAPOLIS — Honeywell, Inc. has announced that its Distributed Manufacturing System (HDMS) for the company's DPS 6 line of minicomputers under Honeywell's Gcos MOD 400 or TPS 6 operating systems is now available in the U.S.

According to a spokesman, HDMS operates on-line and is designed to support a variety of manufacturing functions, including long-range planning and daily shop floor control. Developed by Honeywell Information Systems in the UK, HDMS reportedly enables users to integrate their manufacturing systems with office automation and other DPS 6 applications. Key features of HDMS include requirements planning, contract control and material traceability.

HDMS allows requirements planning to run on spare machine capacity to reduce overnight processing loads. This feature reportedly lets users see the immediate results of shop-floor or purchasing activity as updated replanning suggestions.

Using contract identification of work and purchase orders, HDMS relates the cost of all activities to their appropriate contracts. The integration of job costing with the production planning function is said to enable the system to determine the remaining work on a contract and the cost of completion.

The system's material traceability features allow it to maintain the identity of individual material batches and record the subsequent use of each batch in manufacturing operations.

Other features include bill of materials, inventory control, sales order recording, purchase order recording, work order control and master scheduling functions. The system is priced at $55,000 for a one-time license. The price includes one year of support, training and installation.

Honeywell is located at Honeywell Plaza, Minneapolis, Minn. 55408.

DEC adds voice messaging options to All-In-One system

Tools automatically notify users of messages, allow telephone access; OA options offered

MAYNARD, Mass. — Digital Equipment Corp. has broadened its All-In-One Office and Information System software with the addition of voice messaging options and support for several other optional office automation products.

The two voice products — Dectalk Mail Access and Voice Messaging Support — reportedly allow users of DEC's All-In-One package to access electronic mail messages and other All-In-One documents over any Touch-Tone telephone and receive voice message notification in their All-In-One mailboxes.

According to the company, Dectalk Mail Access permits users to "read" messages or documents stored in their All-In-One filing folders by using their telephones. Users can call an electronic mailbox and listen to electronic messages translated into voice by Dectalk, a text-to-speech voice synthesizer. The telephone can also be used to listen to mail in the user's in-box, select specific messages, delete mail and answer mail. Users can stop, pause, resume or repeat the messages.

Voice Messaging Support is an option that automatically notifies users of voice or text mail through their All-In-One terminals. Information on who sent the message, when it was received and the message length is included in the text. By entering a command, the user's telephone will ring, and the message is delivered.

Dectalk Mail Access software for the All-In-One system is priced at $4,500. All-In-One Voice Messaging Support is available for $7,500. Both products will be available in the spring, the company said.

Along with the voice messaging option, DEC introduced versions of a full-function word processing system for All-In-One and for its VMS operating system. WPS-Plus/VMS Version 1.1 and WPS-Plus/All-In-One are said to include Decmate-style word processing, a scientific and technical character set and equation editing.

Users can delete and insert text to different pages and documents without losing word processing functions, the company said. Letters can be combined with spreadsheets, calendar information and other text created through the All-In-One application and distributed by electronic mail. WPS-Plus/All-In-One is licensed for $4,000. WPS-Plus/VMS is licensed for $6,000. Both products will be available in January. Also announced by DEC:

- Decpage Version 1.1, for VAX computers, reportedly allows text, line drawings and graphics to be printed in one compound document. It will be available in January for $5,000.
- Message Router Version 1.1 is a store-and-forward message transport system for the VAX line

See DEC page 49

FOR ADVANCED COMPUTER SYSTEMS
TALK TO DATA GENERAL.
IT'S WHY WE'VE WON MORE MAJOR INTEGRATED SYSTEM CONTRACTS
THAN ANY OTHER COMPANY.*

The choice of a computer system may be the most crucial decision a corporation can make. And companies such as Beneficial Finance, Pactel Communications, Centel and E.F.Hutton selected Data General.

TODAY'S BEST VALUE

From our DATA GENERAL/One™ portable to our powerful superminis. Along with our unparalleled software and our CEO® office system, we offer a comprehensive computer value. That's why our automation systems for business and industry are leaders in price/performance.

---

*Integrated system contracts over $25,000,000 (does not include military, component and service awards), as reported in *Electronics News*, *MIS Week* and *Computer Systems News* since January 1, 1983

TECHNOLOGY... COMPANY ON THE BRINK?

PROTECT YOUR CURRENT INVESTMENT

With our systems you can use your existing equipment and protect your current computer investment. Because Data General is compatible with IBM and works with most other major makes of computers.

What's more, Data General ties into almost any industry standard computer network. Which puts all your equipment, regardless of make, on speaking terms. And makes your entire information system more productive.

SOLID SUPPORT FOR THE FUTURE

Our support and service is advanced too. So you'll always use our technology to its highest potential. And our high priority on research and development will keep your systems a generation ahead of everyone else's.

Can you risk being caught on the brink with yesterday's technology? To stay on solid ground, talk to Data General at 1-800-DATAGEN or write:
Data General, 4400 Computer Drive,
Westboro, MA 01580 M-S C228.

Data General
a Generation ahead.

SOFTWARE & SERVICES

SYSTEMS SOFTWARE

TRIANGLE SOFTWARE CO.
Prodict 2.0

Triangle Software Co. has introduced Version 2.0 of its Prodict systems utility for IBM mainframes running IBM's VM and MVS operating systems.

According to the vendor, Prodict 2.0 now includes an option that permits users to access data by their assigned job network names.

Context-oriented Help panels have been added to the Structured Programming Facility interface and are said to provide information about the subcommand or function when the help is needed.

Prodict 2.0's control statement reportedly allows users to delete entire sets of jobs by specifying a combination of the job name and wild card characters, the vendor said.

Release 2.0 is available for $8,750.

Triangle Software, Suite 275, 4340 Stevens Creek Blvd., San Jose, Calif. 95129.

EXECUTIVE SUPPORT PRODUCTS, INC.
Aces

Executive Support Products, Inc. has announced an editing system for the Honeywell, Inc. Level 66 DPS 8 series and DPS 88 mainframes.

According to the company, the Aces package was developed for use with the Honeywell 7700 and 7800 series terminals to provide a program and documentation development tool to improve productivity.

Aces reportedly maintains full control over cursor position within the edit screen and recognizes and directly supports most Honeywell file formats, including Ascii, Binary Code Decimal, compressed deck and print formats.

Aces is available for a license fee of $7,900 per CPU.

Executive Support Products, Suite 211, 3901 MacArthur Blvd., Newport Beach, Calif. 92660.

CHAKRA SYSTEMS INTERNATIONAL
Go/38 Release 4.0

Chakra Systems International has introduced Release 4.0 of Go/38, designed to enhance control of the IBM System/38 on-line environment.

Enhancements to the product are said to include a command that allows users to remotely execute commands at any workstation linked into Go, statistical reports designed to identify workstation and program use and a restricted sign-on function that can be used to permit unattended start-ups.

According to the vendor, other enhancements include a list option that reportedly dumps detailed status of active workstations to the printer and simplifies backup procedures.

Go/38 is priced at $3,000, according to the vendor.

Chakra Systems International, 8465 Victoria Drive, Vancouver, B.C., Canada V5P4A8.

BOOLE & BABBAGE, INC.
XPF/Cobol Version 1.1.2

Support for IBM's IMS/VS and MVS/XA has been added to Boole & Babbage, Inc.'s interactive testing and debugging tool for use by Cobol programmers.

XPF/Cobol Version 1.1.2 allows application programmers to monitor and correct programs at their terminals, the vendor said. Other enhancements added to the product allow users to obtain a storage dump after a program abend.

Pricing for XPF/Cobol Version 1.1.2 is $30,000 for the first site, and each additional site costs $22,500.

Boole & Babbage, 510 Oakmead Pkwy., Sunnyvale, Calif. 94086.

PRODUCTIVITY AIDS

DBMS, INC.
Developer Tool Kit

A package of application development products for users of Cullinet Software, Inc.'s IDMS has been announced by DBMS, Inc.

According to a spokesman, the Developer Tool Kit is a package of eight software modules, three of which are currently available.

Online Test is designed for testing Cullinet's ADS/Online dialogs and IDMS-DC Cobol and Assembler programs.

Dictionary Module Editor is a full-screen editor that reportedly allows IDMS users to do on-line edits of Cullinet's Integrated Data Dictionary.

The Dictionary Migrator is designed to simplify migration of systems from testing into production, according to the vendor.

The package sells for $14,900. Users of DBMS's DBA Tool Kit can buy the Developer Tool Kit for $12,500.

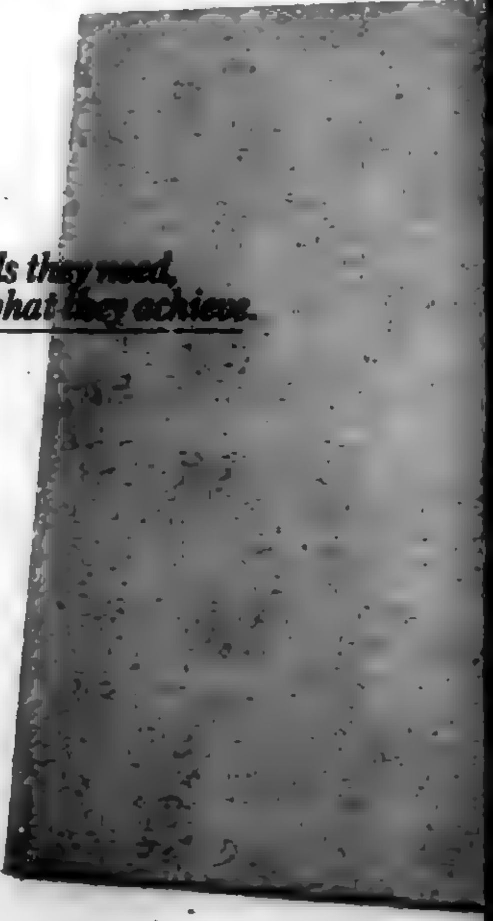
DBMS, 1801 Mill St., Naperville, Ill. 60540.

APPLIED DATA RESEARCH, INC.
ADR/DL

Applied Data Research, Inc. (ADR) has announced that its ADR/DL, an interactive application development system for ADR's Datacom/DB and IBM's IMS data base management system, now allows for Cobol-based application development and maintenance. The package runs on IBM and compatible mainframe computers under IBM's OS and DOS environments.

The new function allows programmers developing and maintaining Cobol applications to access conventional files as well as Datacom/DB and IMS data bases. Existing Cobol programs not originally developed with ADR/DL can also be maintained.

ADR/DL is now compatible with Sketch, the CICS screen painting fa-



Give people the tools they need, and there is no limit to what they achieve.

Announcing the first major breakthrough in word processing technology since WordStar.

Now, state-of-the-art comes easy.

Introducing WordStar 2000, a totally new word processing program from the makers of WordStar.

WordStar 2000 removes all limits from word processing. From what you can create. From what you can achieve.

Because WordStar 2000 lets you do everything.

Easily.

From windows, to undo, to spelling correction, WordStar 2000 does it all. And more.

WordStar 2000 gives you the works.

"Windows" allows you to work on different documents—simultaneously. "Undo" lets you replace text you mistakenly removed. A built-in spelling corrector checks and corrects misspellings from over 97% of the most commonly used words.

WordStar 2000 also has a "typewriter mode" to fill in forms or envelopes easily. Plus "format sheets," which give you ready-made headings, tabs and margins at the touch of one key. It can even create and update footnotes.

Finally, a truly integrated word processing system.

WordStar 2000 goes well beyond words.

It comes with a built-in five function calculator. A built-in mail merge enables you to mass produce form letters. Get our special Plus package and you also get a built-in mail list data base that allows you to create, update and sort your own mailing lists. Also a built-in indexer. Not to mention built-in telecommunications capabilities.

All integrated together, so you never have to leave the program.

The only word processing program that interacts with you on your level, whatever your level.

Before we created WordStar 2000, we studied the way people worked, and thought. We also drew from our experience with over 1,250,000 WordStar owners.

cility of ADR/Roscoe and ADR/Vollie for OS and DOS respectively.

The permanent license price for ADR/DL is $25,900 for OS environments, $21,300 for DOS environments and $16,000 for IBM Models 4321, 4331, 4361 and 370/115, 370/125, 370/135 and 370/138 or plug-compatibles.

Applied Data Research, Route 206 and Orchard Road, CN-8, Princeton, N. J. 08540.

APPLICATION PACKAGES

SHAWWARE, INC.
Facilities Maintenance Management System

Shawware, Inc. has introduced a facilities maintenance control software system for the IBM System/38 minicomputer.

According to a company spokesman, the Facilities Maintenance Management System consists of seven modules.

These modules include work order management, manpower allocation, equipment management, preventive maintenance, stores' inventory control, purchase order management and accounts payable.

The modules can be purchased separately or together as the fully integrated Maintenance Management System.

Prices for the software range from $10,000 for a single module to $80,000 for the complete system, the spokesman said.

Shawware, Suite 21, 3075 S.W. 1st Ave., Portland, Ore. 97201.

VERSATEC
Versaplot Color Random software

Versatec, a Xerox Corp. company, has introduced plotting software to support electrostatic color plotting with Prime Computer, Inc. computers running under Prime's Primos 19.2 operating system. The software is used in conjunction with the Versatec Random Element Processor and Versatec electrostatic color plotter.

The Versaplot Color Random software supports 16- or 32-bit integer mode, allowing a 16-bit host to produce up to 13.65-ft-long plots and a 32-bit host to produce up to 40-in.-wide plots of virtually any length, the vendor said. The plotting software provides for eight line colors, 256 predefined area colors and 256 user-definable colors. The software also supports black-and-white plotting, Versatec said.

The price of the Versaplot Color Random software for Prime computers is $4,000.

Versatec, 2710 Walsh Ave., Santa Clara, Calif. 95051.

HERITAGE COMPUTER CORP.
Business Oriented Support System

Heritage Computer Corp. (HCC) has released inquiry software for the property and casualty insurance industry. The software is a supplement to HCC's property and casualty software products and runs on IBM 30 and 4300 series computers under IBM's DOS, OS or MVS operating systems.

The Business Oriented Support System (Boss) was designed to give executives direct control of the corporate data base without any data processing knowledge, the vendor said.

Users can formulate questions either against the data base through a series of menu choices or by using a series of tutorial screens.

Boss will be available at the end of first quarter of 1985. Pricing starts at $50,000.

HCC, 2800 S. Taylor Drive, Sheboygan, Wis. 53081.

DATA PROCESSING DESIGN, INC.
Word-11

Data Processing Design, Inc. has announced that its Word-11 word processing software now interfaces with the Hewlett-Packard Co. Laserjet printer and the Xerox Corp. 2700 Distributed Electronic Printer. The software runs on Digital Equipment Corp. computers under DEC's VMS, RSTS/E, RSX-11M and P/OS.

With laser printers, the user can choose multiple fonts on a single page without stopping the printer. Word-11's spooled printing allows users to share printers, and users can continue to create or edit while other documents are printing.

Word-11 for the Professional 350 costs $795, and prices for larger machines range from $6,000 to $9,500, depending upon configuration.

Data Processing Design, 1400 N. Brasher, Anaheim, Calif. 92807.

DATA PROCESSING DESIGN, INC.
Figure Module in Graphics-11

Data Processing Design, Inc. has added a two-dimensional drawing module to its Graphics-11 software that runs on Digital Equipment Corp. processors under DEC's VMS and RSTS/E operating systems. Figure requires either DEC VT125 or VT240 series terminals.

According to a company spokesman, the Figure module enables users to create and edit graphics images and then receive hard-copy output from printers, plotters or 35mm slide generators. Objects can be moved, scaled or copied to create almost any graphics image needed for business applications, the vendor said. Colors, patterns and text can be added to enhance the illustration.

The price of the module ranges from $2,000 for a DEC Micro-11 to $3,500 for a VAX-11/780, and the Graphics-11 package, including Figure, ranges from $3,200 to $5,600, depending upon host configuration.

Data Processing Design, 1400 N. Brasher, Anaheim, Calif. 92807.

As a result, the keys you press are the keys you'd expect to press ("c" for copy, "p" for print, etc.). You may also use your computer's function keys. Menus have been uniquely designed for easy access to all functions. And MicroPro's exclusive "tutor-in-your-computer™" makes learning fast and fun.

WordStar 2000 is the easy word processing program you'll never outgrow. Of course, the original WordStar and WordStar for PCjr will continue to provide substantial and proven word processing capability for those with more modest budgets.

See your local MicroPro dealer today or call (800) 227-6703 [in CA (800) 632-7979] for the dealer nearest you.

So you can remove all limits from what you can achieve.

Current WordStar owners can upgrade to WordStar 2000 quickly and easily through their dealer, or by calling MicroPro Customer Update (800) 227-5609, 9am-5pm P.S.T.

WORDSTAR 2000

Now there are no limits.™

MicroPro.

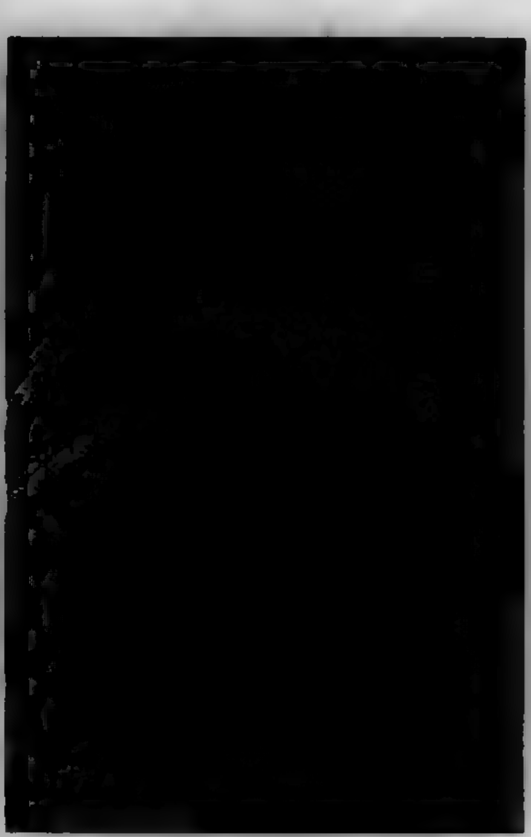
One of the smartest reasons to buy Digital.

Digital Service.

From the moment you choose Digital, our service organization goes to work to protect your investment. We'll develop your software applications. Train your employees. Keep your system up and running. We're ready to provide the support you need, whether you are running a single system or a large network of systems. Our engineers have even worked alongside customers to build new computer sites with the proper power, air conditioning, and fire protection. From start to finish, Digital Service is a smart decision.

Our people help your people develop the skills they need to get the most out of your Digital computer. We offer more than 500 courses on hardware, software, and office automation. At Digital's worldwide Training Centers. Or at your location. And, at your request, we will even customize training to meet your special needs.

Because no other business is like yours, Digital's software experts help you select the right applications for your business. Or they tailor programs to fit the way you work. And whenever you need the answer to a question or problem, specialists trained in your software applications are only a phone call away.



You select the level of service you need: whether you need on-site hardware support 24 hours a day, seven days a week, with our unique commitment to when service will begin, or the economy of carry-in or mail-in services. Digital gives you a choice.

Digital has over 20,000 service professionals worldwide to give you peace of mind with fast, personalized service. And we deliver that service when and where you need it. That's why Digital Service is the smart choice.

Digital Service is everywhere, because Digital's customers are everywhere. Our specialists regularly service Digital's systems on remote islands. On board ships. Even at the South Pole.

For more reasons to buy Digital Service, call 1-800-DIGITAL.

LINK from page 41

formed his preliminary close in the traditional manner. A big block of paper has been printed out in multiple copies, and he is evaluating his performance to budget for the month. He has some final adjusting entries to make, errors to clear up and he is under pressure from his board to produce the numbers for an important meeting in two days.

The controller needs to be able to call up the journal entry screens from his personal computer, enter his adjusting transactions, post them in real time to the production data bases and bring this updated data down again to the personal computer to see the results. With a micro-mainframe link that allows real-time update, he can do this in a few minutes.

Real-time uploads are going to become more common as available products improve. But this evolution should have the user thinking about security in terms of uploads as well as downloads and real-time access to production data bases. Do not expect too much from the mainframe software packages in terms of security. Internal procedures are still going to have to play the major part.

Once an end user has proprietary data on his micro, there is little the mainframe software package can do about security. It is up to you to institute rules like locking offices, enforcing procedures of three generations of backup on the personal computer files, using data encryption software on the personal computer and insuring the computers and the data. However, personal computer link software can do something about security. Because the links generally treat the micros as terminals, the user should be aware of some of the important options that should be available.

■ Does the package have security at the level of the data base and at the terminal or personal computer? Is there a feature for user identification and user password? Is there security at the record, field or partial field level? These are some of the levels of security that a comprehensive personal computer link software package should have.

■ Can each personal computer be secured by its location, by the time of day and the days of the week that it can access certain data and for periods of time to handle temporary assignments or project situations?

■ A security log is also important. This is a set of records, built by the software, that allows an on-line display of anyone who has been attempting to violate the security system by getting into unauthorized data and includes information such as which data base and what functions, the personnel and terminal ID and the date and time.

■ Another good feature for security users is providing the ability for the end user to change his own password although not necessarily to add new passwords.

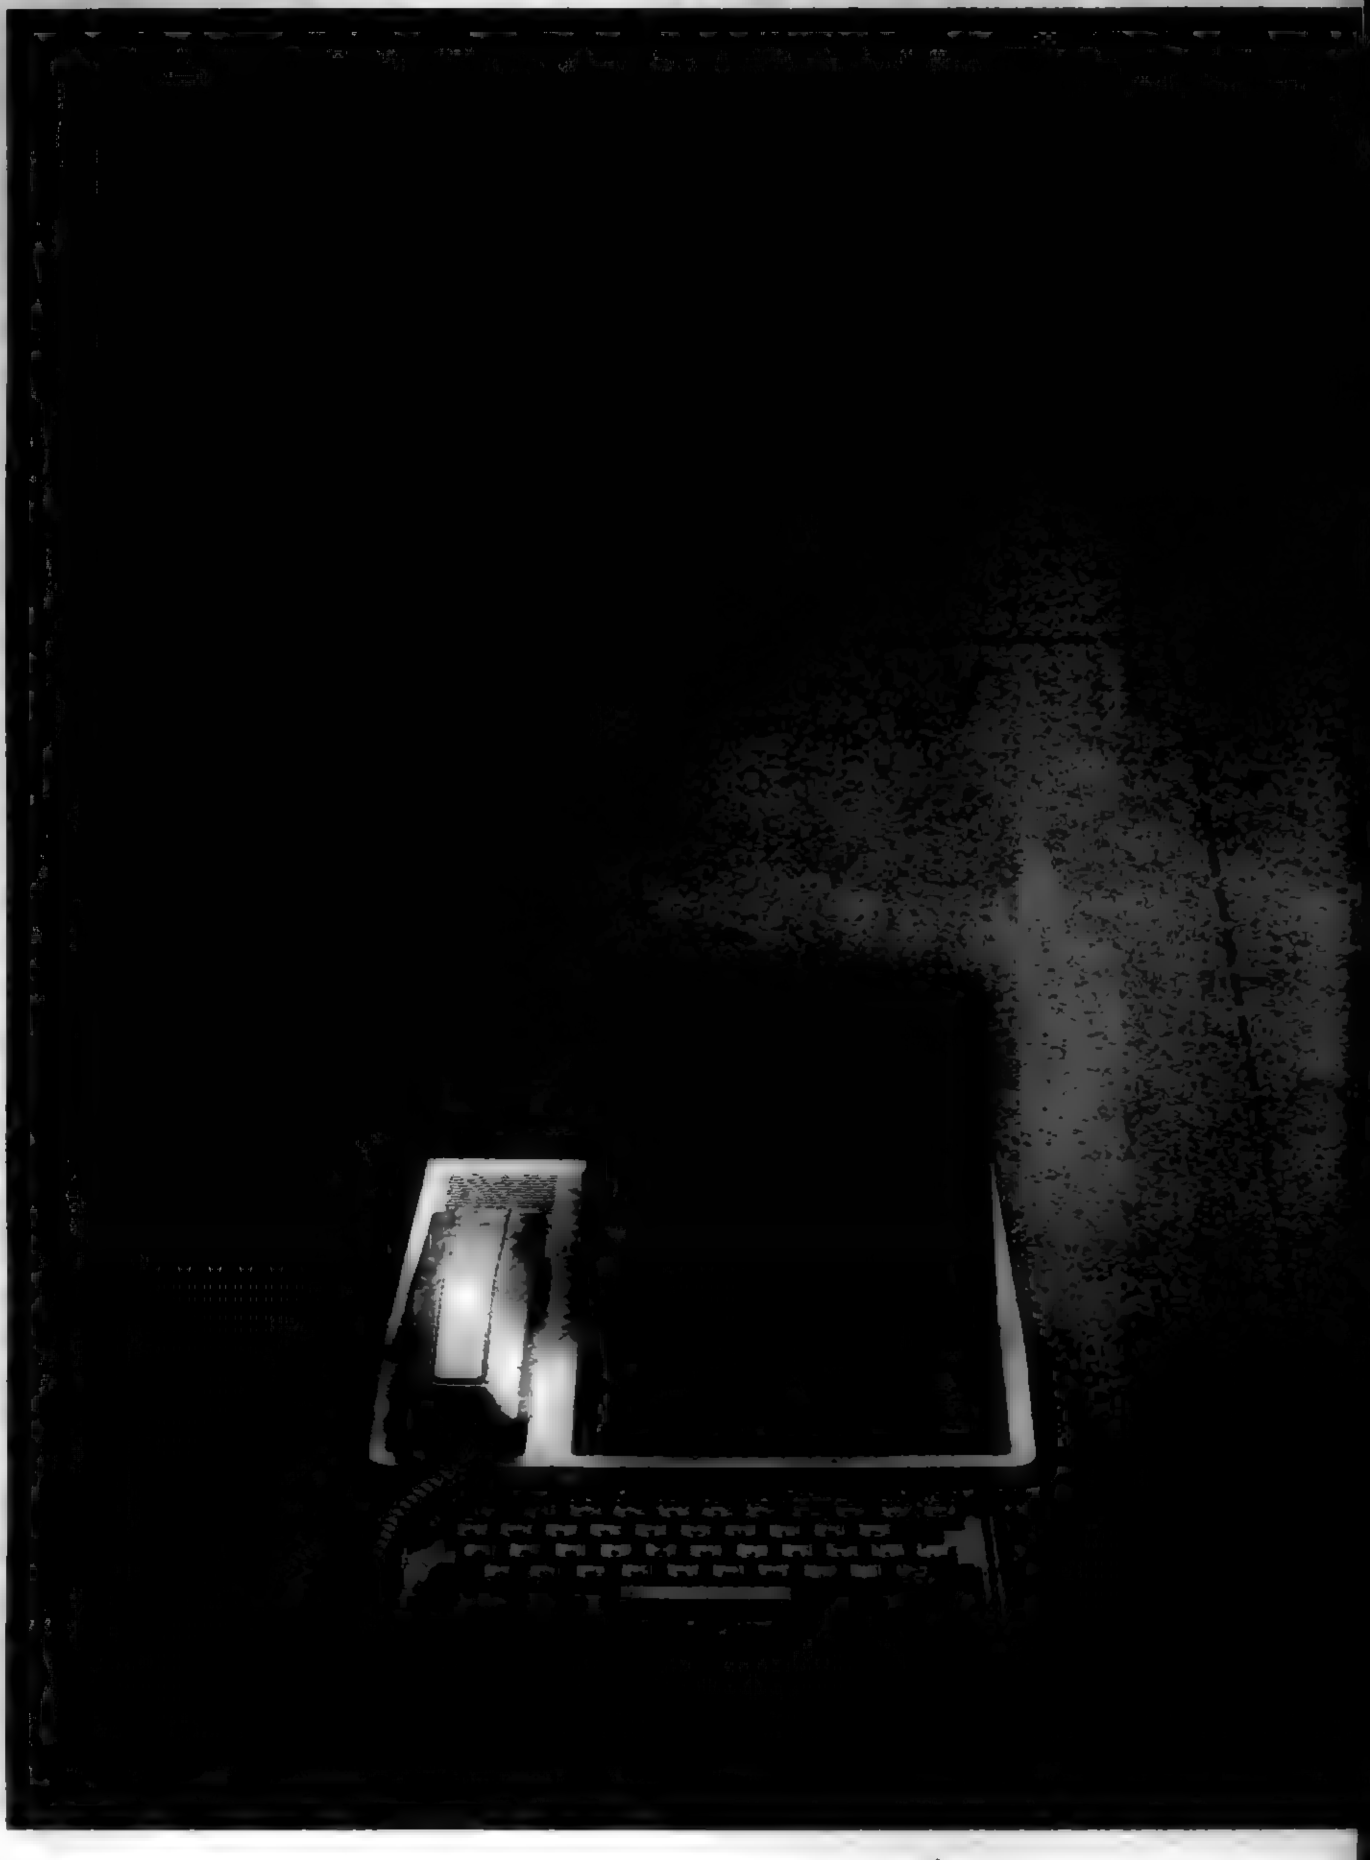
■ Look for the ability to get security interactively in real time. This can be important when a problem employee has been terminated, and there is a need to eliminate his password before he goes back to his office and does some last-day damage to the system.

Another basic philosophy that should be in the software is the concept of two profiles of users, one each for download and upload. In other words, all of these things should be definable in one way for download or data access but in another way for upload or data update, for each individual user.

For example, only our financial vice-president has upload and update capability to the budget fields of a general ledger. But each end user can access his own budget data for download purposes.

Look back at the example of the controller updating a mainframe data base. Security features in personal computer links work like this: First, he can only update his defined data base from his defined personal computer, and he must use his ID and password. Then, he can only get at current amount figures; he only has this capability for a couple of days at the end of the month. The data security function handles the setting of all those security levels.

Being aware of the security risks involved is half the battle. But it is a battle that is easily won when the user supports the new technology with a structured security plan.



DESIGN

from page 41

requirement changes occur after which the schema and the subschemas are changed. Then the programs in the first and the second subsystems have to be modified or rewritten. When the third subsystem is finally finished, it overruns the inflated estimate by 20%. Why?

The above scenario is by no means fictional. What happens is the time required to complete each subsystem grows quadratically. This is because the time required to modify each of the previous subsystems is a linear percentage of the initial development effort. As each new subsystem is added, the number of subsystems that has to be modified, as well as the number of interactions, increases.

By using the data base navigation techniques discussed in the accompanying article, the percentage of development time required to modify the previous subsystems can be greatly reduced. What is also desired is the elimination of the quadratic growth in its entirety. This is achievable if the other subsystems can be insulated from the impact of changes in the data base. The key to providing this insulation is the subschemas.

The process works like this. First of all, do not try to design a data base in the beginning that encompasses all the subsystems anticipated in the final system. Besides being a futile effort, the reduction in initial system analysis time will make possible earlier delivery on the first subsystem.

Analyze the data requirements and design a data base schema only for the first subsystem. Write and implement the schema and any subschemas that this subsystem requires. Finally, write and implement the programs this subsystem requires using the techniques discussed in the previous two sections.

When the time comes to build the second subsystem, perform an analysis of its data requirements. If this subsystem is an independent extension of the first subsystem, its data requirements will be an extension of the schema designed for the first subsystem.

Combine the data requirements for the second subsystem with the existing schema for the first subsystem. A large number of the data elements will already exist in the schema for the first subsystem.

Write a new schema for the integrated data requirements. Regenerate the subschemas from the first subsystem to use the new schema. Write the subschemas for the second subsystem. These subschemas should only include the data elements specifically required by the second subsystem.

Finally, write the programs for the second subsystem using the integrated data base.

This process is repeated for each of the succeeding subsystems. The steps to implement each subsystem are the same: Expand the schema, regenerate the subschemas of the previous subsystems to use the new schema, write the subschema for the new subsystems including only the data elements required for that subsystem, and write the programs for the new subsystem using its subschemas.

DEC

from page 41

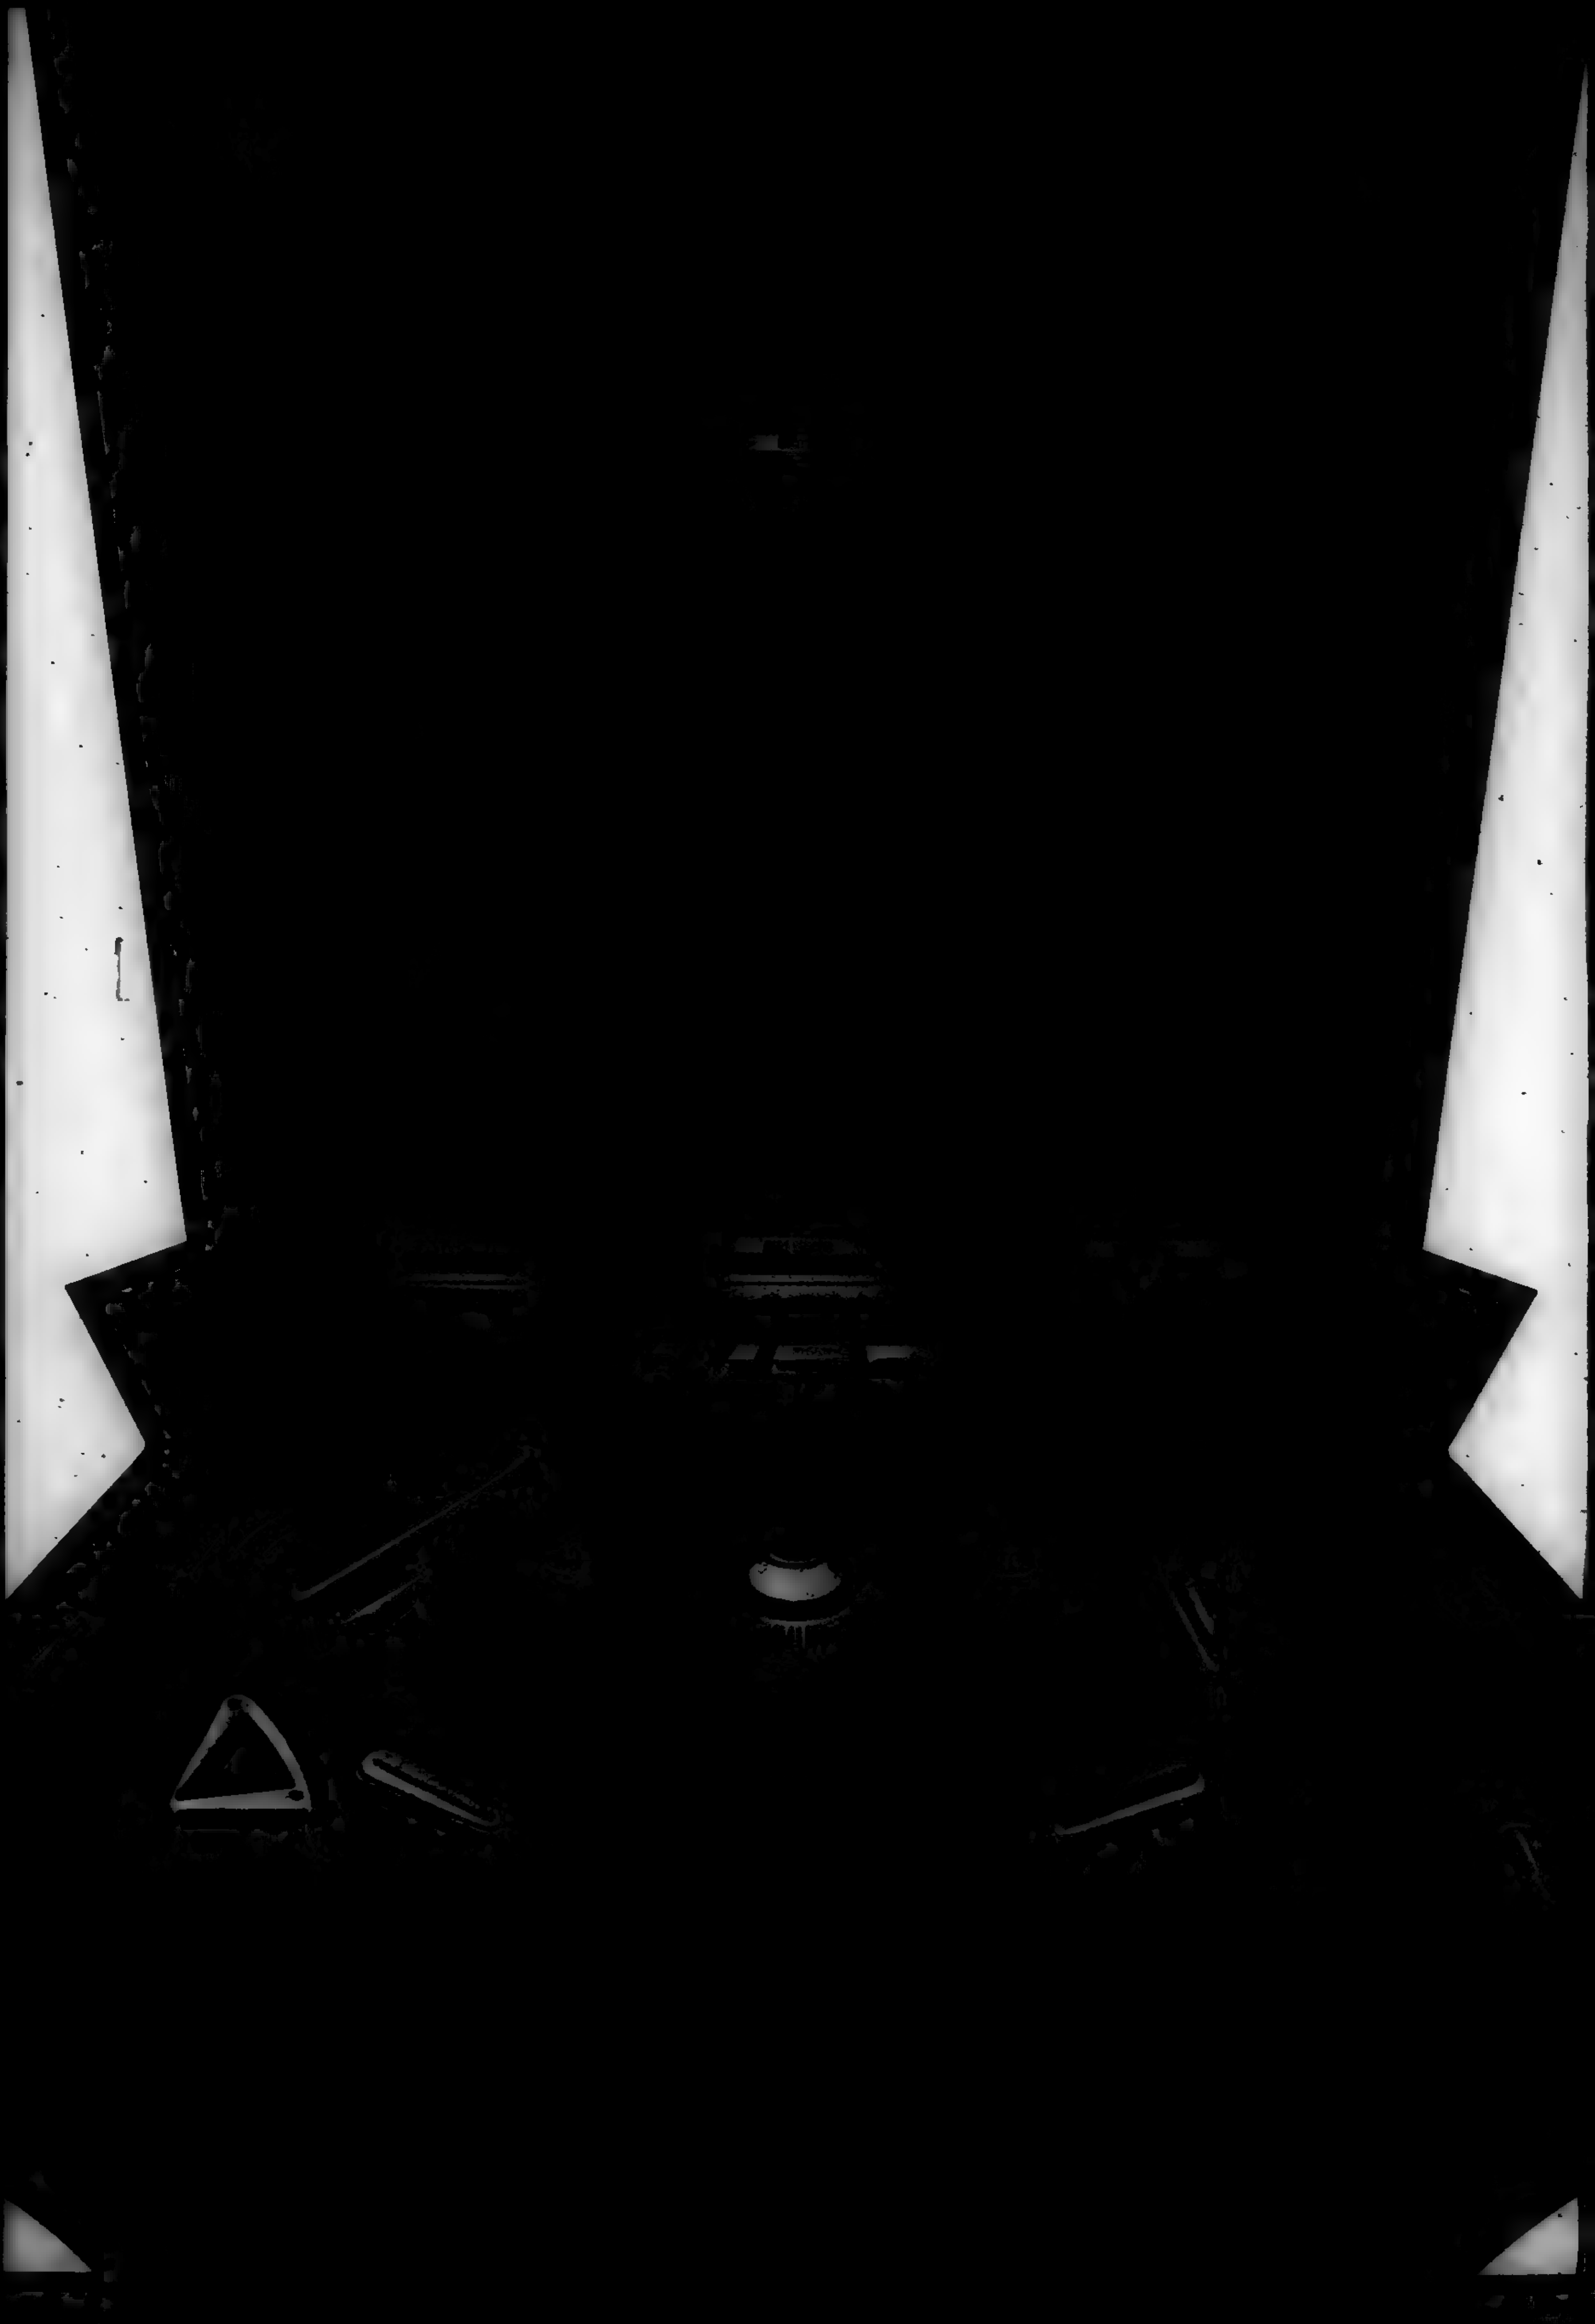
that is said to optimize message delivery. It includes existing standard support for network protocols. The product reportedly gives users the ability to log progress of messages within the network and provides VMSmail gateways for accessing DEC's VMS Personal Mail Utility. Message Router sells for $4,000 and will be available in the spring, DEC said.

■ Decspell Version 1.1 includes expanded lexicons and compatibility with the All-In-One system. The product reportedly includes correction capability for documents created with the WPS-Plus/VMS. It will licensed for $1,850 and will be available in January.

■ Decslide Version 1.2 is said to allow VAX/VMS and MicroVMS users to create slides containing text and graphics. The new version includes compound document capabilities. Decslide is priced at $2,500 and is available immediately.

■ Decgraph Version 1.3 is a general-purpose graphics package for VAX computers and MicroVMS systems. The product is priced at $2,500 and is available immediately.

DEC is located at 146 Main St., Maynard, Mass. 01754.



Four-Phase is helping more than 2,000 DP managers win the productivity game.

Now it's your turn.

It's easy to win the distributed information processing game when you play it with the Series 4000 from Four-Phase. The Series 4000 is an integrated, growth-oriented system designed to communicate within your IBM environment. No other vendor gives you so many functions for so many years at such affordable prices. In the distributed processing arena, that's the way to score points with both end-users and top management.

You win the DDP game with software.

Four-Phase provides one of the most impressive and complete collections of software ever offered from one company. Our packages make integrating Four-Phase computers remarkably easy. And guarantee a logical growth path for years to come. Here's just a sample of what we provide:

Interactive processing: VISION®—For creating custom applications from order entry to transaction processing. It provides a high level of functionality that can be used in any distributed environment. And VISION is easier and faster to program than COBOL.

Word processing: FOREWORD®—Our powerful shared-logic word processing system allows text to be entered, stored, edited, distributed and printed.

Graphics—For business graphics, the Graphics Management System (GMS/IV) gives you an easy way to condense and conceptually present data that's easily understood by decision makers.

COBOL—Industry standard COBOL is used to write programs for handling keyboard-entered data and general batch processing.

[illegible]

If your end-users are like most these days, they're clamoring for their own personal computers. We play that game, too. Because at the flick of a switch, our multifunction terminals suddenly become stand-alone PC's. So now you can give your users the distributed processing capabilities they need, AND the personal computers they want. All in one integrated system.

MFE

The action starts with the Multifunction Executive.

The key to the Series 4000 game plan is the Four-Phase Multifunction Executive (MFE). This unique and powerful control program monitors each multifunction terminal in your system. Its ability to run multiple software programs allows your users to perform 16 different tasks from any terminal on the system. And each of your users can access all of our software packages with one keystroke. You get maximum distributed processing capability and control.

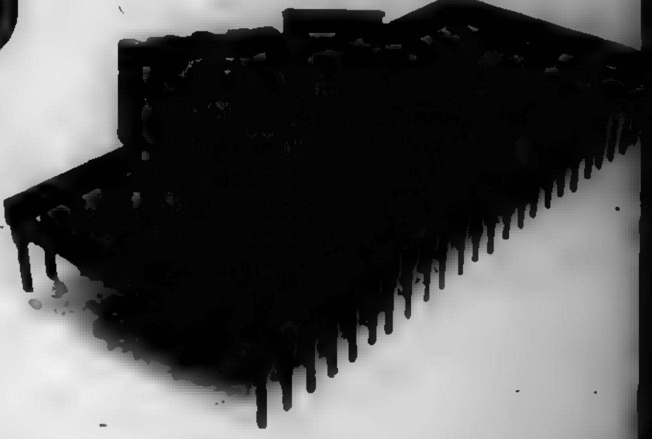
Plus, MFE dynamically allocates selected peripherals so that each device can be used by more than one program. The result—MFE eliminates the need for multiple processors, duplicate terminals and other peripheral devices at installations that require concurrent execution of software.

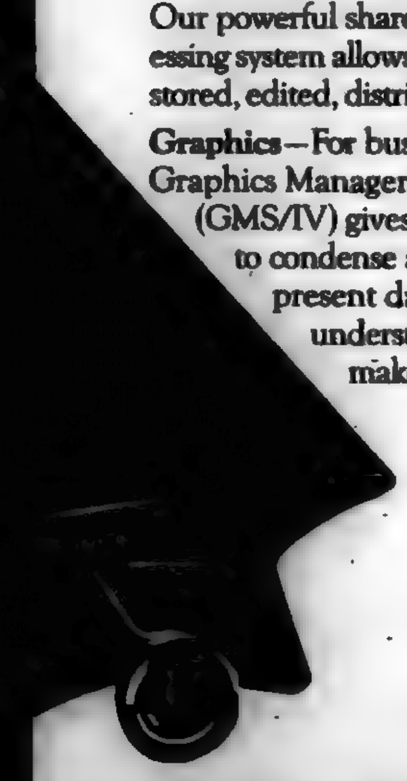
[illegible]

Four-Phase was the first company to introduce the integrated approach to multifunction distributed processing. Today, there are more than 15,000 installed Series 4000 systems, helping people like you manage the information needs of over 150,000 end-users. And every machine is backed by our Customer Support Operation and over 1,000 field service people to provide continuing support and reliability at every level.

Four-Phase customers have been winning the DDP game for years. You can, too. To find out how, call us today at 1-800-528-6050, ext. 1599. In Arizona, call 1-800-352-0458, ext. 1599. For a free poster of this illustration, write to us at 10700 North De Anza Blvd., M/S 52-6A9, Dept. P., Cupertino, CA 95014.

VISION, FOREWORD and Multifunction Executive are registered trademarks of Four-Phase Systems, Inc. MOTOROLA and Ⓜ are registered trademarks of Motorola, Inc. Four-Phase and the Four-Phase logotype are registered trademarks of Four-Phase Systems, Inc. GMS/IV is a trademark of Four-Phase Systems, Inc.





MOTOROLA
Four-Phase Systems

"The computer is down."

It is ironic that when we become dependent on computers, we are at their mercy. As more and more companies go on line, the industry reliability standard of 98.5% becomes unacceptable because it means your computer is liable to go down once every two weeks, on a statistical average.

So, if you are a broker, banker, manufacturer, or businessman who relies on your computer more and more, take note: Stratus Computers are designed not to fail; not once every two weeks, or once every 200 weeks, or once every 2,000 weeks!

Debunking The Myth That All Fault Tolerant Computers Cost More.

It is a common and reasonable assumption that because there is redundancy (extra programming, or extra components) in fault tolerant computers, that makes them cost more. Where the redundancy is in expensive software, this is true. But Stratus has hardware-based fault tolerance that takes advantage of the extraordinary advances in chip technology. The result – price drops. The fact of the matter is, our hardware redundancy adds a mere fraction to our cost, and absolutely nothing to your purchase price. What's more, in overall price/performance comparisons against the top computer names, including IBM, DEC, and Hewlett Packard, Stratus was at the front of the pack, despite the fact that it included fault tolerance, while the others didn't.

	STRATUS XA400	IBM 4381	HP 3000 68	DEC VAX-11/782
RELATIVE PERFORMANCE*	125	100	64	109
PRICE	$446,350	$707,897	$437,754	$656,889
PRICE PERFORMANCE	$ 3,571	$ 7,079	$ 6,840	$ 5,999

Relative Price Performance Index

***Computerworld, August 20, 1984**

All systems are comparably configured with identical amounts of memory, disk space, and communication lines. But, only the Stratus price includes fault tolerance.

Why Stratus May Be The Best Computer For The Times, For The Money.

Considering its showing in overall price/performance comparisons against the most successful computers, Stratus must be considered. And when you take into account the added efficiency and security of fault tolerance, and the fact that it is the world's most powerful fault tolerant transaction processing computer, Stratus truly becomes impossible to ignore. In the 1980's Stratus simply is the right computer, at the right price. For information, contact your local Stratus sales office, or call Keith Johnson in Massachusetts at (617) 460-2188; or toll-free at 1-800-752-4826.

CONTINUOUS PROCESSING™

Now that the world relies on computers it needs a computer it can rely on.

COMMUNICATIONS

Dual-port muxes help users cope with cable woes

By Jeffry Beeler
CW West Coast Bureau

SAN FRANCISCO — Members of the San Francisco Police Department's Gang Task Force were beginning to get a little edgy.

For some time, the task force had sought to install an IBM 3287 printer in its fifth-floor, downtown administrative control center. The printer was earmarked to be located with an existing CRT terminal that the police use to receive administrative messages from around the state.

But the installation, though seemingly routine, hit a snag: Because the task force lacked the necessary coaxial cable, it was unable to connect the newly acquired printer to its existing hardware.

So the police approached the city's Department of Public Works (DPW) and asked that an additional coaxial cable be strung between their first-floor IBM 3274 controller and the printer. But the DPW, with its job order backlog already lengthy, was unable to respond promptly.

In fact, the delay in pulling the desired coaxial cable probably would have ranged from one to two months, according to John Barr, DP manager at the City of San Francisco's Hall of Justice.

News of the extended lead time reached the local police chief, whose reaction was less than sympathetic. Police Sgt. Bill Shoaf explained that the chief, in a memo to the Gang Task Force, said, in effect, "I know there are a hundred reasons why you can't do it. Just get it done."

One day later, a task force member spied a newspaper ad extolling the virtues of a modest-looking communications accessory that allows two I/O devices to be run from the same coaxial cable. The accessories, dual-port coaxial multiplexers, were developed by Fibronics International, Inc., a Hyannis, Mass.-based fiber-optics communications company.

Intrigued and desperate, the task force decided to try the coaxial doublers. Within 15 minutes of their arrival, two were fully installed and were allowing a shared coaxial cable to support both the IBM printer and its companion terminal, Barr recalled.

See DOUBLERS page 56

Southwestern Bell to expand digital transmission services

ST. LOUIS — Southwestern Bell Telephone Co., noting that a third of the customers who are bypassing the company do not know that it offers services they need, has announced a series of digital transmission services.

Tariffs for some of the Digital Link Services, including Megalink and Microlink, will be filed in Kansas, Arkansas, Oklahoma, Missouri and Texas in the next several months and in other states in 1986, according to the Southwestern Bell Corp. subsidiary.

"Our own research indicates that about a third of the customers who bypassed us didn't know we could have provided the network services they needed. Too many customers think we only provide plain old phone service.

"But our business is moving information — voice, data and video," said James W. Callaway, vice-president of marketing for Southwestern Bell Telephone.

Callaway said digital transmission throughout the region will be enhanced by installation within the next two years of at least 32 new digital switching systems serving up to 450,000 customer lines. The company now has 27 digital switching systems serving 95,000 lines.

Dedicated data lines

The Megalink services, designed for customers needing dedicated data lines, include Megalink I-Standard Digital Service, Megalink II-Premium Digital Service and Megalink III-Wideband Digital Service/1.54Mbps.

Megalink I and Megalink II, the latter of which is currently offered under the name of Dataphone Digital Service, offer transmission speeds up to 56K bit/sec. Megalink II will feature 24-hour monitoring and 99.5% accuracy, according to the company.

Megalink III, featuring a 1.54M bit/sec transmission rate, was designed for high volumes of data, voice, video, electronic mail, facsimile and other services.

Microlink I-Public Switched Digital Service and Microlink II-Packet-Switched Digital Service are targeted at businesses and residential customers who transmit data less frequently.

Microlink I provides dial-up digital transmission on the established telephone network using a digital link between the computer and telephone line.

The tariffs for that service will be filed in 1985.

Microlink II will allow various customers to transmit packets over the same lines and save money by only paying for their own usage.

The Microlink II tariffs will be filed in 1986.

Tymnet plans Japanese net

SAN JOSE, Calif. — Tymnet, Inc. has announced a joint venture that it hopes will lead to the establishment of a value-added network throughout Japan.

Tymnet, a packet-switching network, said the joint venture with the Tokyo-based Marubeni trading company will become effective April 1, when the firms expect approval of a proposed telecommunications bill in the Japanese parliament that would allow private companies to offer value-added network services.

A Tymnet spokesman said that all of the value-added services that Tymnet offers in the U.S. will be available through the Japanese network.

Much hardware, software installed

The spokesman said the venture, Japan Network Ltd., will use Tymnet hardware and software, much of which already has been installed.

The network initially will support the cities of Osaka, Tokyo, Sendai, Nagoya, Fukui, Kanazawa and Toyama.

It also will connect to the Tymnet network in the U.S. and other worldwide public data networks, according to Tymnet.

There are 22 secondary shareholders in the joint venture.

Reagan position on Intelsat competition may be moot

DATA STREAM
James Connolly
CW Senior Editor

The Reagan administration's approval of limited private competition for the International Telecommunications Satellite Organization (Intelsat) may be good news for Intelsat's potential rivals.

But the president's action may have little influence on what already seemed to be developing as a buyer's market in international communications. Even before the president issued his memorandum to the secretaries of state and commerce, communications industry observers were predicting drastic price cuts for intercontinental traffic because Intelsat overestimated demand for its transponder space, and terrestrial transmissions are increasingly available as an option.

The administration said it will allow the five private rivals of Intelsat to fight for up to 15% of Intelsat's U.S.-based data, video and intracompany voice traffic. Those rivals are Orion Satellite Corp.; International Satellite, Inc.; Pan American Satellite Corp.; Cygnus Satellite Corp.; and RCA Americom, a subsidiary of RCA Corp.

Unanswered question

However, one question that remains unanswered is how soon, and under what conditions, those companies that last year asked the Federal Communications Commission for permission to compete with Intelsat can get into the satellite market. Reagan said that those who compete with Intelsat must consult with Intelsat about their plans, that they cannot offer switched public circuits and that they must meet the technical compatibility standards of regulating bodies in the countries they plan to service.

Fritz Ringling, director of telecommunications research for the Gartner Group, Inc. in Stamford, Conn., speculated that RCA and Orion are most serious about offering satellite services.

"I anticipated that the administration would allow private satellite companies to compete with Intelsat. I also anticipate very agressive pricing strategies, which could mean significant savings for customers," Ringling said.

Ringling said one reason for the lower prices is the current and future lack of demand for transponder space. He said Intelsat overestimated the need for circuits by 15%, "which translates into 12,000 voice-grade circuits." He observed that even the National Aeronautics and Space Administration has predicted a 10.3% decline in the growth of full-time satellite traffic. He added that the U.S. International Service Carriers last year revised downward their estimates for satel-

FINALLY. HELP FOR THE DATA CRAZED.

Introducing Cypress,® Cedar,™ and Juniper.™ Three fast, friendly, infinitely applicable desktop ideas from ROLM.

It comes as no surprise that people react to technology differently. Dyed-in-the-chip techies thrive on it. True nonbelievers avoid it instinctively.

Now you can please all of the people all of the time. Honest.

Say goodbye to complicated log-on codes. Just push a button and — whoosh! — travel all the way to a data base, talk to a mini or access your IBM mainframe.

Say hello to speakerphones, phone books, message takers and calculators. Built right in.

If you want to take snapshots of data in your mainframe, there's Cypress. It's as easy as Point & Shoot. It's a smart little ASCII terminal integrated with a fully-featured digital phone.

Need a 512 KB, fully IBM-compatible PC that runs programs like pfs:graph,™ the IBM Assistant Series,™ 1-2-3,™ and lets you mini-network through your phone line? Cedar's the one.

Already in love with your IBM® PC or XT but crave the affections of Cypress? Ask for Juniper. Its one slot adaptor card lets your system keep growing. And growing.

Of course, only ROLM has Cypress, Cedar and Juniper. Because only ROLM has the system to run them on. At its heart is the CBX II, a breakthrough communications controller that manages voice and data over standard telephone wire. Simply, brilliantly and cost effectively.

And ROLM has the technical edge, the operational track record and the worldwide service and support organization to please even the toughest customer.

So phone ROLM. High tech. Not high anxiety.

CONVERTING TO IBM?

Based on previous success and popular demand, Touche Ross & Co. is hosting another conference for companies converting from non-IBM computer environments to IBM.

The purpose of the conference is to provide a forum for participating companies to exchange ideas and share experience. All participating companies will be asked to make informal presentations and participate in breakout groups. Touche Ross will act as conference host and moderator.

QUALIFYING CRITERIA

- MVS target operating systems only
- Must have already made decision to convert
- Attendance of principal MIS management individuals required

COMMUNICATIONS

CONTROLLERS

EMULEX CORP.
Commxchange

Emulex Corp. has announced a data switch that is said to allow connection of 180 terminals to single- or multiple-host computer networks.

Commxchange, also called the DS01, reportedly supports 180 terminal-to-computer port connections, or 360 lines, and can be expanded for an additional 480 connections, or 960 lines.

According to the vendor, the Commxchange is compatible with virtually any type of computer or asynchronous terminal, and performance is unaffected as the number of users increases.

The basic system includes a central unit, power supply and central board set. The backplane reportedly is fully redundant, while redundant control boards, expansion bus boards and power supplies can be added as options. It also features a standard battery backup to ensure saving configuration parameters in the event of a power failure.

The company said installation can be handled by a maintenance department or telephone installation crew. It connects through ordinary telephone lines and connectors using a variety of methods, such as telephone punch blocks, telephone jacks, 50-pin connectors and RS-232 distribution panels.

A supervisory control board in the central unit provides menu-driven software for step-by-step instructions on routing terminal lines to designated computers, according to Emulex. A terminal reportedly can select any of 45 types of destinations by using eight-character symbolic names or specific line numbers.

The unit is said to support speeds up to 9.6K bit/sec on all lines.

The company said a typical unit, with redundant power supplies and board sets, costs $15,000.

Emulex, 3545 Harbor Blvd., Costa Mesa, Calif. 92626.

DOUBLERS

from page 53

The Gang Task Force's recent case history is by no means unique, according to Fibronics product manager Dave Sonderegger. He said that in hundreds of large businesses and other organizations throughout the U.S., dual-port coaxial multiplexers are providing users with a quick-fix alternative to the often costly and time-consuming practice of installing additional cable.

The motivation for installing the communications accessories varies widely.

Some users — the San Francisco Police Department's Gang Task Force, for example — opt for the devices to avoid lengthy delays in pulling coaxial cable. Other users, including the I Magnin department store chain, see the multiplexers as a means of minimizing their hardware overhead.

Installation of a single coaxial cable frequently costs $1,000 to $1,200, according to Roy Dodd, the chain's operating vice-president for MIS. Two doublers, by contrast, sell for less than $500.

INTELSAT

from page 53

lite circuit demand and that he won't be surprised if they reduce their figures yet again.

While demand is waning, the customer's cost for satellite transmissions also will come down, which could inspire new business applications, according to Ringling and other observers. Ringling noted that the price of earth stations, particularly receive-only stations, is plummeting.

Jerry Lucas, president of the Telestrategies, Inc. consulting group in McLean, Va., predicted that opening up more transponder space, in particular transponders on the underutilized Ku Band, will lead to large companies developing new applications for their satellite links. He said one such application would be downloading software updates to multiple locations around the world.

IN DEPTH

WARNING

To anyone moving Cobol applications to micros

RESPONSE

The In Depth article "Running your Cobol on micros" by Anthony Fedanzo Jr. [CW, Nov. 19] presented arguments for converting existing mainframe or mini applications to micros. Here are some caveats from a reader who has run Cobol on micros for the last four years.

By Dick Burkhalter

I am not one of the "Cobol haters" who think that Cobol and Cobol programmers should be banished from the planet. Nor am I of the opposite persuasion, praising Cobol above all other languages. I simply view Cobol as another computer language with its own strengths and weaknesses.

My experience with Cobol on micros is limited to a single product, Ryan-McFarland Corp.'s Cobol compiler. It may be that some of the problems I mention are specific to that particular implementation, and I think it would be valuable to readers to hear from users of other Cobol compilers, such as those from Micro Focus, Inc., Microsoft Corp., Realia, Inc. and others.

I found Fedanzo's article interesting and informative. I do, however, think that he missed some key points (or glossed over them) in relation to the difficulties that might be encountered in moving a Cobol application from a large computer to a micro. I am concerned that readers without extensive personal computer experience may be misled by the article, which portrays the conversion as a relatively simple one.

The problems that may occur in moving Cobol applications fall into four general categories:

1. Problems associated with the incompatibilities in the various implementations of Cobol.
2. Problems caused by the quality of the original Cobol code or efforts to clean it up.
3. Problems resulting from the limitations of microcomputers.
4. Problems in transferring data between mainframes and micros.

Unless you already use Ryan-McFarland's Cobol or Information Processing, Inc.'s Blis/Cobol on your large machine, you cannot get a truly compatible Cobol compiler for your micro, as far as I know. Even with these two products, there may be some differences in implementation that will necessitate rewrites of part

COMPUTER ASSOCIATES

of your original source code. This is the best case. In the worst case, you may have to rewrite so much of the code that you might as well start from scratch.

Those of you in IBM mainframe environments have a real bear of a problem, because no matter which personal computer Cobol you pick, you may have to rewrite significant portions of the code in transporting it to a personal computer. Yes, I know, all the microcomputer Cobol vendors claim conformance to the Ansi '74 standard, and as far as I can tell, they aren't lying.

However, the standard has a lot of levels, and only in the fine print do you find out what each vendor supports at each level. And, of course, IBM is well known for its own extensions to Cobol, such as Sort and Report Writer. You don't use those? Lucky for you. Maybe.

Fedanzo stated that the most likely candidates for migration to microcomputers are those older batch programs that are used for data entry. Fine. But micros, by definition, are on-line, interactive machines, getting their input from the screen rather than from cards, tapes or whatever. Most old data entry programs I have seen read cards or card images, and the coding necessary to change to screen input is not as trivial as you might first believe, especially if you are going to edit interactively and prompt the operator.

Screen handling

Even if the programs you are converting use screen input, you need to consider the differences in screen handling between your mainframe compiler and whatever product you choose for the micro. If you have an IBM system and use CICS, you can probably expect to throw away about 60% of the code right off the bat. Similar, though perhaps less burdensome, differences will hold true for other mainframe and minicomputer users.

If your mainframe or mini uses a later version of Cobol that supports such nice features as SEARCH, SEARCH ALL, STRING, UNSTRING and other newer verbs, you are going to have to spend a significant amount of time developing subroutines to replace those features, none of which are present in current personal computer Cobol compilers.

Fedanzo recommended making program changes on the mainframe rather than on the personal computer, supposedly to take advantage of the higher speed of processing and better editing facilities inherent in large computers. I dispute that assumption, especially in a large shop with a heavily loaded system.

Using Micropro International Corp.'s Wordstar or any other word processor, a dedicated personal computer can run circles around most mainframe editors, considering the poor response time usually found on large systems during peak hours. Not only that, but the programs must be compiled on the personal computer anyway, so time gained, if any, by editing on the mainframe may be lost in downloading to the personal computer for compilation.

Speaking of compilation, one should be aware of the slowness of compile times on personal computers relative to mainframes. A typical Cobol program on a mainframe might average 2,000 to 3,000 lines of code and compile in less than a minute. In contrast, the compile time on a micro would be measured in portions of an hour or even more. A program this large is truly huge by personal computer standards.

I have a system written in Cobol for a Tandy Corp. TRS-80 Model III. It contains about 40 programs, the smallest of which is less than 200 lines of code and the largest about 1,800 lines, with an average program size of 500 to 600 lines. The small programs compile in three to five minutes, depending on whether I print the source listing during compilation. The larger ones seem to take time, which increases exponentially with the size of the program; that one real biggie takes more than 45 minutes!

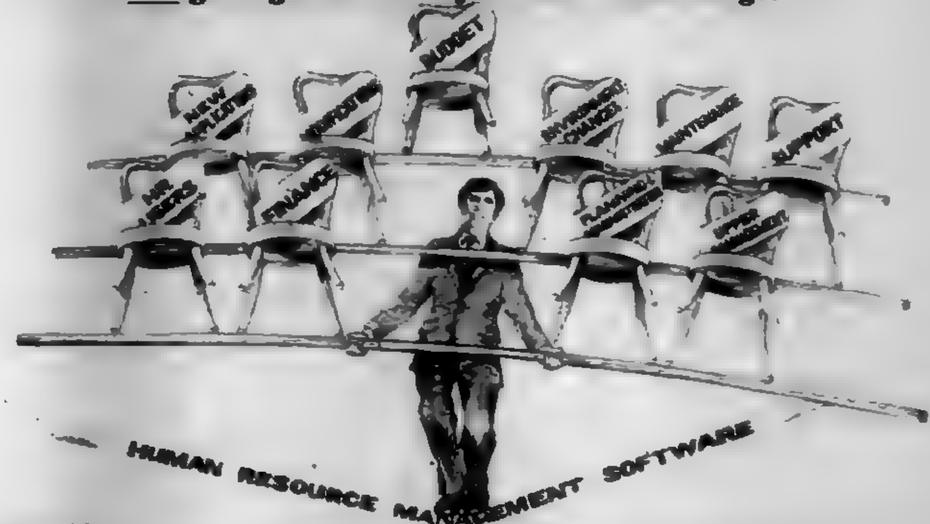
Granted, substantial speed improvements will be experienced with 16-bit machines as opposed to the TRS-80's 8-bit processor, but you will still encounter long compile times as the programs increase in size. You cannot compile programs on the mainframe and move only the object code to the personal computer, because the instruction sets and form of the object code are machine-dependent.

Which brings me to yet another trap for the unwary, namely that of the differences in those supposedly "compatible" personal computers. If you have a mix of personal computer brands, which you intend to use as target machines, be absolutely sure that a single copy of the compiler will create usable object code for all of them. It's possible, but be sure to find that out via actual testing before you embark on a large project, or you may find yourself facing

> *Those of you in IBM mainframe environments have a real bear of a problem, because no matter which personal computer Cobol you pick, you may have to rewrite significant portions of the code in transporting it to a personal computer.*

When it comes to the demand for human resource management software, data processing has a problem...

A problem of balancing everyone's needs
and getting the over-all job done within budget



Now what if...

- There were 4 software packages that fully integrated to meet all your human resource management needs in payroll, personnel, benefit plan, and claims processing programs.
- And these packages were completely on-line, realtime, and adaptable to meet your ever-changing business requirements
- And this adaptation, including small and major modifications, was done by the user by modifying entries in the tables that define program logic, data structures, etc.
- And these packages operated with all major DBMS' and TP systems common to IBM and IBM compatible mainframe environments
- And these packages could quickly adapt to new environmental offerings such as IBM's DB2
- And the company who authored these packages provided thorough maintenance, training, and user support to assure user independence
- And the cost of all this was much less than in-house development, support, and maintenance...

Now what if you had all of this?

Then you'd have Tesseract's complete line of Human Resource Mangement software.

You'd have systems that are being used by almost half of North America's largest companies.

And you'd finally have the solution to the never ending problem of balancing HR user needs with the needs of the rest of your organization.

STOP WALKING THE HUMAN RESOURCE MANAGEMENT TIGHT-ROPE. Call us today or send in the card. (Call 415-543-9320 and ask for Robin Curle, VP Sales)

unexpected expenses for extra cross-linkers.

In the case of the TRS-80 system, separate compilations are required for the Model III and Model I versions, even though the two computers are from the same manufacturer and use the same Zilog, Inc. Z80 CPU. Fortunately, the Cobol compiler package from Tandy (RM Cobol) includes disks for both the Model I and Model III.

If, however, I wish to upgrade my system to run on the Tandy Model 16 or 2000, I will have to purchase a different Cobol compiler for each of these two machines, because they are not compatible with the Model III or with each other.

Quality of Cobol code

One of the most significant issues to be considered is the quality of the programs to be converted. Given that most of the ideal candidates for conversion are likely to be older batch programs written at the Cobol-74 level, it is highly unlikely that these programs were written in structured code.

Moving unstructured code from a mainframe to a personal computer will only move the maintenance headaches from one environment to another, and the latter may be less efficient in terms of maintenance facilities.

If modifying the transported code is to be considered in order to bring about conformance to current structured programming standards, significant delays may be expected. Missing or misleading documentation is common with older programs, and making modifications without totally "gut-ripping" the programs can be difficult. We all know the feelings of frustration that come from wanting to scrap an old program but being forced to make the best of it because of time and cost considerations.

Either way, it is an expensive game to play.

Limitations of micros

Fedanzo mentioned the limitation of 64K bytes of data stack space, which relates to the length of the longest program you may have in memory at a time. This is by far the least restrictive limitation you need be concerned with, because it is often possible to divide a large program into segments or modules that can be called from one another. In some cases, even this technique does not work, however, as portions of the data division that are passed from module to module remain in memory, and eventually you run out of memory, just as in Basic or any other language.

Because you find out about this at development time, during testing, it's not as crucial as finding out after you have put the program into production mode, but the amount of time you have to spend fixing up programs to run in less memory is something to be anticipated.

Another problem here is that you have no way of knowing in advance how much memory a mainframe program will take on a personal computer, because there is no direct correspondence between the size of the program as it runs on your large system and the amount of space it will take when moved over to your micro. You just have to use common sense and try it. (Obviously, you aren't going to try fitting that 20,000-line payroll program into your micro, are you?)

If fitting programs in memory and waiting for compilers to finish are small problems, then fitting all that code onto floppy disks can be a real nightmare. The average personal computer has about 350K to 400K bytes of storage per double-sided, double-density floppy disk. That's not very much storage from the point of view of most mainframe applications. Cobol programs are notoriously verbose and, even at the object-code level, can require more space than is available on a single floppy drive.

Remember, you not only need to have all your programs on a single disk, but that disk must also contain the Cobol runtime modules and the operating system as well. Consideration must be given to this limitation, lest you find yourself in a situation in which the operator is forced to swap program disks in order to run the application — definitely not a user-friendly situation!

Similarly, data files on large systems tend to occupy a lot of space (in personal computer terms). Even if you can segment these files for downloading, you must be aware of your total disk space needs. I can't think of anything much worse than having an "out of disk space" message occur in the middle of a hectic day. Don't laugh, I've had it happen, and so may you, as Murphy's Law reigns supreme in this business.

As far as I'm concerned, hard disk is the only way to go, and the more the better in the corporate environment. This is true regardless of the language being used. The declining cost of hard-disk storage makes this point even more valid. And while you're at it, factor in the cost of a streaming tape backup, because we all know that if the operator has to back up the hard drive to floppies, sitting there feeding backup disks into the personal computer, one by one, backups will be skipped with regularity. (They usually will be taken only on the day after a power failure wipes out all the data captured since the last backup, which may have been weeks earlier.)

Add the price of at least 10M bytes of hard disk and a compatible tape backup device per target machine to your conversion cost.

Data format incompatibilities

Regardless of how easy or difficult it may be to convert program code, you must be aware that the data format incompatibilities between mainframes and micros present a bigger burden than Fedanzo suggested. Moving source code files presents no special problems, because these are simply Ascii text files.

However, there is currently no way to transfer random or indexed files directly (and what good is a Cobol program if it doesn't use Isam files?). Programs will have to be

Get the Most out of SAS®

through AppTech's
Comprehensive Training Seminars

Until now, there has never been a single course specifically designed to allow programmers and technical users to get the most out of SAS.

AppTech seminars provide step by step, progressive instruction in:

- Reading data from simple through complex (such as VSAM files) sources
- Producing sophisticated management reports in chart, graph, plot and columnar format
- SAS utilities
- An introduction to the SAS Macro Language

Dates and Locations

Washington, DC - January 28 to February 1
Houston, TX - February 25 to March 1
Los Angeles, CA - March 18 to 22
New York, NY - April 1 to 5
Chicago, IL - April 15 to 19

Additionally, on-site courses which address specific business applications are available. Applications offered include:

Payroll
Banking
Insurance
Manufacturing
Finance (Accounting)

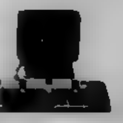
Compared to Data General's desktop, the IBM PC-AT seems a little empty.



If you need a networked multi-user micro system today, there's no comparison.

Data General's DESKTOP GENERATION™ has delivered for over a year the multi-user applications that the IBM PC-AT only promises.

What can Data General deliver today? Distributed data processing. Connectability to other vendors' equipment, including IBM mainframes. Fully integrated office automation, using our CEO® systems.

Can you get all this from the IBM PC-AT?

It's anyone's guess when the IBM PC-AT will have all the capabilities Data General's DESKTOP GENERATION gives you now. So in today's business battle, don't get caught using yesterday's technology.

Choose Data General. And choose productivity over promises. For more information, call 1-800-DATAGEN.

Data General
a Generation ahead.

written to extract sequential files on one side and read and load the indexed or random files sequentially on the other.

In the worst case, programs may be required to perform both operations on both sides. While the time to write these programs may be trivial, the time it takes to load indexed files on a micro can be agonizingly long if more than a few hundred records are involved.

This slowness will be magnified to alarming levels if the micro uses floppy disks rather than hard disk. It will take hours, not minutes, to load a reasonably sized Isam file from sequential input.

To summarize, then, while it is possible to convert programs from mainframe to personal computer using Cobol code, it is not at all as simple as it appears on the surface. Obviously, Fedanzo has done it successfully, and with the right mix of hardware, compiler and application software, so can you. But I would advise doing an in-depth study of all the factors mentioned here before proceeding.

In fact, it might be worthwhile to invest in a number of Cobol compilers for the target microcomputer and try your luck with all of them using some relatively small and noncritical system as a testing and learning tool before proceeding to bigger things. The cost of compilers is small compared with the total development effort likely to be involved.

Additional considerations

Given that the idea of moving some applications from a mainframe to a personal computer is valid in many cases, I would suggest that you consider using one of the personal computer data base management systems, such as Ashton-Tate's Dbase II or III or Microrim, Inc.'s R:Base, instead of Cobol to generate the micro application.

These products are easier to learn and use than Basic, Pascal, C or other languages which are so adored by the micro gurus. Any competent Cobol programmer should become proficient with any of them in less than a week. Not only that, but the resulting application may be cleaner and friendlier to the user than something hacked up out of old Cobol code.

It is highly likely that writing the application over using one of these micro products will require less time than converting the Cobol code, even allowing for programmer learning curves. Additional benefits may accrue from the ability to create additional reports or screens quickly using the facilities inherent in the personal computer product.

Using Dbase II, for instance, you can create a whole new report in just minutes, as opposed to hours using Cobol. The file transfer problem is no worse than for Cobol to Cobol, given the necessity to create sequential update files in either case. The above-mentioned products allow creation of files in "foreign" formats with little effort.

It is time to start training some of our Cobol programmers to use micros effectively, which means giving them some modern tools to work with and allowing them the time to learn how to use them. While moving Cobol code directly to micros may produce some short-term gains, training experienced Cobol programmers in the use of personal computer tools appears to be a much better long-term investment in talents and resources.

If DP professionals are going to retain control over corporate data processing policy, they must learn how to use micros effectively, as many of their users already do. It's time to stop using the broad base of Cobol programming skills out there as an excuse to justify keeping ancient and inefficient systems alive through yet another generation.

About the author

Dick Burkhalter is a business systems consultant for Diverse Developments, a Canoga Park, Calif., consulting and programming firm serving business users of micros.

IT'S ABOUT TIME WE ALL GOT TOGETHER AND TALKED.

GET RESPOND™ COMMUNICATIONS SOFTWARE.
IT'S HELPING CORPORATE AMERICA BRIDGE THE PC COMMUNICATIONS GAP.

Now your company's executives can get the most out of their PCs. And you can standardize your operations for greater control. Not to mention savings on training, support, software and terminals.

Designed for IBM and compatible PCs, RESPOND software integrates all the communications power you'll ever need. Its unique advantage is RESPOND Architecture™—the interface that is the basis for all our products.

RESPOND/TTY™ provides access to all major information services. Plus complete communications and data transfer capability—PC-to-PC or PC-to-mini or mainframe—anywhere in the world.

RESPOND/Async™ incorporates TTY and enables a PC to emulate such asynchronous terminals as the DEC VT100/52, IBM 3101 and the HP 2621B.

RESPOND/Sync™ is a series of products which emulate various IBM synchronous terminals using IBM or Techland Systems' Blue Lynx™ communications adapter boards (SDLC or BSC). Each emulator disk in this series also includes TTY.

RESPOND/ALL™ is the most complete package available today. It combines both asynchronous and synchronous communications in a single product.

Users can start with any one of our products. Then as needs change, upgrade to a new package. All without any new learning.

That's because *every* RESPOND product, beginning with TTY, offers all the features that make our software so easy to use. Simple menus on every screen. XPRESS keys to by-pass menus. Pre-set profiles to save set-up time. Our fail-safe HELP feature. Plus completely unattended communication—while the user's away or even running another program on the same PC. And for technical assistance, our Customer Support Department just doesn't quit.

Who's responsible for such a comprehensive line of products for corporate communications? The foremost innovators in the field:
Software Synergy, Inc.
466 Main Street
New Rochelle,
New York 10801.

* [illegible]

[illegible] data processing and office processing
[illegible] Solution to the need for.
[illegible] Management.

[illegible] tracking of incomplete records
[illegible] and degree of completion.

[illegible] that enable TRACTS
[illegible] of information systems.

TRACTS features an extensive vocabulary
of industry specific terms.

A MEDICAL RECORDS SYSTEM THAT WORKS JUST LIKE YOUR CENTRAL NERVOUS SYSTEM.

The marvel of our central nervous system is that thousands of bits of information can be received, transmitted and stored all at the same time.

Now Honeywell has created a medical record system for hospital administrators that works the same way.

It's a unique combination of office automation, data processing and communications called [illegible]—the Transcription [illegible] and Chart Tracking [illegible]

[illegible] the finest medi[illegible]ware with our expandable line of hardware, TRACTS is another Unified Solution from Honeywell.

TRACTS is built around Honeywell's Office Automation System (OAS), designed to free hospital staffs from redundant and time consuming tasks, while improving speed and accuracy at the same time.

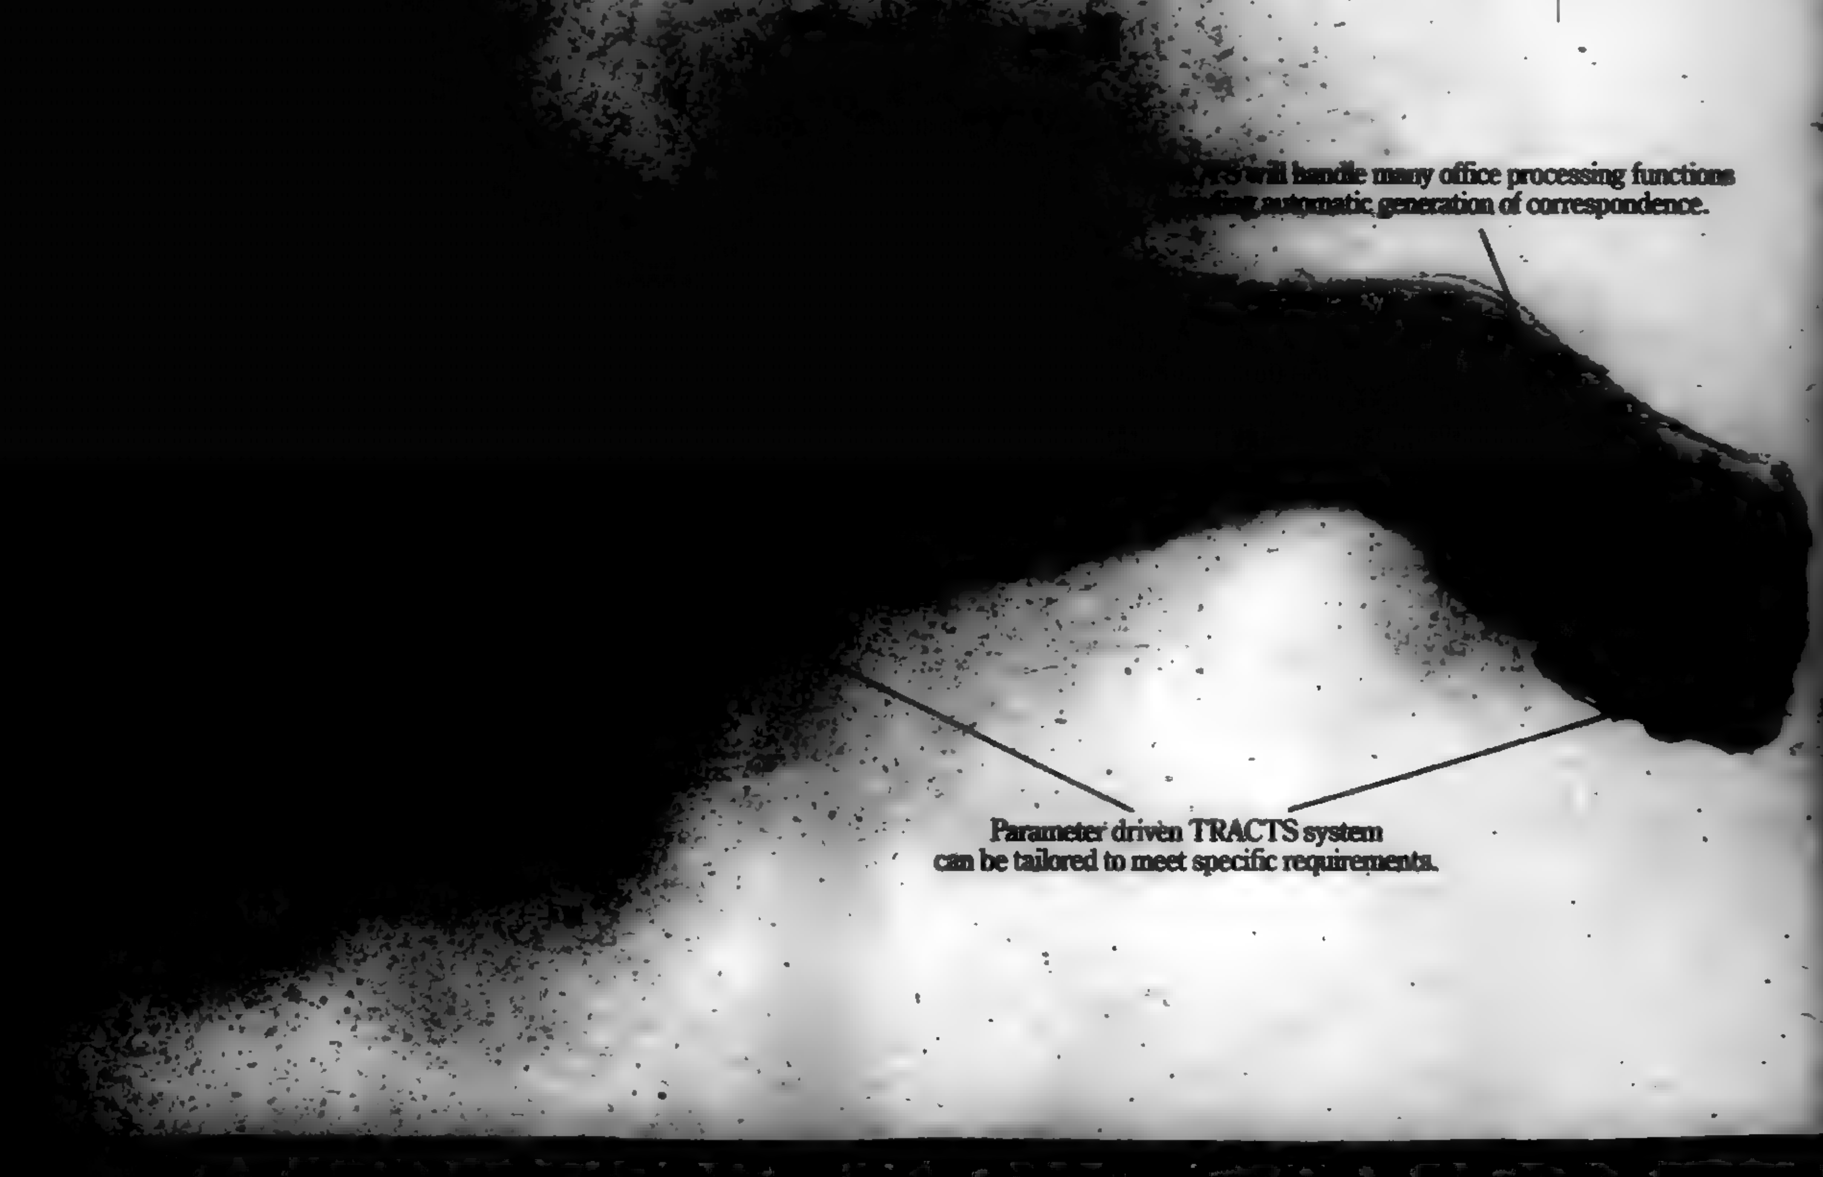
In addition, TRACTS minicomputer operating system GCOS 6 MOD 400 offers a wide variety of data processing options. Data base management systems, high-level language support, custom application programs, and data communications are all part of TRACTS.

The system also supports electronic mail, InfoCalc, file transfers and an array of other application programs. No other system is so complete.

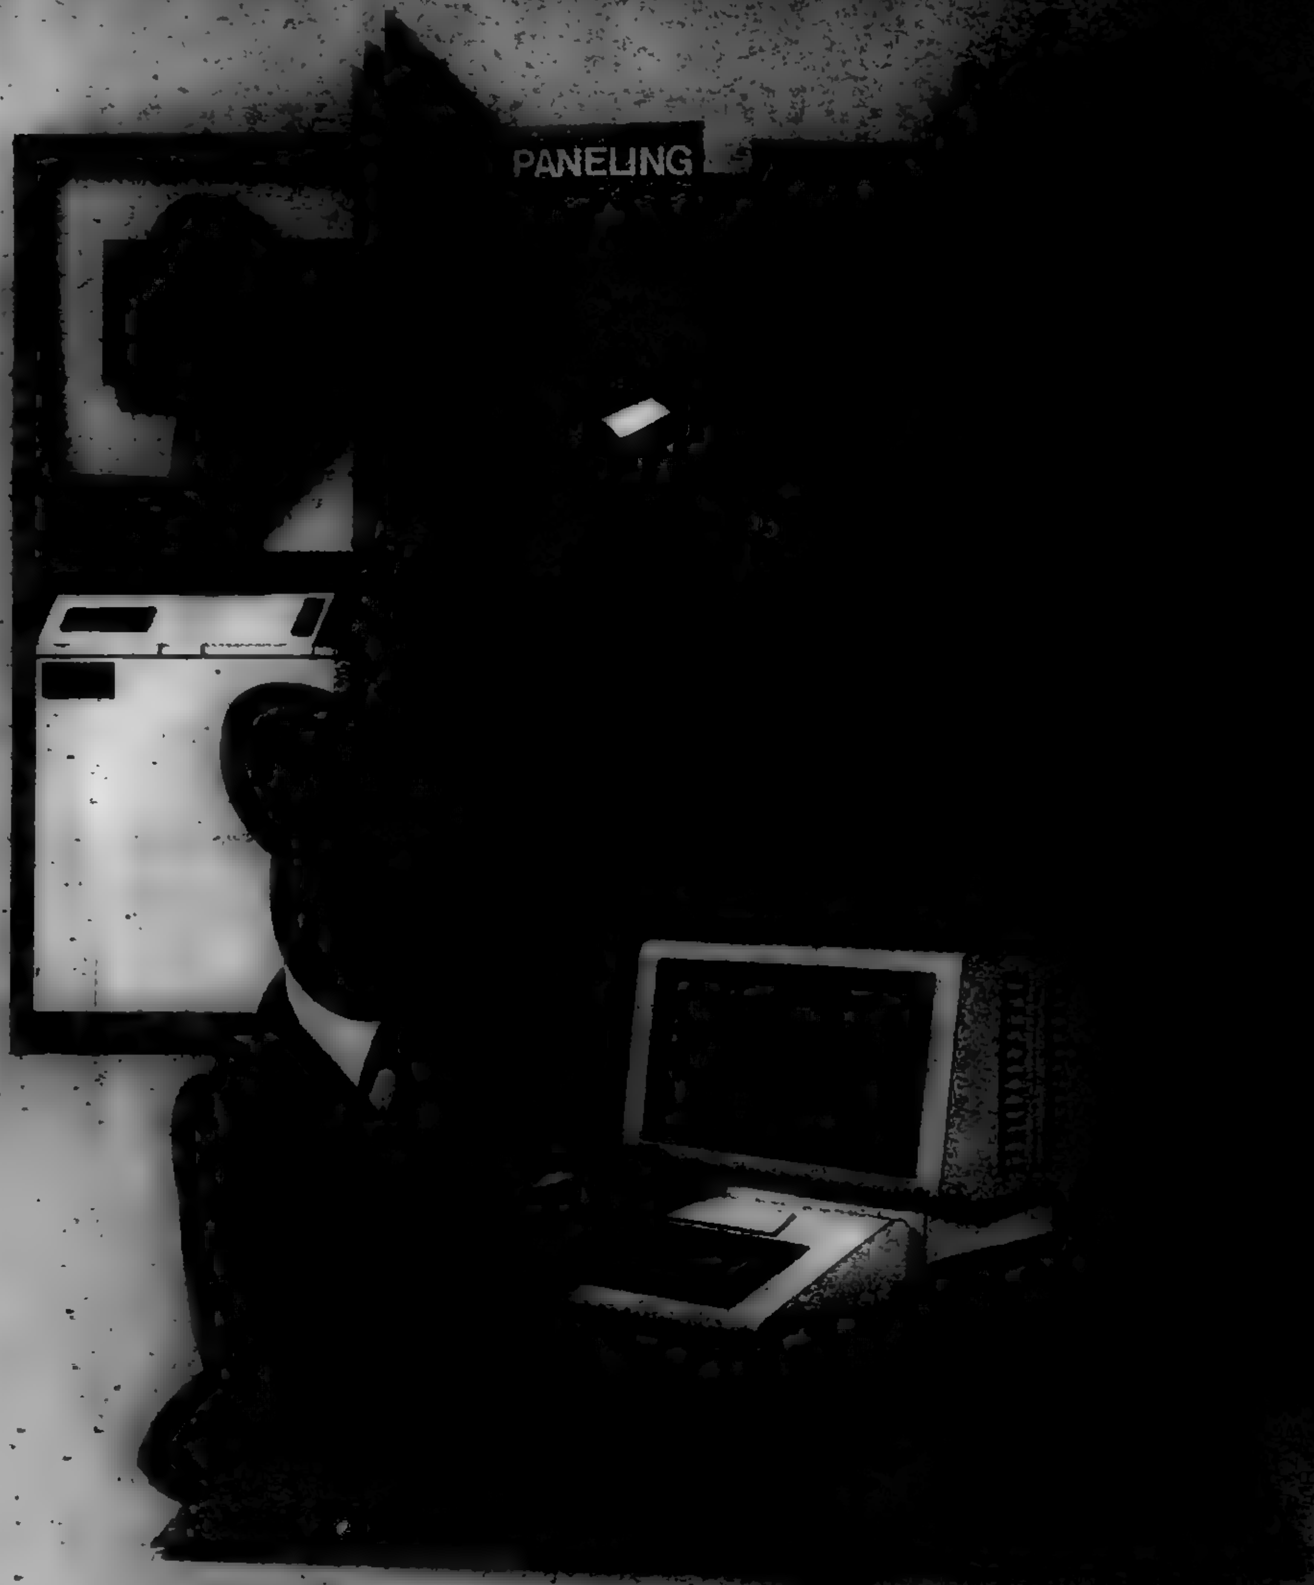
And when hospitals can operate with that kind of precision, we all benefit from better health care.

Find out more about TRACTS today. Call us at 800-328-5111, Ext. 2747 (in Minnesota, call collect: 612-870-2142, Ext. 2747). Or write to the Honeywell Inquiry Center, 200 Smith Street, Waltham, MA 02154. We'll be happy to send literature, discuss the system with you, and even arrange a demonstration.

Together, we can find the answers.



[illegible]TS will handle many office processing functions [illegible] automatic generation of correspondence.
Parameter driven TRACTS system can be tailored to meet specific requirements.



Why people choose an IBM computer [illegible] is why people want IBM service...in [illegible]

After all, who knows your IBM computer better than we do?

That's why [illegible] offer maintenance agreements on computers such as our System/34, System/36 and Series/1. Just another example of blue chip service from IBM.

That means your IBM service representative has a personal stake in the performance of your IBM equipment. It means fast, effective service and IBM parts.

It also means, when necessary, we'll see that you get the benefits of our technical support network [illegible] that will help keep [illegible] running smoothly.

Quality. Speed. [illegible] why an IBM [illegible] blue chip service.

Blue chip [illegible]

Don't rely on the law to stop computer crime

By Nancy Finn and Peter Finn

It is estimated that by the end of next year, more than 10 million personal computers will sit beneath the fingertips of American workers. These tools open up new opportunities for their owners, but they also open the door to infiltration into company business records and the deliberate distortion of information by unauthorized individuals. Losses resulting from computer-related crimes now range between $100 million and $300 million annually in the U.S.

There is no agreement among legal experts as to what constitutes a computer crime. Consequently, a generally accepted definition of a computer crime is notably absent from current legal opinion. Some experts dismiss the concept entirely, referring to "computer abuse" or "computer-assisted crime."

Computer abuse, broadly defined, is any incident associated with computer technology in which a victim suffered, or could have suffered, loss and a perpetrator, by intention, profited or could have profited.

Computer abuse can fall into one of five categories of currently recognized crime: financial crime, information crime, theft of property, theft of services and vandalism.

In view of the legal system, which often leaves the victim of computer abuse without recourse, it is essential users install preventive security measures as the first line of defense.

- Financial crime is the taking of funds via computer, for example, executing the theft of a payroll through a computer system or just shifting monies from one account to another.
- Information crime involves the acquisition of valuable information via computer, such as a company's mailing list, a list of solicitations or other contributions. It is one of the least detected and most costly of computer crimes.
- Theft of property is simply the taking of computer hardware for personal sale or use. It is the easiest crime to categorize and prosecute.

- Theft of services is the unauthorized use of a computer, for example, use of a company's computer for personal, nonofficial use.
- Vandalism is intentional damage to a computer or computer system, either physical destruction or alteration.

Some computer abuse fits more easily into the traditional criminal statutory scheme, such as theft of physical computer property and vandalism. Other types of abuse, such as the taking of information or services, are more difficult to analyze in traditional terms.

Notwithstanding the difficulty involved, it is essential that there be a recognition of the type and magnitude of harm caused by the computer crime so that there is proper analysis of the computer abuse problem. What the courts and the legislatures have to recognize is that computer abuse can occur in unobtrusive ways such as through fraudulent access or bugging of software. Unauthorized users are often so familiar and comfortable with the computer system that detection is particularly difficult.

It appears on the surface that computer abuse might easily be prosecuted under the law of theft. However, traditional criminal statutes such as larceny have been inadequate and ineffective in prosecuting computer abuses. Inherent in the law of theft is the notion that property capable of being stolen must be tangible and that such property must physically change possession. Thus, it is extremely difficult to prove the law of theft in the instance of computer theft without the abuser having physically removed a tangible item.

Tangibility issue

The tangibility issue was addressed in the case *Ward v. Superior Court* (California, 1972). The court found that the defendant had not stolen an "article" within the meaning of the penal code because implicit in the definition of the article is that it must be something tangible. The court found that electronic impulses are not tangible.

A further complication arises in determining the valuation of an item that, in the case of a computer crime, might not be tangible. Is the valuation of the stolen property based upon the price of the paper on which the program was written, or is it the value of the bit of information to the company or the owner of the program? The valuation is necessary in order to distinguish between an offense punishable as a felony and an offense punishable as a misdemeanor. Assessing damages in this instance is a speculative issue, and statutes have not been developed to address the issue.

One case that illustrates the problem of inadequate criminal statutes is *U.S. v. Siedlitz*. An individual used a telephone to gain access to a former employer's computer and thereby obtained a valuable and confidential program. The U.S. attorney in Maryland and Virginia attempted to prosecute the theft but encountered difficulty in using the federal statute prohibiting interstate transportation of stolen property.

Not only was the statute unclear about whether the electronic impulses were property within the requirements of the statute, but furthermore, the movement of magnetic impulses from the victim's computer to the defendant's computer did not satisfy the traditional interpretation of "stealing" or "taking" of property as required by the statute. This ambiguity clearly demonstrates the complications that exist both in determining whether or not there was a theft under the law and whether or not the object of the theft can be classified as property.

Many federal and state criminal statutes, including embezzlement, invasion of privacy, trade secret, copyright and even mail fraud laws, have been used to prosecute computer crimes. It is often erroneous, however, to apply these criminal statutes to computer crimes, because the intent of the specific law often represents different issues from those in the computer crime instance.

For example, in cases of embezzlement, if no property or money is converted, the criminal charge cannot be maintained. In the event of a trade-secret theft charge, there is the issue of "unprotected disclosure," whereby, if the computer trade secret owner failed to take reason-

This one sloppy floppy can

THE SLOPPY FLOPPY

Most companies seal their discs with a spot here, a spot there. Leaving most of each seam not sealed at all.

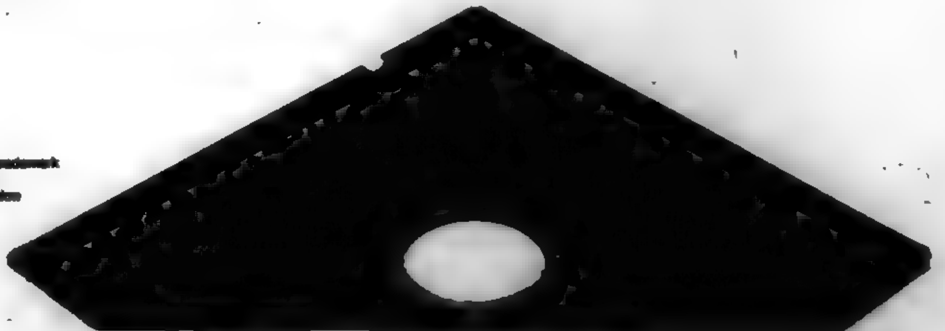
Sooner or later, the seams might do what comes naturally: they bulge. Warp. Pucker. Open up.

You can prove it to yourself. Just take a floppy and twist it.

See those wide open spaces?

That's sloppy. And dangerous. Because if you put a sloppy floppy into your disc drive, it can jam the drive. Lose your data. Or ruin the drive head.

And there goes $400.



Memorex is a registered trademark of Memorex Corporation.

The most innovative approach to the computer abuse problem is the Florida Computer Crimes Act of 1981. It created two new classifications of computer offenses: an offense against intellectual property and an offense against the authorized computer user.

able precautions to protect the secrecy of the thing allegedly stolen, the law does not apply.

The case of *New York v. Weg* (New York Superior Court, 1982) illustrates how difficult computer crime statutes can be to uphold. The judge dismissed the theft of services charge against a computer systems manager employed by the New York Board of Education who used school computers to trace the genealogy of horses and create a handicapping system for betting.

The court found that Theodore Weg had not stolen time because his supervisor had given him general access to the computer. If Weg had plugged into a public computer without permission and was trying to avoid payment, his acts may have been considered criminal.

Legislative efforts

The most innovative approach to the computer abuse problem is the Florida Computer Crimes Act of 1981. It creates two new classifications of computer offenses: an offense against intellectual property and an offense against the authorized computer user. The first classification provides that whoever willfully, knowingly and without authorization modifies or destroys data, programs or supporting documentation, internal or external to a computer, is guilty of a felony against intellectual property. The second offense holds an individual liable for a felony if he, without authorization, denies an authorized user access to computer system services.

This statute distinguishes between misdemeanor and felony crimes on the basis of whether the offense results in damage, destruction or fraud or results in the interruption of government operation of public services and whether the amount of damage to the computer or computer system falls within a specific range described in the statute.

Another unique aspect of the Florida statute is that it recognizes computer abuse as a separate criminal activity within a range of degrees and penalties. By penalizing many types of computer abuse such as unauthorized access, the statute shifts the focus away from the harm, the tangibility of the item or the possession characteristics inherent to conventional theft laws.

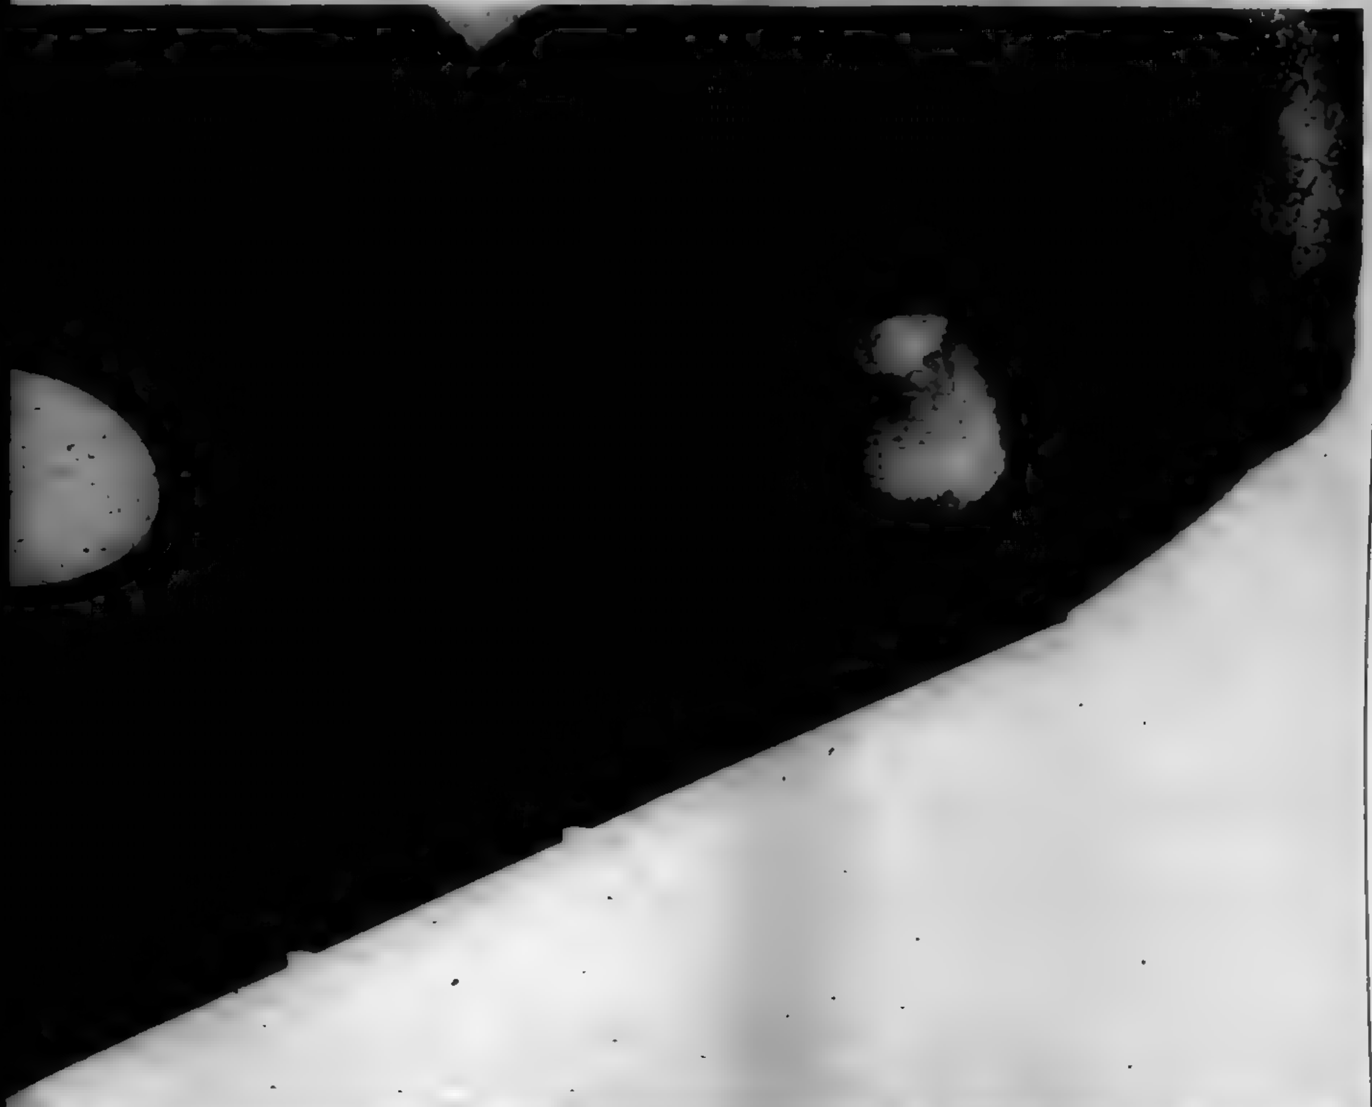
Twenty-one states have passed specific computer crime laws directed toward the special needs of prosecuting computer abuse and misuse.

Legislation on the federal level has been limited.

This past year, Congress enacted two pieces of computer crime legislation. The Small Business Computer Crime Prevention Act sets up a private and public task force to investigate the problem of computer crime in small business and recommend preventive measures.

Just before adjourning in October, Congress hastily passed computer crime amendments attached to the continuing budget resolution. The amendments make it a federal crime to gain unauthorized access to data stored in computers used by the federal government or to financial data protected by federal privacy statutes. The legislation (a compromise version of H.R. 5616) does not address illegal entry into other private-sector computers.

Most recent federal legislative efforts have been unsuccessful. The Federal Computer Systems Protection Act (H.R. 1092) spent five years in subcommittee and was bypassed this year by H.R. 5616.



ruin your $400 disc drive.

THE MEMOREX® SOLID-SEAM BONDED FLOPPY

Memorex seals its floppy discs with a process it developed, called Solid-Seam Bonding.

Solid-Seam Bonding seals shut every inch of every seam of every Memorex floppy disc. Tight as a drum. That makes the Memorex floppy stiffer. Stronger. And your data safer.

You can prove it yourself. Just take a Memorex floppy and twist it. You'll see no wide open spaces.

No wide open spaces that can jam your drive. Lose your data. Or ruin your drive head.

Which could cost you $400.

So why risk it?

Protect your drive. And your data. Ask for Memorex floppy discs, with Solid-Seam Bonding.

It's always better to be safe than sloppy.

For more information on the full line of Memorex quality computer media products, including computer tape, call toll-free: 800-222-1150. In Alaska and Hawaii call collect: 408-987-2961.

Your Data. When it matters, make it Memorex.™

A Burroughs Company

At issue is whether the existing body of law is fully adequate for both the crime and the punishment. At issue also are potential conflicts over jurisdiction between the states and the federal government.

There were concerns about the adequacy of H.R. 1092, which failed to define such key terms as "computer." Some observers feared that such imprecision might lead to misapplication or abuse of the legislation itself, for example, in prosecuting offenses committed by minors.

It was also argued that the proposed legislation focused upon the instrument rather than the object of the crime: the computer rather than the information, its tangible and intellectual properties and individual rights. While there is a certain truth to this argument, the body of law regarding information, its sensitivity and value as well as its intellectual property, is even less well defined.

A number of bills languished in Congress during 1984 and, specifically, in subcommittee. In 1984, four bills awaited action in the House Judiciary Subcommittee.

H.R. 4301, introduced by Rep. Larry Coughlin (R-Pa.), was unique in that it was only three paragraphs long. The bill would make the use of a computer in a manner not authorized by the owner a federal crime punishable by a fine of up to $100,000 and up to 10 years' imprisonment.

In February 1984, Sen. William Cohen (R-Maine) introduced in the Senate the Computer Crime Prevention Act of 1984. The bill, which died in October, contained provisions and penalties for buying, procuring or selling the passwords to the computers covered in the legislation in order to obtain money or services illegally. The penalties for this offense would be $50,000, or three times the amount obtained, and/or a maximum prison sentence of five years.

To deter computer hackers, penalties for any unauthorized access not involving fraud or damage would be up to $5,000 and one year in jail.

Civil law

While most attention is currently being given to the criminal aspects of computer abuses, it is likely that civil action will have an equally important effect on long-term security problems. The issue of computer crime draws attention to the civil or liability aspects in computing environments.

In the future, we can expect to see many more individual and/or class-action suits. For example, a stockholder might sue a corporation that had to devalue its assets and stock because of computer fraud-related losses. Another scenario might involve stockholders filing suit because the loss of highly sensitive trade secrets seriously affects the corporate balance sheet. Liability of the corporation and its officers to protect its assets and resources, such as imposed by the Foreign Corrupt Practices Act, will also be tested.

Civil damage suits will test the concepts and limits of legal responsibility and culpability. It will be interesting to see how the courts, state and federal government attempt to determine responsibility and assign liability for damages. Who will be at fault? The user, for not providing better security for the system? The equipment manufacturer, because of alleged flaws in the security design?

Even today, the liability battle lines are being drawn. Vendor advertisements in major national magazines proclaim that "privacy begins at home," and "computers don't steal, people do."

In the future, we can expect to see many more individual and class-action suits.

In equipment lease agreements, many vendors very clearly spell out that the lessee bears full responsibility for all aspects of system security. Clearly, as liability issues are tested in the courts, all parties — the end users, corporations providing computer-based services and the manufacturers of computers and related systems — will be forced to look more clearly at their own areas of responsibility and act accordingly.

Nonlegal remedies

In view of the legislative weaknesses, which often leave the victim of computer abuse without any legal recourse, it is essential that computer users look to preventive security measures rather than to legal measures as the first line of defense. Among the commonsense rules for safeguarding data are the following:

- Regularly change the password for access to the system.
- In addition to the password, require such personal information as an employee's name, birthday or identification number. It is far more difficult for someone to come up with two correct identifications.
- Limit the number of attempts that anyone can make to log on to a system.
- Keep a record of all user activity in a system and monitor this log to detect any unusual activity such as repeated failures by someone to enter a correct password, unusual amounts of data retrieval and attempts to enter confidential files.
- Follow through at a top management level by allocating the money and staff necessary to carry out these steps. Prosecute any security violations, whether employees or outsiders, even if it means adverse publicity.

There is software available that will improve security. These programs typically limit the number of

TELECOMMUNICATIONS USERS:

It's All Here!

Attend the first, the most comprehensive and the most important telecommunications conference and exposition of the year . . .

THE SEVENTH ANNUAL

Communication Networks '85

CONFERENCE & EXPOSITION WASHINGTON, D.C./JANUARY 28-31, 1985

Whether you've been in the telecommunications field for one year or ten, you've never seen things changing so fast. It's exciting . . . complex . . . confusing. That's why you need to attend COMMUNICATION NETWORKS '85.

Even if you can spare only one day, it will be worth your while to get a look at the very latest in telecommunications products and services — data communications equipment, including modems, multiplexers and high-speed T1 class transmission equipment . . . hardware and software for Local-Area Networks . . . electronic PBXs . . . satellite transmission . . . fiber optics . . . new low cost, long-distance services . . . and more.

750 EXHIBIT BOOTHS, OVER 200 COMPANIES

The exhibits alone will be an education — new products and services offered by some of the world's leading companies will be on display, including AT&T, Digital Equipment Corporation, GTE, Hewlett-Packard, IBM, ITT, RCA, and more.

FULL CONFERENCE PROGRAM

Come to the exhibit hall only or plan to attend any of the seminars and presentations with such speakers as James Martin, Arch McGill, Dennis Patrick and 200 other speakers and panelists. Both introductory and advanced sessions will be held. Free bus service will be provided between the conference location and conference hotels. For complete conference program details, call 800-225-4698, toll free. (In Massachusetts, call (617) 879-0700.)

SAVE $5 ON ADMISSION TO EXHIBITS

Bring this special coupon to the Washington Convention Center with $5 cash. It's worth $5 off the regular $10 exhibit registration fee. Exhibit hours are:

Tuesday, January 29 — 10 AM-5 PM
Wednesday, January 30 — 10 AM-5 PM
Thursday, January 31 — 10 AM-3 PM

You'll also get to meet exhibitors informally in their hospitality suites, plus enjoy all the fun and excitement of the Nation's capital city.

And you'll be eligible to attend a free conference session and to win one of several prizes, including an AT&T Personal Computer.

DON'T MISS COMMUNICATION NETWORKS '85 in Washington, D.C. — the most important telecommunications conference this year.

tries a user gets to type in a correct password and will prevent intruders from repetitively guessing until they hit a valid password. This type of software ranges in price from $9,000 per year for an annual rental to about $30,000 if purchased.

A dial-back system is also available that screens out the thief trying to forge a password. When a user calls into a computer, a black box intercepts the call and asks for a password. The unit then disconnects the phone call, looks up the password in a directory and calls the user back at the phone number listed in the directory.

Corporate personal computers also need protection. With proper precautions, there is a far greater opportunity for legal action in the event of computer abuse than there would be if no precautions were taken. The same issues that arise if fire protection is ignored and there is a question of insurance coverage hold true for computer security; it is also questionable when proper computer security is not undertaken.

Poor controls

Even today, most organizations do not recognize that their information is sensitive or critical. They basically do not adequately analyze the potential impact of an unauthorized entry. Lacking this understanding, companies fail to apply currently available physical and logical security controls to their sensitive and critical data. Where controls are applied, they are often incompletely implemented, poorly monitored or improperly managed.

The issue is further broadened by the wild proliferation of personal computers in organizations and the increasing ease with which computers can be tapped into via telephone lines. If a corporate executive stopped to figure out how much business could be lost if computer files were damaged or how much it would cost in man-hours to replace of reconstruct files that had been tampered with, they would realize the importance of computer security.

The ability of technology to build high-integrity software and certify that it possesses the necessary security and control attributes is extremely limited. Furthermore, office automation applications are creating important new privacy policy issues for management that go unrecognized.

A large majority of organizations are so busy with the hardware and software aspects of office automation that they have not begun to take these policy problems seriously. It has become apparent that professional and executive applications in the office environment can lead to data handling that can violate organizational and legal standards of data privacy.

In the 1970s, federal or state statutes covered confidentiality regarding federal agency practices, credit reporting, employment and insurance investigations, law enforcement and medical records as these various endeavors were plugged into computer systems. The trend toward office automation calls for extending those privacy standards from data processing into the office.

However, office automation, unlike data processing, does not store large volumes of information in centralized, organizational systems. Information in the office environment is scattered among many individuals and on many personal computers and other computer systems where there is an inherent lack of sensitivity to the principles of information security. The danger is even greater than it has been in the data processing environment since information that is kept in office files is often more finished and refined than the raw statistics found in the corporate mainframe.

As electronic messaging systems begin to proliferate and data is accessible and available to a number of people, confidentiality breaches will inevitably happen.

This risk has created a whole new compendium of issues around privacy concerns that have not been addressed either through the law or in common practices within the business community.

As the number of systems increases, crime problems will increase. The potential for this increase was set forth in the testimony of John C. Keeney, acting U.S. Assistant Attorney General for the Criminal Division before the Senate Subcommittee on Criminal Laws and Procedures. Keeney said:

"Our political, economic and social institutions have grown increasingly dependent upon computers to the point that their illicit manipulation or malicious destruction can potentially wreak havoc on society. Consider in this regard the consequences resulting from the willful destruction of the computer-generated Social Security checks flowing to the elderly or disabled, the destruction of a bank's computer records of its demand deposits or the malicious destruction of irreplaceable medical research data stored in a computer bank.

"Computers have become a part of everyone's life and are being integrated into virtually every facet of human activity at an ever-increasing rate. The very existence at the present time of a broad base of computer usage and computer knowledge and its projected increase in the years to come suggest that we will experience an increase in the opportunities for computer-related abuses in the years ahead."

THE TOTALLY COMPATIBLE TERMINAL.

The 5540 terminal from Teletype Corporation is ideal for 3270 protocols, agrees with your pocketbook and gets along so well with people that you'll wonder how you got along without it.

As our third generation of 3270-compatible terminals, the 5540 represents an even better value than its predecessors. Besides being competitively priced, the 5540 supports 3270 SNA/SDLC in addition to 3270 BSC line protocols.

The 5540 also has a more powerful microprocessor-based controller that will cluster up to 32 devices, including our letter quality printer. We also offer a tabletop controller that will cluster up to 12 devices.

Available with standard and reduced size displays, 4-color capability and 80 or 132 column formats, the 5540 can be tailored to your specific needs. And, each display has a smudge-resistant, non-glare, high resolution tilt screen.

To further enhance operator productivity, the terminal features a detachable keyboard with 3270-like layouts, 24 program function keys, and a status line that includes a response time monitor.

Backed by our experience in building over 300,000 3270-compatible terminals, the 5540 is building a strong record for reliability. If problems occur, self-diagnostics pinpoint them.

You'll find our 5540 terminal is very easy to like.

SYSTEMS & PERIPHERALS

Panel weighs supercomputer potential

By John Desmond
CW Staff

TARPON SPRINGS, Fla. — Experts at a Gartner Group, Inc. conference panel on supercomputing held here recently could not agree on a precise definition of a supercomputer or on the machine's commercial potential, but they did agree that demand for the fast-processing machines exists and that engineering applications are practical now.

The five-member panel at the IBM Large Computer Market Conference was led by David L.R. Stein, a general partner in the Julian, Cole and Stein venture capital firm and a cofounder of the Gartner Group. Other panel members were Carl Claunch, director of marketing technology planning with National Advanced Systems, Inc. (NAS); Arthur Leiz of Grumman Data Systems Corp.; Robert Wayne McIntyre, director of special-purpose systems for Amdahl Corp.; and Gregory P. Williams, a vice-president of the Gartner Group.

Explaining why a discussion of supercomputing was being conducted at a conference for users of IBM 370-compatible mainframes, Stein said the 370 architecture is not incompatible with supercomputing, a term he said was coined by Control Data Corp. in the early 1960s. That is a change from the thinking of 20 years ago, when IBM 360 architecture (the 370's predecessor) was considered incompatible with supercomputing.

Although many early innovations in computing were the results of efforts to develop supercomputers, "For whatever reason, supercomputers seemed to fall on hard times" in the past 10 years, Stein said. But he said recent achievements by Japanese manufacturers in supercomputing, on machines that have a "significant relationship" to 370 architecture, have helped spur a renewed interest in supercomputing. "I don't know whether it's a Japanese challenge or the fact that we've outgrown our mainframes for some applications, but I have seen a resurgence in interest in supercomputers in the last several years," Stein said.

Claunch of NAS defined supercomputing as processing that exceeds the capacity of the largest general-purpose mainframe. Supercomputing is accomplished by restricting processing to that which can be executed more quickly under a special set of instructions, sometimes called vector processing, he said. Certain work that can be accomplished within the limited instructions can make use of the supercomputer, he said. Ten years from now, NAS is projecting that 10% to 15% of all large mainframes will include vector processing capability.

Leiz of Grumman suggested Claunch's definition of supercomputing is not adequate because as mainframe processing rates go up, more processing can be accomplished with general-purpose mainframes. Claunch said the definition could be that a supercomputer executes 10 times faster than general-purpose mainframes.

"I don't know if I have a good definition for a supercomputer other than to say that they run real fast when they have floating-point arithmetic," Amdahl's McIntyre said. The potential speed of a supercom-

See PANEL page 59

IBM 3081 seen as path to Sierra

Analyst says CPUs will attract Model K users

TARPON SPRINGS, Fla. — At a recent conference on "Strategies in an Era of IBM Strength," Michael A. Chuba of the consulting firm Gartner Group, Inc., predicted that IBM's 3081 Model K will be the "exit machine" used to shuttle users into initial models of IBM's Sierra series of mainframes, which the Gartner Group claims will be announced in the spring of 1985.

IBM is trying to have 50% of the installed base of 3080 Model X processors on the 3081 Model K when the Sierra is announced, Chuba said. The Sierra announcement will compare its performance to the 3081 Model K, and not all the Sierra's features will be announced in the initial product, predicted Chuba, who is program director for Gartner's IBM Large Computer Market service.

To make projections of likely features of the Sierra series and options for users of IBM's 3080 and 4300 series, Chuba employed the Gartner Group's Residual Asset Value for IBM Systems software model for describing the IBM market. Gartner Group justifies using only IBM in the model on the basis of the company's dominant position in the industry.

In describing IBM's dominance, Chuba said that 60% of IBM's revenues are derived from the 370 hardware and software still employed in most of its current line CPUs. Since IBM accounts for 40% of worldwide data processing revenues for U.S. manufacturers, the 370 accounts for 25% of worldwide DP revenue from U.S. manufacturers, Chuba said. The 370 hardware and software products comprise "the single largest segment of the data processing industry," Chuba said.

Moreover, Chuba said IBM has 25,000 mainframes and 100,000 disk drives installed in the U.S. today. IBM has been steadily increasing market share at the expense of the firms that make up the Bunch

Hitachi experimenting with Cmos chip

SAN JOSE, Calif. — Hitachi Ltd. said it has developed an experimental 32-bit Cmos microprocessor chip called the Micro 32.

According to Hitachi, the unit was fabricated on a 1.3 micron Cmos substrate using a two-layer metal process technology.

The chip is said to contain more than 300,000 transistors.

Internal throughput

Micro 32 reportedly offers internal throughput of roughly 5 millions of instructions per second.

Hitachi said the unit incorporates a 200K-bit read-only memory with a 50-nsec cycle time. The chip measures 6.5mm by 9mm, but no definite packaging configuration has been established.

Hitachi said the product will not be commercially available until late 1986.

According to the vendor, volume shipments are slated to begin in mid-1987.

For more information, Hitachi is headquartered at 2210 O'Toole Ave., San Jose, Calif. 95131.

Modcomp CPU controller supports 32 I/O options

FORT LAUDERDALE, Fla. — Modular Computer Systems, Inc. (Modcomp) has announced the APC/5 Advanced Programmable Controller for use on the company's Classic CPU in industrial automation markets for support of 32 process I/O options and up to 2,048 I/Os.

The product is said to support a range of data types in digital I/O and analog I/O and to simplify programming. The programming device is said to enable engineers to define the logic with standard Instrument Society of America (ISA) symbols.

The APC/5 combines the Modcomp Modacs V hardware with software designed by Thesaurus, Inc. The controller can be used for applications with 250 to 1,024 processing I/O points. The APC/5E provides for systems as large as 2,048 process I/O data points. The controller has the capability to display seven inputs and one output on each line of a ladder diagram on the color terminal, the vendor said.

Use of ISA standard graphics character symbols and colors allows quick recognition of elements and powerflow states. Up to 16 lines may be included in one network with a possibility of up to 999 networks, each operating in specified time segments of 50 msec, seconds or minutes. The user can create or edit one control algorithm while displaying another, the company said.

The APC/5 Programmable Controller is said to be capable of testing the validity of programs before they are run on actual equipment, the company said.

The price for a typical system configuration consisting of an APC/5 Programmable Controller unit with color graphics programming device and 256 process I/O points, is $50,000. An optional documentation device is available for another $7,000, the vendor said.

Modcomp can be reached at P.O. Box 6099, 1650 W. McNab Road, Fort Lauderdale, Fla. 33310.

CHUBA

from page 57

companies (Burroughs Corp., Univac [Sperry Corp.], NCR Corp. Control Data Corp. and Honeywell, Inc.), so that IBM controls some 76% of the market today, according to the Gartner Group figures.

Chuba said IBM's large-systems marketing strategy includes announcing top-of-the-line models before low-end models to minimize the impact on sales of existing series, cutting prices to stimulate sales of existing lines when new lines are announced and offering customers the option of field-upgradability to realize the benefits of improved price/performance. "The field upgrade strategy serves as a type of competitive lockout," because it is often easier for users to upgrade than buy a plug-compatible product, he said.

As to frequent user inquiries about whether IBM will cut off upgrades of other models to force users to Sierra, Chuba said, "We think that's highly unlikely." IBM will be more likely to stabilize the price of upgrades, so that in years to come upgrades will not be as attractive as buying the new machines, he said.

Better price/performance

The Gartner Group expects that the Sierra will not be field-upgradable, but IBM will offer superior price/performance to entice users to Sierra, Chuba suggested. He predicted that Sierra will offer approximately $200,000/one millions of instruction per second (Mips) price/performance in a minimum configuration.

The Gartner Group also predicted that succeeding the Sierra, perhaps in 1988, will be the Summit series, with price/performance closer to $100,000/one Mips, Chuba said.

IBM has shipped 4,000 to 5,000 3080 series processors in the last three years and should ship 7,000 to 8,000 Sierra CPUs during its product life, Chuba said. Demand will fuel the increase, and IBM will be able to produce more Sierras than 3080 Model X series CPUs without adding manufacturing capacity, because Sierra will have fewer components, Chuba said.

An integrated array processor is possible in the Sierra, perhaps as an option, to appeal to science and engineering markets, Chuba said. The Gartner Group also predicted that the Sierra will feature main memory of up to 256M bytes and higher channel speeds.

"The important thing to realize about these features is that they probably will not all be there at the outset," Chuba said. IBM will try to downplay the differences between Sierra and the 3080 Model X series initially, to preserve the market value of the Model X series. Gartner Group does not expect a low-end Sierra until 1986, Chuba said.

All these incentives will make Sierra attractive to users, "If not for what it offers now, then for what it offers potentially in the future," Chuba said.

Users of 4381s, in the absence of a low-end Sierra, will have the option of moving to the 3033s, Chuba suggested. Citing confusion in the marketplace about how the air-cooled 4381s and liquid-cooled 3033s compare, Chuba pointed to the advantages of the 4381's lower price per Mips and the fact it requires less space in a data center. "From a price/performance standpoint — from many standpoints — the 4381 today is a much better buy than the 3083," he said.

When 4381 users "run out of gas," the Gartner Group predicted that IBM will, in 1986, announce performance improvements for the line or announce new models. But, "We don't see the 4381 family getting bigger in any significant way," such as with a quad-processor, Chuba said. Perhaps in 1987 or 1988, IBM will announce a follow-up air-cooled CPU to the 4381 family, he suggested.

For the approximately 8,000 4341 users in the U.S. market, the 4381 or 3083 is the upgrade path, Chuba said, adding that the Gartner Group expects that 90% of 4341 users will go to the 4381.

The decision for those users should be based on growth factors, he advised. Firms with over a 50% compound annual growth rate should migrate to the 3083, and firms with less than a 50% rate should consider the 4381, the Gartner Group advises. IBM may sell 8,000 to 10,000 4381s in the product's life, to make it one of their most successful CPUs, he suggested.

PANEL from page 57

puter is 50 times faster than a general-purpose mainframe, he said.

Original intent

Stein suggested the original intent of the supercomputer designation was to distinguish the processors as a class of CPUs at the high end of the spectrum, positioned above mainframes. Supercomputing implies "maximum computing at minimum cost," he suggested, acknowledging that any definition is likely to change in coming years.

Commenting on applications for supercomputers, Leiz said his company uses a Cray Research, Inc. supercomputer for structural and flow analysis, such as for air flow over an aircraft wing. Using a supercomputer, a wing structure can be modeled at one-fifth the cost of building a wing, he said.

McIntyre said that in engineering analysis applications, more accurate models can be run with supercomputers. Models that run on 370 architecture may be too simplistic for certain uses, he said.

Stein summarized that applications for supercomputers today are those too large for existing mainframes.

Lower costs, better designs

Claunch said research and engineering costs can be lowered and designs can be improved as a result of supercomputer use. He said one aircraft manufacturer achieved a 20% lower aircraft operating cost as a result of using a supercomputer to help model performance.

Automakers may be able to achieve similar operating improvements, he suggested.

Supercomputers could be used for high-speed transaction processing and possibly for artificial intelligence applications, Stein suggested. The Japanese may be motivated to develop supercomputers by a desire to develop AI applications that U.S. companies are not pursuing, he theorized.

Software wars'

"They [Japan] may perceive that as their secret weapon in the software wars," he said. "If the Japanese were successful in doing that, they could well be in a dominant position in the computing industry in as little as 20 years' time."

On the software issue, McIntyre said, "The machine is only as good as the software you have to exploit it." Scientific applications involving multiple CPUs linked in a parallel series are "fun to fantasize about" but not very useful in the practical world, he suggested. Getting jobs to run is what concerns users, he said.

With the exception of NAS and Amdahl hardware, most applications of supercomputers and array processors up to now have been for non-370 architecture for noncommercial purposes, according to Stein.

THE TREE OF
COMMUNICATION

The tree of communication symbolizes BULL's total commitment to information systems.

As one of the leading international manufacturers of data processing and office automation systems, BULL offers competitive and innovative solutions to all your information management problems, whether special or general, always designed to meet the specific needs of your business.

Moreover, BULL has developed an unmatched know-how in designing communication systems in order to improve interaction at all levels and in any situation. The result: an enhanced competitive edge and a better return on your information and communication investment.

In terms of hardware, BULL offers a wide range, from micro-computers to large scale data processing systems, including distributed data processing and office automation. For BULL, high quality data processing necessarily includes the availability of a full range of constantly updated services, which are under continuous development. To this end, BULL cooperates closely at international levels with software houses, universities, research centers and other manufacturers.

Whether your organisation is large or small, simple or complex BULL Distributed Systems Architecture (DSA) adapts to you and to your needs. It conforms to international standards (ISO) and has the inherent property of accommodating change. DSA is adaptable, flexible, and easy to use.

Strongly present in 74 countries, BULL is wherever you are. So why not let us plant your tree of communication... or help it grow?

Bull

AUXILIARY EQUIPMENT

DATAGRAPHIX, INC.

COM for Sperry Corp. 1100/60-90

Datagraphix, Inc. has announced an on-line computer output microfilm (COM) capability for Sperry Corp. 1100/60-90 mainframes.

Users can choose from either of two cut-fiche on-line systems: the Autocom II recorder with self-contained chemical processing or the Aris II dry recorder, the company said.

Datagraphix on-line COM systems attach directly to all current Sperry Series 1100/60, 70, 80 or 90 CPUs.

The price for an on-line Model 2275 Autocom II is $112,800, according to the vendor.

Datagraphix, P.O. Box 82449, San Diego, Calif. 92138.

XEROX

Presenting the fastest, most versatile and most economical print shop in the world.

In short, the Xerox Electronic Publishing System.

A laser printing system so technologically advanced, it lets you create documents with a speed and quality that rival that of the finest outside print shop.

Digitally store customized forms.

And what makes it so technologically advanced? A Xerox innovation called the Xerox Integrated Composition System (XICS). XICS is the software of electronic publishing. It lets you create print-shop quality, cover-to-cover documents from computerized text and scanned or computer-generated graphics.

Which means you compose, paginate, format and store all your pages electronically.

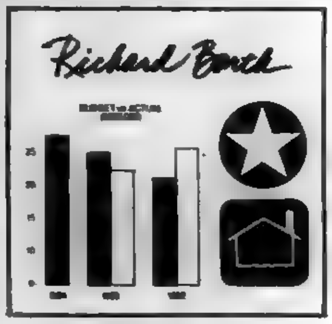
And set type in your own choice of font style and size, as well as reproduce logos, signatures and graphics.

Create and update company phone book.

Then, using either our 9700 or 8700 Electronic Printers (or Model V versions), you print on both sides of ordinary, cut-sheet, 8½ by 11 inch paper and turn out documents at up to 120 pages per minute.

All sorted, collated and stacked automatically. So you get what you want, when you want it. And only as many sets as you need. Of course, you also get tremendous savings in production costs, warehousing and waste reduction.

Not to mention increased flexibility to respond to customers' needs.



Reproduce logos, charts and signatures.

For example, one company, a wholesaler of books to school libraries, used our system to offer customized catalogs with a personal choice of sequence and delivery dates.

The result... "Increased sales of over 400 percent."

A large energy company now produces a more accurate and timely telephone directory utilizing Xerox electronic publishing capabilities.

ABCDEFGHIJ
abcdefghijklm
abcdefghijklmno
12345678910
ABCDEFGHIJKLMNOPQRST

Set type in choice of font style and size.

Another company, a leading manufacturer of PBX systems, used XICS to produce the 800 to 1,400 pages of documentation that must accompany each system—a job that used to take three to six months to complete.

They now do this documentation in tandem with new product development... "saving as much as a year's time in releasing a product."

The Xerox Electronic Publishing System is also part of Team Xerox—a wide array of products, people and services designed to meet your information needs.

Team Xerox

If you want more information than this illustrated example provides, simply ask for our free 16-page Graphics Capabilities brochure. It will give you complete details on how the Xerox Electronic Publishing Systems work.

IBM launches micro version of RS/1 package

File transfer, graphics packages for 3270 Personal Computers also debut

INSIDE
Software/64
Systems/66
Communications/68

WHITE PLAINS, N.Y. — IBM introduced a Personal Computer version of Bolt, Beranek and Newman, Inc.'s RS/1 analytical package along with 3270 Personal Computer application software earlier this month.

RS/1 provides technical professionals with a variety of analytical tools, IBM said. Functions are said to include data entry and retrieval, data transformation and analysis, graphics, curve fitting, statistical analysis and analytical models. RS/1 also provides the Research Programming Language, which permits users to extend and tailor the system's capabilities and to interface with other programs.

RS/1 runs under PC-DOS 2.0 or higher versions on an IBM Personal Computer with 512K bytes of random-access memory and a dual-sided disk drive and a 10M-byte hard disk drive. The software also runs on similar configurations of the Personal Computer XT, Personal Computer AT, Personal Computer XT/370 and 3270 Personal Computer.

The $2,000 package is scheduled for sale by Jan. 25.

IBM also launched the IBM 3270-PC File Transfer Express program, which runs on the 3270 Personal Computer and is said to permit transfer of any type of file between that machine and a host system. The host system may be supported by standard Distributed Processing Control Executive/Distributed Office Support Facility or Distributed Processing Programming Executive/SP2 in an IBM 8100 or by appropriately coded customer-supplied System/370 software. Available this month, the program will cost $75.

In addition, IBM noted that it has shipped the 3270 Personal Computer/G and 3270 Personal Computer/GX and introduced the 3270-PC Color Graphics Applications program for those two machines.

The program consists of Graphics Editor and Picture Plotting components. The Graphics Editor reportedly enables users to create, modify, file and retrieve pictures and to display, edit and file pictures generated in the Picture Interface Format (PIF). The Picture Plotting software is said to give users the ability to plot Graphics Editor output or other PIF files. The software is scheduled for April shipment and is priced at $395.

Finally, IBM said its 7371, 7372, 7374 and 7375 color plotters now support the Models AT and XT, Portable Personal Computer and Personal Computers equipped with the General Purpose Interface Bus, except for the PCjr.

IBM National Accounts Division is located at 1133 Westchester Ave., White Plains, N.Y. 10604.

SMALL TALK
Eric Bender
CW Senior Editor

IBM AT shipped before its time, many users say

Offhand, there's little resemblance between the Osborne Computer Corp. Osborne I and the IBM Personal Computer AT.

Introduced in 1981, the Osborne I was based on the then-ubiquitous Zilog, Inc. Z80 microprocessor and featured an oscilloscope-like 5-in. screen and ultralow-density floppy disk drives in a transportable package. The AT, built around Intel Corp.'s hotshot 80286 chip, comes with high-density floppy and hard disk drives and stoutly resists the trend toward taking a smaller footprint on a desk.

But there are curious parallels in the early customer histories of the two machines:

Both generated tremendous excitement when announced, both immediately began to carve out new territory for personal computers, and both also soon showed that they had shipped before they were ready.

"Any seasoned manufacturing executive would have deemed the Osborne I, when first shipped, to be in its preproduction stage," Osborne founder Adam Osborne later acknowledged in *Hypergrowth*, his book detailing the company's rise and fall. While other factors crippled the company, manufacturing difficulties plagued Osborne right up to the moment the firm filed for Chapter 11 protection under the Federal Bankruptcy Act.

IBM now has tens of thousands of Personal Computer ATs out in the field, and many reports have a curious ring of familiarity. Once again, the machines sound like beta versions. This time, how-

See AT page 69

Lattice unveils debugging tool

GLEN ELLYN, Ill. — Lattice, Inc. recently introduced C-Sprite, a debugging tool for software programs written in Lattice C or assembly language.

C-Sprite, which runs under IBM's PC-DOS or Microsoft Corp.'s MS-DOS Version 2 or 3, reportedly features Help screens, macros, command files, conditional commands and debugging through a communications port.

The software operates on COM or EXE files made up of object modules produced by the Lattice C compiler or Microsoft assembler, Lattice said. C-Sprite is said to provide a high-level view of C programs via function names, line numbers, variable names and C data types. It also reportedly gives a low-level view of machine addresses and instructions for testing assembly language functions or for microscopic examination of compiler-generated code.

Program behavior is monitored by planting break points, examining registers and variables and single-stepping if necessary, according to the vendor. Variables, registers and program instructions can be changed at any time, Lattice said.

C-Sprite will be available next month for $1,175. Lattice can be reached through P.O. Box 3072, Glen Ellyn, Ill. 60138.

In-house tech writers guide novice users

By S.L. Dean
Special to CW

Most personal computer hardware and software manufacturers make a real effort to provide sufficient information to use their products. However, many of them don't seem to realize that the secretary, accountant, vice-president or maintenance chief expected to use this new tool has never run a computer, is unfamiliar with the equipment and, quite possibly, did not wish for a computer at all.

To begin with, the new users are presented with the computer, peripherals, chosen software and a number of manuals.

The manuals theoretically contain sufficient information to allow the new user to learn whatever is needed. In some cases, this may be true. However, in the case of the truly novice computer user, even the words "peripherals" and "software" probably are unintelligible. Such a person is completely lost trying to cope with the intricacies of computers.

Some companies are perfectly willing to provide opportunities for staff to learn programs. Particularly in the case of the more complex programs, such as Lotus Development Corp.'s 1-2-3 and Micropro International Corp.'s Wordstar, the company may be willing to send

Conetic Systems adds desktop package

SAN LEANDRO, Calif. — Higgins, an "administrative assistant" software package for managers and knowledge workers, was introduced here this month by Conetic Systems, Inc. Designed for the IBM Personal Computer XT and compatible machines, the program is available in single-user and local-area network versions.

Unlike other microcomputer desktop organizing packages, Higgins offers expense reporting, multiuser local-area network support, phone message and electronic memo functions and the ability to track each item's relationship to everything else in the system, Conetic Systems said.

The package reportedly offers nine fully integrated modules built around a common data base: time manager, telephone directory (with autodialing and related capabilities), things-to-do list, personal filing, calculator, expense report, scratch pad, clock and tickler reminder. Higgins also is said to feature global information retrieval, note writer, keyword links to external programs, macros, customized reports and context-sensitive on-line Help.

The multiuser version of Higgins currently supports up to seven users on personal computer networks supplied by 3Com Corp. of Mountain View, Calif., and No-

See HIGGINS page 69

SOFTWARE

SOFTWARE STUDIOS, INC.
PC-Desk

Software Studios, Inc. has announced PC-Desk, a desk management system that runs on an IBM Personal Computer with IBM's PC-DOS operating system.

The program is said to include an integrated address and telephone file, a calendar, a calculator and an automatic telephone dialer. PC-Desk will merge letters with addresses and print labels, stickers, an alphabetized phone directory and a log of system use, the vendor said.

The text of a letter reportedly may contain four variable fields including a person's name, company name, expiration date and a free-form field that the user designs.

PC-Desk costs $49.95 plus $2 for shipping.

Software Studios, 8516 Sugarbush Court, Annadale, Va. 22003.

QUALITAS, INC.
Tall Screen

Qualitas, Inc. has announced Tall Screen, a utility for IBM's PC-DOS operating system that stores up to 1,090 lines of PC-DOS output for review and editing.

With Tall Screen, a user can recall any previous command or string of commands with a single keystroke, the vendor said. The utility reportedly allows a block of text to be written to a file, printed or frozen on a screen. A user reportedly can edit any text on a screen and use custom keystroke sequences.

Tall Screen requires IBM PC-DOS 2.0 or higher, and an 80-col. screen is recommended. It is priced at $49.95.

Qualitas, P.O. Box 3AK/UPB, Las Cruces, N.M. 88003.

RATIONAL SYSTEMS, INC.
Instant-C

Rational Systems, Inc. has announced Instant-C, a C language interpreter available for microcomputers running IBM's PC-DOS, Microsoft Corp.'s MS-DOS and Digital Research, Inc.'s CP/M 86 operating systems.

Instant-C is said to implement standard C features so programs developed with Instant-C can be moved to other systems. A built-in screen editor displays source code errors and provides diagnostic messages, the vendor said.

The product reportedly includes break points, single-stepping by line of source code or function call and evaluating expressions.

Instant-C costs $500.

Rational Systems, P.O. Box 480, Natick, Mass. 01760.

'Your flexible screen mount doesn't seem to be working.'

MICRO SOLUTIONS, INC.
Uniform-PC

Micro Solutions, Inc. has introduced Uniform-PC, a utility that transforms diskettes created under Digital Research, Inc.'s CP/M operating system so they can be used with IBM's PC-DOS operating system.

The product transforms one IBM drive into a CP/M drive capable of reading, writing, formatting and copying diskettes, the vendor said. Standard Ascii files and other files reportedly can be moved between operating systems without altering the integrity of the file.

Menu-driven commands reportedly help the first-time user work with Uniform-PC. When the user is familiar with the product, all commands can be entered with a single-line entry from a PC-DOS prompt, Micro Solutions said.

Uniform-PC costs $69.95.

Micro Solutions, 125 S. Fourth St., DeKalb, Ill. 60115.

LAYERED, INC.
Front Desk

Layered, Inc. has introduced Front Desk, a time and resource manager that runs on Apple Computer, Inc.'s Macintosh microcomputer.

The product reportedly integrates scheduling for personnel and resources and analyzes project productivity and revenues, the vendor said. Front Desk is said to provide scheduling for up to 15 people or other resources.

The software provides reports on assignments for any or all people for a single day, week or day of the week or month. Front Desk keeps a history of the previous three months and schedules appointments for up to 10 months in advance, Layered said.

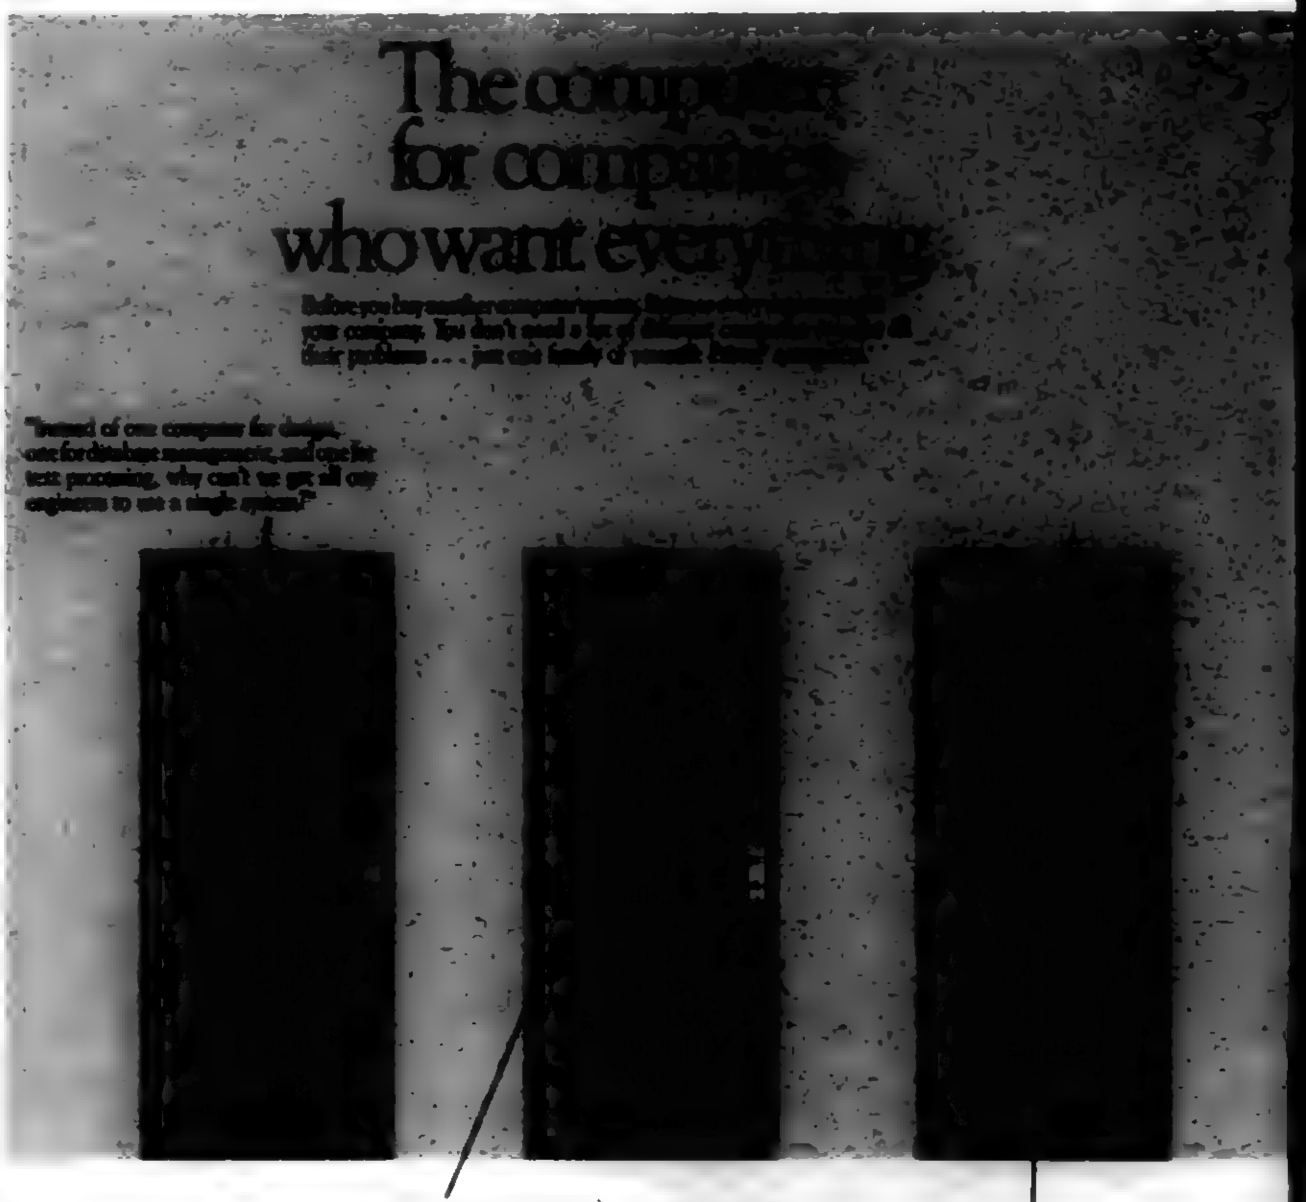
Front Desk costs $149.95.

Layered, 85 Merrimac St., Boston, Mass. 02114.

STOK SOFTWARE, INC.
Backrest enhancements

Stok Software, Inc. has enhanced Backrest, a utility for backing up hard disks on microcomputers running Microsoft Corp.'s MS-DOS, IBM's PC-DOS, Digital Reseach, Inc.'s CP/M and Musys Corp.'s Turbodos operating systems.

The enhancements include the ability to interrupt a backup at any time to perform another task or to format a floppy disk, the vendor said. Other additions include the ability to lock out bad sectors on hard



The computer
for companies
who want everything
"Instead of one computer for design, one for database management, and one for text processing, why can't we get all our engineers to use a single system?"

"Before I put one more computer on the shop floor, I want one powerful system that puts it all together reliably: inventory control, shop scheduling . . . even shipping!"

"This company's marketing decisions are too big for one little spreadsheet. I need total decision support if I'm going to meet my revenue goals. And I need it now. Or after lunch, at the latest."

disk, optional restoration to an alternate drive and support of file-oriented tape backup devices, according to the vendor.

The program includes a menu-driven installation program.

Backrest costs $180.

Stok Software, 17 W. 17th St., New York, N.Y. 10011

WORDTECH SYSTEMS, INC.
Db/Index, Db/Debugger

Wordtech Systems, Inc. has introduced two utilities for users of Ashton-Tate's Dbase II data base management software.

Db/Index is a library of routines said to provide faster indexing, sorting and packing of Dbase II data files. It also includes a program that can repair some damaged data bases, the vendor said.

The Db/Index routines can be operated as stand-alone modules, or they can be called from Dbase II programs. The utilities reportedly can be used on microcomputers utilizing Microsoft, Inc.'s MS-DOS, IBM's PC-DOS or Digital Research, Inc.'s CP/M 80 and CP/M 86 operating systems. It is priced at $120.

Db/Debugger is a symbolic debugger for programs written in the Dbase II programming language. It is said to eliminate the need for Dbase II in program development and testing and to complement the vendor's Db/Compiler product.

Db/Debugger is said to enable programmers to set execution break points by file and line, automatically enter debugging mode after a run-time error, list and modify memory variables and data base items, list Dbase source code from any file and any number of lines and invoke an on-line help menu.

The utility, which runs on the same machines as Db/Index, is priced at $240.

Wordtech Systems, P.O. Box 1747, Orinda, Calif. 94563.

LANTECH SYSTEMS, INC.
Integrated/Office Series

Lantech Systems, Inc. has announced the Integrated/Office (I/O) Series, a collection of microcomputer applications for use under Unetix 2.0, the latest version of Lantech's AT&T Unix-compatible operating system.

According to a spokesman, the I/O Series provides a multitasking, windowed environment for Lantech's office automation application packages. The packages include Powerlink 100, an asynchronous communications program; IF, an integration facility; and PC-DOS Emulator, which allows the system to support most IBM PC-DOS applications.

The product reportedly combines a window-to-window transfer mechanism that can learn a long series of keystrokes or commands to automate repetitive tasks, such as entering spreadsheet data. The Powerlink 100 package is said to link IBM Personal Computers or compatibles to any host computer that can support a standard Digital Equipment Corp. VT100 terminal. With IF, Powerlink allows a user to transfer data from an application running on a minicomputer or mainframe directly into a local application.

The Unetix operating system with windowing costs $249. Powerlink 100 and PC-DOS Emulator are priced at $50 each, and IF is priced at $100.

Lantech Systems, 9635 Wendell Road, Dallas, Texas 75243.

POC-IT MANAGEMENT SERVICES, INC.
Microman

POC-IT Management Services, Inc. has introduced a microcomputer-based project management system for information services departments and software development groups.

Microman is designed to run on an IBM Personal Computer or compatible under IBM's PC-DOS or Microsoft, Inc.'s MS-DOS Version 2.0 or later operating systems. Features include work load control, project planning, management reporting and monthly financial report functions.

The price of Microman is $5,000.

POC-IT Management Services, Suite 606, 606 Wilshire Blvd., Santa Monica, Calif. 90401.

PARLAY SOFTWARE CORP.
Quota:100

Parlay Software Corp. has announced an integrated sales organization management system for IBM Personal Computers and compatibles running under Microsoft, Inc.'s MS-DOS operating system.

Fortunately

Better Sooner.

Computers don't ever get headaches.

But the people who use computers do.

Quite clearly, as PC Magazine spells out, that's not the only trouble they're having.

In case you're tempted to dismiss this as trivial, there are two things you should be aware of:

First, more than twenty states are already preparing legislation to force some improvements.

Second, if computer users suffer, so does business.

Because computers are only as fast and accurate as the people who operate them.

You are not a machine.

Computers are designed by engineers.

They usually know a lot about technology but very little about people.

Which is why so many computers are technically impressive but strangely unnatural to use.

[illegible]	
Eye strain	55%
Back pain	43%
Headaches	30%
Shoulder	29%
Hand/wrist	18%
Neck pain	15%

(Source: "Ergonomic Principles in Office Automation" Pub. 1983 by E.I.S. AB, Sweden.)

Ericsson, in its very Swedish way, has always believed that excellent ergonomic design isn't a privilege.

It's a right.

That it isn't a noble gesture but demonstrably good for business.

It's an attitude that has made Ericsson No. 1 in Europe twice over:

First, as the giant of European telecommunications.

Then again as Europe's biggest workstation company by far.

(You couldn't ask for a better marriage of technology for the future.)

Here is one example of how they got there.

It's the first of a whole range of computers to be introduced in the U.S.A.

IBM is a trademark of International Business Machines Corp.

The Ericsson PC. It's Ergo-Intelligent.™

Ericsson has spent $300 million finding ways to make people and computers work better together.

Here are some of the results.

Ergo-Screen.™

Aspirin gets rid of a headache.

Ergonomics gets rid of the cause.

The Ericsson PC monitor has a non-glare screen.

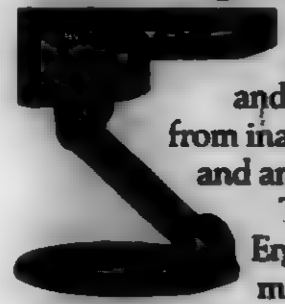
With restful amber characters on a specially developed, low-fatigue background color.

Even the shape of the actual characters was specially developed to allow easier recognition of difficult to distinguish letters like O and Q.

On the monochrome monitor, the resolution is double that of IBM's, so clarity is remarkable.

You can even have characters and graphics on the same screen.

Ergo-Arm.™



Thousands of people get neck and muscle pain from inadequate height and angle adjustment.

The Ericsson Ergo-Arm lets you move your screen exactly where you want it.

Better than back pain, wouldn't you agree?

Ergo-Touch.™

The keys are full-size and the layout is ergonomically planned for greater accuracy and speed.

Yet the keyboard is 20% more compact and less than half the weight of IBM's.

Even the cord is adjustable to suit left- or right-handers.

Ergo-Color.™

Even the color of the case is ergonomically selected to be restful to the eye over many hours.

Ergo-Space.™

The system unit is one-third smaller than IBM's.

It even fits under your desk in a vertical rack.

So your desktop is your own again.

IBM Compatible.

Many companies claim to be compatible.

Some are. Some are stretching the truth.

The Ericsson PC boasts the highest compatibility rating there is.

It's operationally compatible.

You can take advantage of thousands of PC-compatible programs already available.

In fact, with the best-selling software, the program and data disks are interchangeable with those of the IBM PC.

Service. Not Excuses.

Ericsson wouldn't give you anything less than on-site or carry-in service. The choice is yours.

3 Free Offers.

Ericsson will send you revealing literature on ergonomics.

Also a detailed brochure on the Ericsson PC.

And arrange a hands-on test if you ask for it.

Call toll-free 1-800-FOR-ERGO.

ERICSSON

MICROCOMPUTERS

Continued from page 66

According to the vendor, the Quota:100 system includes modules for order processing, confirmation processing, commissions, receivables and sales analysis.

The price of Quota:100 including program diskettes, user manual, function-key template, tutorial and unlimited telephone support for the first month of use is $2,995.

Parlay Software, 4651 Westgrove Drive, Dallas, Texas 75248.

AMERICAN SOFTWARE, INC.
Forethought

American Software, Inc. has announced Forethought, a microcomputer version of its mainframe product group and item forecasting system.

Forethought is a forecasting package for plants and offices. The product provides monthly and yearly forecasts, multiforecasting and item forecasting with up to two item groupings and statistical forecasts with management overrides and simulation capability, the vendor said.

The package runs on an IBM Personal Computer with IBM's PC-DOS operating system.

Forethought costs $9,500.

American Software, 443 E. Paces Ferry Road, Atlanta, Ga. 30305.

SYSTEMS

ALPHA MICROSYSTEMS, INC.
AM-1100E

Alpha Microsystems, Inc. has announced AM-1100E, a desktop microcomputer that runs Alpha's Unimos, a multiuser operating system capable of supporting 11 users.

Unimos is a version of AT&T's Unix System V and supports Unix versions of programming languages such as C, Cobol, Fortran and Basic, according to the vendor.

The microcomputer features a Motorola, Inc. 68010 microprocessor, 1M byte of random-access memory, a 30M-byte hard disk drive, three serial ports (expandable to 11 ports) and a 40M-byte streaming tape backup, the vendor said.

AM-1100E costs $15,585.

Alpha Microsystems, 17332 Von Karman Ave., Irvine, Calif. 92714.

COMMUNICATIONS

TECMAR, INC.
Powerlink

Tecmar, Inc. has announced Powerlink, a microcomputer-to-mainframe communications board for the IBM Personal Computer.

According to a spokesman, Powerlink is designed to emulate IBM 3278 and 3279 terminals that access an IBM mainframe system. The emulations allows a user to access IBM 3270 applications on the mainframe while concurrently running Personal Computer applications. File transfer software enables the micro to access and move large mainframe data bases to the micro. The files can be viewed and manipulated and then transferred to the mainframe or stored on the micro, the vendor said.

The interface board features direct memory access for rapid screen updating, and file transfer is enhanced with batch file support capability, according to Tecmar. Powerlink also features a windowing capability that allows the user to view one host session containing information from a mainframe, one IBM PC-DOS session from the micro and two electronic notepads, the vendor said.

Powerlink is priced at $1,090.

Tecmar, 6225 Cochran Road, Solon, Ohio 44139.

The Software Store
Mastercom

The Software Store has announced Mastercom, a smart terminal and file transfer utility designed for microcomputers running Digital Research, Inc.'s CP/M 80 or Microsoft Corp.'s MS-DOS operating systems.

The product reportedly can connect a terminal to a host time-sharing system, capture data on disk or printer and transfer files with error-correcting protocols.

Mastercom is said to feature directory display, multiple file transmission, file erase, file rename, disk drive logging, automatic dialing, stored responses recalled with single keystroke and file viewing.

Mastercom costs $49.

The Software Store, 706 Chippewa Square, Marquette, Wis. 49855.

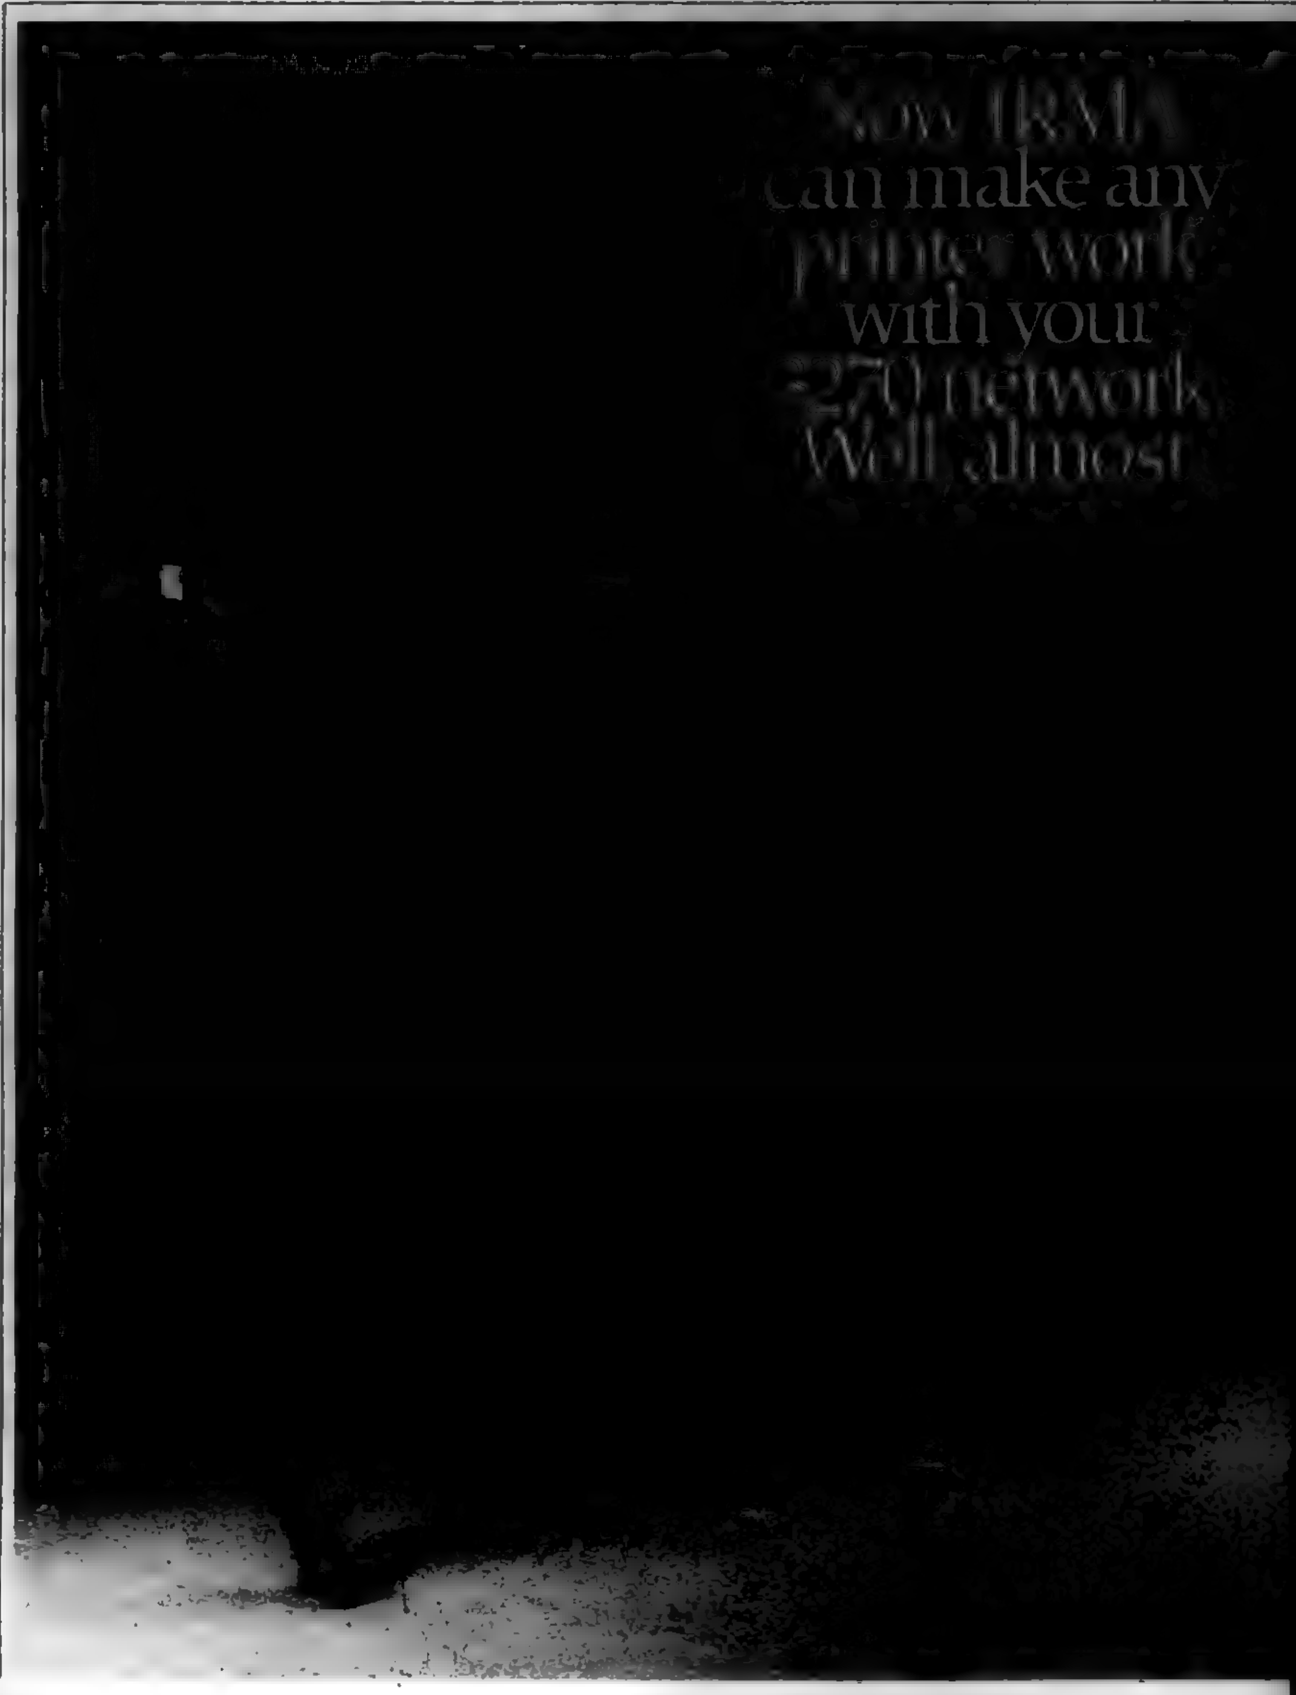
TRIPAS TECHNOLOGIES, INC.
PC Trilink

Tripas Technologies, Inc. has announced a personal computer integration board that reportedly links the IBM Personal Computer, Personal Computer XT or Personal Computer XT-compatible systems with asynchronous terminals and networks.

Trilink is said to give most asynchronous terminals, including Digital Equipment Corp. VT100 terminals, Personal Computer capability without disrupting any element of the existing data processing network. No changes are required to the terminal, host computer or Personal Computer, the vendor said.

The board, which is directly plugged into any expansion slot in the Personal Computer, Personal Computer XT or compatible, allows users to operate aynchronous terminals as monitors on the microcomputer or directly as network terminals, the vendor said.

Trilink is built around a Zilog, Inc. Z80 microprocessor design and operates from two RS-232 interface ports for host and terminal connections. It uses nonvolatile memory to store



configuration data, as well as up to 32K bytes of random-access memory, the vendor said. Up to 8K bytes of read-only memory are available for the firmware, the vendor said.

The board is priced at $495.

Tripas Technologies, 37053 Cherry St., No. 303, Newark, Calif. 94560.

NETWORK SOFTWARE ASSOCIATES, INC.

Communications emulators for IBM Personal Computer AT

Network Software Associates, Inc. has announced that its line of microcomputer-to-mainframe communications emulators is now available for the IBM Personal Computer AT.

Products now available for the Personal Computer AT include Adapt SNA 3270, Adapt SNA Printer and Adapt SNA RJE, all of which reportedly emulate IBM terminal products in an IBM Systems Network Architecture (SNA) environment. A fourth product, Adapt BSC 3270, is said to emulate an IBM 3270 terminal in a bisynchronous environment.

The vendor said a main feature of the Adapt series is that the emulators work in conjunction with IBM's existing Synchronous Data Link Control (SDLC) or Bisynchronous Adapter Card for the Personal Computer.

The emulators require IBM's PC-DOS 2.0 or a later version, 192K bytes of memory and an SDLC or Bisynchronous Adapter Card. Prices are $325 for the Adapt SNA RJE and $275 for Adapt BSC 3270. Adapt SNA 3270 and Adapt SNA Printer are sold together for $325.

Network Software Associates, 19491 Sierra Soto, Irvine, Calif. 92715.

HIGGINS

from page 61

well, Inc. of Orem, Utah. Releases are planned for other networks as well, said Marketing Vice-President Howard Case.

Keeping files private

The network version reportedly includes phone message and electronic mail functions and allows each user to keep any contents of Higgins' files private.

The initial release does not permit two users to view a record simultaneously "because we were not willing to commit to a record-locking technique until IBM announced its network," Case noted.

A second release will provide this feature, he added.

Selling at $395 for a single-user version, Higgins requires a Personal Computer XT or compatible system with 256K bytes of random-access memory and IBM's PC-DOS or Microsoft Corp.'s MS-DOS 2.0 or above. The package also runs on the Personal Computer AT.

Pricing for the network version is based on the number of users, with customers buying a single copy and distributing it over the network.

A version supporting up to seven users will cost under $1,500, Case said.

Conetic Systems is based in Portland, Ore. More information on the network is available from the company's Office Automation Group, which offers Higgins, at 1470 Doolittle Drive, San Leandro, Calif. 94577.

AT

from page 61

ever, not only individual users but vendors, DP staff and other computer professionals are complaining of flaws.

"We've got four in, and three are bad," noted one micro manager at a Fortune 1,000 firm. In addition to power supply malfunctions, "the disk drives are flaky," he said. "The half-heights [floppy drives] are very tempermental, even when they are working, and the hard disks have problems too." The hard disk drives are likely to be damaged in shipment because IBM neglected to fully emphasize the complete preshipment procedures, he said.

The manager also described the AT as a good machine overall and said that he expects IBM to quickly fix the product flaws, improve documentation, supply a full range of related equipment in quantity and boost support in general. His firm currently intends to buy more ATs for specialized applications such as computer-aided design.

Many other DP/MIS executives also gave lukewarm reviews to the AT in its current incarnation.

"For some applications, we like it, and we're beginning to buy it," said Ronald Jenks, director of information services at Touche Ross and Co. in New York.

But, like others, his firm is not yet buying the AT for general use. "We're holding off, waiting for some of the weaknesses to be fixed," he said.

Volkswagen of America, Inc. in Warren, Mich., which originally considered replacing Personal Computer XT orders with purchases of the new machine, is also postponing acquisitions, according to information center manager Warren Kress. "We're experimenting with two units, trying to identify the glitches."

Unlike the case with Osborne, everyone expects IBM to solve the AT's problems quickly and thoroughly. But until that happens, the next generation machine won't reach hyperspeed.

When you set up an IBM® 3270 network, you're faced with the fact that you can't just go out and buy any printer to work with it.

Your choices are, to say the least, limited. Even IBM only makes a few that are compatible.

But with new IRMAprint from DCA, the limits are off.

IRMAprint isn't a printer. It's a printer emulator. In technical terms, it hoodwinks the IBM mainframe into thinking that whatever printer attached to it is a 3287.

So now if there's a more economical printer you want to use, use it. If you'd like to plug in a laser printer, plug it in. If you've always wanted to upgrade to a printer with better capabilities, there's never been a better time than now.

You would think that, with all that it does, installing an IRMAprint might prove to be a headache.

It's not.

IRMAprint is installed right at the controller site with a simple standard coaxial cable. And two models of IRMAprint are available for either an RS-232C or Centronics® Parallel Interface.

IRMAprint. It's new from DCA, the makers of the IRMA family of IBM-emulation products.

It lets you choose any printer that's right for the job, instead of the few that are right for the network.

For more information about IRMAprint, or any of the IRMA family of IBM-emulation products, send in the coupon below. Faster still, call 1-800-241-IRMA. Telex 261375 DCAATL.

Mail to 303 Technology Park, Norcross, GA 30092. And we'll tell you more about IRMAprint and all IRMA products.

ALGOR QUALITY PERFORMANCE [illegible]

[illegible] Square, Pittsburgh, PA 15206 · 412/[illegible]-2100

The key word in that long, drawn-out headline is system.

A system built for PCs.

At Hewlett-Packard, it's a quality system of personal computers, plotters, a truckload of software, and Local Area Network (LAN) capability.

It's all matched and designed to work brilliantly together.

Yet the system is so flexible each part can stand alone. Or even team with an IBM PC.

So you can build just the system your staff needs.

It all starts with two of our Hewlett-Packard personal computers.

We call one the HP Touchscreen and the other (because it can do even more) the HP Touchscreen MAX.

The first comes with two double-sided disc drives that give you 256K bytes of main memory, expandable to 640K bytes.

The HP Touchscreen MAX has even more capacity, with the added power of a 14.8M byte Winchester disc drive.

And both have DSN/Link, to let you set up a direct line of communication between them and your HP 3000 Department Computer.

As the names imply, you can actually change things on either screen just by touching the screen.

That makes the Touchscreen PCs easier to use. And a lot easier to learn.

The system also includes two printers many people think are simply the best around.

Our Hewlett-Packard LaserJet and ThinkJet printers are both breathtakingly fast and refreshingly quiet.

The ThinkJet printer runs at a rapid 150 characters per second.

Yet because the ThinkJet paints each character with a small jet of ink (instead of smashing the paper with keys), it's as quiet as a sigh.

At 300 characters per second, our LaserJet printer is even faster.

Ten times faster than the best daisy-wheel printers. Yet the image is as sharp as you'll get from a printing press. Amazing.

and when you get to your hotel, change everything.

Two different plotters are also part of the HP personal computer system.

Both create full-color graphics. One with two pens, the other with six for even more detail.

If you like, the system can be knitted together through a LAN.

It lets a number of HP personal computers link up, talk to each other, share printers, and exchange information.

By the way, there can be a lot of information to exchange. That's because there are more than 500 business software titles available. For word processing, accounting, spread sheets and graphics. You'll find the big names there, too.

1-2-3™ from Lotus.™* WordStar.™** MicroPlan.™*** And the whole catalogue of software from HP.

Finally, when you travel, you can take the system with you.

Hewlett-Packard's portable personal computer turns your hotel room (or your den at home, or your customer's desk) into another part of your personal computer system.

The Portable has plenty of capacity; 272K bytes of RAM and 384K bytes of ROM. And with its built-in modem, it can link you with your office printers and plotters. Not bad for a computer that weighs just nine pounds and can fit into a briefcase.

The system is all linked up, all on the same programs, all designed to work together, and all ready to go.

And all from Hewlett-Packard.

Just dial 800-FOR-HPPC, toll free, to find the name of a Hewlett-Packard dealer or sales representative near you.

hp HEWLETT PACKARD

---

*1-2-3™ and Lotus™ are U.S. Trademarks of Lotus Development Corporation. **Available for the HP Portable beginning January, 1985. WordStar™ is a U.S. Registered Trademark of MicroPro International Corporation. ***MicroPlan™ is a U.S. Trademark of Chang Laboratories, Inc.

WRITERS

from page 61

staff to outside classes. Other companies will have one employee trained and then allow that employee to train others.

These methods will work, of course. Most people can learn to use a computer to perform the job in question if given sufficient incentive and training.

Unfortunately, because of the complexity of the programs, it can take many hours of unproductive attempts before a computer novice learns enough to be effective.

Still more time will be wasted if the person does not know a few basic rules of computer usage. For example, few novices know that a disk is magnetic, and that exposure to magnetic fields can destroy the disk's contents.

An in-house technical writer can help bridge this communications gap.

Businesses often employ a staff writer, whose job may be anything from creating brochures or newsletters to writing technical product descriptions. With training and experience, these writers can become technical writers, creating simple instructions that will ease the transition to computer methods. In particular, technical writers can be of invaluable assistance to novice users.

Getting started

To get started, the writer first must have access to the computer and the software and time to become familiar with both. If the writer previously has done no technical writing, he might enroll in a local technical writing course.

Once familiar with the hardware and software, the technical writer can begin creating simple sets of instructions.

A good technical writer, faced with educating a novice user about a computer, will not assume anything.

Computer installation

The writer first should know if the computer is completely installed and ready for use or if the user must perform this task. If the user is expected to install the computer, then the technical writer can take the manufacturer's installation instructions and simplify them into steps. For example:

- **Step 1.** Find the packing slip and check to be sure you have all the parts that are listed. If any are missing or seem different from the list, call vendor department, person and so on.
- **Step 2.** Be sure the desk (table) for the computer is near an electrical outlet. Carefully unpack the display screen, keyboard, disk drives and printer. You will also find two cables, labeled (A and B). Next, look at the display page in the owner's manual. Note that the screen is placed on top of the disk drives, the keyboard is in front of them and the printer is to the side. (You may place the printer on either side.)

Simple lists

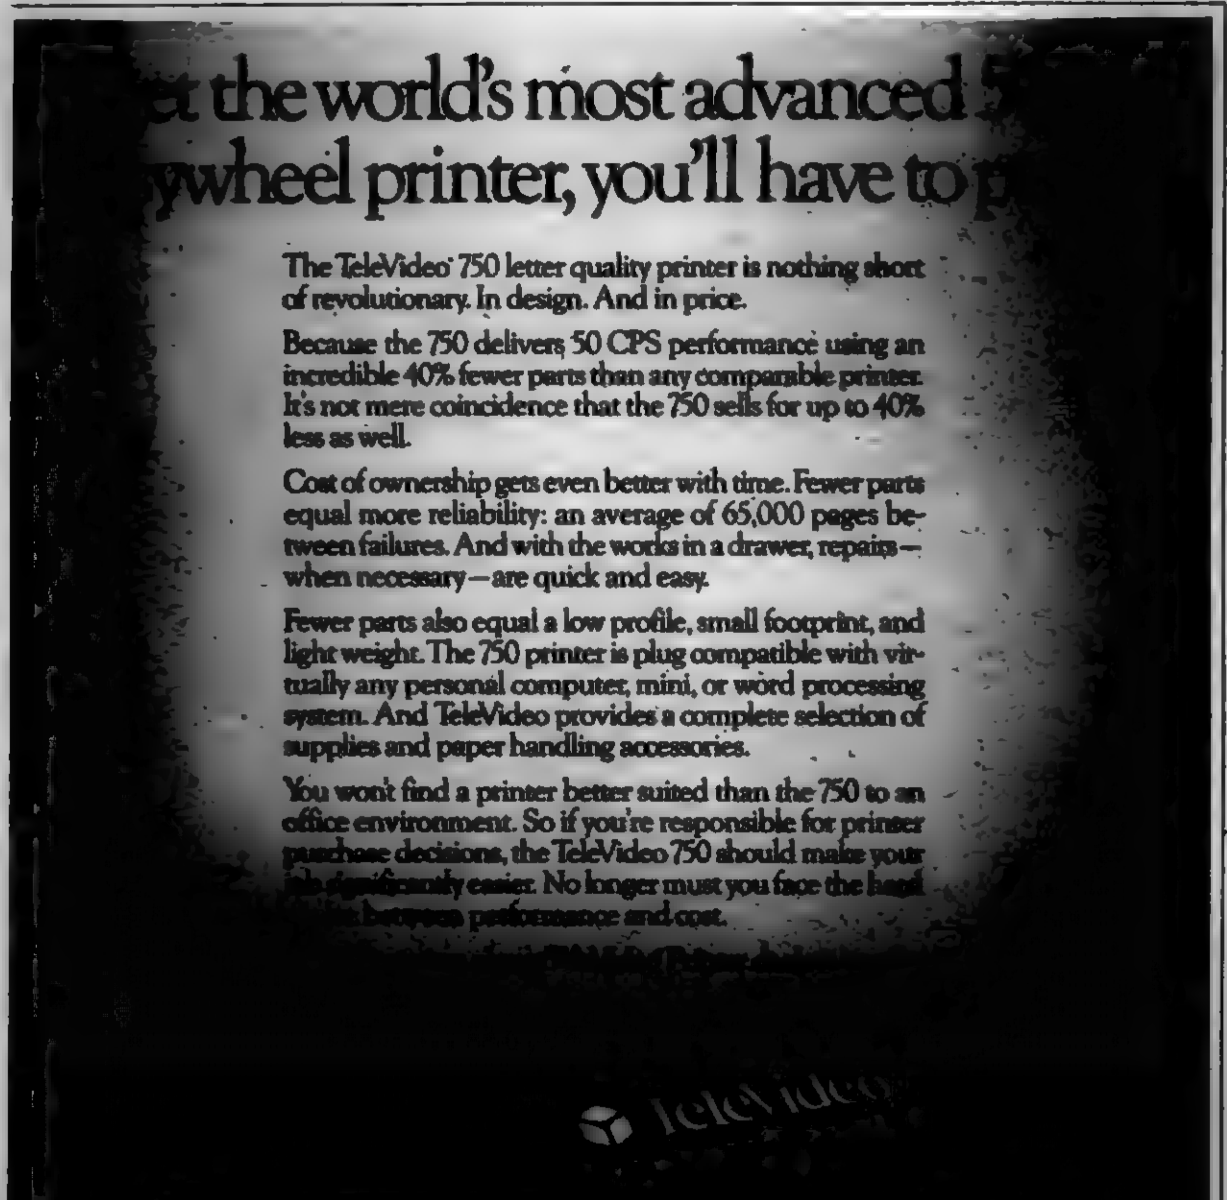
This example may seem too simple, but when a user unfamiliar with the electronic equipment needs to get it working, it is easier to follow such simple lists than to try to find the proper page in the manual and then interpret more intricate instructions. Also, novices are less intimidated by instructions from a person than from a manual.

Once the computer is hooked up, the technical writer can then instruct the new user to:

- **Step 1.** Find the disk labeled 'System Master.' (It should be in the back of your owner's manual.) Note the distinguishing characteristic such as a label or a tab. Insert this disk in Drive A of your disk drive (the left-side drive slot) with the tab or label up. Push gently until the disk is totally inserted; you will hear a soft click. Remember to handle your disks carefully.
- **Step 2.** Turn on the computer. The switch is located on the right underside of the keyboard. There will be a slight humming noise, and the small red light under the left disk will flash on and off. When the computer is ready to operate, your screen will display a message.

Again, this may seem simple, but the simpler the instructions, the faster the user will get over any initial uncertainty.

The technical writer can use the same skills to lead the user through the steps necessary to get a software program into the computer and ready to run. At that point, the user can be assisted with finding and interpreting the manual's instructions.



t the world's most advanced
ywheel printer, you'll have to

The TeleVideo 750 letter quality printer is nothing short of revolutionary. In design. And in price.

Because the 750 delivers 50 CPS performance using an incredible 40% fewer parts than any comparable printer. It's not mere coincidence that the 750 sells for up to 40% less as well.

Cost of ownership gets even better with time. Fewer parts equal more reliability: an average of 65,000 pages between failures. And with the works in a drawer, repairs—when necessary—are quick and easy.

Fewer parts also equal a low profile, small footprint, and light weight. The 750 printer is plug compatible with virtually any personal computer, mini, or word processing system. And TeleVideo provides a complete selection of supplies and paper handling accessories.

You won't find a printer better suited than the 750 to an office environment. So if you're responsible for printer purchase decisions, the TeleVideo 750 should make your job significantly easier. No longer must you face the hard [illegible] between performance and cost.

COMPUTER INDUSTRY

Seagate gears to ride out shaky mart

COMPANY PROFILE
Kathleen Burton
CW West Coast Bureau

SCOTTS VALLEY, Calif. — Seagate Technology, Inc., the leader for five years in the booming single-user, hard-disk drive market with a 45% market share, faces an exceedingly difficult year ahead.

Caught in the crosscurrents of an industry reeling from shortened product life cycles, a soft microcomputer market, a trend to overseas manufacturing and the unpredictability of its major customer, IBM, Seagate's future is uncertain.

"The disk industry is in the midst of a shakeout," Seagate founder, Chairman and Chief Executive Officer Alan F. Shugart said in a recent interview. "Within two years, we'll only see six companies left in this business and maybe two leading suppliers."

To survive these troubled times, the company must compete with domestic vendors and the Japanese to gain market share in next-generation products built around sub-5¼-in. and half-height, high-capacity micro Winchester drives.

"Seagate faces a critical time window," said James Porter, editor of "Disk/Trend Report," an industry newsletter published in Mountain View, Calif. The company must ramp up new products to recoup recent capital expenditures and get those products into the market for systems designers, notably IBM, Porter said. "Seagate should have begun production on half-heights, 20M-bytes and 3½-in. drives six months ago," he asserted.

Other serious problems lie ahead for the company. Prices, already plummeting 30% annually, are predicted to drop even further, sparked by a cutthroat price war led by Tandon Corp., a new entrant in the hard-disk market, that is expected to undercut Seagate's mass-market 10M-byte product by $100. Seagate is also plagued by chronic production problems, Porter said, chiefly an inability to get product plans into production rapidly and a tendency to announce products, such as the ST206 half-height, that are never shipped.

Amid those market uncertainties, Seagate in mid-November undertook a major reorganization, which resulted in the resignations of several key sales and marketing executives. Shugart said the reorganization will provide customers and distributors with quicker access to the company by lessening the levels of in-house bureaucracy. The present reorganization followed an earlier management shake-up in July, which resulted in the abrupt departure of company cofounder and ex-vice-chairman Finis T. Conner. Shugart has become more involved in the company's day-to-day sales and marketing operations since then.

But industry analysts said Seagate is not without important strengths. The company has maintained excellent long-term relationships with more than 200 OEM customers, including heavyweights such as IBM, Digital Equipment Corp., Hewlett-Packard Co., Honeywell, Inc. and AT&T, and has acquired a reputation as a volume supplier with an annual production capability of two million units. To keep manufacturing costs low, Seagate also has a foreign source for every part except disks, which are purchased in the U.S.

Robots: Orders up, prices down

By Mitch Betts
CW Washington Bureau

WASHINGTON, D.C. — Shipments of robots from U.S. suppliers to users in 1984 will amount to about $290 million, a 50% increase over the 1983 level, as unit prices dropped about 20%, according to officials of the Robotic Industries Association (RIA).

"The numbers reflect the fact that American industry now recognizes the need to modernize its manufacturing processes by the use of industrial robots," according to Walter K. Weisel, RIA president and president of Prab Robots, Inc., a manufacturer in Kalamazoo, Mich.

The RIA released its new figures — the first hard statistics ever generated by U.S. robot manufacturers — at a press conference here earlier this month. The U.S. trade association has an all-time high membership of 320 firms, including robot users such as the major automobile manufacturers as well as robot equipment manufacturers and researchers.

Weisel and Donald Vincent, RIA executive vice-president, said the new customer base for robots has expanded from automotive industries to encompass the textile, materials and product handling, aerospace, medical, furniture, electronics, construction and defense industries as well. Robots typically improve productivity by 20% to 30%, they said.

The RIA's statistical survey showed that $148 million worth of robots were shipped in the first half of 1984, with a backlog of unfilled orders amounting to $142.3 million. Combining the two figures,

Engineering teachers feared in short supply

As the U.S. computer industry struggles to remain king of the technology hill amid challenges from Japanese, European and other up-and-comers, a continuing dilemma is the education of electrical and computer science engineers. The question is often raised: Will there be enough engineers to meet the needs of the industry, and how well-trained will they be?

The American Electronics Association (AEA) and assorted forecasting groups are predicting

IBM, NCR Comten to meet in court

Copyright violation countered with antitrust charges

By Kathleen Burton
CW West Coast Bureau

LOS ANGELES — IBM and NCR Comten, Inc., a division of NCR Corp., will square off this month in a legal battle over the alleged disclosure of proprietary information by a computer consulting firm.

The charges, which will be heard in federal courts here and in Minneapolis, indicate the measures many computer companies, including IBM, will take to protect their computer secrets. The countercharges subsequently brought by St. Paul, Minn.-based NCR Comten against Evergreen Consulting, Inc., a consulting firm based here, also focus on the question of how much material from competing companies consultants may disclose to their clients.

A preliminary injunction hearing today in Los Angeles' 9th Circuit Court will determine whether NCR Comten will be prohibited from using a program it is alleged to have unlawfully copied from IBM. The dispute began in 1980 when IBM hired Evergreen to evaluate products that competed with IBM's 3705 communications processor, which is a gatekeeper for information entering mainframes.

In carrying out the evaluation, Evergreen discovered that segments of the software used with NCR Comten's communications processor were identical to IBM's Advanced Communications Function/Network Control Program. Evergreen procured a copy of the NCR Comten program and relayed the alleged copyright infringement information to IBM.

In 1981, IBM notified NCR Comten that the program infringed on IBM's copyright and demanded a $74,000 payback for the alleged misuse. NCR refused, and the legal sparring began in November 1982, when NCR Comten brought suit in a federal court here against Evergreen, charging that the company had disclosed proprietary information

ALAN F.
SHUGART

Alan F. Shugart, founder, chairman and chief executive officer of Seagate Technology, Inc., has nearly 30 years of experience designing computer peripherals and systems; he spent 18 years with IBM as a field engineer, was subsequently vice-president of product development at Memorex Corp. four years and, in 1973, founded Shugart Associates, a floppy disk drive company that Xerox Corp. later purchased. In a recent interview with Computerworld West Coast correspondent Kathleen Burton at Seagate's Scotts Valley, Calif., headquarters, Shugart discussed IBM, Seagate's biggest customer, and talked about the emerging markets that will drive the volatile rigid-media market in 1985.

Q ***What's going to happen in the rigid disk market over the next two quarters?***
The disk industry is in the midst of a shakeout. Within two years, we'll only see six companies left in this business and maybe two leading suppliers.

The other companies will go broke, get acquired or enter small, niche markets with low volumes. I don't see any improvement over the next two quarters either, because the same conditions will exist in the marketplace.

Q ***What's driving this shakeout?***
There's been a slowdown in user acceptance of desktop computers. This industry goes where the small-computer industry goes. I predict a resurgence in the small-computer systems market, however, driven by more computing power and lower costs. Seagate's low cost structure for large rotating memory devices will help fuel this revitalization.

Q ***How are Seagate's fortunes tied to IBM's?***
IBM is our largest customer, representing almost 60% of our business.

Obviously, we have a very good relationship with IBM.

Q ***Is this a frightening position for Seagate — to be this dependent on IBM?***
Absolutely, but the alternative is more frightening. The minute you're not scared in this business, you're doomed.

Q ***What do you think of IBM's ability to set standards in the industry? Is this good?***
If it weren't for IBM, we wouldn't have any standards, not even an 80-column card.

It's not the standard itself that's important, but the fact that IBM can dictate that a standard exists. I think that's a great thing. The industry is incapable of doing it itself.

Q ***What specific problems lie ahead in 1985?***
A price war will be sparked by the industry-wide move to [foreign] manufacturing and the entrance of Japan into the 3½-in. market. This will drive a lot of marginal suppliers out of business.

Q ***Are you worried about this Japanese competition?***
No. Floppy disk technology is now 11 years old, and the Japanese have won 80% of that market. This is because the technology leveled off, and the Japanese did what they do best — automate production.

The technology curve for rigid drives is still too steep for this to happen here though, and product life cycles are still too short. The Japanese can't beat us at competitive cost structures either, because they build [overseas] just like we do.

Another subtle deterrent to the Japanese is the complicated nature of the disk drive interface. It's a harder interface to duplicate than those on watches, cameras or printers.

The Japanese also face two major problems in selling products to U.S. systems manufacturers: the high levels of technical support required and Japan's historic inability to perceive why its "perfect products" don't always work in a customer's system.

Q ***What technical problems will Seagate address in the future?***
We'd like to participate in two emerging markets. As capacities increase, the hard-disk backup issue becomes more critical.

Most MIS directors at Fortune 1,000 companies are very worried about backing up their personal computers. The best solution now is [with streaming tape drives], which isn't very cost-effective.

Also, as products with a gigabyte of networked storage become common, it's impossible to archive using floppy disks. Maybe optical storage is the solution .

Vendors view IBM contracts as precarious blessings

COMPANY PROFILE
Kathleen Burton
CW West Coast Bureau

Industry observers say the sharp dip in Seagate Technology, Inc.'s sales is due to a slowdown in orders from IBM, which, as Seagate's largest and most influential customer, accounts for 59% of the company's sales.

"This is an OEM business, and all disk companies will rise and fall with their customers' whims, notably IBM's whims," said Dave Claridge, senior analyst at investment banking firm Hambrecht & Quist in San Francisco.

"IBM did a sloppy job of planning its future requirements and is whipsawing its vendors — including Seagate — all over the place now," said James Porter, publisher of "Disk/Trend Report," an industry newsletter published in Mountain View, Calif.

According to Porter, IBM plans to ramp up to produce internally 100% of the 3½-in. and high-capacity 5¼-in. products destined for the Personal Computer AT.

IBM is also shopping among domestic vendors for 10M-byte and half-height 20M-byte products for the Personal Computer XT, according to Porter.

Negotiations are also under way between IBM and two Japanese vendors, Alps and Toshiba Ltd., for 3½-in. floppy disk products reportedly scheduled for IBM's portable computer, Porter added.

Winchester contracts follow

"You can bet that where floppy contracts go, Winchester contracts will follow a year later," Porter said.

"Having IBM as a major customer is a mixed blessing," said Bill Frank, a senior analyst at Infocorp, a market research firm in Cupertino, Calif.

Companies that frenetically ramp up for IBM's 18-month contracts and neglect their other customers have no guarantee that IBM will stay around when the contract expires, he said, adding, "dealing with IBM is very precarious."

Seagate to tap Asian mart
Manufacturing strategies fuel sales drive

Vertical integration and automated offshore manufacturing are two trends sweeping the hard-disk industry.

Both are necessary steps to meet the aggressive pricing environment predicted for next-generation products, said Tom Finnegan, Seagate Technology Inc.'s director of international sales.

"Our intention is that all volume production will eventually be done offshore," Finnegan said, "but we're taking it one step at a time."

Untapped markets

Bob Toda, Seagate's director of Far East Marketing, said the company plans to push into the virtually untapped Japanese and Far Eastern markets during 1985.

To ramp up for this move, Seagate recently expanded its 41,000 sq-ft offshore operation in Singapore, which supplies printed-circuit boards, head assemblies and drives for shipment to Europe and the Far East.

This gives the company a foreign source for every part used in its products except disks, which are still manufactured in the U.S. Toda said Seagate also hopes the offshore distribution network will woo major U.S. customers that have recently moved production operations overseas.

Company Chairman Alan F. Shugart explained the company's interest in the Japanese market: "With the word processing and data base business applications developing rapidly in Japan and the massive storage requirements of the Kanji language, the Japanese will be major purchasers of 20M-byte-plus products. They'll skip the 10M-byte market completely. Japan has the second largest market potential for rigid media after the U.S., and we plan to be there."

Seagate began its marketing and selling thrust in Asia two months ago, Finnegan said, by establishing procurement offices in Tokyo and Taipei, signing distribution agreements in Korea, China, Hong Kong, Singapore and Malasia and negotiating with Japanese suppliers.

Seagate also began to accelerate its vertical integration strategy last year, he said, acquiring Grenex, a California company that develops sputtered thin-film magnetic media, an eventual means to increase disk storage.

Q: How Many People Are Afraid Of Your 4-GL/DBMS?

A: None, If You Have EZNOMAD.

That's right. EZNOMAD is a major extension of NOMAD2 that pulls novice and infrequent end-users into the mainstream of mainframe computing. EZNOMAD's screen-driven environment requires no key words, system commands, or knowledge of syntax for operation.

With EZNOMAD, your end-users can sit back and follow a series of English-language instructions, menus, and pick-and-point screens. Now, those busy "management types" who "never have the time" to learn mainframe computing don't need to take the time. Infrequent users no longer need to "relearn" the system every couple of months.

EZNOMAD's micro-like capabilities access essentially all of the functions and power of NOMAD2. Imagine a senior manager in your company developing databases, creating applications, maintaining databases, and writing ad hoc reports — without your help.

Your senior management will not only be pleased with the capabilities of EZNOMAD, they will also be delighted with the cost of EZNOMAD—its's free to all NOMAD2 licensees.

In other words, you get the ease-of-use of a micro and the tremendous power and flexibility only a mainframe can deliver. And the price is right.

It's nice to know that when you pick NOMAD2 as the 4-GL/DBMS for your company, EVERYBODY will know first-hand that you've made the right choice.

EZNOMAD is the latest innovation in end-user computing from Dun & Bradstreet. NOMAD, now NOMAD2, has evolved over the years to keep pace with the demands for providing business professionals with maximum computing power. EZNOMAD is a major stride in that direction.

VSI-RESOURCE for VM/CMS VSI-MULTITERM for VM/CMS VSI-RESOURCE for VM/CMS VSI-MULTI

THE MAN HAS GONE CRACKERS!

Last month the boss got a little crazy. He put our $2,500.00 MULTITERM product on the market for $500.00. This time he has definitely gone over the edge. He says for 30 days our VM PERFORMANCE MONITOR/CAPACITY PLANNING system (VSI-RESOURCE) goes for $2,000.00 plus $300.00 annual maintenance.

So if you want real time performance monitoring, to see vmbloks without system dumps, graphics instead of numbers, ability to do online capacity planning ... VSI-RESOURCE is the answer when you need it, NOW!!

You have 30 days to order. Do you have any idea the amount of commission I'll lose at this price? As sales manager I think it's just too much. When you order, please include 2 aspirin in the envelope. No aspirin! No deal! Sales managers can get crazy too.

VSInc. Vision Software Incorporated

Sincerely,
Barbara Christensen
Sales Manager

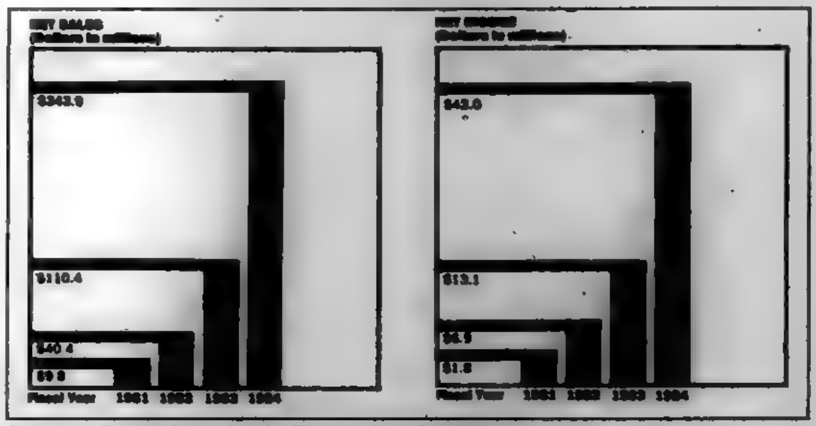
COMPUTER INDUSTRY



Seagate Technology, Inc.'s financial performance

SEAGATE

from page 73

Industry watchers also said the rigid media industry is basically healthy and will rebound, based on the market's acceptance of integrated software, AT&T Unix-based applications (requiring higher capacity products) and a revitalized personal computer workstation sector.

However, Seagate must contend with a hard-disk market that is branching in two different directions, according to David Claridge, a senior analyst at the venture capital investment firm of Hambrecht & Quist. The direction is toward smaller, lower cost drives for the transportable and single-user market and to full-size, higher performance drives destined for multiuser systems, he said.

Seagate is addressing both markets with recently announced products, claimed Doug Mahon, Seagate's senior vice-president and chief technical officer. Presently in the works are a drive for the IBM Personal Computer AT, a family of 3½-in. products (perhaps destined for IBM's portable computer), several intelligent disk drives that allow the drive's controller to communicate with the CPU and a high-capacity line of 5¼-in. voice coil products.

Rags-to-riches story

Seagate's corporate history is a classic Silicon Valley rags-to-riches story. In 1979, Connor approached Shugart, then president of a floppy disk drive company he had founded called Shugart Associates, predicting an exponentially growing market would emerge for hard disk drives among microcomputer users. Shugart, Connor, Mahon and Thomas Mitchell founded Seagate in November of that year and, in 1980, shipped $10 million worth of 5¼-in. rigid disk drives, offering six times as much storage and access times 1½ times faster than floppy disks.

The market took off and, by 1982, 8% of the microcomputers sold were equipped with hard disks. In 1983, the steep growth curve continued — Seagate shipped 200,000 drives and posted revenues of $110 million.

But by the second half of 1984, the boom ended. Seagate's sales plunged from $100 million to $50 million. The company remained profitable, however, raising cash-on-hand from $13.7 million to $29.7 million and boosting equity to $165 million.

To ride out the slowdown, Seagate is carefully guarding its resources. In October, recently appointed Seagate President and Chief Operating Officer David Mitchell said the company, which laid off 700 employees last July, has frozen hiring and will sell a never-used manufacturing facility in Watsonville, Calif.

"We definitely [have] no cash flow problems," he said, alluding to a $40 million multibank line of credit.

DunsPlus: The Micro Solution That Reflects The Way You Do Business

You've heard the buzzwords: user friendly, integrated, smarter, faster, cheaper. But when you push the rhetoric aside you're still asking the same question, "Why can't I get a system that solves more problems than it creates?"

You can. It's called DunsPlus and it's built to respond to your information-related business demands without creating demands of its own.

DunsPlus gives the IBM PC XT a built-in business environment. This lets you mold DunsPlus to fit the way you do business.

Within the DunsPlus environment is a software base of the best. Lotus, MultiMate, Western Union electronic mail (to name but a few), are all ready for immediate use. But additional programs to solve your unique problems can also be added with ease.

Instant, yet controlled, access to your choice of mainframes and subscription databases is also a part of the DunsPlus environment. And transferring data throughout the system is as easy as moving a piece of paper from the In Box to the Out Box.

Immediate end-user productivity is not an issue: DunsPlus is a menu-driven system requiring minimal keystrokes for maximum results.

Installation is not an issue: DunsPlus is installed by IBM.

End-user training is not an issue: Training and support are part and parcel of DunsPlus.

Flexibility is not an issue: Any part of the DunsPlus solution--hardware, software, or service--can be tailored to meet your precise business needs.

In fact, there are no issues. DunsPlus does what you want, the way you want it--now.

Designing systems that reflect the way you do business is business as usual for us. NOMAD2, the premier 4th-Generation-Language/DBMS from D&B Computing Services, has made us a leader in the field of information management services. And as your needs evolve, so do we. DunsPlus is just the latest step in translating technological advances into usable business tools --tools that reflect the way you do business.

New high-tech firms boast third-quarter growth in

OUTSIDE LINES
Bohdan Szuprowicz

Bankruptcies, layoffs and liquidations have intensified among high-technology firms in recent months, but at the same time more new firms than ever before showed a spectacular growth performance in earnings and revenues.

Storage Technology Corp. became the largest computer company ever to file for Chapter 11 of the Federal Bankruptcy Act, yet at least 30 rapidly growing, publicly owned firms have seen their revenues increasing by at least 100% during the third quarter of 1984, compared with the same period in 1983.

Twenty-two of those firms — over a third more than a year ago — also registered simultaneous increases in earnings per share (EPS) of more than 100%, which sets a record since 1983 when we began keeping track of such superperformance.

Absence of micro software

What is significant about those top performers this quarter, however, is the virtual absence of microcomputer software or even minicomputer disk drive manufacturers that often dominated this list in previous quarters. This time, the fast-growing firms are primarily in semiconductor-related and telecommunications-based industry segments, with just a spattering of firms from among peripherals and memory-media suppliers.

Micron Technology, a small start-up that took on the Japanese in cutthroat competition for a share of the 64K-byte random-access memory semiconductor market, made it to the top of our list this quarter with a spectacular performance, increasing its EPS by 2,900% and continuing similar growth levels during the second quarter of 1984, which earned the firm second place on our list three months ago.

The company went public in June 1984 at $14 per share and rose as high as $40 per share in the aftermarket, making it one of the year's best-performing initial public offerings.

Lam Research Corp., which also made our list for two quarters running, is perhaps not widely known, but the company represents a new crop of manufacturers in the critical plasma-etch equipment industry, which is vital for expanding very large-scale integration (VLSI) microchip production. The company is at the cutting edge of the VLSI revolution, which is now gathering momentum and will drastically change the semiconductor industry.

Advanced Micro Devices, Inc. and SEEQ Technology, Inc. are two other semiconductor manufacturers on our list, and Mentor Graphics Corp., Valid Logic Systems, Inc. and Daisy Systems Corp. are the big three suppliers of computer-aided engineering (CAE) workstations and design systems that are making custom and semicustom VLSI products an economic reality.

Among the top-performing firms in the general area of telecommunications, 3Com Corp. and Ungermann-Bass, Inc. are the first two public local-area network manufacturers whose appearance on this list underscores the rapid growth of local-area network markets that has been under way for the last two years. Optronics and Fibronics International, Inc., on the other hand, represent an even faster growing segment of electro-optical systems and components — many of which end up in fiber-optic local-area networks, robotic systems, artificial vision and factory automation, where specialized industrial local-area networks are among the fastest growing of all high-technology markets today.

VMX, which markets voice mailboxes used as electronic answering services, began shipping its systems to large corporate cli-

BEHIND EVERY SUC
IS AN M.I.S. DIREC

revenues, earnings in period of increased casualties

ents and major telecommunications equipment and service suppliers. It was the first of the voice store-and-forward equipment and services suppliers to go public last year and appears to be growing rapidly in a new market segment. Equatorial Communications Co., which makes small earth stations for low-cost satellite communications networks, became an instant hit with institutions when it went public a year ago; now almost 50% of its stock is in institutional portfolios. COM Systems is a manufacturer of computerized telephones; Digital Communications Associates, Inc. is a leading independent supplier of large data communications networks; and Walker Telecommunications provides marketing, engineering and other services to the industry.

Of the remaining top performers, Apollo Computer, Inc. needs no introduction. It has already earned itself a place as one of the biggest successes ever since going public in early 1983. Apollo

Apollo is now clearly among the new leaders in 32-bit supermicrocomputer or workstations product categories and its future remains very bright, provided it moves fast enough to keep ahead of the VLSI-driven competition.

Quality Micro Systems, Inc., among the original independent laser printer suppliers in the U.S., has made our list because the nonimpact printer segment of the market is soaring, particularly with the strong growth in the laser printer niche.

Computer Memories, Inc.; Xidex Magnetics, a subsidiary of Xidex Corp.; and Wyse Technology, Inc. round off the list of top performers.

Szuprowicz is president of 21st Century Research of North Bergen, N.J., and publisher of Supergrowth Technology USA.

Datapoint consolidates to cut costs

SAN ANTONIO — Datapoint Corp. recently announced further moves to consolidate its operations, and it was further reported that the company's management faces intervention from an investor who was responsible for altering strategies substantially at two other computer vendors earlier this year.

The company, which experienced a 73% decline in profits to $1.5 million for the quarter ended Oct. 27, said it would combine the manufacturing activity from its Fort Worth, Texas, plant with its plant here and would close the Fort Worth plant effective Jan. 31.

A spokesman for the company also said it was lengthening by several days the traditional holiday season production shutdown.

The Fort Worth closing will enable the company to reduce overhead costs of manufacturing operations and to bring production and inventories in line with demand, according to a spokesman.

The holiday shutdown extension, from Dec. 17 to Jan. 4, lengthened from the normal shutdown of Dec. 21 through Jan. 2, will permit the company to balance the output of its work force with product demand pending the Fort Worth closing, the spokesman said.

Meanwhile, *The Wall Street Journal* reported last week that investor Asher B. Edleman was expected to file with the Securities and Exchange Commission notification that he holds shares and options totaling nearly 10% of Datapoint's stock.

The newspaper reported that anonymous sources said Edelman will attempt to influence management or take control of the company.

CESSFUL BUSINESSMAN
TOR WITH CLOUT.™

"I JUST GOT THE BEST PRESENT A MANAGER COULD GET."

In most companies, there's one thing managers want even more than corporate perks or bigger staffs.

Information.

And they'll drive your whole DP staff up the wall trying to get it. They'll ask you to round up data that's scattered all through the company. Then expect you to sort it a hundred ways from Sunday. And deliver it last week.

Even worse, they'll buy carloads of PCs, then come running to you for help every time they forget how to plug one of them in.

But now, there's a way to give these global marketing heavies the answers they've been looking for. And give yourself a break at the same time.

All you do is take the mainframe data they want—and download it into their PCs, hard disks, or network servers. Then give every one of them a new software program called Clout.™ It's as simple as that.

"IT WRAPS UP FILES FROM LOTUS 1-2-3,™ PFS:FILE,™ DBASE II,™ THE MAINFRAMES, AND MORE."

In the past, it used to be near impossible to pull information together from different sources, without re-entering every bit of the data.

But the new Clout takes data files directly from these popular programs—plus ASCII, DIF and SYLK files, too. So users can get information from other PCs by sharing floppy disks. Or being part of a LAN. Clout can even read files that have been transmitted from the company mainframe. Or another PC.

Anytime users have a question, they just ask—in their own words! Clout will scan up to 40 of these files automatically, cross-reference five simultaneously, and there's the answer. They don't have to know exactly how the data is organized. Or even in which file it's stored. Best of all, Clout won't let these high-powered managers pollute the database. No matter how hard they try.

"NOW THE WHOLE DP DEPARTMENT CAN GET A CHRISTMAS BREAK."

Clout's self-guided, step-by-step tutorial makes learning so easy, your staff will spend less time training these people. And more time on the things they do best. Like figuring out ways to improve operations. And maybe, vacationing in the Bahamas this winter.

"GIVE YOURSELF A BONUS. GET A DEMO TODAY."

Clout's suggested retail price is less than $300—a small price to pay for a big boost in productivity. But if you prefer we'll send you a full demo of Clout for only $6.95 (plus shipping). Just call 1-800-547-4000, Dept. 927 In Oregon, or outside the U.S., call 1-503-684-3000, Dept. 927 Or get in touch with your nearest computer or software store.

And see what it's like to wield a little Clout.

CLOUT™
FROM MICRORIM®

Requires 256K of memory. Runs on MS-DOS and PC/DOS operating systems. Hard disk recommended.

IBM to face marketing, productivity challenges by

By John Desmond
CW Staff

TARPON SPRINGS, Fla. — Because IBM's manufacturing costs, as a percentage of revenue over a 13-year period from 1976 to 1989, will rise by 9%, selling expenses must be shaved by an equivalent amount to meet profit targets.

This scenario was outlined by Gartner Group, Inc. vice-president Stephen P. Cohen at a conference for IBM large-systems users here recently.

According to the Connecticut-based market research and consulting firm, costs increased from 36% of revenue in 1976 to an estimated 41% in 1984 and a projected 45% in 1989.

Will not cut R&D

IBM will not cut research and development budgets, since it must compete with such potential threats as the Japanese firms and AT&T.

Cuts will be made from selling and general administration expenses, a marketing and productivity challenge for IBM, said Cohen, Gartner's director of Industry Service and a former IBM strategic planner.

Gartner Group estimated that IBM plans to cut selling expenses from 18% of income this year to 15% in 1989 and to cut general administrative expenses from 9% to 7% in 1989, Cohen said. Expense as a percentage of revenue is targeted for a reduction from an estimated 35% this year to 30% in 1989, he added.

Staffing expenses to rise

The expense burden of the marketing staff, estimated to be $110,000 per person this year, is projected by the Gartner Group to rise to $140,000 per person in 1989 if the expense is held to the rate of inflation.

The estimated revenue generated per member of the marketing staff, $613,000 this year, would have to rise to $929,000 to meet IBM objectives, Cohen said. That rise would be equivalent to a 52% improvement in five years. "That's the challenge IBM is facing," Cohen said.

This challenge assumes that IBM will keep pace with a projected 18% annual industry revenue growth and can hold its sales expenses per man-year to inflation. If IBM fails in either objective, its sales force would have to generate even greater than 52% improvement, Cohen said.

"Either IBM's profitability will suffer and [it] will not achieve [its] objective, or IBM will not be able to price [itself] as competitively as [it] would like and [it] will not be able to achieve the market share [it] would like," Cohen said.

"All strategies IBM has embarked on in the area of selling, administration, service and manufacturing are oriented around achieving that productivity," he added.

Methods for strategies

Among methods to achieve the strategies, Cohen said, IBM will employ the following:

■ It will use its direct sales force only for big-ticket customers, promote long-term commitment through account plans (suggested long-range growth paths), presell products with more statements of direction and automate elements of the sales cycle.

■ It will use alternate marketing channels for smaller customers, trying to lower the cost of selling. "If you can't eliminate selling expense entirely, the next best thing is to do that selling with a lower paid person," Cohen said.

■ It will design products to minimize selling expense, with features including ease of use for end-user products and standard user interfaces to lower training and support expenses.

■ It will design products for improved reliability, availability and serviceability. Improved diagnostics and field-replaceable units will aid this goal, Cohen said.

Another way for IBM to reduce service expenses would be to absorb unneeded field engineers elsewhere in

trimming budget, 9% rise in expenses

the company, Cohen said. But, he added, IBM will go slowly in moving its field engineers out of fear the engineers might form a union.

In manufacturing strategy, IBM will turn to the OEM market more in order to spread costs over a bigger base, Cohen said, pointing to the recent agreement between IBM and Honeywell, Inc. to market older IBM mainframes as one example.

'IBM will get more aggressive'

The Gartner Group projected that IBM's long-term revenue growth rate will be 16% annually; thus, IBM will lose market share if industry revenue grows at an 18% annual rate. Meanwhile, the market share of the Japanese is increasing, Cohen said. As a result, "IBM will get more aggressive," he said.

The aggressiveness could result in products with little competition being priced higher, software prices increasing rapidly and software fees being based on usage rates, he suggested. IBM now has decision support software with a price based on the number of signed-on terminals users, he noted.

IBM will use financial muscle to block competition and penetrate new markets, he said. When competition emerges, IBM will drop prices to try to thwart it, he said, noting the experiences of Storage Technology Corp. and Control Data Corp. in the disk drive business.

AMD halts DOD chip shipments

By David [illegible]
CW Staff

SUNNYVALE, Calif. — Advanced Micro Devices, Inc. (AMD) recently suspended the shipment of certain integrated circuits to U.S. Department of Defense contractors after an internal audit discovered discrepancies between the company's testing procedures and those of its contractors.

Advanced Micro, a semiconductor manufacturer, said shipments will not resume until the company can determine that its testing procedures are meeting customer specifications. Deliveries of the chips were halted Dec. 1.

"The inconsistencies were discovered as part of a special audit of all customer special test specifications following discovery of similar situations at several other manufacturers of integrated circuits," said Jim Lynch, vice-president of quality assurance and reliability.

The Advanced Micro action is the latest in a series of testing irregularities at major manufacturers of military chips. Earlier this year, Texas Instruments, Inc. and Signetics Corp. reported testing problems, and Schlumberger Ltd.'s Fairchild division has notified the Department of Defense that some of the chips it supplied to contractors may have been improperly tested.

A spokesman for Advanced Micro said the company has not been informed of any disciplinary action by the Defense Logistics Agency, the Department of Defense's procurement unit.

The spokesman said the chip testing question "has brought about a complete review of everything. All these occurrences have prompted everyone to look a lot closer" at test procedures, he said.

Last March, National Semiconductor Corp. pleaded guilty to federal charges that it falsified test data for chips supplied to the military.

Advanced Micro said shipments of joint Army-Navy products and standard catalog products were not included in the suspension. The company said after its Dec. 4 announcement that it expects to complete a review of its testing procedures within 120 days. "We think we can do it by then," a company spokesman said.

A company spokesman said it will immediately resume shipments to customers where no inconsistencies are found.

YOU KNOW WHO'S MAINFRAME?

This real life nightmare can make any DP manager lose sleep.

You want to give more people access to your corporate mainframe, so they can get the information they need.

Which is nice.

Except that when you start adding terminals in different locations, how you do control access?

How do you restrict who can upload—and who can download? How do you keep hackers, intruders and other undesirables from invading your mainframe?

DATA COMMUNICATIONS PRODUCTS FROM PROTOCOL COMPUTERS. TECHNOLOGY THAT HELPS DP MANAGERS STAY IN CONTROL.

Only Protocol Computers offers both protocol converter boxes and add-on communications boards with positive security features to help you control who gets access to your mainframe. And who doesn't.

Rest easy.

PCI can show you how to connect virtually any ASCII device to an IBM mainframe. And control mainframe access with positive security.

For example, our PCI protocol converter boxes and PCI-Link add-on communications board both require users to identify themselves with a special password before they can access your host.

That gives you an extra measure of protection.

What's more, PCI protocol converter boxes also offer automatic log-off. So even if your user forgets, your PCI protocol converter will automatically disconnect from the mainframe. Which means unauthorized inquiries are automatically locked out.

FOR MICRO TO MAINFRAME COMMUNICATIONS, NO ONE TALKS TO IBM LIKE PROTOCOL.

There's another reason you know you're secure with PCI. We're the leader in protocol conversion technology.

In 1980, we introduced the first successful protocol converter. And today, more than 9000 PCI boxes are installed worldwide, handling data communications for leading companies in diverse industries. Including aerospace. Oil. Packaged goods. Manufacturing. Banking. And retail.

The fact is, PCI connects more ASCII devices to more IBM mainframes than any other protocol converter manufacturer.

And PCI is the only single source that offers a complete range of data communications products.

Advanced protocol converter boxes. Communications boards. And powerful support software.

So we can show you how to connect virtually any ASCII device to an IBM mainframe—in Bisync and SNA/SDLC.

With greater performance. Less cost. And the positive security you need.

For complete technical information on the full range of PCI data communications products, call 1 (800) 423-5904. In California, 1 (818) 716-5500. Or just send the coupon.

Your DP nightmares are over.

Tandon files patent complaint

By David Gimes
CW Staff

CHATSWORTH, Calif. — Tandon Corp. has filed a complaint with the U.S. International Trade Commission charging three Japanese companies and their American subsidiaries with infringement of a patent covering floppy disk drive technology.

In its action, Tandon, a disk drive manufacturer based here, is seeking an investigation into the alleged infringements and an order barring future imports of the Japanese disk drives involved in the complaint.

The complaint names Mitsubishi Electronics Corp. and its U.S. subsidiary, Mitsubishi Electronics America, Inc.; Teac Corp. and its U.S. subsidiary, Teac Corp. of America; and Sony Corp. and its U.S. subsidiary, Sony Corp. of America.

'Imminent demise' of industry

Tandon's complaint, filed Dec. 6, warned of the "imminent demise" of the U.S. floppy disk drive industry as a result of the alleged Japanese infringements. U.S. disk drive manufacturers have been hurt by competition from Japanese imports. The suit cites the estimate of industry analyst James N. Porter, editor of the "Disk/Trend Report" newsletter, that the Japanese will be the world leader in floppy disk sales by 1985.

In a related action, Tandon filed a patent infringement suit in U.S. District Court in Los Angeles against the same Japanese parent firms and subsidiaries. The suit seeks to bar further sales of the Japanese disk drives. It also seeks unspecified damages and asks that the damages be trebled as a result of the alleged "willfull, deliberate and intentional" patent infringement.

Spokesmen for the Teac subsidiary in Montebello, Calif., the Mitsubishi subsidiary in Torrance, Calif., and the Sony subsidiary in Compton, Calif., said they have not yet received copies of the complaint and would not comment until they do so.

Complaint's allegations

The complaint alleges that Mitsubishi and Teac have imported double-sided floppy disk drives through their American subsidiaries that infringe upon patents held by Tandon. It further charges that Sony, through its subsidiary, has imported 3½-in. double-sided floppy disks that constitute an infringement of Tandon patents.

The Tandon complaint claims that the patent is "one of the most valuable in the floppy field," having enabled Tandon to manufacture double-sided floppy disks that could be mass-produced at a low cost. Tandon further claimed that the invention "has been a major factor in sustaining the explosive growth of the microcomputer industry."

Tandon said it has granted licenses for the patent to several U.S. manufacturers, including IBM; Hewlett-Packard Co.; Shugart Associates, Inc.; Magnetic Peripherals, Inc.; and Micro Peripherals, Inc. The suit claimed that, because of Japanese competition, Micro Peripherals has since gone out of business, and Shugart decided to close a large portion of its California disk drive facility in October.

Plug Them Into Paradyne's PIXNET.
With PIXNET, terminals and high-speed peripherals can be placed in any location. In another building or another town.
They'll be gone but not forgotten. Because they'll still behave like local devices, under the control of your same CPU over your same communication lines.
The "Speaker Foolez."
With Paradyne's PIXNET, remote = local. The host CPU will think your remotes are right in the same room. So remote devices can be run from their own locations.
Access any program or application, in any computer on the network, from the remote location.
Low-Cost Network Expansion.
Widen your data operation with this cost-effective networking innovation.
Move a device, a CPU, or a department over the weekend and be up and running Monday morning.
With no extra front-end processors. No extra software, for host or application. No extra burden on the host.
Improved Remote Performance.
Run high-volume IBM 3890 check processors from your home office mainframe. With PIXNET you can process 100,000 documents an hour at your remote site with no additional CPU power.
Print up to 90 pages a minute remotely with Paradyne's Remote High Speed Page Printer. Paradyne's PIXNET also improves the performance of remote high speed printers and IBM 3270s.
Call today and find out how we can put your remote devices on their best behavior.

If your product or service belongs in the automated office, your ads belong in February's Computerworld Focus.

There's enough information about office automation to fill a book. And that's exactly what we'll be doing with February's issue of *Computerworld Focus.* Which makes it *must* reading for just about everyone involved in the state-of-the-art office. And must advertising for anyone with products or services to sell into the automated office.

Inside, your prospective buyers will find the valuable, objective information they need to make intelligent decisions.

They'll find out what the experts think in areas like planning and implementation strategies, technologies and product selection. We'll analyze everything that's available from software to hardware to communications to…you name it. We'll even show readers how to mix and match state-of-art with "old reliable" for the most effective information systems available.

And we'll reach over 126,000 paid *Computerworld* subscribers with that information. Not to mention our high pass-along readership. And bonus distribution at OAC '85 in Atlanta, GA.

But the value of your advertising dollar doesn't stop there. Because Starch INRA Hooper will be performing a detailed readership study* on our February issue. So you can see how effective your ads are. And how effective your competition's ads are. And make some decisions of your own.

So if you've got products aimed at the automated office, there's one sure fire way to make sure your advertising works. Get your ads in *Focus. Computerworld Focus.* The February 6th issue. Closing January 4th.

For more information, contact Ed Marecki, National Sales Director, *Computerworld Focus,* 375 Cochituate Road, Framingham, MA, 01701, (617)879-0700. Or call your nearest sales office, listed below.

TI to lay off 2,000; continued chip sales decline cited

DALLAS — Texas Instruments, Inc. recently announced plans to begin cutting approximately 2,000 jobs from its work force next month. The company cited the "continued weakening of the worldwide semiconductor market."

The TI development, which followed by one week Honeywell, Inc.'s announcement that it plans to lay off 1,000 people at its Synertek, Inc. semiconductor unit and intends to sell the subsidiary, indicates that semiconductor orders, which have slumped over the past few months, may not rebound as quickly as industry participants had expected [CW, Oct. 29].

The layoffs at TI will primarily affect its Texas facilities, the company said. Additionally, reduced work schedules are being implemented in some plants, according to TI.

Reportedly, the job cuts will reduce by 5% the portion of TI's work force engaged in semiconductor manufacturing, the largest portion of the company's business.

TI said employees affected by the reductions will either receive severance pay or be placed on furlough. Those on furlough will receive compensation from TI to supplement unemployment compensation for up to 26 weeks and will continue to have benefits coverage during the period in which they receive the supplemental compensation.

Over the past few months, book-to-bill ratios, which compares new orders with shipments, reported by the Semiconductor Industry Association have plummeted to new lows. In September, the rate of new orders fell below shipments for the first time in two years and has slipped even lower since then.

Industry observers and participants told *Computerworld* in October that the decline was probably due to the tendency of systems developers to double-order from chip manufacturers during periods of high demand.

Those observers had expected the situation to level off by the end of the year. The recent developments, however, indicate that the situation has worsened and suggest that the industry may be poised on yet another of the cyclical slumps that it has traditionally suffered during a slowdown in economic activity.

Why the time has never been better to get your own subscription to Computerworld.

FREE CLOCK WITH YOUR SUBSCRIPTION.

Subscribe to *Computerworld* now, and we'll send you this miniature, personal computer clock. Free. The clock displays the date, the hour, minute and second, and makes a handsome desktop piece for your office. And as we said, it's a gift from us to thank you for becoming a new subscriber to *Computerworld*.

51 ISSUES OF *COMPUTERWORLD*

In addition to the free timepiece, of course, you'll receive our regular 51 issues of *Computerworld*. So you won't have to wait for a co-worker's copy to keep up-to-date on what's taking place in the industry.

YOU'LL ALSO RECEIVE SPECIAL FOCUS ISSUES

As a *Computerworld* subscriber, you'll also receive our highly-acclaimed COMPUTERWORLD FOCUS issues — at no extra charge. Published once a month (except July and December), these bonus issues focus on a single topic. Here is a sampling: UNIX™, Office Automation, Microcomputer Software, Business Graphics, Applications Software, Manufacturing, Networks, Systems Software, Microcomputer Hardware. COMPUTERWORLD FOCUS helps you plan, purchase, and save money. And these bonus issues are sent only to *Computerworld* subscribers — it's like getting a subscription to a second magazine FREE!

As you can see, there are plenty of reasons to subscribe to *Computerworld*. So don't rely on someone else to lend you theirs. Be well-informed — with 51 issues of *Computerworld* plus the COMPUTERWORLD FOCUS issues — without having to wait.

Now you know why the time has never been better to subscribe to *Computerworld*.

UNIX is a trademark of AT & T Bell Laboratories.

☐ **Yes!** Please enter my subscription for one full year (51 issues) of *Computerworld* at $44. Plus all 10 COMPUTERWORLD FOCUS issues at no extra charge . . . plus my FREE gift with my paid subscription. (Please allow 6-8 weeks for shipment of your free gift.)

SBS appoints IBM executive to presidency

MCLEAN, Va. — Satellite Business Systems (SBS) last week named Marvin L. Mann as its president and chief executive officer, replacing Steven B. Schwartz, who was appointed assistant group executive for IBM's Telecommunications Products organization in the Information Systems and Communications Group.

Mann was previously vice-president and general manager of IBM's Lexington Business Products unit in Lexington, Ky.

Schwartz has been assigned the role of overseeing the incorporation of the latest IBM acquisition — Rolm Corp. — into IBM's business operations. He will retain a role at SBS as a member of the executive committee.

IBM owns 60% of the SBS partnership, and Aetna Life & Casualty Co. of Hartford, Conn., owns 40%. IBM recently increased its ownership share of SBS, buying out one-third of the interest in the Communications Satellite Organization.

SBS is a nationwide telecommunications company serving more than 150,000 business and residential subscribers.

COURT

from page 73

about the NCR Comten program to IBM in violation of federal licensing and copyright laws.

Since then, the impending courtroom battle has widened to include assertions by NCR Comten that IBM violated federal antitrust laws and a request by Evergreen for damages against NCR Comten, based on the allegation that it called Evergreen "an IBM spy" and damaged the firm's future business.

Evergreen lawyer James Keir claimed "Evergreen just got caught in the middle." The company was doing a straightforward investigation, he said, asking several manufacturers, including NCR Comten, to provide technical manuals for devices competing with the IBM 3705 when the alleged violation was discovered.

NCR Comten attorney Raymond Fitzsimmons said no definite date has been set for the trial, which is expected to begin early next year.

Mark Steinberg, a spokesman for O'Melveny & Myers, the Los Angeles-based legal firm representing IBM in the case, said Evergreen "acted properly in reporting the apparent theft of IBM's property" by NCR Comten. Steinberg would not comment on IBM's strategy but claimed that NCR Comten's allegations are "without merit" and that "IBM plans to respond vigorously to [NCR Comten's] antitrust allegations."

Only Answer/DB connects all these dots.

The more mainframe access you give your users, the happier they'll be.

They'll be more productive, too.

Answer/DB® is fast becoming the industry standard for universal data access. It addresses every mainframe file with a single, easy-to-learn language.

Users can get answers to simple queries on-line. It makes them more efficient, and your company more competitive.

Answer/DB operates in OS and DOS, interfacing with all database structures—in TSO, IMS/DC or CICS environments.

Users can integrate data from several files and generate detailed reports and inquiries—without DP help.

They can even download data to personal computers, where they can use it in the familiar PC programs they already know. Answer/DB interfaces with LOTUS™/Answer™, dBASE™/Answer™ and VisiAnswer.™

Answer/DB frees DP staff from routine tasks and request bottlenecks. But it keeps control of the mainframe resources and complete security at the DP level, where it belongs.

If you'd like to sample Answer/DB, without the pressure of a presentation, mail this coupon. We'll send a demonstration package, free of charge.

In less than an hour, you'll see that Answer/DB is powerful enough to deliver all the data your users need.

Yet so easy, it's almost child's play.

Yes, happier users sure would be nice. Send me a free Answer/DB demo package.

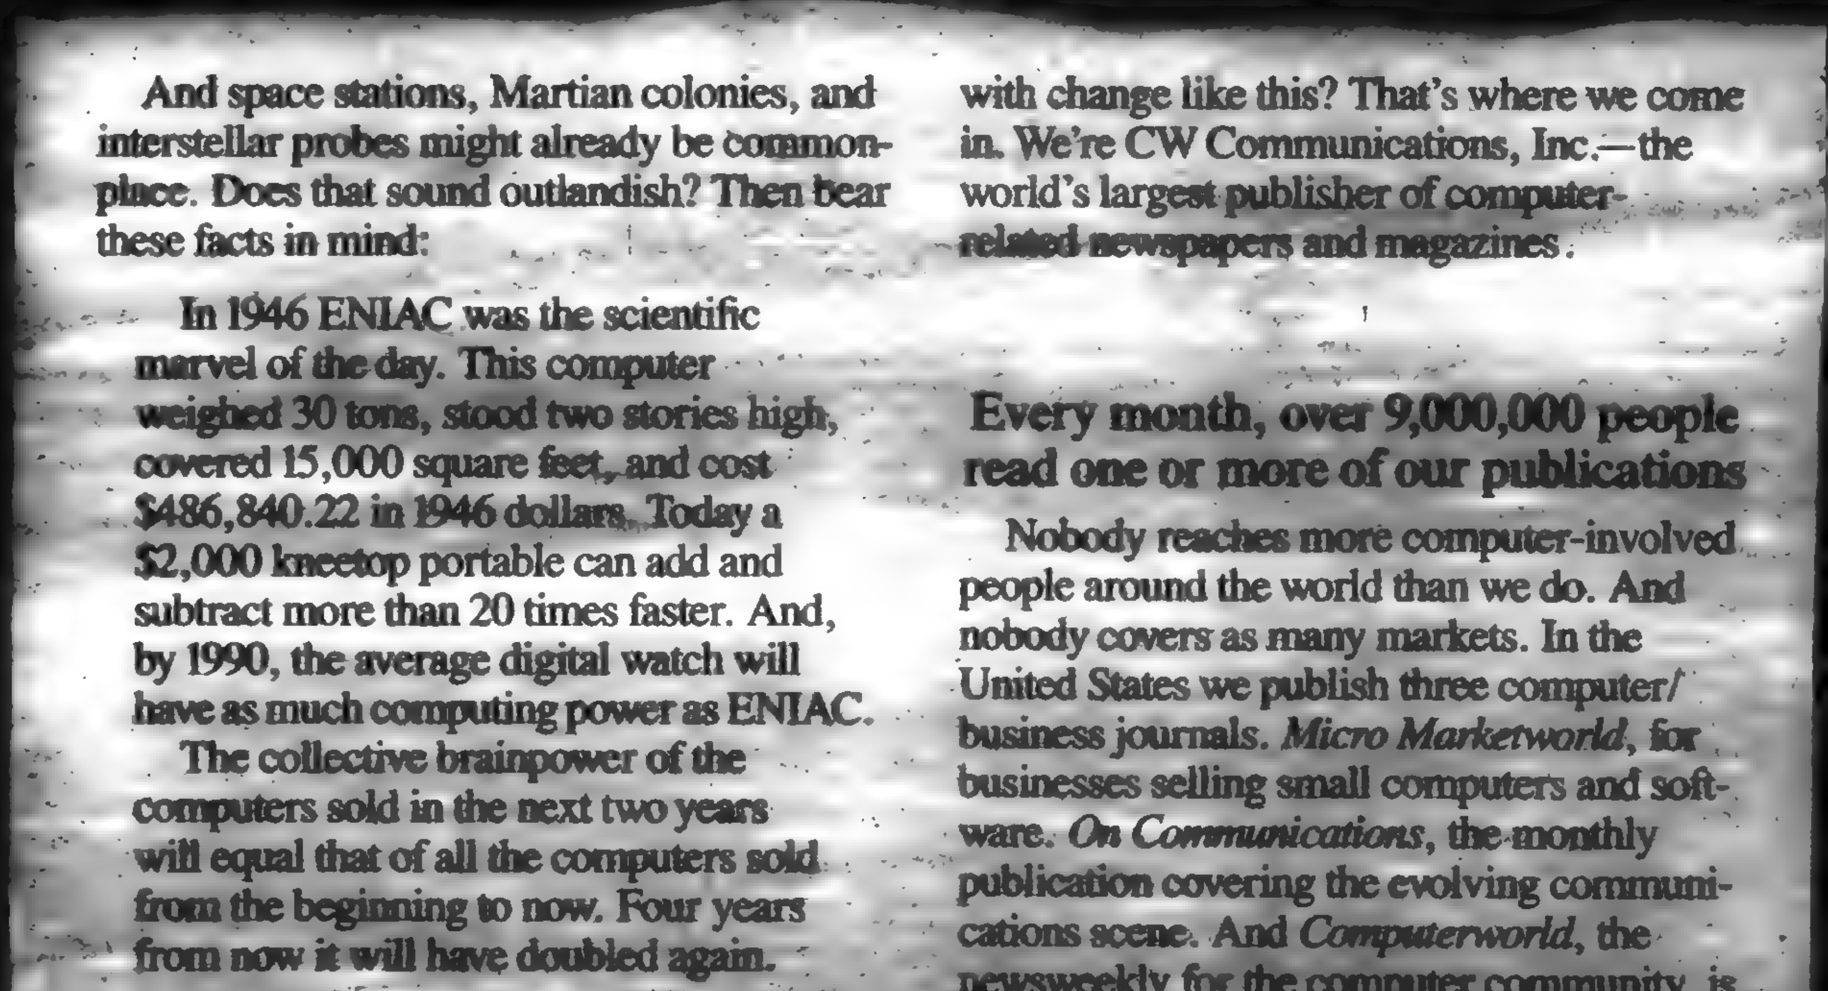
informatics general corporation.

If the space program had advanced as fast as the computer industry, this might be the view from your office.



And space stations, Martian colonies, and interstellar probes might already be commonplace. Does that sound outlandish? Then bear these facts in mind:

In 1946 ENIAC was the scientific marvel of the day. This computer weighed 30 tons, stood two stories high, covered 15,000 square feet, and cost $486,840.22 in 1946 dollars. Today a $2,000 kneetop portable can add and subtract more than 20 times faster. And, by 1990, the average digital watch will have as much computing power as ENIAC.

The collective brainpower of the computers sold in the next two years will equal that of all the computers sold from the beginning to now. Four years from now it will have doubled again.

It's hard to remember that this is science fact, not fiction. How do people keep pace with change like this? That's where we come in. We're CW Communications, Inc.—the world's largest publisher of computer-related newspapers and magazines.

Every month, over 9,000,000 people read one or more of our publications

Nobody reaches more computer-involved people around the world than we do. And nobody covers as many markets. In the United States we publish three computer/business journals. *Micro Marketworld*, for businesses selling small computers and software. *On Communications*, the monthly publication covering the evolving communications scene. And *Computerworld*, the newsweekly for the computer community, is the largest specialized business publication of any kind in this country.

[illegible]

The other [illegible] monthly [illegible]

AEA

from page 73

that the answer to that question is basically no — though there are differences on how to get at a solution. In its latest report on the situation, the AEA warned that a shortage of engineering faculty at U.S. universities may lead to a decline in the quality of electrical and computer science engineers. With not enough engineering teachers to fill vacant teaching slots, some engineering schools have had to turn away qualified high school applicants, the AEA said.

The AEA has been troubled by the problem for some time. A 1981 study by the AEA projected a shortage of 129,000 electrical and computer science engineers by 1985. Yet another study, issued last year using data compiled during the recession months of early 1983, pegged the shortage at 113,000 by 1987.

The latest study noted that, in the past decade, enrollments of engineering students have doubled, while the number of engineering faculty has risen just 10%.

According to the study, this imbalance has meant more crowded classrooms, course cancellations, increased teaching loads, less time for faculty research and more dependence on part-time faculty and teaching assistants.

In the AEA's view, a resolution to the faculty and student shortages is essential if American computer companies are to stay economically competitive. "A sufficient faculty supply is essential both to the quality and quantity of these [engineering] graduates," concluded Pat Hill Hubbard, the AEA's vice-president of engineering and technical education, who prepared the report.

But is the engineering shortage really as big a problem as the AEA purports? Like the AEA, the National Science Foundation concluded in its own recent study that the demand for computer and electrical engineers and computer scientists will grow by 10% to 15% during the next several years, and that there will be a significant shortage of computer scientists. The science foundation, however, foresaw that the shortage of engineers will be met by people crossing over into the field from other occupations.

The AEA is not convinced that the shortage problem can or should be resolved in the way proposed by the science foundation. So the trade association has worked to tackle the problem by its own methods.

AEA member companies have contributed $7 million through the AEA's Electronics Education Foundation. This money goes mainly to fund loans and fellowships for doctoral students in electrical or computer engineering or computer science. More than 120 graduate students at more than 30 universities are now receiving these fellowships. The AEA believes that without an increasing number of U.S. citizens receiving Ph.D.'s in engineering, more faculty posts will continue to go to foreign-born Ph.D.'s.

In other efforts, the AEA has lobbied federal and state lawmakers to raise salaries of engineering faculty, to provide tax incentives for corporations donating computer equipment and to provide matching grants with state legislatures to fund a variety of higher education initiatives.

ROBOTS

from page 73

the RIA said, indicates that total 1984 shipments will reach $290.3 million or more, compared with total 1983 shipments of $194.4 million.

"More robots have been shipped in 1983 and 1984 [combined] than in the previous 20 years combined, dating back to the development of the technology," Weisel noted. RIA figures show that 3,060 robot units were shipped in 1983, and at least 3,951 will have been shipped in 1984.

Based on new orders, the RIA said, the average price of an industrial robot dropped from $74,100 in 1983 to $59,200 in mid-1984. Weisel attributed the price cuts mostly to stiff competition in the U.S. market and, to a lesser extent, economies of scale in robot manufacturing.

He added that while prices have dropped about 20%, there has been a concurrent 20% increase in robot capabilities, due to advances in software, computer interfacing and sensory abilities.

Weisel and Vincent said the number of industrial robots installed in the U.S. has risen from 9,400 in 1983 to about 13,000 today, a number still far below the 41,000 robots installed in Japan. Vincent asserted that the U.S. robots tend to be more sophisticated technically and have better applications software than the Japanese robots.

Because the Japanese government subsidizes its robot industry, Vincent said, the U.S. industry will ask Congress in 1985 for tax incentives to improve its competitive position.

Robert Smith, RIA's lobbyist here, expressed concern that the Department of the Treasury's recent proposal for business tax reform would sharply reduce the ability of manufacturing industries to invest in robot systems. He cited the proposals to eliminate the 10% investment tax credit and the accelerated depreciation schedule that was enacted in 1981 [CW, Dec. 10].

On another subject, the RIA officials said that robots will not cause substantial unemployment in the next few years because robots typically replace other equipment rather than human laborers, and employment in the robotics industry itself now outstrips any unemployment caused by the robots. However, the officials stressed that worker retraining programs are needed to prevent widespread job displacement in the next century if a robot boom develops.

Announcing

The one-stop, international advertising service for micro marketers.

You'll reach microcomputer buyers all over the world with *Computerworld's* International Marketing Service (CWIMS). Because we have the microcomputer market *covered* with an international network of publications. And what a market!

As the need for computerization in government, industry and educational systems all over the world becomes more acute, countries look to the cost-effective, adaptable microcomputer to bring them into the computer age. This means a very lucrative market for the U.S. micro marketer, since international product demand exceeds product supply.

Now, with the help of *Computerworld's* International Marketing Services, you can advertise in twenty magazines devoted exclusively to supplying information to microcomputer users in: Australia (*MicroWorld, Australian PC World*), Brazil (*MicroMundo*), Canada (*PC World Canada*), Denmark (*Micro Verden*), Finland (*Mikro*), France (*Golden, OPC*), Japan (*PersoCom World*), Mexico (*Compu Mundo*), Norway (*Mikro Data, PC Mikrodata*), Sweden (*MicroDatorn, Min Hemdator*), Spain (*Micro Sistemas*), Sweden (*Svenska PC World*), The Netherlands (*Micro/Info*), West Germany (*MicroComputerwelt, PC Welt, Run*). And your advertising message can reach buyers of microcomputer products and services around the world through special micro sections in any of over 40 publications in 25 countries.

Act now—and take advantage of this international demand for microcomputer products. Whether you want to test the market—or locate a distributor or representative—our publications will put you in touch with the right people around the microcomputer world.

For more information on getting international micro coverage, call Diana La Muraglia, General Manager, International Marketing Services, toll-free, at 800-343-6474. In Massachusetts, call 617-879-0700 or return the coupon below.

POSITION ANNOUNCEMENTS

VALLEY NATIONAL BANK OF ARIZONA has current openings for professionals in an IBM State of the Art environment. Current openings include:

SENIOR SYSTEMS SOFTWARE SPECIALIST

Valley National Corporation is a large tele-processing and systems user. Current systems include such software as MVS/XA, IMS 1.3/FAST PATH, and currently examining MSC/ISC. An immediate opening is available in an area of major growth in the Corporation, CICS. An experienced technical individual (3-5 years) is needed who can participate in application design reviews, project management contacts, and performance and tuning. The position includes contact with user areas and a required knowledge of good verbal and written skills. Opportunities for career growth and knowledge of other online systems if desired are available for the self-starter.

LEAD SYSTEMS SOFTWARE SPECIALIST

A current need exists for a project leader in online Systems Software (IMS, CICS). The qualified individuals background must include first-line supervision, good communications skills (including formal presentations) and project management skills. This position provides technical leadership to technicians responsible for supporting, enhancing, and tuning the online environment.

SENIOR OR LEAD SYSTEMS SOFTWARE SPECIALIST

Position exists for experienced VM Systems programmer. The qualified individual would possess 3+ years installation, maintenance, and enhancement of IBM's VM/SCP, strong assembler skills, knowledge of VM communications facilities with exposure to ASCII interfacing. Preferred skills include OS/VS1, MVS, VTAM and knowledge of capacity and performance management.

If interested in these career opportunities, please submit resume and salary history in confidence to:

CHALLENGES IN MANAGEMENT INFORMATION SYSTEMS

YOUR FUTURE may be with CALDOR'S rapidly developing M.I.S. Department bringing us both to the verge of tomorrow's state-of-the-art. We are searching for professionals who have the expertise, drive and commitment that will enable us to rapidly expand our environment to include IBM 308X, OS, MVS, Data Base, VTAM, CICS, and an extensive communications network gathering financial, inventory and personnel information.

OPPORTUNITIES FOR:

•Project Managers •System Analysts
•Programmer/Analysts
•Data Base Analysts •Systems Programmers

Caldor, a division of Associated Dry Goods Corp., is one of this nation's most dynamically expanding retail operations having sales well in excess of $1 billion with 103 stores in 7 northeastern states. Anticipated expansion will take us to 150 stores and the $2 billion sales range within the next 5 years. This dramatic, growth oriented environment coupled with our commitment to develop a staff that can provide the sophisticated data critical for our continued success makes Caldor the place for those seeking serious career challenge and personal rewards.

For prompt, confidential consideration send your resume or letter of interest to our Data Center, attention: William [illegible], V.P. of MIS, Dept. 300, Caldor Inc., 20 Glover Ave., Norwalk, CT 06852.

CALDOR

expanding throughout the Northeast

SENIOR SYSTEMS ANALYST

Research Medical Center is a 583 bed hospital with a progressive environment designed to meet the specialized health care needs of Kansas City.

We currently have a position available in the Data Processing Department for a Senior Systems Analyst with 3-5 years experience in design and implementation of large scale systems in a distributed D.P. environment. Your exposure to and knowledge of P.C.'s will be an asset. We are an IBM 4341 DOS/VSE shop supporting data base technology in utilizing ADABAS, NATURAL, COBOL and CICS products.

Research Medical Center offers a competitive salary and excellent benefits including a child development center on the hospital grounds as well as access to our corporately owned fitness center. For confidential consideration, send your resume to Sharon Baker, Employment Interviewer.

RESEARCH MEDICAL CENTER
2316 E. Meyer Blvd.
Kansas City, MO 64132

An Equal Opportunity Employer M/F/H

DIRECTOR OF MIS

Progressive, medium sized organization in the sunbelt is seeking a dynamic individual to take over as its Director of MIS. The successful candidate will play a major role in expanding the company's current computer based information system. Position involves a high degree of visibility and responsibility, coordinating activities across departmental lines. Direct supervision of a small professional/technical staff and contractors in development and operation of multimillion dollar system for real time operations control and management information. Requires bachelor's degree in computer sciences or related field and at least 5 years of applicable experience to provide a comprehensive knowledge of business data systems. Salary from the mid 30's to 40's plus excellent fringe benefits. Send confidential resume with salary history to Personnel Dept., P.O. Box 12489, San Antonio, Tx. 78212.

Data Base Administrator

SMUD

Sacramento Municipal Utility District

Sacramento, located between San Francisco and the Sierras, has enough sunshine year-round to enable us to build the world's largest experimental solar energy project. Our median housing cost of $78,000 and low utility costs help make us one of the top 10 hot growth spots in the U.S.

We have an immediate vacancy for a professional DBA to be at the front end of corporate DB design/installation/maintenance. We have a progressive data processing department with a large IBM Main Frame (3083), IDMS Software and MVS JES 3, so IDMS Software experience is very desirable.

We provide excellent benefits and civil service retirement system.

Obtain a SMUD application and file immediately for early consideration, but this announcement will be open until we find the right person for the job. Contact SMUD Personnel, 6201 S Street, P.O. Box 15830, Sacramento, CA 95852-1830. We are in a growth model Equal opportunity employer.

THE SCHUMANN CONSULTING GROUP

We are a well respected consulting group with about 300 employees. For the past 13 years, we have been providing a wide variety of services in the fields of management, organization and data processing on behalf of important clients in West-Germany, Italy, Spain and abroad. Within the field of EDP, especially system consultancy, we are among the leading companies in Europe. We are now considerably expanding our Systems Consulting Section and are therefore looking for several new members of staff.

WE REQUIRE:

SYSTEM SPECIALISTS

to handle interesting and demanding system-related assignments using IBM equipment.

You should have the following qualifications:

- detailed knowledge and several years of experience in one of the following fields:
  - Networks, especially SNA and VTAM
  - MVS system programming and tuning
  - DOS/VSE system programming and tuning
  - Migration: DOS to MVS
  - Data communications, especially CICS
  - Capacity planning
- sound theoretical training with an academic degree or equivalent in mathematics, computer science or engineering
- wide experience in system programming and generation
- practical experience in installation and management of DB/DC systems
- good knowledge of English and at least basic German

Successful candidates will not only have the necessary professional experience, but also the ability to apply their particular experience as skilled consultants. They will also need flexibility, willingness to expand their professional knowledge, as well as the drive and ability to work as team members.

We are offering attractive salaries and results-oriented bonuses. Please write, quoting the above reference, and enclosing all relevant credentials. For further information contact Mr. Tuechter. Tel.: Cologne: 0221/798091-(95).

All applications will be treated confidentially.

If you are looking to recruit computer professionals your first step should be to advertise in COMPUTERWORLD

Chances are, it will be the step needed!

We're the number ONE trade newspaper for the computer industry. It makes sense, then, that advertising in Computerworld should be the first and most logical step to take when searching for quality computer industry professionals.

With exposure to over half a million readers, there are bound to be plenty of people who are looking for what you have to offer. This means a greater number of responses to your advertisement and a wider selection of candidates from which to choose. And you shouldn't have to look any further.

Computerworld publishes every Monday with an ad deadline of 10 days prior to each issue date. You may send in copy to be pubset or camera-ready material (velox or negative) via the mail. We provide telecopier service and will also take simple ads over the phone.

SENIOR ANALYST / PROGRAMMER

The Pennsylvania State University Library (LIAS) Computer Operations Div.

The heart of Pennsylvania-Nittany Valley's Centre Region and Penn State's Library (LIAS) Computer Operations offers the best of all worlds, e.g., cultural events, a rural setting and a challenging work environment.

A senior level position is currently available—dynamic, creative, away-from-the-big-city opportunity—for qualified individuals to be involved in state-of-the-art software design and development of integrated information systems. Become a member of a modest-sized research and development team using dedicated computer facilities ranging from multi-processor, large scale computers (Honeywell, DPS8/C's) to personal computers (MS-DOS, CP-M, etc.).

Define and formulate statements of problems; devise solutions, preparing block diagrams and system specifications. Analyze system and program logic; recommend and make revisions. Verify program logic with test data, test and debug program. Prepare documentation to assist in training, operation and maintenance of the system.

Requires Bachelor's Degree (or equivalent) in Computer Science plus 3 to 4 years of effective experience in computer programming and analysis. Experience in analysis and development of library computer systems preferred. Microcomputer experience highly desirable.

Liberal fringe benefits, including educational privileges. Send an application letter, current resume and three letters of reference to: Employment Division, 117 Willard Building, Box CW-100, University Park, PA 16802. Please state salary requirements. Application deadline, January 14, 1985. An Equal Opportunity/Affirmative Action Employer.

Call your local ROMAC™ office to have a free "How-To-Hire-A-Key-Employee" brochure sent to you at no obligation, or call our corporate office. 800/341-0263 or 207/773-6387

"I told Mr. Bigelow I could find the right person for the right job, right now."

Wrong.

It's easy to tell the boss you can fill any job opening when the time comes. But what happens when the time comes? How do you go about finding just the right person for that key position, or worse yet, key positions? Before Bigelow starts asking questions?

We specialize in placements in computer technology, corporate accounting, public accounting, finance and banking. And our staff comes from these fields. Our national system has on file thousands of professional applicants. And we can help you find the right person for the right job, right now.

EDP Instructors/ Course Developers

NCR is a $3.7 billion computer company that places great emphasis on the development of effective training programs. High performance systems put a premium on course content and instruction.

This makes NCR Engineering and Manufacturing in Columbia, South Carolina a special place for gifted trainers. The spectrum of advanced generation, leading edge products we've created includes a very powerful UNIX* based microcomputer called the Tower. You'll be joining one of NCR's most prestigious and highly motivated engineering organizations.

Your responsibilities will include developing courses, and instructing computer professionals in a broad range of topics related to The Tower and other state-of-the-art computer systems. Content will include programming languages, UNIX operating system, data communications, and various other design/development topics. Courses will be continually changing to keep up with new system developments.

If you have a BS/MS in CS or EE, and have demonstrated ability to teach in a technical environment, we offer recognition and advancement factors you should investigate without delay.

Please send confidential resume with salary history to: Mr. Gordon Davidson, Dept. N56, NCR Corporation, 3325 Platt Springs Road, West Columbia, South Carolina 29169.

"A Fair and Equitable Employer"

COMPUTERWORLD CLASSIFIEDS--
--*PROGRAMMED TO HELP YOU*

The computer industry is dedicated to developing greater efficiency and valuable time-saving resources for the business world.

Well, so are **Computerworld Classifieds.**

And we can deal with a lot of problems. Our classifications include:

Position Announcements – To help you find the computer professionals right for you.

Positions Wanted – For individuals seeking full-time, permanent positions - no company ads are allowed.

Buy, Sell, Swap – For those seeking to buy, sell or lease computer equipment.

Time & Services – For companies who want to offer computer timesharing or other computer-related services.

Software For Sale & Software Wanted – Used for buying & selling software packages.

Business Opportunities – For those seeking individuals or partners in computer-related business ventures, mergers, or franchises.

Real Estate – For those seeking to sell or lease office space suitable for computer rooms or computerized businesses.

Bids & Proposals – Used to request for bids on equipment or to invite proposals for desired computer acquisitions.

Here's the data you need to know to place your ad:

The deadline for classified advertising is ten days prior to the issue desired. (That's six working days prior to the issue date). Ads may be sent in by mail. For camera-ready ads, a velox or negative is required. For ads to be typeset by us, enclose a layout if needed, along with any logos or artwork you would like to include in the ad. These must be dark and clear for reproduction purposes.

Our ad takers will be happy to take smaller sized ads over the phone. We can provide simple line borders for you, if desired.

We also provide telecopier service at extensions 410 and 451.

The open line rate is *$10.35 per line and there is a minimum size ad of 2 column inches (28 lines) at a cost of *$289.80. Column inches are calculated by multiplying the number of columns wide by the number of inches deep that your ad is. Depth increases in half-inch increments and we accomodate up to 5 columns. Column widths are as follows:

1 column – 1 13/16" or 11 picas
2 columns – 3 13/16" or 23 picas
3 columns – 5 13/16" or 35 picas
4 columns – 7 13/16" or 47 picas
5 columns – 9 13/16" or 59 picas

If you wish a box number to be assigned to your ad, it will cost an additional *$15.00.

First-time advertisers must send either payment or a purchase order along with their ad.

So, whatever the problem, simply supply us with the data we need to help you on your way to a solution, quickly and efficiently.

If you wish to reserve space, or would like more information, call us at 1-800-343-6474 or (in Mass.) 617-879-0700. All materials should be sent to:

COMPUTERWORLD Classifieds
Box 880, Framingham, MA 01701

** All prices reflect the 1985 price increase.*

Equal Opportunity Employer

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN SENIOR RESEARCH ENGINEER DATA COMMUNICATIONS NETWORK

The College of Engineering at UIUC requires a Senior Research Engineer to define, implement, and control the installation of an innovative computer network; supervise its maintenance and expansion; and ensure its operation. The network will involve 600 professional work-stations 500 pc's, 32 minicomputers, and several mainframes and will be integrated into campus-wide facilities. This is a non-tenured academic/professional position.

Applicants should have the management experience in data communications and networking to be able to assume full responsibility for the network. Requisites: Baccalaureate in a computer-related area and experience in data communications. Experience with UNIX is highly desirable. Starting salary: $30,000/year and up as a function of experience. Anticipated starting date: April 1985. For full consideration, applications must be received by Feb. 15, 1985. Apply to: Professor A. L. Addy, 144 Mechanical Engineering Building, 1206 W. Green Street, Urbana, IL 61801; (217) 333-1126.

The University of Illinois

DIRECTOR, COMPUTER APPLICATIONS PROGRAMS

We are a major national organization and the leader in our field with headquarters in Chicago. We are searching for a highly motivated individual with 5-10 years experience as a manager of an applications programming development and support group.

This position has responsibilities both on a local and national level for a variety of applications programs, from business systems to communications network systems.

Specific qualifications would include:

- A Bachelor's degree in computer systems, or indepth equivalent experience directing a group of some 25 professionals.
- Experience in both IBM and Burroughs environments desired.
- CICS and IMS applications systems experience required.
- Ability to manage multiple projects and to make difficult management decisions.

As a key member of our management team, you will report directly to the officer in charge of business operational strategy for this national organization operating in 50 states.

For confidential consideration, forward your resume and salary history to:

SYSTEM 38 PROFESSIONALS

Location - Pittsburgh

Technical

• TELECOMMUNICATION SPECIALISTS
• SYSTEMS PROGRAMMERS

Develop and implement an extensive telecommunications network in a distributed processing environment with system 38's. Communicating in (SNA/SDLC) and (BSC) protocols over switched and non-switched lines using a variety of transmission speeds to a broad range of devices. Provide a full range of support to the interactive-/batch environments for applications development concurrent with normal production activities. Develop APPC programs for a peer relationship between multiple system 38's. Use performance measurement tools to identify potential operating improvements. The candidates for the above position will have a minimum of two years' experience on System 38 utilizing RPG II or III. IBM Series/1, Audio Response, and/or IBM PC experience a plus.

Applications

• SENIOR PROGRAMMER ANALYSTS
• PROGRAMMER ANALYSTS

Senior candidates will have systems design experience and 3-5 years of programming experience. Good communications skills are required because of the extensive user interaction that will take place while designing many new systems. No old systems currently exist that need to be interfaced to, enhanced, or maintained. A working knowledge of RPG III, Basic, or COBOL is required. System 38/36/34, or System/3 experience is a plus. We are seeking ambitious, self-starters who have a desire to use their developmental skills in multiple System 38's environment.

We are a new Pittsburgh based subsidiary of a billion dollar service corporation, the leader in our industry. This is a unique opportunity to get in on the start up of a high growth operation. We offer an excellent compensation and benefits program. Qualified candidates should send their resume and salary history, in confidence, to:

CW-84082
Computerworld, Box 880
Framingham, MA 01701

Your Strategic Career Choice

Does your career need a strategic boost? If so, you should consider Dartmouth's professional program in the design and management of information systems.

Our two-year Master's program is designed to equip tomorrow's information systems managers to play a leading role in the design and development of effective business solutions to business problems. We offer a blend of technological, management, and communication skills, and a record of career advancement.

Students in Dartmouth's CIS Program spend one term as interns in a variety of sponsoring organizations. On campus, they study the broad fundamentals of information systems, networks and distributed processing, current analysis and design methodologies, database management systems, communication and management skills crucial to effective planning and implementation, and the social, ethical, and organizational issues related to information systems. Case studies and guest lectures by practicing managers of information systems and professionals-in-residence are regularly featured.

If you have previous experience in the computing field but want to be equipped to assume more responsibility and leadership, why don't you consider joining us next year? For more information, write:

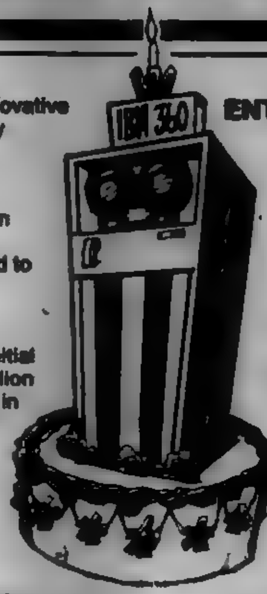
THE RANDOLPH STORY... SINCE 1965.



Randolph, the most innovative and the most financially stable computer lease-financing company of the 1980's, had its beginning in 1965, when Randolph Computer Corporation was formed to lease IBM's newly-announced S/360 computers.

The company's initial bankroll—over $18.0 million—was a hefty sum back in 1965, although it would be considered only petty cash in respect to Randolph's current daily leasing activities. But it was a start—and a good one.

OFF AND RUNNING. Randolph quickly established a reputation for leadership in the computer leasing industry. Just four years later, in 1969, The Travelers Insurance Corporation acquired all outstanding Randolph common stock. The company continued to grow, to add new customers for S/360's and peripherals. By 1972 Randolph's portfolio included over $180 million of computer hardware.

ENTER . . . THE BANK OF BOSTON. Then, in late 1972, the Bank of Boston purchased Randolph's S/360 assets through a subsidiary, Firstbank Financial Corporation, to become the first bank in the United States to enter the business of leasing and financing computers. The Bank administers these assets through Randolph, which is still staffed essentially by the same team of professionals who have an average of 18 years experience in the computer leasing and data processing industries.

LEADING THE INDUSTRY. Today Randolph provides lease-financing for IBM systems—CPU's and peripherals. Our customers continue to benefit from the skills of the most seasoned management team in the industry. And Randolph's affiliation with Bank of Boston gives added assurance that they can continue to depend on the company's unique financial stability.

STABILITY YOU CAN BANK ON. The Randolph name and distinctive logo headline all of Randolph's advertising and communications, reminders that the first team in computer leasing will continue to provide high-quality lease-financing for all of IBM's computers and related equipment . . . to live up to the terms and conditions of its agreements . . . provide upgrades . . . and fulfill all of its commitments.

MISSISSIPPI CENTRAL DATA PROCESSING AUTHORITY

Sealed proposals will be received by the CDPA, 508 Robert E. Lee Building, Jackson, MS 39201 for the following data processing equipment and services:

Request for Proposal No. 869, due Tuesday, January 8, 1985, at 3:30 p.m., for the acquisition of IBM's Customer Information Control System or equivalent software package for ALCORN STATE UNIVERSITY.

Request for Proposal No. 870, due 3:30 p.m., Thursday, December 20, 1984 for the acquisition of components necessary to add 16 ports to an existing Atlantic Research Corporation Technical Control Center for the STATE COMPUTER CENTER.

Request for Proposal No. 871, due 3:30 p.m., Thursday, January 3, 1985 for the acquisition of a COBOL program development package to run under AOS/VS/INFOS on two Data General MV/8000 systems at MISSISSIPPI STATE UNIVERSITY.

Detailed specifications may be obtained from the CDPA office. The CDPA reserves the right to reject any and all bids and proposals and to waive informalities.

COMPUTERWORLD

COMPUTERWORLD's paid circulation climbed to over 126,000 this fall. Folio 400 (Folio Magazine's study of trade publication performance) placed us first in total revenue. As the industry grows, so will COMPUTERWORLD. It will continue to offer the high quality news coverage and editorial content that has attracted its readers. What does that mean to you, our advertisers? Good news...in the form of wide exposure.

The Classified section of the newspaper is laid out in an attractive format and is easy to read. It offers classifications to solve a variety of problems: Position Announcements, Positions Wanted, Buy - Sell - Swap, Software For Sale, Software Wanted, Time & Services, Real Estate, Publications, Bids & Proposals, Auctions, Seminars & Conferences and The Bulletin Board.

Our BULLETIN BOARD section is ideal for the smaller companies who want a low-cost way to sell pieces of equipment (hardware or software). The BULLETIN BOARD is laid out as a quick reference for potential buyers who know what they are after.

So, as a nationwide publication, we give you the exposure you want. As a weekly publication, we give you the immediacy your advertisements need.

A number of special issues of COMPUTERWORLD are scheduled to run in 1985. Each of these issues will feature one aspect of the computer industry and give our advertisers a chance to reach a more select audience. These are the topics the issues will cover:

- December 31, 1984 & January 7, 1985 Combo Issue - '85 Forecast (There will be an early close for this issue on Thursday, December 20th)
- January 28 - Applications Software Pkge.
- February 25 - Communication Networks
- March 25 - Graphic Systems
- April 29 - Micros in Big Business
- May 27 - Manufacturing Systems
- June 24 - DBMS
- July 8 - NCC Preview
- July 15 - NCC Show (early close July 3rd)
- July 22 - NCC Wrap-Up
- August 26 - Software Productivity Packages
- September 30 - Minis & Small Business Systems
- October 28 - Data Communications Terminals
- November 25 - Protecting The Corporate Information Resource
- December 30, 1985 & January 6, 1986 - Forecast '86

COMPUTERWORLD publishes every Monday with an ad deadline of 10 days prior to each issue date. (Notice early closing for combo issue.) You may send in copy to be pubset or camera-ready material (velox or negative) via the mail. We provide telecopier service and will also take ads over the phone.

Information concerning classified advertising rates, color costs, ad sizes, mechanical specifications along with more detailed information on the special issues is contained in the 1985 Rate Card #20 and Media Kit.

The Bulletin Board

Our Low-Cost Way to Sell Your Equipment in Computerworld

What is The Bulletin Board?

We have a classified section designed to help you buy or sell individual software and hardware. It's especially suited to companies with a piece of used equipment for sale. For one low price, you can advertise to over half a million **Computerworld** readers nationwide.

How Does The Bulletin Board Work?

- The Bulletin Board is designed to advertise only one piece of equipment or software per unit.
- Units are one column wide by one inch deep at a cost of $ 140.00 per column inch. Although several units may be purchased for one advertisement, there will be no quantity discount.
- All ads are standard in format and typeface. No special typeface, borders or logos are allowed. Copy may be up to 25 words per unit.
- The Bulletin Board ads are listed by manufacturer or by product type under appropriate headlines.
- Ads are set on a six-column page in our classified section under "The Bulletin Board".

How to Place an Ad in the Bulletin Board:

- We suggest you prepare your ad before contacting us. Here are some guidelines:
  The first line is set in larger, bold type and should contain standard equipment identification.
  The body copy should describe the equipment and state the price.
  The closing should supply the seller's name and telephone number.
  This is all the information an interested buyer needs for follow up.
- Ads are accepted by mail, phone or by telecopier.
- Deadline is 7 days in advance of Monday issue.
- If you have never advertised with **Computerworld**, we request a check with your order.
- The Bulletin Board ads are not agency commissionable nor may they be applied to contract advertisers inch count.
- We assume no liability for errors beyond the price of the ad.

Here's the Address and Phone.

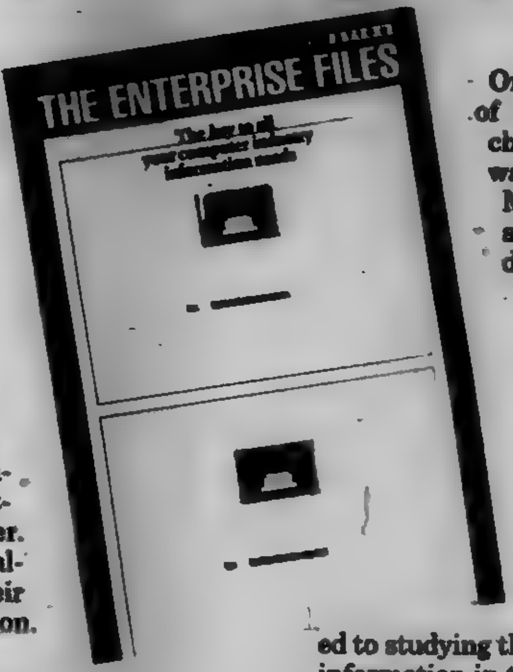
You Have To Offer Here In...

COMPUTERWORLD's

Classified Pages.

Send for this FREE brochure and find out why the Enterprise Files may be your most important marketing tool



The Enterprise Files from International Data Corporation give you the detailed sales information you need to stay ahead in today's competitive computer market.

Now you can locate prospective clients, fine-tune your promotional campaigns, and track competing companies. And you'll do it all quickly, easily, and accurately.

When you subscribe to the Enterprise Files you'll get up-to-date facts on more than 13,000 companies and the 35,000 computer-related products & services they offer. Many leading organizations have already made the Enterprise Files their number one source of information. Here are four reasons why...

1) Comprehensive listings

The Enterprise Files are divided into two general categories, Vendor Files and Product Files.

Each vendor profile includes: company and division names, parent company, address and telephone number, type of company, number of employees, years in business, target industries, target applications, key corporate executives, geographic coverage, and product/service offerings.

Every product profile includes: price, model number, date of introduction, the number of installations, channels of distribution, and market status. Also, each product or service is researched individually, with up to 25 product-specific characteristics identified.

You'll get everything you need to compare product specs and contact vendors.

2) Custom packaging

No matter which companies and products interest your organization, you can get the information you need, the way you need it. Because the Enterprise Files are available in three ways. You can choose the complete file, any of 26 standard subfiles, or custom packaging. So you'll pay only for what you need.

3) Easy to use

Once you've determined what kind of information you need, you can choose between three convenient ways of receiving your information. Magnetic tape for permanent storage, pressure sensitive labels for direct mail promotions, and hard copy for a handy resource tool.

4) Accurate listings

The information in the Enterprise Files is gathered and updated daily by International Data Corporation. IDC has been the leading market research firm covering the information processing industry for 20 years. And IDC is the only firm solely dedicated ed to studying this market. So you can rely on the information in the listings.

Send for your FREE brochure today

Can you afford to be without this kind of detailed information about your industry? Put the Enterprise Files to work for you. Call Mike Hovagimian today to get your FREE copy of our brochure. It describes what the Enterprise Files are, what your custom packaging options are, and includes a rate sheet. Call right now. You can reach Mike at (617) 872-8200.

Or, if you prefer, fill out the coupon below and return it today.

☐ Yes, I want to get all the latest market information. Rush me a FREE copy of your brochure today so I can see how the Enterprise Files can help me.

MSA WE ADD THE GENIUS TO COMPUTERS.™

The Software Company.

MEET THE SYSTEM THAT MAKES BORDERLESS FACT. NOT FANTASY.

INFORMATION EXPERT™

Borderless. ■ You've heard the word enough. And until now, that's all it's been. A word. Not reality. ■ But Management Science America has changed that for good. ■ Introducing Information Expert™ (I.E.). The new mainframe software tool that gives you the level of system integration that some companies have been promising. But not delivering. ■ I.E. is truly borderless. ■ It removes the barriers between systems. Between the individual user and accounts receivable. And accounts payable. And general ledger. And more. So that the individual user can retrieve information and design reports from several application programs at once, even if they aren't all MSA programs. Simply and quickly. At one online terminal. ■ And I.E. is designed to meet the needs of a broad cross section of users. It's easy enough for first-time users—because commands are in plain English. And powerful enough for the most advanced DP specialist. ■ And I.E. also gives you higher levels of security than most other systems. ■ Only MSA gives you I.E. ■ It's a giant technological step into the future from the company that has quietly led the way in application software development. It will now be a part of all software MSA provides. The result of 3½ years of intense research and development, it's the tool that has taken the concept of total "system integration" out of the realm of theory and into the realm of fact. ■ To find out more about I.E., contact Robert Carpenter at (404) 239-2000. ■ Management Science America, Inc., 3445 Peachtree Road, N.E., Atlanta, Georgia 30326. ■ I.E. from MSA. ■ It's one more way we're adding the genius to computers. ■ Today and tomorrow. ■ ©1984, Management Science America, Inc.

System upgrades, integration of micros, quality personnel top DP execs' wish lists

By John Gallant
CW Staff

'Twas the night before Christmas
And all through the shop,
The systems were whirring
Production couldn't stop.
The stockings were hung on the mainframe with care,
In hopes that St. Nicholas soon would be there.

Ho! Ho! Ho! You there, you look like a DP manager, climb up on jolly old Santa's knee. Have you been good this year? Have you kept downtime to a minimum? Did you address that applications backlog? Did you maintain data integrity in the face of growing microcomputer use? Good. Now, tell Santa what you would like for Christmas.

Well . . . how about a bigger and faster CPU, Santa? "For my Christmas present, I would like a machine that we could never outgrow," said Donald Sitter, director of information services for Lyons Transport Lines, Inc. in Erie, Pa. "It seems that every time I turn around, we need a bigger or faster piece of equipment. We always need something more. I would like to have a machine that has a little dial on it that I could turn to make it bigger or to make it run faster."

Me too, Santa. "I would love to climb up on Santa's knee and ask for an upgrade to my CPU," laughed George Reid, DP manager for Safeway Stores, Inc. in Salt Lake City. "I would like to upgrade from our [IBM] 4331 Model Group 2 to a 4361. We are bringing our system right down to its knees with our current applications. We have got to improve our response time, too."

Wang beefs up mid-range line with VS 65 mini

Firm targets 32-bit unit at IBM System/36 market

By John Desmond
CW Staff

LOWELL, Mass. — Wang Laboratories, Inc. last week added to its mid-range VS office system product line by announcing the VS 65 minicomputer system featuring a 32-bit data path, capable of supporting up to 30 users and field-upgradeable from the low-end, 16-bit VS 15.

The company also announced that it is no longer actively marketing the VS 25 and VS 45 16-bit minis, leaving the VS 65 positioned between the VS 15 and the VS 85 in Wang's VS series.

The VS 65 features a proprietary CPU using parallel architecture, a 16K-byte, high-speed cache memory and up to 4M bytes of main memory. The VS 65's 32-bit CPU features a 200-nsec maximum instruction cycle time, compared with a 600-nsec maximum cycle time on the VS 15 and a 160-nsec maximum cycle time on the VS 85, a Wang spokesman said. I/O processing is off-loaded to an Intel Corp. 80286 microprocessor and updated from an Intel 8086 I/O processor on the VS 15, VS 25 and VS 45, said John Deutsch, marketing manager for VS products at Wang.

The VS 65 runs the VS operating system and supports industry-standard protocols, including asynchronous, synchronous, binary synchronous, X.25 and IBM's Systems Network Architecture/Synchronous Data Link Control, the company said. The VS 65 can also be linked to other VS systems and to Wang Professional Computers. The product is compatible with other VS systems and hosts in a distribut-

FYI

DP at the top of the world

By Donna Raimondi
CW Staff

Santa Claus' seemingly miraculous one-day toy drop to children around the world would be impossible without superb communications, computer facilities and lots of helpers — and finding these things in the frozen North is not always easy.

The biggest communications problem in that icy region north of the Arctic Circle is access to equipment locations, according to Jim Chatleain, Anchorage, Alaska-based sales representative for Alaskanet — Alascom, Inc.'s packet-switching network. There are no telephone lines north of Fairbanks, Alaska, and equipment cannot be accessed by road, Chatleain said. Any construction or computer equipment repair in remote places means flying in a crew.

Alascom launched Aurora, its own communications satellite, in 1982 and uses more than 170 earth stations to provide telephone service and data communications for small villages, government agencies and the oil companies that work the oil fields of Northern Alaska, Chatleain said. Small portable earth stations sit on the decks of oil rigs anchored in the sea.

Storms and snow threaten the equipment, so the larger, heated stations are cleaned off regularly, Chatleain said.

Villagers are hired to maintain the generators of the unmanned earth stations.

Computers for the Arctic Circle — airfreighted to their destinations —

Firms warned on 'intuitive' micro purchase decisions

Difficulty of factoring benefits hampers efforts at cost justification despite rising costs

By Eric Bender
CW Staff

At the Bank of Boston, "one of the major factors in the success of the personal computer was that it was free of charge to users," systems officer Vic Tine commented recently at a meeting sponsored by the Ledgeway Group market research firm of Lexington, Mass. In the early days, the bank's systems people told users, " 'We'll help you to do everything, and it won't cost you a nickel,' " Tine said. "We didn't try to cost-justify any of these things."

Today, a corporate personal computer bill may easily run into tens of millions of dollars, and users get their chance to foot the bill, but cost justification typically remains an inexact and limited process.

"Most people are buying micros for applications they intuitively believe in," noted Stephen Caswell, analyst with the consulting firm of Trigon Systems Group in Toronto. "If you're using a spreadsheet and doing things you never did before, what's the way to figure the benefits? What's the value of better decisions?" Caswell also said that the price of cost justification itself is substantial.

"The benefits are intuitively obvious," agreed Warren Kress, micro manager of the information center at Volkswagen of America, Inc. in Warren, Mich. "When you get to the point of measuring the secretarial hours and the executive hours saved on each machine, it's just ridiculous."

However, Peter Keen, consultant with Informational Technology Services, a consulting firm in Newton, Mass., said that companies should try to get a handle on the benefits. "We've gone through the seeding of these things; now companies have to see what benefits we've gotten," he said.

While some benefits clearly cannot be pinpointed, it makes sense for companies to list them and to examine those for which estimates can be assigned, Keen said. He noted that one of his clients set up a benefit-tracking questionnaire with nine categories: work eliminated, costs avoided, return on time, improved decision making, improved services, competitive edge, quality of work life, spinoffs and other.

> ***Many firms do not bother to cost-justify additional micros, while those that do keep cost justification relatively simple.***

Keen disagreed with the common view that buying microcomputers should not require any more justification than buying a telephone, pointing out that the micro purchase quickly brings up system decisions. "It's more like buying a [private branch exchange] than a telephone," he said.

Despite these concerns, many firms do not bother to cost-justify additional micros, while others keep it relatively simple, DP managers said.

In one typical response, Glen Fund, manager of end-user computing at GCA Corp. in Burlington, Mass., said he takes a hard look at the user's initial request for a system, but there is no specific formula.

"I want to see that they've given it some thought, that they're not just getting one because their neighbor's getting a machine," Fund said. Once the system is approved, users are past the hurdle and can get software relatively easily, according to Fund.

"Some people have to do a lot [of justification], some do not," said Andrew Langlois, assistant controller at Moore McCormack Resources, Inc. of Stamford, Conn. "We ask people to bring their ideas to our MIS group, first to see if they can do it with existing tools, and second to see if they can work with existing micros and users to build a tiny prototype, analogous to the classical feasibility study.

"Once beyond that, the guy has to complete an economic justification case," Langlois said. "A typical configuration costs $4,200 to $4,500 with a printer, extra memory and so on. We have to look at savings enough to pay for that in a couple of years or [the potential for] a sufficient competitive edge in the business."

Ken Sullivan, product marketing manager at Wang Laboratories, Inc. in Lowell, Mass., pointed to the personal computer's role in reducing DP backlogs and said, "I don't think a lot of hard justification has been necessary." However, he acknowledged that the micro situation is unusual in corporate purchasing. "Sometimes it seems totally against what I call industrial purchasing policy, but in the case of new technology, a consumer mentality has seemed to pervade the organization," he commented.

Some firms have taken a hard line that requires demonstrable cost avoidance, noted George Colony, president of Forrester Research, a consulting firm in Cambridge, Mass. "In one company growing at 40% per year, to get a micro you had to sign a paper saying, 'I will hire less than 40% additional people,' " Colony said. "But that doesn't really work indefinitely."

Court OKs STC finance plan

DENVER — Storage Technology Corp. (STC) received authorization last week from a bankruptcy court here to utilize up to $140 million in cash and receivables of its wholly owned subsidiary, Storage Technology Finance Corp. The plan will allow STC to tap a source of funds worth an estimated $80 million to continue operations while undergoing reorganization under Chapter 11 of the U.S. Bankruptcy Act.

A similar plan turned down a week earlier would have given superpriority creditor status to a consortium of banks that had loaned money to the subsidiary. That plan would have placed them ahead of all other unsecured creditors for claims to the parent company's assets.

According to a company spokesman, the approved plan provides "no real superpriority status." Many of the creditors of the subsidiary are also unsecured creditors of the parent company.

Following approval of the plan, Thomas F. Wands, STC's president and chief executive officer, said, "It will help overcome the concern of our customers and employees about the viability of [STC], and second, it will permit the company to move forward with its reorganization."

In the Nov. 19 industry spotlight report on the computer leasing industry, CMI Corp. was incorrectly identified as a Minnesota-based firm. CMI is based in Bloomfield Hills, Mich.

Fujitsu Ltd.'s FM-16 Beta personal computer is based on Intel Corp.'s 80186 microprocessor, not a Motorola, Inc. microprocessor as previously reported.

ADR® WARE™

ADR/ROSCOE®, VOLLIE®, THE LIBRARIAN®.

Examples of ADR's ability to design software with a future.

In an industry where few products are expected to have a long, useful life, one software company has consistently produced products with staying power. ADR.

Cases in point: ADR's ROSCOE, VOLLIE and The LIBRARIAN. ROSCOE and VOLLIE for on-line programming in the MVS and DOS/VSE environments. The LIBRARIAN for source program management control in virtually any on-line programming environment. VOLLIE was introduced over 8 years ago. ROSCOE and The LIBRARIAN have been in use for over 15 years. And although it may seem incredible, all three are still operating at peak efficiency for the over 10,000 installations that rely on them every day.

Because, and equally incredible, ROSCOE, VOLLIE and The LIBRARIAN are still considered state of the art today. Why? The fact is, ADR will not allow its software to become outdated. ADR software is constantly updated, so far at a cost of over $50 million over the years for ROSCOE, VOLLIE and The LIBRARIAN alone.

The LIBRARIAN has undergone 5 major rewrites since its introduction. ROSCOE and VOLLIE have undergone similar changes. Simply put, ADR doesn't believe in obsolescence. And if your software doesn't become obsolete, neither will your applications.

And when IBM introduces a new operating environment, program conversions aren't far behind. For example, when IBM changed its TSO-SPF architecture, it took 15 minutes to get The LIBRARIAN to work with it. And that was done over the phone.

ADR designs software that does more than interface. ADR software integrates. Each piece of ADR software builds on and enhances the performance of the others.

And nobody's products outperform ADR's on-line productivity products. Not even IBM's. The simple fact is that ADR software uses less of your computer's resources. For example, with ROSCOE, after the first terminals sign on, each additional terminal takes approximately an extra 35K of virtual memory. According to IBM's recommendation, with their TSO/ISPF, the same expansion uses an extra 2,000K.

ROSCOE also provides for a quick response time. And when your computer's response time is quicker, application development and maintenance go quicker. So your programmers produce more. And increased productivity helps solve the major problem facing data processing today—the application backlog.

When you use ADR software you can be sure you're using software that performs and will continue to perform.

So next time you're considering a new software product from someone else, ask to take a look at some of their old products. If they're still around.

Then call 1-800-ADR-WARE or mail us the coupon and learn more about the software that can help your computers do everything they promised.

Before you make a software decision mail in the coupon below.
Or call in N.J. (201) 874-9000 or toll free 1-800-ADR-WARE

Systems worth extra points to college football powers

By Paul Korzeniowski
CW Staff

The pot of gold at the end of a college football team's rainbow is a victory in a bowl game. During the holiday season, 34 teams will vie for gold in 17 contests.

Because these games feature the nation's best teams, the difference between victory and defeat is often miniscule. Last year, the national championship was decided when Florida's University of Miami defeated the University of Nebraska by one point in the Orange Bowl.

With the margin of victory so slight, teams' search for anything that will give them an advantage over their opponents. In some cases, computers help provide the desired edge. "Computers help a coach determine what an opponent will do in a certain situation," noted William Hemingway, a graduate-assistant football coach at Oklahoma State University. "That knowledge translates into a significant advantage in a game."

Computers have joined weight training facilities and practice fields as necessary tools for most collegiate football teams. "I would say that close to 90% of the collegiate football teams use computers in some way," said Wayne Hall, defensive line coach at Auburn University in Alabama.

Brian O'Connor, part-time scout for Boston College (BC), noted that computers provide two benefits: time savings and confidence in information. "With a computer, a coach doesn't have to sit, watch films and tabulate the number of times a team runs a certain play," the scout noted. "A report can produce that information."

Hemingway added, "Our computer saves our staff at least 24 hours each week. That additional time is a godsend."

More reliable than a coach's perception

In addition to saving time, a computer provides reliable information. A computer report that states that a team will pass 60% of the time in a certain situation is more reliable than a coach's perception of what the opponent will do, according to O'Connor, who helped design a package for BC's team that runs on the college's IBM 4341 mainframe.

Rather than designing its own package, Auburn is one of three bowl-bound teams running Sports Pac, a sports package from MDS Quantel Corp. in Hayward, Calif. Sports Pac runs on an MDS minicomputer and automates collegiate athletic department or professional sports team functions.

Hall's interest lies in Sport Pac's game preparation module, which was originally designed for the Tampa Bay Buccaneers in 1977. The first step in Auburn's use of that module requires two Auburn graduate-assistant coaches: One works a projector that shows film of the other team's games; a second enters data into the MDS system. "We enter data such as what yard line the team is on, what formation they line up in, where the hash mark is, what play they call and how many yards they gain or lose," the defensive coordinator said.

Once the information is entered, Hall can choose from approximately 250 reports the system produces. The reports tabulate what the opponent has done in previous games. "We are interested in learning the opposition's offensive tendencies," he noted. "For example, they may run to their left on third and two 80% of the time."

Then Hall and the other defensive coaches devise a plan to counter these tendencies. "If they consistently run to their left on third and two, we may decide to shift our defense that way," Hall explained.

While Hall uses the computer to monitor the other team's offense, the opponent can use a computer to mask its intentions. "A report may point to a tendency," said Ed Zaunbrecher, offense coordinator at Louisiana State University. "We then have two choices. If a play has proven to be successful, we can run it until a defense stops us. Or we may fake the play and try to fool the defense."

The guessing game progresses during the match. "We chart plays during a game and determine if the offense has made any adjustments," Hall said. "Sometimes there is more time to prepare for a game. There may be a week or two between games or before a bowl game. Then, teams are better able to mask tendencies, which makes my job more difficult."

Hall has worked with computer scouting systems since he was a graduate assistant at the University of Alabama 12 years ago. "Most systems are tied to a university mainframe," the coach said. "The team depends on someone else to run a program and produce a report. We do not share our system with any department. With 80,000 people sitting in the stands and a national television audience, it is obvious to a lot of people when we have prepared our team. We don't want to fail because the computer was down. In another department, employees may lose track of a few thousand dollars. But they will find it. Once we lose a football game, we can't get it back again."

Exec micro use on upswing

Survey finds young professionals leading the way in personal computer use

PARSIPPANY, N.J. — Executives are rapidly taking to the personal computer, and the younger the executive, the more likely he is to use a microcomputer in his office or at home.

A survey conducted by Trinet, Inc. — a subsidiary of Control Data Corp. — revealed that 35% of the 100 corporate executives surveyed use personal computers when making critical business decisions, up from 8% two years ago. About a quarter of the respondents use personal computers at home.

About half of the executives under 50 have adopted micros, compared with one-fifth of those over 50.

The survey was conducted among 100 corporate executives, each of whom is one of the top five officers in a Fortune 500 company.

Three-quarters of the respondents who use computers have done so for two years or less. About half of the executives under 50 years of age have adopted microcomputers, compared with one-fifth of those over 50. The younger group (under 50) comprised 47% of the sample.

Fifty-eight percent of each age group employs computers for financial analysis, the survey revealed, but there are differences in the way each age group uses microcomputers for other tasks.

Older respondents turn to microcomputers more often for support decisions. These include:

- Long-range planning — over 50, 45%; under 50, 21%.
- Personnel — over 50, 33%; under 50, 8%.
- Public affairs — over 50, 25%; under 50, 17%.

Younger microcomputer users focus their skills on:

- Budget planning — under 50, 54%; over 50, 47%.
- Market intelligence — under 50, 38%; over 50, 25%.

Personal computer users are far more likely than nonusers to take advantage of available information capabilities, the survey showed. Computer users more frequently access:

- On-line company data bases. These are accessed daily by 15% of users as opposed to 5% of nonusers and several times a week by 45% of users as opposed to 13% of nonusers.
- External data bases. These are accessed daily by 12% of users as opposed to 5% of nonusers and accessed several times a week by 33% of users as opposed to 11% of nonusers.
- Electronic mail. This is accessed daily by 23% of users as opposed to 3% of nonusers and accessed several times a week by 29% of users as opposed to 16% of nonusers.

The price of the survey is $295.

More information is available from Trinet, Marketing Department, 9 Campus Drive, Parsippany, N.J. 07054.

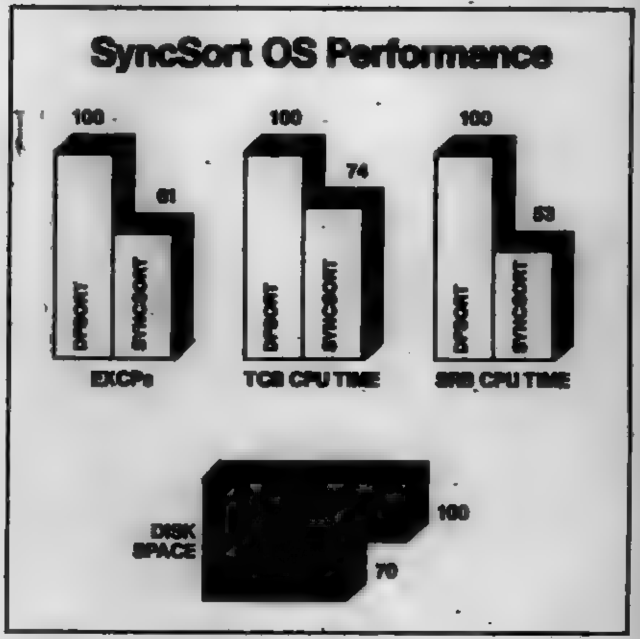
THE BEST COMPOSER SHOULD HAVE THE BEST PIANO

What could be more fulfilling in life than to realize one's absolute potential? And what could be sadder than to fail for lack of the proper equipment?

"Rousing Performance"

SyncSort allows you to perform like a virtuoso, drawing out the best your ***IBM Mainframe*** has to give.



If OS isn't your tune, you'll find our CMS and DOS performance equally impressive.

"Impressive Backstage Support"

Our Technical Service people, resolving more than 85% of all requests for technical service within 24 hours, will make you look like a star. A recent independent survey showed that 97% of SyncSort's users rate our product reliability as Very Good or Excellent.

"Harmonious Features"

SyncSort's features will impress even the most jaded impressarios, increasing programmer productivity and operational flexibility.

- Sortwriter—displays sorted data in user-tailored reports. Programmer efficiency is maximized through flexible report formatting of headers, trailers, sectioning, totals and subtotals.
- Multiple Output—provides multiple copies of the sorted output file. Each output file can be any subset of the full sorted output, and you can produce a different report format for each output file based on user-specified criteria.
- Record Editing—allows insertion of literals, commas, $, etc. as well as editing, repositioning or elimination of record fields, thereby reducing programming time.
- Fast File Copy—dramatically reduces the consumption of mainframe resources. All standard sorting features (Include/Omit, Inrec/Outrec, Sum, etc.) as well as SyncSort's unique features can be activated in a normal copy operation.
- Maxsort—provides powerful operational flexibility in sorting very large files. Sorting of these files is automatically broken into optimal steps, executable at different times; thus, the amount of data that can be sorted is no longer restrained by the amount of disk space available.

Early user finds Spotlight outshines Sidekick

Software Arts desktop management package said to run easier than best-seller

By Paul Korzeniowski
CW Staff

DETROIT — The Pontiac Division of General Motors Corp., an early user of Software Arts, Inc.'s Spotlight, a desktop management package for the IBM Personal Computer, compared Spotlight with the best-selling desktop manager, Borland International, Inc.'s Sidekick, and decided that Spotlight was a better product.

"Some of our applications had trouble working with Sidekick," said Alan L. Fox, senior systems analyst at the Pontiac Division. "Programs would either not run, or error messages would appear. We could not determine why that occurred."

Spotlight, announced in October, offers five desktop management functions:

- Appointment book.
- On-screen calculator.
- Telephone listing.
- DOS filer.
- Notepad.

The package is not designed as a stand-alone application. Rather, it resides in a portion of random-access memory (RAM) that an application program does not use. This allows a user to work with a data base management or spreadsheet package.

While working with the application, users who require a Spotlight function can reportedly call Spotlight by pressing one key. After using that function, users can again press one key and return to the original application.

Although desktop management packages are relatively new, Fox said he believes they fill an important function. "Desktop managers are just as important as spreadsheets or word processors," Fox said. "Since they offer a number of facilities, they fill at least one need for every user. We think they are a vital part of the workstation."

Fox reported that users quickly understand how to operate Spotlight. "Before we give our users workstations, we hold tutorials for the various packages," he said. "Users can be working with Spotlight after only an hour of instruction."

However, the systems analyst listed a number of drawbacks to the desktop manager. "The user should be able to change the color scheme," he said. "For example, a user may set packages so they produce white letters on a blue screen. With Spotlight, he is unable to make this setting."

> *'Desktop managers are just as important as spreadsheets or word processors. Since they offer a number of facilities, they fill at least one need for every user. We think they are a vital part of the workstation.'*
>
> — Alan L. Fox, senior systems analyst, GM Pontiac Division

Another limitation was with the calculator that engineers require. "We would also like to use floating-point decimals with the calculator," Fox noted. "It is also difficult to work with the calculator because it takes up half a screen. Often, the user is unable to see the data he wants to calculate."

Software Arts has been responsive to the package's limitations. Lack of an automatic telephone dialer, for example, was rectified in the latest release of the program. "[Software Arts] has listened to our complaints and claims to be willing to solve them," he said.

Spotlight is part of a prototype engineering workstation that the Pontiac Division is designing. Currently, 12 workers are testing the workstation, which consists of an IBM Personal Computer XT with 640K bytes of RAM, an integrated operating environment that GM developed and a slew of software packages including the following:

- Lotus Development Corp.'s 1-2-3.
- Lifetree Software, Inc.'s Volkswriter Deluxe, a word processing package.
- A scientific version of Volkswriter Deluxe.
- Softcorp, Inc.'s Project Six.
- Funk Software, Inc.'s Sideways.
- Software Arts, Inc.'s TK Solver.
- Forte Co.'s 3279 terminal emulation package.
- IBM's Word Proof spelling checker.
- Rogue River Software, Inc.'s SPF PC.
- Ashton-Tate's dBase II.
- Hayes Microcomputer Products, Inc.'s Smartcom.

"We chose a number of packages so that the workstation could meet the wide range of our users' needs," Fox said.

The number of GM users who will work with Spotlight depends on the success of the prototype workstation. "There are 12 users in a pilot system right now," Fox said. "We soon plan to expand that to 40 users. If the expansion is successful, the number could grow to 200 or 300 in our division. We are just one division in GM; if other divisions adopt the workstation, there could be thousands of users."

Computer Fat is everywhere.

LOOK FOR IT JANUARY 14th.

IBM slows production of AT; unable to fill first-quarter orders

BOCA RATON, Fla. — IBM has slowed production of the enhanced version of its Personal Computer AT and rescheduled deliveries for that model, the company's Entry Systems Division acknowledged last week.

"IBM is unable to fill all of its orders through the first quarter of 1985," a spokesman said.

Major accounts placing new orders for the enhanced AT may have to wait up to nine months, he noted. IBM expected to announce an overall delivery schedule for final 1984 and early 1985 shipments last Friday.

The enhanced model adds a 20M-byte hard disk drive and more memory to the basic AT. The spokesman attributed the production slowdown to shortages of key components, including the hard disk drive. Despite some user reports of difficulties with that drive, he said that "there are no problems with the systems that we have shipped."

Strong demand for the enhanced AT, which "has far exceeded IBM's expectations," was the other factor that made rescheduling a necessity, he commented. ATs have been in short supply since shipments began [CW, Dec. 17].

Stand-alone systems

Both basic and enhanced ATs have been sold, so far, as stand-alone systems.

The hard disk drive is a prerequisite for the AT to act as a multiuser system (under IBM's PC Xenix) or as the file server for IBM's PC Network. PC Xenix and the PC Network Program will be available in the first quarter of 1985, according to IBM.

Overall AT production is on the upswing, as IBM is boosting production of the basic AT, the spokesman added.

Computer coordinators form group

EUGENE, Ore. — A Special Interest Group for Computer Coordinators (SIGCC) has been established as the first SIG of the International Council for Computers in Education (ICCE).

The SIGCC's membership will be composed of those coordinating use of personal computers in either a school building, school district or a county. The SIG, according to the ICCE, will be used to clarify the role of computer coordinators, promote cohesiveness among them and provide a forum for sharing information.

SIGCC membership is priced at $10 for ICCE members in the U.S. and $17 for non-ICCE members outside the U.S. The ICCE is located at the University of Oregon, 1787 Agate St., Eugene, Ore. 97403.

Telenet links Telemail worldwide, backs X.400 standard

WASHINGTON, D.C. — GTE Telenet Communications Corp. announced last week that subscribers to its Telemail electronic messaging services will be able to carry on two-way communications with the large installed base of telex users worldwide.

Telenet also announced that it will promote the recently adopted worldwide X.400 standard for establishing connections between private electronic message systems and its Telenet network, as well as to link Telenet to foreign public message systems.

Telenet President J. David Hann said that Telenet was seeking to position the company as a major supplier of complete electronic messaging systems.

Telenet said it would allow Telemail users, who, Telenet said, comprise an estimated 20% to 25% of electronic mail users in the U.S., to produce hard-copy letters with company letterheads, logos and signatures that will be delivered with the aid of the U.S. Postal Service on a next-day basis.

This service, called Telemail-Xpress, will have two options: high-quality business letters for same-day delivery and inexpensive next-day delivery. A Telemail-Xpress letter will cost an average $2 to $5, and the service will be available in the first quarter of 1985.

Telenet said that the Telemail-telex interconnection arrangement will permit 1.5 million telex machines worldwide to interface with the electronic mail system in a two-way communications mode. Hann predicted that while the telex market will continue to grow in the future, it will slowly convert to the use of electronic terminals. The international Telemail-telex communications link will be available in the first quarter of 1985.

Hann said that the principal marketing thrust Telenet will adopt for its Telemail subscribers will be interconnecting the Telenet network with foreign public electronic message systems to allow terminal-to-terminal communications. Hann said that Telenet currently has not reached agreements with any foreign postal telephone or telegraph authority.

GTE Corp. operates overseas telephone and data communications services as an international record carrier and currently has operating agreements with 10 foreign countries, mostly located in Europe.

However, Hann said that Telenet is not planning to solicit private intracompany electronic mail systems actively for connection to the Telemail system unless those systems adopt the international X.400 standard, which conforms to the sixth and seventh levels of the International Standards Organization's Open System Interconnect model.

In this connection, Joseph J. Porfeili, vice-president and general manager of Telenet network applications and terminals, said Telenet had signed with Telecom Canada to interconnect its Canadian Envoy 100 system with Telenet using the X.400 interface.

Until now, Telemail users in foreign countries have communicated via their own public packet-switched network to Telenet's Telemail system. The new capability, which will be available in the second quarter of 1985, will permit direct Telemail system access from one country to another, as though the user was making a local Telemail call in one country.

George Lieb, Telenet's director of electronic messaging services, said that Telenet has no immediate plans to pursue proprietary computer-to-computer applications, such as that recently announced by General Electric Information Services Co. [CW, Dec. 18]. "I believe that third-party manufacturers will develop interfaces from an IBM, a [Digital Equipment Corp.] or a [Wang Laboratories, Inc.] environment that implement the X.400 standard," Lieb said.

Your IBM 34/36/38 Will Think This Is A $17,000 Printer.

Your Accountant Will Think It's A Miracle.

For all your IBM 34, 36 or 38 knows, your new Datasouth TX-5180 is an IBM 5225 — an underfeatured $17,000 line printer the size of a washing machine. Your computer could also think your Datasouth is an IBM 5224 — a $10,000 desktop version of the 5225. Or a 5253 — an older serial matrix printer that still costs [illegible].

That's why you and your accountant are glad to know the Datasouth TX-5180 is a workstation workhorse that costs just [illegible]. You also know your TX-5180 doesn't come with a black box. Or dipswitches. Or any of the other old-fashioned inconveniences that clutter most of the printers in the 34/36/38 market. Instead it comes with a list of features that make you as happy as your accountant.

For example, you get both parallel and IBM twin-ax interfaces, so your 5180 will run with your IBM PC (or any ASCII computer) as easily as it does with your 34/36/38. You get cable-through and terminate capability. Bi-directional printing at 180 cps. Six different character pitch settings. The most complete, friendly and ergonomic front panel controls in its class. And legendary Datasouth reliability.

So treat your computer and your accountant to the best printer a little money can buy: your new Datasouth TX-5180. Call for one today. It's toll-free.

AUDITOR'S REPORT

We have examined the Datasouth TX-5180 and found its features and characteristics exceed accepted expectations for IBM 34/36/38 printers. A partial list follows.

☐ [illegible]
☐ 180 cps bidirectional printing
☐ Tractor feed forms: 3"-15"
☐ Cartridge ribbon
☐ Cable-thru and terminate
☐ Push button programming
☐ Twin-ax and parallel (ASCII) interfaces

The TX-5180's ratio of value to price is exceptional. Purchase of the device is highly recommended.

Presidential libraries induct minis in automation project

Systems to provide administrative support initially, to aid research efforts eventually

By John Desmond
CW Staff

WASHINGTON, D.C. — What do Herbert J. Hoover, Franklin D. Roosevelt, Harry S. Truman, Dwight D. Eisenhower, John F. Kennedy, Lyndon B. Johnson and Gerald R. Ford have in common besides having been U.S. presidents?

Each has a presidential library that is about to become automated.

Each presidential library is now installing a Datapoint Corp. 8645 minicomputer, which is based on the Intel Corp. 8086 microprocessor and which runs the RMS operating system. Libraries are also installing Datapoint 8220 terminals and printers, to be used for office automation initially and later for access to a data base to aid research.

At the outset, the Datapoint system will be used to handle administrative work, including word processing and spreadsheet analysis. Tom Soapes, archivist for programs and policy with the Office of the Presidential Libraries here, which is part of the National Archives office, said Datapoint was chosen because the National Archives head office uses Datapoint equipment and because the libraries' management teams were impressed with the company's Arc local-area network. Each library will start off with 512K bytes of main memory and 20M to 40M bytes of hard-disk storage, Soapes said.

Software

Software will include Datapoint's Vista package for word processing and Microsoft Corp.'s Multiplan for spreadsheets.

The libraries are spending $300,000 on hardware in the first phase of automation, after spending $140,000 for an initial study and $100,000 for a system design, according to a consultant for the automation project.

Consultant William Yoder of American Management Systems, Inc. of McLean, Va., described the presidential library automation as "the first top-down analysis and design ever done for a major archival institution." Previous attempts have involved trying to fit software developed for libraries to the needs of an archive, which has a different cataloging system and no circulation. "The main reason it hasn't been done before is because archives don't have much money," Yoder said.

CW photo by J. Desmond
Boston's JFK Library

The presidential library system houses more than 200 million pages, with from six million to 45 million pages in each library. The material includes 147 million pages of personal papers and 11 million pages of federal records.

In addition to the seven libraries, the Presidential Libraries office has the papers of former Presidents Richard M. Nixon and Jimmy Carter. Nixon has 48 million papers now being kept by the Nixon Material Project in Alexandria, Va., and the Carter library is under construction.

The libraries' primary clients are history scholars who research broad topics for doctoral dissertations, master's theses and books.

'Pivotal thrust'

Soapes said the arrival of Datapoint equipment "is just an initial shipment to get some sort of automation into the libraries."

In the second phase, the presidential libraries plan to bring up a data base management system for archival processing and references. "This is the pivotal thrust of our move into automation," Soapes said.

Material is now manually controlled at the "folder-title level," Soapes said.

After processing, the material is put into file folders that are stored in special boxes called Hollinger boxes. Lists are made of the folder titles. Manual control is the only control at present.

"We have a large search requirement, and all of our reference work is done manually by reading through these folders," Soapes said. He added that 25% to 30% of the staff's time is spent handling research requests.

"If we can automate it, we project important savings in productivity."

Yoder is now designing a nine-level hierarchical data base that will index the vast collections, many of which are quite detailed.

'Regarding Cuban situation'

For example, among collections at the Kennedy Library in Boston are files of the former president's doodles.

The doodles are filed in chronological order by number with a description of the setting.

In 1961, doodle descriptions included: "on envelope of letter from Robert Kennedy," "concerning faulty clock" and "regarding Cuban situation."

Robert Humphreys' papers

In another example, the Eisenhower Library has several files with the papers of Robert Humphreys, former Eisenhower public relations and Republican National Committee campaign officer. Titles include: "1956 Republican National Committee vote-producing decisions" and "1958 Republican National Committee campaign school — speeches."

"We're building a system that would allow this information to be put on-line and searched," Yoder said.

A vendor for the second phase has not yet been selected. Soapes said a decision will not be made until the data base software is more fully developed.

Get caught up in our net report

Are you lost in a [illegible] of local-area or long-haul networks? [illegible] Computerworld's [illegible] Special Report on communications networks [illegible] update you on network architectures, communications software and industry standards.

The Special Report will focus on corporate networking choices, including the feasibility of satellite bypass and private-line networks.

Contributions to the Special Report should take one of two forms: tutorial articles that discuss issues or trends or applications stories that outline a particular user company's applications.

Articles only [illegible] six typed, double-spaced pages.

Artwork, such as charts, graphs and photographs, is also welcome.

Authors should include both a brief biography and a telephone number at which they can be reached.

If you have a story you would like to tell, an issue you would like to speak on or any questions, contact Janet Fiderio, Special Reports Editor, *Computerworld*, Box 880, 375 Cochituate Road, Framingham, Mass. 01701.

Info/Central set for Feb.20-22

LOS ANGELES — Candle Corp., a manufacturer of performance-monitoring software, has announced that its user conference is scheduled from Feb. 21 to 22 at the Sheraton Plaza [illegible] here.

The theme of the conference is "Managing the Changing Data Processing Environment." Terrence E. Deal, coauthor of "Corporate Cultures," plans to speak on the topic of data processing and corporate culture in the 1980s. Other scheduled topics include technology discussions, user experiences in problem solving and system tuning techniques and product overviews.

The prepaid registration fee is $290, and people registering at the door will be charged $350.

More information is available from Candle, headquartered at Suite 2404, 10880 Wilshire Blvd., Los Angeles, Calif. 90024.

JFK Library [illegible] set to transfer tasks from [illegible] to mini system

By John Desmond
CW Staff

BOSTON — Before the John F. Kennedy Library here had its Datapoint Corp. minicomputer and terminals delivered, two members of the library staff were making use of two personally owned micros.

Librarian [illegible] was using a Kaypro Corp. micro to do research statistics and monthly archive summaries, and supervisory archivist Megan Desnoyers was using an IBM Personal Computer for word processing.

The Kennedy library has 28 million pages in more than one million file folders. The library has processed 5,500 research requests since it opened in 1968. Each month, reports are made on the number of people who did research, the number of visits per person and the backgrounds of the researchers. The Kaypro has been helping with those reports. On her Personal Computer, Desnoyers put together a transcript of a recently released tape recording made by former President John F. Kennedy while in office.

Chief archivist William Johnson said he understands that [illegible] the Jimmy Carter and Gerald R. Ford libraries [illegible] personally owned [illegible]. "People get tired of waiting for a system when their own microcomputer can do the work," he said.

From her exposure to computer capabilities, Desnoyers has plenty of ideas for how to use the Datapoint system now being installed in all seven presidential libraries. The Kennedy library has 1,300 oral history interviews, 800 of which have been processed and can be used by researchers and 500 of which have been transcribed but not yet processed. In the past, an interview was transcribed into 35 to 40 pages of text. An editor read the text and made corrections while listening to the original. A copy was sent to the person interviewed for more corrections, and a final copy was typed by the library staff in an extremely tedious manual process.

Other potential applications include an index of photographs, which are now listed [illegible], and an index to the subject files, which is [illegible].

WHEN THE BOSS'S KID STARTS REWRITING THE FINANCIALS, WHAT'S YOUR DEFENSE?

VMCENTER:

THE ONE INDISPENSABLE SURVIVAL TOOL FOR VM DATA CENTER MANAGERS.

Breaking into your online system isn't supposed to be child's play. But all too often, it is.

Unless, of course, you have VMCENTER.

VMCENTER is the one comprehensive system that addresses all your key concerns as manager of a VM data center. And none of those concerns is more important than the security of your system and data.

That's why VMCENTER provides multiple authorization levels–for maximum control over system usage.

It's also why we've designed VMCENTER to make it easy for you to customize your protection to meet specific needs. You can change passwords in a flash, encrypt data through simple commands, and use on-line reports to keep top management informed of potential security problems *before* they happen–not after.

But if you think VMCENTER is great for security, you should see what it does for disk and tape management, resource scheduling, workload balancing, and system accounting. In one stroke, VMCENTER eliminates all your biggest headaches. And does it in an integrated manner that's more effective than any possible collection of quick fixes.

VMCENTER. It's not much fun for the boss's kid. But it can be a lifesaver for his dad–and for you.

For more information on VMCENTER, call or write VM Software, Inc., 2070 Chain Bridge Road, Suite 355, Vienna, Virginia 22180, telephone **(703) 821-6886.**

Computerized kiosk offers gift suggestions to shoppers

By Edward Warner
CW Staff

DEARBORN, Mich. — Step aside Santa. A nine-foot, computerized kiosk at a shopping mall here has helped customers find the right present for each person on their Christmas shopping lists, all without regard to whether the recipient has been naughty or nice.

The Touch 'n' Choose kiosk, developed by AT&T Consumer Products group and installed in a pilot project at 19 U.S. shopping malls operated by the Taubman Co. of Troy, Mich., is based on an AT&T 6300 personal computer with a 19-in. touch-screen display. Customers press the appropriate responses on the screen to questions about their price range and the age, sex and lifestyle of the person for whom they are shopping. The black and chrome kiosk responds with from six to 40 gift suggestions, displayed on the monitor in color.

The Touch 'n' Choose monitor displays from six to 40 gift suggestions in color.

Using software developed for the application by AT&T, the kiosk at the Fairlane Town Center mall here evaluated the shoppers' responses against a list of 1,500 to 2,000 different potential gifts from the mall's 200 stores. Pictures of the gifts are stored on a videodisk player in the kiosk and are called up by Touch 'n' Choose during its presentation of gift suggestions.

Shoppers use the service for free; the kiosk's operating costs are defrayed by a continuous stream of 30- and 60-second commercials that run on a second color monitor located at the top of the kiosk. The commercials are supplied by national advertisers to promote products they have for sale in the mall.

Such a scene is likely to turn a few heads, and that is just what happens when shoppers pass by, according to William Winter, mall manager. Winter said that no more than six or seven people may be standing in line for the electronic Santa at its busiest time, but he added that as many as 20 people may be nearby watching Touch 'n' Choose at work.

The kiosk "has been a delight to the vast majority of customers both young and old," he said. However, it is not the first such kiosk the mall has had in use to help with Christmas buying. Last year, Winter said, the mall used a gift suggestion kiosk based on the Texas Instruments, Inc. Personal Computer. The machine's keyboard interface was "much less user-friendly" than the touch screen of this year's kiosk, he observed.

Other applications

Thomas Adams, marketing vice-president for Taubman, said it was still too early to tell whether the kiosks, in use in the malls since Thanksgiving, would be used again during next year's holiday season. An AT&T Consumer Products spokesman, meanwhile, said the kiosks could have other applications, such as electronic directories to large buildings. As a directory, the kiosk could display a route-specific map to lead the user to his destination, according to the spokesman.

At another of Taubman's Detroit-area malls, the Twelve Oaks Shopping Center in Novi, Mich., Sheila Armstrong, mall marketing director, reported that the Touch 'n' Choose kiosk in use there has drawn praise from some customers for its gift suggestions. Armstrong said customers have come to appreciate the kiosk because it is a timesaver and because it "merges the holiday well with what is happening technologically" in society.

Twelve Oaks is apparently no wallflower when it comes to merging computers with the holiday season. In the mall's main concourse, Santa himself sits enthroned in a holiday display featuring 16 Tandy Corp. personal computers.

Children can use the computers to write letters to Santa, which are printed out immediately, or play a seasonal version of ticktacktoe using Christmas trees and ornaments for markers.

Will Computer Fat strike you next?

LOOK FOR IT JANUARY 14th.

ARCTIC from page 1

are installed in climate-controlled modules at remote sites, said Dick Denton, regional facility engineer in charge of automation at Atlantic Richfield Co. (Arco).

The Modular Computer Systems, Inc. machines and Digital Equipment Corp. PDP-11/44s that keep track of operations and human resources information for the three oil fields that Arco operates north of the circle need special antistatic mats around them as protection against the dry air, he said.

A computer delivery must be timed just right. The modules that house computers are sometimes as large as football fields and one to three stories tall, Denton said. A module is constructed in the state of Washington, hauled by barge to the tip of Alaska in the summer when the ice moves out of Prudhoe Bay for a few weeks and loaded onto crawlers for the remainder of its slow journey, he said. This container holds equipment and also becomes the office for the DP staff.

DP personnel work a 12-hour day, seven days in a row. They then fly to wherever they live for seven days of rest. Some people can't take the schedule.

Microwave dishes

Arco uses microwave dishes mounted on towers in the Prudhoe Bay, Kuparuk and West Sak oil fields and at 18 drill sites for communications between computers and personnel, Denton said. The central communications tower is located at a base camp in the North Slope region of Alaska, site of a three-story module that is home to DP and other oil field staff, he said.

DP personnel work a 12-hour day, seven days in a row, Denton said. They then fly to Anchorage or wherever they live for seven days of rest, he said. "There is special incentive pay and lots of time off, but even with that, some people can't take it," he said.

A few weeks ago, the sun set for two months, said Lowell Humphrey of Setpoint Alaska Co. in Anchorage, which supplies contract programmers and develops large computer projects for Alaskan companies. "It is dark and cold all the time, and there's nothing to break the wind up there," he said.

Workers — about 2,000 in different facilities — spend all their time inside together while they are working the seven-day shift, Humphrey said, because the temperature outside routinely drops to 40 degrees Fahrenheit below zero during the long winter season. Although personnel earn extra isolation differential pay, eat excellent food and have access to racquetball, television and movies, the life is tough, and few people stick it out for long, he said. "If you work those hours and never see the sunshine, depression sets in quickly. Also, little irritations amplify quickly," he said.

The people who are attracted to jobs in the Far North are often outdoor sports enthusiasts who enjoy the kinds of recreation that they need extra time to travel to, Humphrey said. "Operators and computer operations supervisors generally make more money and have more time off than their counterparts in Anchorage, and those people stay several years," Humphrey said. Programmers or analysts get bored with the sameness of the situation — they need to be in a cosmopolitan atmosphere like Anchorage, so they don't stay long, he said.

Even with the difficulties, the jobs are much sought after, Humphrey said.

"Money and time off are the motivators," he said. Given the entrepreneurial spirit in Alaska, the time off allows people to build small businesses or work on projects, Humphrey added.

Micros help Christmas tree grower harvest profit

By Paul Korzeniowski
CW Staff

CADILLAC, Mich. — Often, Christmas mixes the good with the bad: The joyous holiday spirit can be dampened in long department store lines.

So it is with Emerald Tree Associates, the third largest U.S. Christmas tree grower and distributor here. "In the last month, we've had to add a third shift and work 24 hours a day to keep pace with our work load," noted Steven Seeberg, owner of the Christmas tree company. "This year has [been] our busiest holiday season." He claimed that in 1984, Emerald will sell half a million trees grown on 8,000 acres in Michigan and Tennessee.

The main reason why Emerald can handle such business growth, Seeberg said, is the company's purchase two years ago of two IBM Personal Computers and the PC Focus data base management system from New York-based Information Builders, Inc. "Working with a computer is much more efficient than working with a manual system," the owner maintained. "Last year, we were only testing the system. This year, we know what it can do."

Yearlong process

Although Christmas tree sales are seasonal, the work for this year's harvest began 12 months ago. "In January, we begin planning our planting and spraying," Seeberg noted. "In March, we plant approximately two million trees. The trees are sprayed for bugs in May and June. In July, we conduct an inventory for all trees and mark the trees that will be sold at Christmas. In October and November, we conduct our harvest."

The PC Focus system fills two requirements. Its data base management facilities are used to track tree planting and growth. Seeberg, who is not a computer programmer, wrote various applications for Emerald, including inventory, order processing, shipping, invoicing, standing timber, supplies and cutting contracts. "With PC Focus, we are able to track where trees are planted, how many are planted, how fast they grow, when they are sprayed and the cost of maintaining our fields," the owner said.

The microcomputer system also allows Seeberg to control the distribution of the trees. "We work with a number of supermarket chains," he said. "One store may call for additional trees. Rather than sending it more trees, we may be able to ship [the store] trees from a nearby member of the chain."

Information produced with PC Focus interfaces to Emerald's accounting system from American Business Systems, Inc., a Westford, Mass., software vendor.

Mail-order pine trees

In addition to its Christmas tree business, Emerald sells miniature pine trees by mail order. PC Focus is used for credit checks, generating mailing lists and ordering the trees, Seeberg said.

Emerald's relationship with PC Focus has taken a few soap-opera twists. In 1979, the tree seller had turned to a time-sharing and mainframe version of PC Focus. "We liked [PC Focus], but we were paying close to $20,000 for the three months we required the system," Seeberg said. "It was just too expensive for us to keep."

Consequently, the company reverted to its manual system.

When IBM announced its Personal Computer, Seeberg realized that for the three-month cost of the time-sharing system, Emerald could purchase a complete computer system. And it did.

The choice of software was simple. "We didn't look at any package other than PC Focus," Seeberg said. "We were familiar with it and liked its features."

Seeberg said he hopes to enhance the system and eliminate the company's overtime. "We have orderd an [IBM Personal Computer AT] and should receive it in February," he said.

Realia COBOL.
Migration without migraines.

Until recently, you had to abandon the business computer language when you developed microcomputer application software. The available micro COBOLs were inadequate—too limited, too slow. The best alternative—the XT/370 or AT/370 using IBM's COBOL—was very expensive and still too slow. To get acceptable performance, you had to retrain your programmers in Pascal or C.

Realia COBOL is the cure for such headaches.

Realia's compiler supports most IBM VS/COBOL and VS/COBOL II features, such as:

- COMP and COMP-3 data
- SELECT assignment names
- Multiple entry points
- GOBACK, EJECT, and SKIP statements
- Structured programming extensions of VS/COBOL II

You can download mainframe systems for development, maintenance, and testing. Productivity will soar.

You can compile faster with Realia COBOL than in most mainframe environments, even on floppy-based systems. Compile-time options allow cross-reference, brief and full code listings, and helpful features like subscript and decimal value checks.

Our interactive debugger lets you follow the program source, display and modify data, and set breakpoints using the normal optimized machine code.

The results are startling.

Our users report that their systems run up to 20 times faster when compiled by Realia COBOL. That's compared to our nearest micro competitor. The ratio is up to 100 times faster when compared to any of the others.

On the IBM PC AT, your programs can run at 370/148 to 370/158 speed. Realia's file system really makes your machine deliver, giving it a distinct edge over Pascal or C. Our indexed file system even has full key compression and buffer controls just like VSAM. The generated code is pure MS-DOS, so it can be run on most of the 8088/8086 machine family.

And you can sell your programs without paying us a royalty fee.

Realia COBOL is priced at $995, including one year of maintenance and upgrades. Subsequent maintenance and upgrade contracts are currently priced at $125/year/copy. Available for the IBM PC, PC XT, 3270 PC, PC AT, PC-compatibles, and the TANDY 2000.

Realia COBOL. What a relief.

IBM, IBM PC, PC XT, 3270 PC, XT/370, PC AT, and AT/370 are registered trademarks of International Business Machines Corporation. MS-DOS is a registered trademark of Microsoft Corporation.

WANG from page 1

ed network and supports Wang Office network-based applications, such as electronic mail.

Other features

Other VS 65 features include support for up to 2.6G bytes of disk storage, nine-track or cartridge-tape systems, remote diagnostics and up to 48 ports for workstations and peripherals. The VS 65 also supports Wang's relational data base management system, called Professional Application Creation Environment.

The price for a VS 65 package with 1M byte of main memory; a 5¼-in., 360K-byte diskette drive; 147M-byte internal fixed disk; two-port disk controller; data storage cabinet with 147M-byte fixed disk and a 76M-byte removable disk; and four 4230-VS workstations, is $54,300, the vendor said.

The price for a field upgrade from a VS 15 to a VS 65 is approximately $12,000, according to the company.

Aimed at System/36 mart

Wang is aiming the VS 65 at the same market as IBM's System/36, the announcement indicated.

In a statement accompanying the VS 65 announcement, John F. Cunningham, Wang's president and chief operating officer, said, "Recent announcements and statements of direction confirm IBM's need for distributed data processing solutions to overcome an incompatible and costly product mix."

In related announcements, Wang unveiled two packages, the VS 85-S and the VS 15-2WS.

The VS 85-S includes the VS 85 mini, now offered with two 147M-byte, 8-in. internal fixed disks, and a tape cartridge drive. Previous versions offered less storage.

The announcement indicated that Wang is aiming the VS 65 at the same market as IBM's System/36.

The price for a VS 85-S with 1M byte of main memory, the internal drives and cartridge, four 4230 workstations, Wang Word processing and one compiler, is $86,000, Wang said.

The VS 15-2WS replaces a variety of previously offered VS 15 packages. The price for the VS 15-2WS with 1M byte of memory, a 76M-byte fixed disk, two 4230 workstations, a 16-port serial controller, a fixed disk controller, operating system, assembler program and 360K-byte diskette drive, is $21,000, the vendor said.

In addition, Wang has reduced prices of some 4200 series VS workstations. The 4230 64K-byte workstation supporting data and word processing, has been cut $400 to $3,400.

The cost of a 4205 model, a 32K-byte DP workstation, has been cut $300 to $2,450. And the price for the 4220 workstation for remote DP and synchronous communications, has been cut by $250 to $2,250, according to the company.

Finally, the price of the Local Communications Option, allowing the Wang Professional Computer to serve as a VS workstation, has been reduced by $400 to $1,600, the company said.

More information on the VS announcement is available from Wang, located at One Industrial Ave., Lowell, Mass. 01851.

EFT Expo set for March 22

SAN FRANCISCO — The Electronic Funds Transfer (EFT) Association has announced that the EFT Expo, its annual convention and exposition, is scheduled for March 22-24 at the Fairmont Hotel here.

The convention will concentrate on the point-of-sale market and point-of-sale strategies for supermarkets, convenience stores, department stores and petroleum marketers. Other topics are videotex services, EFT standards, telecommunications options and security.

The registration fee is $450 for an EFT Association member, $525 after Jan. 15. For a nonmember, the fee is $575, $650 after Jan. 15.

The EFT Association can be reached through P.O. Box 66200, Washington, D.C. 20035.

Management found impeding OA implementation

By Mitch Betts
CW Washington Bureau

WASHINGTON, D.C. — A national field study has found that 75% of the 110 business and nonprofit organizations examined are experiencing big problems with office automation because of insufficient management attention to people problems, such as user training and ergonomics.

The two-year study, conducted by the nonprofit Educational Fund for Individual Rights, was released at the organization's National Conference on People, Organizations and Office Technology, held here Dec. 12-13.

"Most organizations find that implementing office automation is much harder than implementing DP was [many years ago]," remarked Dr. Alan F. Westin, president of the Educational Fund.

"Too many applications are vendor driven rather than user designed," he said.

The researchers found such problems as the following:

- Insufficient strategic planning by top management and failure to involve the personnel department in such OA issues as job design, work satisfaction and performance monitoring.
- Inadequate resources for training and orienting new OA users.
- VDT work environments that do not meet ergonomic standards and weak management communication to users about VDT health and safety issues.
- Low levels of employee involvement in implementing new office automation technology, which unnecessarily raise employee fears and thus undercut OA implementation.

More than 115 site visits

To carry out the field study, the researchers conducted more than 115 site visits to major companies and institutions and contacted approximately 1,100 employees, 650 managers and executives, 55 information systems managers and 40 union leaders.

The Educational Fund for Individual Rights is a nonprofit research foundation in New York that specializes in privacy and labor management issues.

The $275,000 field study was supported by grants from IBM, Hewlett-Packard Co. and NCR Corp.

Employee OA complaints 'manageable'

"The good news is that employee complaints [about OA] are manageable," Westin said at the conference. He said the research showed that about 10% of the sites had excellent "people-technology programs" to handle the human resource implications of OA.

The effective OA programs featured a long-range, strategic plan, employee involvement and training and ergonomic standards for VDT workstations, Westin said.

Only 5% to 10% of the sites visited had satisfactory ergonomic work conditions — such as adjustable chairs and proper lighting. "While some employees do worry about health effects from VDTs," the researchers said, "the central health issue for office workers is the serious physical discomfort and harmful stress they experience in intensive VDT use as a result of poor job design, ergonomic conditions and management practices."

'Big Brother surveillance'

The Educational Fund researchers said that electronic work monitoring is a growing concern among nonunion and union employees, yet only one-third of the organizations visited had developed work performance standards that avoided employee feelings of "Big Brother surveillance."

Westin, professor of public law and government at Columbia University, noted that while no legislation regulating VDTs has been enacted so far, future legislative activity will depend on whether employers develop and implement good VDT management practices.

"Society will not let management apply OA oppressively," he said.

SANTA from page 1

Make that three, St. Nick. "I'll take a CPU upgrade from our IBM 3083-E to a 3083-J," said John Harodecki, DP director for St. Louis-based Ozark Air Lines, Inc. "We are really starting to run out of CPU cycles. If we can solve that problem, we will have the world licked — at least for a while."

Gosh, Santa, I hate to badger you about upgrades but . . . "I am easy to please. All I want for Christmas is a bigger CPU," said David Dowrie, computer services manager for the Oregon Transportation Department in Salem, Ore. "We have an IBM 3033, but a 3081-K is what I would really like. We always seem to be out of gas; we never have quite enough capacity to meet our user demands."

Hey, Mr. Claus, how about some help with all these micros? "I would ask Santa to put control over all the micros in the accounting department in DP's hands," said Robert Belvin, director of distribution and MIS for Beech-Nut Nutrition Corp. in Canajoharie, N.Y. "While I am in favor of micros, I think we have created a situation where our accountants are becoming keypunch operators and programmers. They are building their own data bases that are not tied to the mainframe. We are heading for trouble by creating one-person DP departments. That problem has to be addressed."

Same for me, Santa. "What I would like for my DP shop is a clear direction on where micros are going and how they are supposed to fit into the total picture," said Ronnie Barker, DP manager for Levi Strauss & Co. in Little Rock, Ark. "Everybody is saying 'I want one, and I want to do this and that with it.' But there seems to be a lot of confusion about what the real role of the micro will be. We need to get some direction, maybe in the form of policies and procedures."

That's all well and good, St. Nick, but what I really need is some more people. "I would ask Santa to make Cheryl Tiegs work for me," joked Sammy Sawoya, director of information processing and international MIS for Mattel Toys, a division of Mattel, Inc., in Hawthorne, Calif. "But seriously, I wish for a better trained group of people, including better managers and shift leaders."

Longer days needed

Yes, Santa, that's it — more people! "I want more personnel to do the job," said Loren Miller, MIS facilities manager for the Nevada Power Co. in Las Vegas. "We are constantly strapped for time to do our work. We need more folks, including systems and applications programmers, to do our work or more time to use our people. Maybe we need longer days."

Wait, wait! Aren't you forgetting something important, Santa? What about our communications needs? "What I would like most is to get hold of some cleaner communications lines," said William Wimer, vice-president, MIS, for Fanny Farmer Candy Shops, Inc. in Bedford, Mass. "With some better communications lines we would not have to do as much retransmission of data as we have had to do in the past."

But what about me, Santa? Can you bring me reliability for Christmas? "I want 100% uptime," said Donald Pressley, DP director for the Oskosh Truck Corp. in Oskosh, Wis. "When we have downtime, our 120 users get awfully angry. Also, we are experiencing some growing pains and response time is sometimes a problem. So, Santa, if you could give me one-half-second response time on all our applications, everybody here would be very happy."

SCS conference set for Jan. 24-26

SAN DIEGO — The 1985 Society for Computer Simulation (SCS) Multiconference will be held January 24-26 at the Bahia Hotel here.

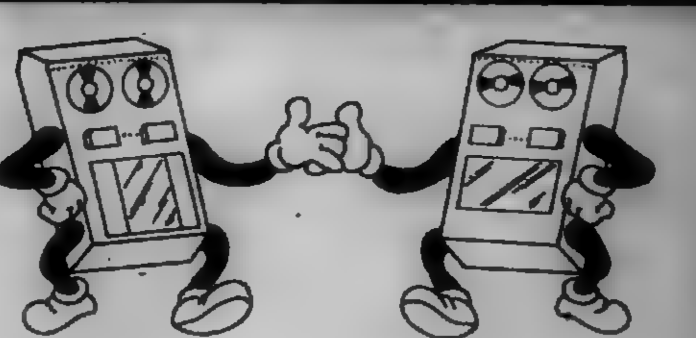
The multiconference includes four separate conferences: Modeling and Simulation on Microcomputers; Computer Simulation in Emergency Planning; Distributed Simulation 1985; and Artificial Intelligence, Graphics and Simulation.

In addition, several professional development seminars will be offered at the multiconference.

The conference prices range from $155 to $195, depending upon registration (advance or after Jan. 1) and membership in SCS. One-day professional development seminars are $130 in advance or $150 for registration at the conference. The two-day seminar costs $200 in advance, $260 at the conference.

More information can be obtained from SCS, P. O. Box 2228, La Jolla, Calif. 92038.

OUR SWITCHES MAKE YOUR IBM SYSTEMS WORK LIKE A TEAM!



If you have more than one IBM or plug compatible processor, Digital can help you get the most for your hardware investment. Our switches allow you to achieve backup and peripheral configuration flexibility at a fraction of the cost you're probably thinking.

Whether you have two processors or more, Digital has a switch to suit your requirements.

- Model 4101 The lowest priced matrix switch on the market.
- Model 3421 The only manually operated channel switch in the industry.
- Model 3403 A remote controlled channel switch designed for underfloor installation.

Private lines used to bypass local telephone rates

WASHINGTON, D.C. — In a report issued last week, the Federal Communications Commission said that large-volume communications users are making extensive use of private lines to bypass usage-based local telephone rates. The report on bypass, in the works for the past year, is the first to note that private lines can be considered a form of service bypass, as opposed to facility-based bypass in which users directly link to long-distance carriers.

Users are simulating public telephone networks with private-line hookups that are provided by local telephone companies where usage is not measured for price purposes, the report said.

The FCC raised the possibility that, through regulation, it might be forced to raise tariffs on private lines to discourage inefficient use of local telephone networks.

Facility-based bypass serious threat

The report also said that facility-based bypass is a more serious threat to local telephone companies in the long run, and it predicted that this type of bypass will continue to grow.

In other action, the FCC, as expected, approved last week the levy of a $1 monthly charge for residential telephone customers as part of its access charge plan [CW, Nov. 26]. It is scheduled to go into effect in June and will increase to $2 per month by June 1986.

The FCC also said it will allow state regulators to add an additional 35% on top of the residential charge. In addition, the commission will give leeway to telephone companies to provide business customer discounts if it appeared that the $6 multiline business access charge is promoting bypass of the local telephone company facilities by large-volume business users.

According to the FCC, the residential access charge will raise an estimated $1.8 billion that will be applied to "dollar-for-dollar" reductions in long-distance rates by AT&T Communications, which will see the amount of its subsidy to local exchanges lowered. The FCC has estimated this should translate to a 0.6% drop in long-distance fees.

Speaker claims bypass threat more smoke than fire

By James Connolly
CW Staff

FRAMINGHAM, Mass. — The bypass threat is more smoke than fire and will remain limited if local telephone companies focus on improved services and appropriate pricing, advised a Westinghouse Electric Corp. executive at a recent regional business conference here.

"At this point, there is an awful lot of smoke and a little bit of fire. To some extent, bypass has been used as a whipping boy," Robert E. Bennis, manager of communications for the Pittsburgh-based company, said in a speech to the New England Council. Bennis, who also serves as chairman of the International Communications Association (ICA) Public Policy Committee, added that the bypass issue has been used to justify requests such as those for local access charges and for rate hikes on the basis of self-serving studies.

Bennis, who discussed his own company's $26 million, five-year-old bypass project, said, "Much of the significance assigned to bypass has been indicated by the concerned parties in the issue."

According to Bennis, an independent ICA survey indicated that while most large companies have examined the bypass possibility, respondents said it was not a significant telecommunications opportunity, particularly with regard to saving money.

He said that even companies, such as his own, that run hybrid bypass systems using private microwave links and cable television wiring will usually rely to some degree on local telephone wiring like that from Bell Telephone Co. of Pennsylvania. He added that many of those companies using bypass are only using it for narrow applications.

He cited that possible reasons for bypass are that regulatory bodies and telephone company policies have previously discouraged innovation, that divestiture has meant some reliability problems, that local telephone companies cannot or will not provide high-speed data capabilities, that local geography may favor bypass technologies such as microwave and that annual or near-annual telephone company rate increases make it economically worthwhile.

He said that factors against bypass may include the telephone companies' new responsiveness to innovation, a customer's lack of capital, the inability to obtain frequencies, the inability to acquire microwave tower sites, the lack of technical expertise among some bypass vendors and the loss of the security blanket associated with the former Bell system.

Consultant offers guidelines for dealing with deregulation

By James Connolly
CW Staff

FRAMINGHAM, Mass. — The first year after the AT&T divestiture has been rough.

Companies have been forced to cope with disruption and have not received many of the supposed benefits, charged a consultant at a regional communications conference here.

William Page Montgomery, vice-president of Economics & Technology, Inc., said, "I think the confusion factor in 1985-86 [will] be less than it was in 1984.

"But there still will be a confusion level or noise level behind telecommunications that [will have] to be dealt with."

He was speaking at a communications seminar sponsored by the New England Council, a regional business organization.

Advice for users

Montgomery offered his advice for users dealing with the effects of deregulation and divestiture.

He listed the following points as keys to users developing a new focus on communications in a deregulated environment:

- Staffing up telecommunications departments to a level comparable to data processing department staffing.
- Auditing communications resources because some vendors cannot be trusted to keep accurate records concerning items such as the number of telephones or the status of office moves.
- Establishing independence from vendors by adding value to communications resources where possible.
- Trying private instead of public regulation by carefully contracting for equipment and service.
- Establishing a business plan and a strategic plan by looking ahead to where the company will be and what its telecommunications requirements will be in five years.

Montgomery noted that some of the continuing confusion is due to the lack of technical staffs at the Department of Justice and the court of U.S. District Judge Harold Greene, who are overseeing divestiture.

ARE YOU LISTED?
DOES YOUR OPINION COUNT?

To be listed in the next 4 issues of the COMPUTER PROFESSIONALS REGISTER and participate in the next 4 CPR opinion surveys, you must send your $10.00 annual registration fee as soon as possible. A CPR registrant listing data form will immediately be sent for your prompt completion and return. Your personal CPR listing content (including its availability for mailings) is entirely within your control.

The COMPUTER PROFESSIONALS REGISTER is a quarterly published listing of individuals who spend at least 50% of their time in the practice of activities directly involved with computer systems. The annual subscription rate for U.S. surface mail is $15.00 ($20.00 for all other countries). Authorized listings are provided on magnetic media contractually. The CPR also conducts quarterly opinion surveys of its registrants that it summarizes for its subscribers and other computer industry organizations and publications.

SEND $10 for registration/listing survey participation only
$15 for subscription only ($20 outside U.S.)
$25 for both ($30 outside U.S.)

Greene OKs holding companies' expanded services

WASHINGTON, D.C. — U.S. District Judge Harold Greene, who presided over the court-ordered split of the seven regional holding companies from AT&T, has approved the regional holding companies' request to enter new lines of business outside their regulated telephone service.

The regional holding companies had filed requests for waivers from the court provisions barring them from entering competitive markets, seeking to offer such services as computer sales, foreign operations, real estate telecommunications services and office products.

Less than a year after the official breakup of the AT&T monopoly on Jan. 1, 1984, Greene granted approval to the 13 waiver requests but added several conditions designed to prevent anticompetitive abuse.

Waiver requests opposed

The waiver requests had been vigorously opposed by computer equipment vendors, TRW Corp. and the North American Telecommunications Association, representing the independent interconnect industry.

While permitting the regional holding companies to expand their service offerings, the court will require them to establish separate subsidiaries to offer the services, finance the businesses independently of the parent company, establish monitoring standards and limit the investment in the subsidiary to 10% of the regional holding companies' net revenues.

The new lines of business the U.S. District Court approved are the following:

- Bell Atlantic's provision of equipment leasing through a subsidiary, Tri-Continental Leasing Corp., that will provide third-party financing by purchasing the equipment for subsequent lease. This would include telephone equipment such as private branch exchanges, word processing, data processing and photocopying equipment.

Bell Atlantic agreed not to permit Tri-Continental to finance the purchase and leasing of Bell Atlantic equipment. It also agreed not to lease equipment or offer information services or long-distance services through Tri-Continental.

- Permission for Bell Atlantic to acquire the Sorbus, Inc. services division of Management Assistance, Inc. to provide computer maintenance services.
- Five requests for foreign business ventures, such as consulting, and cellular radio ventures proposed by Pacific Telesis Group, Nynex Corp., U.S. West and Ameritech Corp.
- Permission for U.S. West and Ameritech to provide real estate services, such as installation, consulting and contracting. They are barred, however, from offering shared tenant service for buildings.
- Permission for Nynex, Bell South and Pacific Telesis to enter the office products business, subject to conditions barring them from jointly marketing products with their telephone service and prohibiting the office products organizations from procuring goods and services for resale through a subsidiary that also offers regulated telephone service.

While granting the waivers, Greene asked that the Department of Justice, which had signed off on the proposed waivers, "to be particularly vigilant in the exercise and monitoring . . . of these enterprises . . . if violations are detected."

Upcoming meet to scrutinize security topics

BAL HARBOUR, Fla. — The 1985 National Insurance and Protection Conference, a session on security and risk management sponsored by the American Bankers Association (ABA), is being held at the Sheraton Bal Harbour here Jan. 29 to Feb. 1.

The conference will include 41 sessions, as well as discussion groups and exhibits. Session speakers will include Dr. Patricia Zigarmi, vice-president of Blanchard Training and Development, Inc., on "Applying the 'One Minute Manager' to the Banking Industry"; and Dr. Michael Mescon, dean of the College of Business Administration at Georgia State University, on "Management: New Perspectives from an Old Foundation."

Other participants include Boris Melnikoff, corporate director of security for First Atlanta Corp.; Garard Kenna, president of Profit Protection, Inc.; and Marsha Covey, president of the Colorado National Insurance Agency.

Subjects to be addressed include access control systems, shared networks, encryption, risk management, information systems, physical security and data security. In the area of physical security, hostage taking and ATM security will be addressed.

Registration is $495 for ABA members and [illegible] for nonmembers. More information is available from the ABA, Security and Risk Management Division, Attn.: Vicky Barr, 1120 Connecticut Ave. N.W., Washington, D.C. 20036.

TELECOMMUNICATIONS USERS . . .

It's All Here!

Attend the first, the most comprehensive and the most important telecommunications conference and exposition of the year . . .

THE SEVENTH ANNUAL

Communication Networks '85

CONFERENCE & EXPOSITION WASHINGTON, D.C./JANUARY 29-31, 1985

Whether you've been in the telecommunications field for one year or ten, you've never seen things changing so fast. It's exciting . . . complex . . . confusing. That's why you need to attend COMMUNICATION NETWORKS '85.

Even if you can spare only one day, it will be worth your while to get a look at the very latest in telecommunications products and services — data communications equipment, including modems, multiplexers and high-speed T1 class transmission equipment . . . hardware and software for Local-Area Networks . . . electronic PBXs . . . satellite transmission . . . fiber optics . . . new low cost, long-distance services . . . and more.

750 EXHIBIT BOOTHS,
OVER 200 COMPANIES

The exhibits alone will be an education — new products and services offered by some of the world's leading companies will be on display, including AT&T, Digital Equipment Corporation, GTE, Hewlett-Packard, IBM, ITT, RCA, and more.

FULL CONFERENCE PROGRAM

Come to the exhibit hall only or plan to attend any of the seminars and presentations with such speakers as James Martin, Arch McGill, Dennis Patrick and 200 other speakers and panelists. Both introductory and advanced sessions will be held. Free bus service will be provided between the conference location and conference hotels. For complete conference program details, call 800-225-4698, toll free. (In Massachusetts, call (617) 879-0700.)

SAVE $5 ON ADMISSION TO EXHIBITS

Bring this special coupon to the Washington Convention Center with $5 cash. It's worth $5 off the regular $10 exhibit registration fee. Exhibit hours are:

Tuesday, January 29 — 10 AM-5 PM
Wednesday, January 30 — 10 AM-5 PM
Thursday, January 31 — 10 AM-3 PM

You'll also get to meet exhibitors informally in their hospitality suites, plus enjoy all the fun and excitement of the Nation's capital city.

And you'll be eligible to attend a free conference session and to win one of several prizes, including an AT&T Personal Computer.

DON'T MISS COMMUNICATION NETWORKS '85 in Washington, D.C. — the most important telecommunications conference this year.

Policeman walks DP beat to squelch computer crime

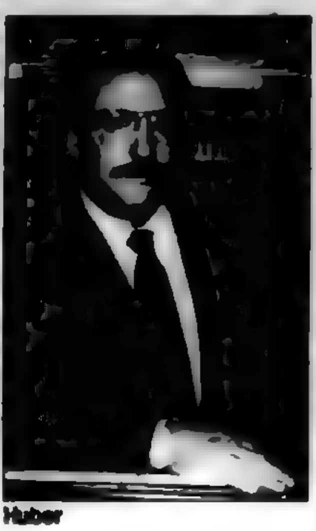
By Donna Raimondi
CW Staff

MINNEAPOLIS — Last year, a financial institution here fired 20 employees in the first 10 months of the year for using the company computer system to steal money. When asked why criminal charges had not been brought against the employees, the company said, "We've handled it within."

This attitude — expressed in private to a police officer who specializes in computer crime — is common among companies that will not publicize such incidents because they are afraid to lose customers or release sensitive information to the police, said Robert Huber of the Minneapolis police department.

Such secrecy is one of the reasons why more money does not go into developing computer crime expertise in police departments, Huber said. "If businesses aren't reporting the crimes, it is hard to justify spending money on training," he said. "Law enforcement really needs full cooperation from a business reporting a computer crime," he added.

Huber, a 16-year veteran of police work, said he took a three-month leave to study computer programming seven years ago and was invited by the Federal Bureau of Investigation to join its computer crime training classes in Quantico, Va., two years ago. In addition to computer crime investigation, Huber is responsible for the police department's Data General Corp. Eclipse 230 computer system and software acquisition recommendations. He also writes programs, monitors the equipment and trains police officers in terminology and evidence procedures for computer-related crimes, he said.



Huber

Off duty, Huber lectures nationally on computer crime investigation to groups. He will soon train IRS agents in the investigation of white-collar computer crime, he added.

"Huber has made us more aware of our security efforts, and we are now exploring how to secure our environment [better]," said Sandra Evans, an office equipment manager at the Wilson Jones Co. in Chicago who has consulted with Huber. Evans said Wilson Jones was impressed enough to invite Huber to speak on computer crime and security measures at the 1984 Comdex/Fall show.

FBI statistics revealed some bad news, Huber said. Only 1% of computer crimes are even detected, and of that number, only 12% are reported to police departments, he said. Only 3% of the reported computer crimes end in conviction. This means there is one chance in 27,000 that a computer criminal will go to jail, he added.

Some businesses are relying on their information systems to such an extent that without their computers, they would be out of business in a few days, Huber said. The way he sees it, businesses are open to attack on two fronts — the malicious hacker and the criminal. Malicious hackers are few in number, he said. Most hackers are playing telephone games and are not even aware of whose system they are on when they gain access, he said.

Criminals are people who steal money or information through the system, like the maintenance technician who placed diagnostic equipment on a system, copied the customer's account information and sold it to a competitor, Huber said.

"Huber serves as a method of getting our foot in the door of the computer theft world," said Pat Farrell, deputy chief. The Minneapolis police were totally unaware of how to deal with computer crimes before Huber's training, Farrell said. Huber gives the business community a sense that they can be helped in as confidential a way as possible, he added, especially when it comes time to make out a crime report. Businesses dislike filing such reports, but they must do so if the crime is to be investigated efficiently, he said.

It is much easier to secure a system to prevent abuses than to try to investigate a crime after the fact, Huber said. Businesses should take several security ideas and put a package together, he said. The more sensitive the information, the more sophisticated the security package should be, he added. It should consist of devices, guidelines, procedures and — if the company is large enough — a full-time security person.

Inmate allegedly enters system to abbreviate sentence

By Kathleen Burton
CW West Coast Bureau

SAN JOSE, Calif. — Thanks to an unattended IBM terminal, an inmate at a Santa Clara, Calif., prison almost computed his way out of jail in time to make it home for Christmas.

Scott Robinson, a truck driver serving a one-year sentence for stealing video games, allegedly memorized the logon codes for the Santa Clara County Sheriff's Department IBM terminal by looking over the shoulders of jail officials as they booked prisoner's records. Robinson allegedly logged on to the computer and altered his own release date from Dec. 31 to Dec. 5.

In an interview with jail officials, Robinson, a computer neophyte, said, "It's not that hard to get into computer files," but refused to admit he had done so.

Jail officials are investigating the possibility that Robinson may also have accessed 1,200 other release records and entered files in the statewide computer system at the Criminal Justice Information Center in Sacramento, Calif., a data network that contains state criminal and motor vehicle records. Officials are also trying to discover if other prisoners were released up to a year before their scheduled release dates, as Robinson has claimed.

The computer-aided escape attempt was discovered when Robinson began mentioning his release date to other inmates. A deputy became suspicious and checked written records, said Capt. Don Tamm of the sheriff's department. Tamm said that the computerized records are used to notify jailers of upcoming release dates but are normally checked against a written log. "Robinson never would have made it past the sign-out window," Tamm added.

> *People treat computers too informally, without understanding their power to do harm.*
>
> — Don Parker, SRI International, Inc.

Lt. Steve Frazza, commander at the Elmwood Detention Center in Milpitas, Calif., where Robinson is currently being held, said Robinson held a "trustee" status, which allowed him access to the medium-security misdemeanor booking area of the jail, where he swept floors and fingerprinted new inmates. The area where Robinson worked is next to the sheriff's law enforcement telecommunications system IBM terminal, Frazza said, so Robinson was able to get a close look at the terminal as sheriff's deputies used it.

To log on to the computer, a four-letter code and the inmate's booking number must be entered. Two codes must be changed before the computerized release date can be altered, and another key is then used to record the changes, Frazza said.

Lt. Jim McLarney of the sherriff's department said that since Robinson's alleged joyride through the data files, security precautions have been stepped up at the facility, which processes 75,000 prisoners a year. Trustees are no longer allowed in the booking area, and deputies have to remove their keys from the computers when they are not in use, he said.

Don Parker, a senior management consultant at SRI International, Inc. in Menlo Park, Calif., said the incident is a classic example of how people treat computers too informally, without understanding their power to do harm. Two basic security principles were violated in the case, Parker said: Only trusted people should have access to sensitive computing areas, and unique passwords should always be assigned to authorized individuals using a terminal.

Officials are currently deciding whether to bring charges against Robinson, who they claim plans to study computer programming after his release. "Looks like Robinson has a good future in programming," a jail administrator said.

ACM Computer Science Conference slated for March 12-14

NEW ORLEANS — The 13th annual Computer Science Conference of the Association for Computing Machinery (ACM/CSC '85) is scheduled to take place here from March 12-14.

Among those scheduled to speak at the ACM/CSC '85 conference are John Darringer, Ph.D., of the IBM Thomas J. Watson Research Center. Also scheduled to speak is Donald E. Thomas, Ph.D., of the Department of Electrical Engineering, Carnegie-Mellon University.

The conference's first keynote address will be delivered by Gerald Estrin, Ph.D., who is a member of the computer science department at the University of California at Los Angeles.

Conference topics

The topics to be addressed by conference speakers range from "Production Logic Synthesis" to "Supercomputers and Distributed Computing."

Registration for the conference is $70 for the full conference and $55 for a single day for ACM members. For nonmembers, registration is $105 for the full conference and $70 for a single day.

On-site registration, for members, is $95 for the full conference and $70 for one day.

On-site registration for nonmembers is $130 for the full conference and $85 for a single day.

Registrations may be addressed to ACM/CSC '85, Dr. Cathy Jo Linn at the Computer Science Department, University of Southwestern Louisiana, P.O. Box 44330, Lafayette, La. [illegible]

Virtual processor eases conversion to Sperry 1100/70

By Bryan Wilkins
CW Washington Bureau

WASHINGTON, D.C. — Announcing the demise of product support for Sperry Corp.'s VS 9 system, used in the public school system here, could have been rather traumatic since the system has been in place for 14 years with happy users. However, a bridging product, called an attached virtual processor, came to the rescue, permitting continued use of VS 9 data files on a new Sperry 1100/70.

According to William Stewart, director of the District of Columbia public school system operational support unit, other Sperry VS 9 users were moving to IBM 370s because they were reluctant to switch over to the more rigid 1100 series. Luckily for the District of Columbia schools, and perhaps for Sperry and the preservation of some of its business, Sperry quickly produced its bridging product — an attached virtual processor that enables the software codes running on VS 9 to be transported virtually free of programming changes to the Sperry 1100 operating system.

'No one else, I believe, has taken the time or effort to use [Sperry Corp.] Mapper in the ways we have.'
—William Stewart, director, District of Columbia public school system operational support unit

Stewart said that the VS 9 users in his public school system are relatively happy with the new 1100, which is running some unusual applications under the proprietary Sperry Mapper system. While the termination of support for the 90/80 was a major factor forcing change, the shift to the 1100 was equally necessitated by the changes in and greater demands on the public school system's data processing needs.

"No one else, I believe, has taken the time or effort to use Mapper in the ways we have come up with," said Stewart, who reported that the school system is now running one data base where five were present before. The combined data base management system, called Resource Management and Control System (Remcis), is now running on the 1100 and was written by in-house programmers using Mapper. It handles financial reporting requirements of all the schools, as well as all personnel management records for students and teachers.

Next year, Remcis will add payroll records, attendance and student grade records as well as the students' daily classroom schedules. All the applications programs will be developed internally, Stewart reported.

"Mapper is a tremendous tool for application generation," commented Stewart, who said that the new on-line data base is now being used in all sorts of report writing where previously batch runs on individual data bases were required.

The shift over from the 90/80 to the 1100 took six months. According to Marvin Raines, director of the District of Columbia public school system's Division of Information Resource Management, the successful transition was accomplished through planning and looking at other installations' experience before the switch was made.

Instead of using turnkey or off-the-shelf software application generators, the Division of Information Resource Management found that it had the in-house programming resources to learn the Mapper system. One junior programmer who was able to master the changeover quickly was a recent graduate of a computer learning school in the Washington, D.C, area, Raines said.

"We found that turnkey vendors were willing to come in and do the job for us, but they wanted to double the cost at the same time," added Stewart, explaining why the school system relied on in-house resources.

However, the installation of the Sperry attached virtual processor made the transition to the use of the 1100 from the 90/80 much easier in that the existing data storage file could be read by the 1100 in their native mode and be accessible as a virtual memory system from the disk drives, Stewart said. But the plans call for the removal of the attached virtual processor from the premises sometime in late summer of 1985, when all the District of Columbia public school system files have been transferred to the 1100 system.

Raines said he is proud of the technology conversion that has been carried out in his shop and even prouder that it was done quicker than expected with the Mapper system, which is not usually used for software program generation. "No one else has taken the time or effort to do it. It's unusual," he said of the eight new applications programs that were transferred in less than a year.

Yet every success brings some new demands. Data requests have jumped now that the previously cumbersome data bases have been merged, Raines reported.

“Rockwell International eliminates order management paperwork and ships products faster with a ***Tandem NonStop™ Computer System.”***

Robert P. Marovich, VP and Controller
Avionics Group
Rockwell International Corporation

Our Tandem NonStop computer helps us dramatically streamline order tracking for our broad line of products here at the Collins avionics facilities in Cedar Rapids. This automated operation has meant we've been able to ship our products faster, as well as respond to customer inquiries in a much more timely, accurate fashion.

The Tandem system consolidates all data pertaining to the orders, from order entry to scheduling, inventory issue to packing lists, and right on down the line to shipping. And, because the system is on-line, other departments have immediate access to this information as well: Accounting, for example, now generates invoices automatically, resulting in much improved cash flow; Manufacturing is saving $175,000 a year in internal freight charges due to the reorganization of ordering and shipping procedures, and the Group as a whole has been able to eliminate more than 300,000 reproduced documents a year.

Other system benefits contributing to our improved customer service include better control of backorders, more accurate pricing information, and the ability to make detailed forecasts of market conditions for planning purposes. The net result is an operation that is helping us achieve some very significant gains in plant productivity.

The NonStop System. Ideally suited to on-line transaction processing where continuous availability of up-to-the-second information is critical to your business.

Tandem [illegible] by a worldwide [illegible] service and manufacturing organization.

For information on how a Tandem NonStop system can improve your productivity or your P/L statement: call your local sales office or Tandem Computers Incorporated, 19333 Vallco Parkway, Cupertino, California 95014, U.S.A. Toll Free 800-482-6336 or (408) 725-7300 in California.

NonStop Transaction Processing

Unix standard expected to push Japan ahead of market

By Randall Litchfield
Special to CW

One question that can never be far from the minds of Americans is: When will Japan train its big guns on the U.S. computer market, quickly becoming No. 1 by inundating it with high-quality, low-priced products as it did with cars and televisions?

It is not that Japan has not tried. From mainframes to micros, Japan's large computer companies have sought the elusive U.S. market foothold needed to become major contenders but have done so mostly in vain. According to International Data Corp. (IDC), the Framingham, Mass.-based research house, the Japanese are a long way from brushing aside 35 years of U.S. leadership in the computer industry. U.S. firms still control about 75% of noncommunist information processing and, outside of the Pacific Basin, the Japanese share is less than 10%.

The fact that Japan has not scored a marketing coup surprises many. The country's enormous vertical manufacturing facilities and technological and financial resources make it perfectly suited to crank out the standard computer items — which are basically not any more technologically difficult than cars and videocassette recorders.

Unlike those items, however, computers have yet to form a mature market where standards are widely accepted. What has stood in the way of the maturation process has been the lack of standardized software. And what might well mature the market in a hurry is AT&T's Unix. Unix could potentially tame an explosive market, and the Japanese could very well direct their energies here.

The OA market has in fact been growing by leaps and bounds — as much as 40% annually in the U.S. on a 1983 base of $13 billion. Stephen McClellan, an analyst with Salomon Brothers of New York went as far as to say that OA is not simply another profitable niche for the computer industry but the future of the industry itself.

Japan could be positioned to pick up the most pieces in the widely predicted computer shakeout. As the industry matures, success increasingly depends on vertical integration. If there is one thing abundant on the islands of Japan, it is strong, well-organized and vertically integrated companies.

Japan has succeeded in certain marketing areas already and has enjoyed its first computer trade surplus with the U.S. in 1983.

However, Japanese success has been in the sale of components, not systems. As an OEM, it lacks all of the marketing clout used so effectively in dominating other industries. Instead of being able to offer leveraged sales of the office voice and data products already available from Japanese manufacturers, the Japanese are forced to sell to domestic distributors — minus the market presence and the meaty profit margins. Anyone familiar with Japanese marketing techniques in the automotive and consumer electronics industries will know that this simply is not the Japanese style of doing business.

According to the Gartner Group, Inc., Japanese manufacturers still lack an understanding of North American office needs to offer any real wide-scale competition. However, leading Japanese companies, including NEC Corp., Fujitsu Ltd. and Hitachi Ltd., are targeting the integrated office and will likely become significant by the end of the decade. The reason, they said, will be that software will have been better defined and will permit a commodity approach to the purchase of hardware. By then, the Gartner Group also expects, Japanese distribution and maintenance organizations will be sufficiently well established.

PC to System 34/36/38 Local Communications

With AST-5251/11™ and Standard Twinax Connections.

AST-5251/11 is the complete hardware/software solution that uses twinax cable to locally attach your PC/AT/XTs, portables and compatibles to your IBM® System 34/36/38 – just like a standard IBM 5251/11 display terminal.

Now you can fully utilize the benefits of your personal computer. With AST-5251/11, you use your PC as always, and emulate a powerful, feature enhanced Model 11 terminal to access your host. In addition to sharing data, you'll improve productivity. By using AST's Hot-Key support you can conduct concurrent DOS and host sessions, offloading work to your PC and freeing up your host.

For configuration flexibility, AST-5251/11 provides host addressable 5256 printer support and can effectively utilize low-cost PC-compatible printers. Options include file transfer and an application program interface for integrating PC and host applications.

This complete package – from the leader in PC enhancement products – is available from your neighborhood computer store. So is our AST-5251/12™ for remote connections. See your dealer today, or call our Customer Information Center (714) 863-1333 Ext. 5249 for more information. For OEM inquiries, contact AST OEM Sales (714) 863-9913. AST Research, Inc., 2121 Alton Avenue, Irvine, CA 92714 TWX: 753699AST UR.

FEATURES

- *Plugs into PC/XT/AT and compatibles; connects to System 34/36/38 via twinax cable and supports cable thru.*
- *Emulates 5251/11, or 5291, or 5292/2 display terminal.*
- *Provides host-addressable 5256 printer support on PC-attached printer.*
- *Selectable DMA and I/O interrupt channels.*
- *Application program interface and bidirectional file transfer available.*
- *Complete package includes hardware, software, twinax cable assembly, and comprehensive user manual.*
- *Hot-Key assist for concurrent host and PC sessions.*

AST-5251/11 and AST-5251/12 trademarks of AST Research, Inc. AST-5251/12 is a development of AST Research, Inc. and Software Systems, Inc., Jefferson City, MO. IBM registered trademark of International Business Machines Corp.

INTERNATIONAL REPORT
CW International News Network

AUSTRALIA

PETONE — After running its data processing operations in-house for 20 years, Unilever New Zealand Ltd. has transferred its DP operations to an outside service bureau. Faced with the cost of upgrading its 4M-byte IBM 4331 and a high staff turnover, Unilever has opted to off-load to Idaps Computer Sciences New Zealand.

■

KNOWFIELD — A 25% price advantage and a better upgrade path were cited as the two factors that influenced the Victoria retailing cooperative Composite Buyers Ltd. to abandon IBM in favor of National Advanced Systems Corp. (NAS).

Composite Buyers chose the NAS 6650 to replace its IBM 4341 Model 2 because the NAS system offered the same memory capacity and three more channels for less than 75% of the price of the existing IBM rental, a spokesman said. Composite Buyers is a group of 400 grocery retail outlets in Victoria.

■

CROWS NEST — Telecom Australia is suffering from what is being called "a massive brain drain." The company has been losing its communications experts at the rate of about 150 employees a year, mostly to banks, sources said.

■

MELBOURNE — One of the most sucessful partnerships in the history of the Australian computer industry has broken up, insiders reported. Brian Johnstone, joint managing director of Computer Power Group Holdings, has sold his 33.3% share for an undisclosed sum to the other two shareholders, Rupert Murdoch's News Ltd. and Roger Allen, Johnstone's former partner, leaving the two with 50% holdings each.

FRANCE

PARIS — Groupe Bull has unveiled an addition to its Micral range of microcomputer workstations. The new two-workstation Model 90-20 comes with 256K bytes of memory and up to two 600K-byte diskette units and can accommodate a 5M- or 10M-byte fixed disk, the vendor added.

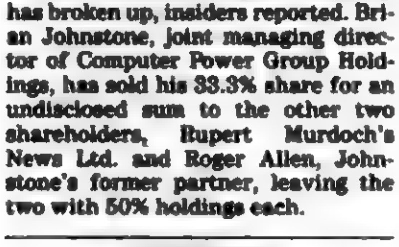
The machines can run under Microsoft Corp.'s MS-DOS and Digital Research, Inc.'s CP/M operating systems. Pricing starts at $2,790 for the Micral 90-20.

■

PARIS — Telic Alcatel, Groupe Bull and financial investors lead by Credit du Nord Bank have joined forces to create a new microcomputer and peripherals company here.

The company, called Djinntel, will manufacture and market equipment that is compatible with the French Minitel terminals; has value-added features such as automatic dialing, call management and optimization of use of telephone lines and servers; and can access videotex services.

Directing the new company will be Jean-Pierre Talvard, the former director of product development at Compagnie Generale d'Electricite.



JAPAN

TOKYO — In a flurry of announcements, Fujitsu Ltd. has introduced mainframe system called the Facom M-3800, a cartridge tape drive called Facom 6475 and an enhanced version of its OS IV F4MSP software.

According to a company spokesman, the M-3800 offers a main memory of 64M bytes, expandable to 128M bytes; a potential memory of 2G bytes; and up to 64 ports. It reportedly can be leased for $76,000/mo and comes bundled with the vendor's enhanced software.

The OS IV software now features the ability to switch back and forth on-line and off-line; comes with the vendor's Advanced Information Manager software, which can handle 400,000 transactions an hour; features half the response time of the former version; and supports up to 2G bytes of memory, according to Fujitsu.

Finally, the Facom 6475 cartridge tape drive has a 2.5M byte/sec response time, 280M-byte capacity, 18 tracks and 32,000 bit/in. density. It can be leased for $2,320/mo, the vendor said.

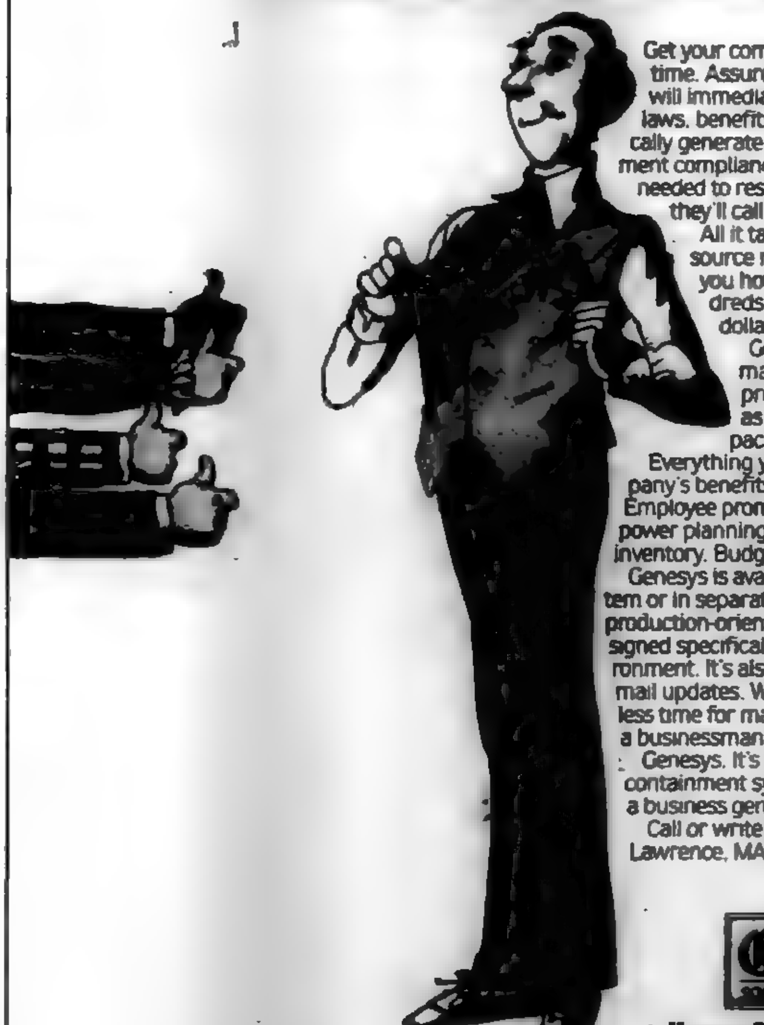
UNITED KINGDOM

LONDON — British software maker Aregon International will supply Japanese industrial giant Mitsubishi Electronics Corp. with $3 million worth of videotex equipment during the next three years under the terms of a recently signed agreement. Mitsubishi will distribute Aregon products in Japan with options to develop further potential markets in other Far Eastern regions. Aregon is customizing its videotex products to accommodate the Japanese language.

■

LONDON — Nixdorf Computer AG has announced two additions to its Comet software line: Comet International and Comet Oil. The company also announced the creation of an International Oil Divison here.

EVEN IF YOU CHOOSE THE GENESYS HRMS FOR STRICTLY TECHNICAL REASONS, YOU'LL STILL LOOK LIKE A BUSINESS GENIUS!



Get your company's 401(k) up and running on time. Assure payroll that employees' paychecks will immediately reflect any changes in tax laws, benefits, or union settlements. Automatically generate all the reports required for government compliance, as well as all the information needed to respond to discrimination suits. And, they'll call you a business genius.

All it takes is Genesys. The human resource management system that shows you how to contain costs and add hundreds of thousands, even millions, of dollars to your company's bottom line

Genesys is the only human resource management system to offer a comprehensive benefits module, as well as leading edge personnel and payroll packages.

Everything you need to manage your company's benefits program Minority tracking Employee promotions. Applicant control Manpower planning. Training and development. Skills inventory. Budget analysis And more.

Genesys is available as a fully integrated system or in separate modules. With or without a production-oriented IMS/database system designed specifically for your IBM mainframe environment. It's also the only HRMS with electronic mail updates. Which means it'll take that much less time for management to see just how smart a businessman you are.

Genesys. It's more than an HRMS. It's a cost containment system that makes you look like a business genius.

Call or write today. Genesys, 20 Ballard Way, Lawrence, MA 01843. (617) 685-5400.

NEWS

TURNAROUND TIME

Larry Long

Q Computer terminals and microcomputers are now commonplace throughout the company, and we order five to 10 more every month. As more and more applications go on-line, people with no typing background whatsoever are asked to use the computer to enter not only numeric data but text as well. In our training sessions, we find that some are frightfully slow, and we wondered if you could recommend a good microcomputer-based package for interactive keyboard training.

I do not recommend specific hardware or software products. However, any of the major packages should prove adequate for your needs. Besides training software, you might also consider purchasing Dvorak keyboards for hunt-and-peck keyboarders who refuse to learn touch-typing skills. With 70% of the alpha keystrokes on the home row, a novice keyboarder can significantly increase his productivity with the Dvorak system.

Some companies have already implemented Dvorak keyboards in their word processing pools and are experiencing 50% and higher increases in productivity. I expect that within a couple of years, we will be ordering as many Dvorak keyboards as we do Qwerty keyboards.

Q My 10-year career has revolved around personnel services. During the last year, I have worked closely with several programmers who are implementing a new system for us. Lately, I find myself more interested in their work than in my own. I spoke with their manager about transferring to his group, and he encouraged me. He seems to think that I could learn to be a good programmer. I'm about to take him up on the offer but am still concerned whether I have the right type of personality. Is there a stereotype for a programmer's personality?

Contrary to popular belief, programmers cannot be stereotyped. I've worked with hundreds of past and present programmers, and I say without reservation that they are a truly varied lot.

However, I will say that most good programmers possess certain attributes. They can be described as perceptive, persistent, patient, picky and productive.

Q During the last 20 years, I've progressed steadily in a family-owned company to the point that I now manage a 35-person data center. During the last few years, business has gone sour, and we are beginning a third year with no pay increases. I've lost all my best people and have just about decided to jump ship myself.

I wanted to check with you before I begin applying for other jobs. I never finished my bachelor's degree. I could complete the degree in 11 months if I go full-time. I'm in my early 40s but am willing to return to school if the degree is absolutely necessary.

With bonuses, my current salary is about $50,000. Do you feel that my lack of a degree will be a deterrent to my finding an equal or better position?

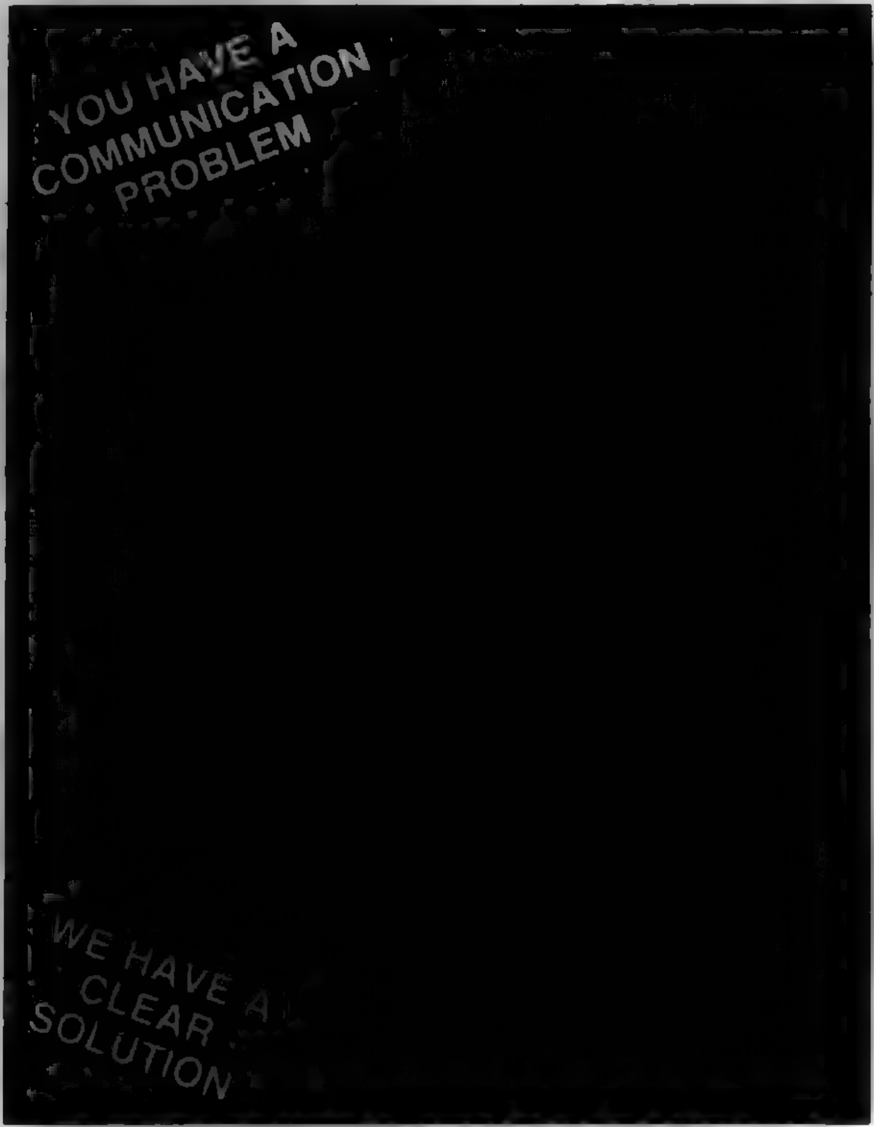
At least 95% of the positions to which you aspire will have a baccalaureate degree as a minimum educational prerequisite. In the past, companies have waived the education prerequisite for truly outstanding people, but this happens infrequently today.

In answer to your question as to whether you should return to school, by all means, yes. With your experience and tenure in the business, the degree area is not nearly so important as the parchment.

Q We are a small company of slightly fewer than 1,000 employees. Currently, our centralized MIS division services our four locations, all of which are in the same state. Against all of my arguments to the contrary, our steering committee voted to decentralize and has asked me to draw up a plan to accomplish the move. I feel that such a move is premature and will hinder our efforts to be responsive. Is there anything I can say or do to reverse its hasty decision?

There is no such thing as pure decentralization of information services. You can distribute people, hardware, software and data, but somebody has to mind the store, whether you choose geographic or functional decentralization. Is your committee suggesting that each site maintain separate data bases? Who will set standards, ensure compatibility and establish policy?

I've long been a proponent of moving processing capability closer to those who use it but not at the expense of integration and coordination. Approach the steering committee with a plan for what I call "centralized decentralization." That is, outline a plan that distributes computing resources according to the committee's wishes, but accompany it with an organizational structure with control authority for coordinating the information services function.



FULL COMMUNICATION CAPABILITIES IN LIMITED DISTANCE APPLICATIONS

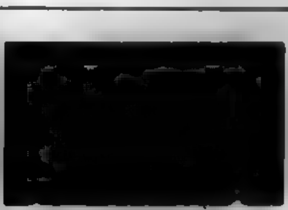
For all your networking needs — DATA-VOICE-VIDEO — the clear choice is Fibronics fiberoptic communications, for providing fast, effective solutions. Fibronics is a full-capability manufacturer of complete fiberoptic systems including fiber, cable, optical components, modems, and multiplexers for all limited distance communications application.

If you're in the dark concerning any limited distance application, contact Fibronics. We will have a good understanding of your problem and, more than likely, a clear solution ready and waiting.

CALL TODAY: (617) 778-0700

Fibronics International Inc.
325 Stevens Street Hyannis, Massachusetts 02601

Cable Bandit Unimux 832 and PASCII are trademarks of Fibronics International Inc.
IBM is a registered trademark of the International Business Machines Corporation.
ITT Courier is a registered trademark of the International Telephone and Telegraph Corporation.
TELEX is a registered trademark of the TELEX Corporation.
Memorex is a registered trademark of the Memorex Corporation.
Raytheon is a registered trademark of the Raytheon Company.



FM-800 VOICE & DATA
The UNIMUX 832™ is used either to transfer bulk quantities of voice and data in large data centers or for high density node applications. The UNIMUX carries up to 128 data and/or voice circuits including IBM 3270, RS-232, v. 35, analog voice, TTL and more. It can be used in DCE to DTE or DCE to DCE networks.

FM-1600 HIGH SPEED DATA
The FM-1600 Cable Bandit™ Series multiplexer systems can reduce your cable (fiberoptic or coax) requirements 32 to 1. The Cable Bandit can connect two similar or different controllers within one system and is compatible with IBM 3270, ITT Courier, Telex, Memorex, Raytheon and others.

FOV-4000 CAD/CAM
The FOV-4000 Series fiberoptic links extend the distance up to 3 km between the CPU and CAD/CAM workstations. High resolution monochrome or color transmission is accomplished with multiplexed data.

FM-900 UNIBUS EXTENDER
The FM-900 Series permits the extension of a DEC UNIBUS up to 3 km from a VAX or PDP-11 computer. This fiberoptic bus extender can transmit full duplex data for high speed line printers, monitors and color graphics display generators.

FC-3000 PASCII™ PROTOCOL CONVERTER
The PASCII™ protocol converter allows IBM 3274 controllers to communicate with asynchronous ASCII terminals/printers without requiring a front end controller (i.e. 3705).

OPTRONICS
Fibronics offers a wide variety of fiberoptic cables, standard and specialty, for use in indoor/outdoor, direct burial, military and plenum applications with complete design and installation service.

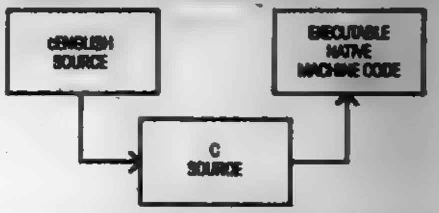
cENGLISH™
The C Generation Language.

What is cENGLISH? cENGLISH is a comprehensive fourth generation procedural language based on dBASE II™ syntax. It is portable to a wide range of micros and minis. The language features user-transparent interfaces to a wide range of popular C compilers, operating systems, and data base managers.

How is portability achieved? cENGLISH through its compiler interface translates cENGLISH into documented C source and uses a host C compiler to produce native machine code.



[illegible]

Differences in the operating system and data base manager are handled by the runtime libraries.

The result is that cENGLISH source can be compiled without modification on any micro or mini configuration supporting cENGLISH.

What about performance? cENGLISH executes FAST, just like any compiled C program.

How easy is cENGLISH to use? While cENGLISH is a powerful high level language that can accommodate complex software development, it remains simple and straightforward to use.

Call or write for availability of cENGLISH for the following configurations—

Compilers:
  Standard O/S compilers: Lattice C™ for MS/DOS™
Operating Systems:
  UNIX,™ UNIX-like, MS/DOS,™ Coherent,™ VMS™
Data Base Managers:
  C-ISAM™ and INFORMIX,™ UNIFY,™ ORACLE,™ PHACT,™ Logix™
Foreign Language Versions:
  German, French, Spanish

Attention MS/DOS users. Demo version and special introductory offer available for IBM PC,™ XT,™ AT,™ and other MS/DOS systems. Requirements: 256K, hard disk or two floppy disk drives, and MS/DOS 2.1 or higher.

Attention dBASE II and dBASE III users. dBASE II to cENGLISH Converter now available; dBASE III Converter available later this quarter. Converted code is portable to micros or minis and executes as fast as original cENGLISH source.

dBASE II and dBASE III are trademarks of Ashton-Tate. Lattice is a trademark of Lattice, Inc. UNIX is a trademark of Bell Laboratories. MS/DOS is a trademark of Microsoft, Inc. Coherent is a trademark of Mark Williams Company. VMS is a trademark of Digital Equipment Corporation. C-ISAM and INFORMIX are trademarks of Relational Database Systems, Inc. Oracle is a trademark of Oracle Inc. PHACT is a trademark of Phact Associates. Logix is a trademark of Logical Software, Inc. IBM PC XT and AT are trademarks of International Business Machines Corporation. UNIFY is a trademark of Unify Corp.

...at once.

With Northern Telecom's unique multi-tasking capability, you can perform a multitude of jobs—simultaneously.

Now your staff can work on spreadsheets, move to word processing, shift to personal computing, then access data and communicate, without missing a beat. No more time-consuming interruptions. Thanks to the unique multi-tasking capability of Northern Telecom's 500 Series Office Information Systems.

With our unique access feature, your staff can leave any application at any point and move to another—and another—while the original task is processed through completion. In fact, the 500 Series will keep track of as many as 16 running programs at once!

Northern Telecom's 500 Series Information Systems also have outstanding communications capabilities. Besides being compatible with each other, they communicate with a multitude of mainframes, including IBM, Burroughs and CDC. They also talk to other minis and even micros such as IBM PC's and Apple.

Our multi-tasking capability allows for up to 16 users to access common files—send or retrieve—from across the hall or across the country. So your people spend less time researching, duplicating efforts and conducting meetings.

Let us show you how easy and cost-effective it is to be in 16 places at once.

Write Northern Telecom Inc., 9705 Data Park, P.O. Box 1222—T-240, Minnetonka, MN 55440; or call 1-800-331-3113. (In Minnesota, call 612-932-8223.)

EDITORIAL

Time for hard line on software

By most indications, there are so many people engaged in using pirated or pilfered programs in the U.S. and elsewhere that, instead of punishing the offenders, perhaps we ought to award merit badges to those who actually pay for the software they use.

Figures made available recently by the Canadian Computer Dealers [CW, Dec. 17], although rough 'guesstimates' at best, nonetheless are shocking in their magnitude. According to the dealers up north, nine in 10 microcomputer programs in use in Canada are illegal — either pirated (copied and resold for profit) or pilfered (copied and distributed gratis for use within MIS departments).

The costs are obvious, both to vendors who lose massive amounts of revenue and to users, who eventually will pay for those lost revenues through higher software prices. And there is no reason to expect the situation is much different in the U.S.

Given that software piracy and pilferage will remain and likely proliferate as long as the crime is so easy and safe to commit (as in the hacking dilemma mentioned in this space last week), the obvious defense is for vendors to make it harder to copy a program. This should be about as easy as preventing teens from taping live radio concerts.

Nonetheless, vendors like Ashton-Tate, Lotus Development Corp., Microsoft Corp. and others that stand to lose their shirts to runaway piracy are banding together to attack the problem [CW, April 30]. They have to. Apparently, not much help is forthcoming from the U.S. Department of Justice, which, according to one specialist in copyright law, hasn't undertaken a criminal prosecution for software piracy under the Copyright Act of 1976.

Computerworld strongly supports all efforts by the vendor community to combat pilferage and piracy both in the courts and, ultimately most effectively, on the diskettes themselves. But the greatest role in fighting this problem can be played by MIS and DP professionals from vice-presidents to entry-level programmers. It is from their ranks that have come the people most proficient in determining how best to pirate and pilfer software.

I'M SORRY, BUT HE CAN'T SEE YOU NOW. HE HAS A RUSH PROGRAM TO HAND-CODE.

Computerworld

DATA PAST

Five years ago

WASHINGTON, D.C. — A rewrite of the Communications Act of 1934 had been unveiled in the House of Representatives. Endorsed by all members of the House Communications Subcommittee, headed by Rep. Lionel Van Deerlin (D-Calif.), the bill hewed closely to advice from President Carter's chief telecommunications advisor, Henry Geller.

Ten years ago

WASHINGTON, D.C. — A compromise to guarantee the privacy of individuals' personal records kept in government data banks had passed both houses of Congress and was expected to be signed by President Ford before Christmas.

LONDON — Results of the benchmarking project run by the British government's Central Computer Agency had appraised some minis with power equal to or in excess of some full-scale mainframes, although the general pattern was "predictable."

LETTER

IBM Cabling System still a contender

I must object to the presentation of the article "IBM Cabling System falls short of mark, user says" [CW, Nov. 26].

The article places greater emphasis on the problems than on the virtues of the Cabling System. The headline strongly conveys the very false impression that we are dissatisfied with the capabilities and performance of the Cabling System, and that we are about to abandon the system already installed at Carnegie-Mellon University.

These are certainly not accurate impressions. While local-area network wiring is proving to be more expensive than we estimated four years ago, the IBM Cabling System as installed (in only one building) is completely adequate for the task and offers many advantages in versatility, configurability and maintainability.

It remains under very serious consideration for campuswide installation.

Thomas W. Bajzek
Pittsburgh, Pa.

Exception reporting: Less can be more

THE DATA CENTER
John P. Murray

The idea of building exception reporting systems is not new. While a considerable amount has been written about the delivery of systems that key in on and report only the significant aspects of a particular situation, many organizations have accomplished little in this area.

Given today's technology, this is both unfortunate and unnecessary. Consideration of those factors that have historically worked against the delivery of such systems and implementation of some approaches that can prove helpful in overcoming those impediments can increase both client satisfaction and the productivity of the department. Why produce more than is necessary to get the job done?

Information processing clients often argue that, to be effective, reporting systems must produce minute detail. They feel the reports must cover all transactions in detail in order to meet their needs. A feeling exists among MIS clients, sometimes shared by members of the systems and programming staffs, that unless copious amounts of detail are produced, the system is of questionable value.

Part of this problem can be traced to prior constraints of both hardware and software. The limitations of the technology placed real restrictions upon the design of information processing systems. In many instances, the only practical solution was to produce voluminous reports that contained considerable detail. An objective review of many reports currently being produced will yield examples of this phenomenon. It is questionable if those who receive these reports can find time to read, never mind use them.

There are indeed systems, many of them in the financial areas, where considerable detail is required. An invoicing system is a good example. Both the organization's customers and members of the accounting and accounts receivable departments must know what was sold and delivered, when the sales occurred, and when, or if, payment was received.

> *Some information processing functions have so little credibility that clients insist upon great volumes of detail to satisfy themselves of the accuracy of the work being done.*

Unfortunately, some information processing functions have so little credibility within the organization that clients insist upon great volumes of detail to satisfy themselves of the accuracy of the work being done. Clearly, in those organizations where such a situation exists, the original data must be cleaned up and better controlled before any campaign can be mounted to move to a more exception-oriented reporting environment.

There are areas in organizations where vast amounts of detail are not only not required, but may have a deleterious effect.

On occasion, sales forecasting and results monitoring are attempted on too broad a scale. Too much data is manipulated, too much paper produced, and the result is frustration.

Consider a company with 50,000 active customers, 300 sales people and a product line of 800 items. This organization produces on a routine, batch basis, a number of sales reports. One set of reports tracks all sales by salesman and by customer. Another set tracks all sales by product category, and a third set tracks sales by region. All activity for all sales made during each month is printed in each of the three sets of reports. This, of course, amounts to a massive amount of detail.

An analysis of these reports might show that approximately 80% of the total sales were made to 20% of the customers. Further investigation might reveal that 350 of the total 800 products in the line produced 70% of the total sales revenue. The result of such an analysis would reveal that much less detail would provide a significant picture of the sales effort.

If the organization has its sales information under a data base management system, it will be easy to restructure the reports in order to reduce both the print time and paper volume required to produce meaningful reports. All data will still be used as input, but through a more effective selection process, those items that do not affect the business can be combined and printed as totals rather than as line items. The detail will still be available and can be produced when required.

The savings in the cost of paper, machine time, printer use and handling are obvious. If the process is put on-line and CRTs are used, further reductions in these costs can be realized. Perhaps the biggest benefit will be the lowered frustration level of those who must use the information. The sales function can now be managed more effectively and more immediately. Problem areas can be identified and corrected more quickly. The focus can be sharpened to identify and address the critical areas and to target new opportunities.

This may seem a rather elementary and obvious example of the value of exception reporting and perhaps it is, yet, such situations exist in many organizations. We tend to become sensitized to the work our departments produce. It never hurts to take the time to step back and look at what is being sent to our clients. An objective analysis of improvements in new technology may make exception reporting a more viable process.

And visions of robots danced in my head

HUMAN CONNECTION
Jack Stone

There is no question that within a few years, enterprising systems folks will export cost-effective applications of robotic machines of all makes and styles from the production facilities of America to the offices.

This conclusion was driven home in the futuristic movie *Runaway*, in which these machines had not only become well established in such challenging environments as building construction, but even more impressive, they were serving as maids and housekeepers.

The plot of the film concerns an evil crook who replaces processor chips of user-friendly robots with chips programmed to turn the little fellows into user-hostile killers. Tom Selleck, a police officer who specializes in robotic deviants, tracks down the mad machines and dispatches the crook with alacrity.

Robot runs amok

It is not difficult to extrapolate from Selleck's saga and accept the inevitability of robots, designed to alleviate the shortage of skilled workers in computer centers. But one wonders how Selleck would handle a programming robot that has run amok.

- *The time*: Christmas Eve, the year 2010.
- *The place*: The offices of a major computer operation.
- *The scene*: Several dozen robot programmers are busily working at their desks, typing madly away at mainframe terminals, entering code at six to 10 times the rate of their human counterparts.

Doris Sisterman, a bright, young analyst who heads a small programming department is conducting an important meeting with her staff. In attendance is a robot with the name "R9D9" stenciled on its chest.

"Are we all agreed, then? The problem is of such crisis proportions that we must call Officer Selleck?"

"Yes!" responds the staff. The robot's antenna is seen to droop at the decision.

A few minutes later, Selleck races in with full regalia: steel headgear, leaded clothing and a zapper ray gun. "Where is the creepy, crawling monster? Let me at it!"

Sisterman puts her hand up to slow down the attack and says soothingly, "Whoa now, hold your horses and quiet down. Although our situation is desperate, you must appreciate that we certainly don't want you upsetting the other robots.

"We have delegated virtually all of our detail work to our robot teams. The machines take care of the computational support of system design, layout and documentation of the program specifications, parameter selections, detail coding and programming documentation.

"As a consequence, we find ourselves relieved of all the tedium, drudgery and routine aspects of the programming job, and we can focus all of our energies on the creative aspects of our assignments. However, the bottom line is that there is so little creative work to do that it's difficult to get psyched up to do it. So we programmed R9D9 here to play 'Adventure' with us, setting it up so that we find all the treasure and come up with a perfect score. The victory really gets our creative juices flowing.

Beyond the giant, green snake

"But someone changed his processor chip, and we can't move beyond the giant, green snake. We've tried everything — lighting the lamp, drinking the water, we even let the bird out of the cage.

"Unless we find a way to kill it, we won't win the game and we'll wind up without the incentive to design new systems.

"Please, Tom, will you find the sinister source of this horrific act?"

Selleck points his zapper at the visual sensor of the robot and demands, "All right, you bucket of bolts, who is the culprit? Tell me or I'll blow you right into electronic heaven."

R9D9 cringes. "I'll come clean. I did it — but with good reason. They were giving 'Adventure' a bad name with all their wins, and being a player myself, I couldn't stand the corruption."

Have a wonderful holiday and great New Year! ‡

THE MOST IMPORTANT FEATURE YOU'LL FIND IN DIGITAL'S TELEPRINTERS IS THE COMMITMENT BEHIND THEM.

When Digital pioneered the concept of interactive computing some 25 years ago, an interesting side benefit occurred. Out of necessity, we had to develop our first teleprinter.

But rather than simply approaching the task as a sideline, we genuinely committed ourselves to the job of developing a truly outstanding product. The end result was the LA36™ teleprinter. A system that provided far more features, capabilities and durability than most people needed just then. The fact that over 200,000 LA36 teleprinters remain in active duty across the country today is a true testament to the careful thought and foresight that went into the original design.

Each new model introduced since the LA36 teleprinter has been yet another demonstration of our commitment to the needs of the marketplace. And an equally strong demonstration of the market's commitment to us. For the popularity of our products, in several cases, has actually helped drive the industry to adopt new standards. With the introduction of the LA36 teleprinter, for instance, came the wide acceptance of the 300 baud communications rate. And the LA120™ teleprinter helped popularize the faster 1200 baud rate.

Digital's commitment to the teleprinter market remains rock-solid. Our terminals manufacturing plant in Arizona currently produces more teleprinters than ever before. So as long as there's a need for teleprinters, you can count on Digital to fulfill that need. With a product specifically designed for the job.

THE DECWRITER III. THE IDEAL TERMINAL FOR HIGH DUTY CYCLES AND RUGGED ENVIRONMENTS.

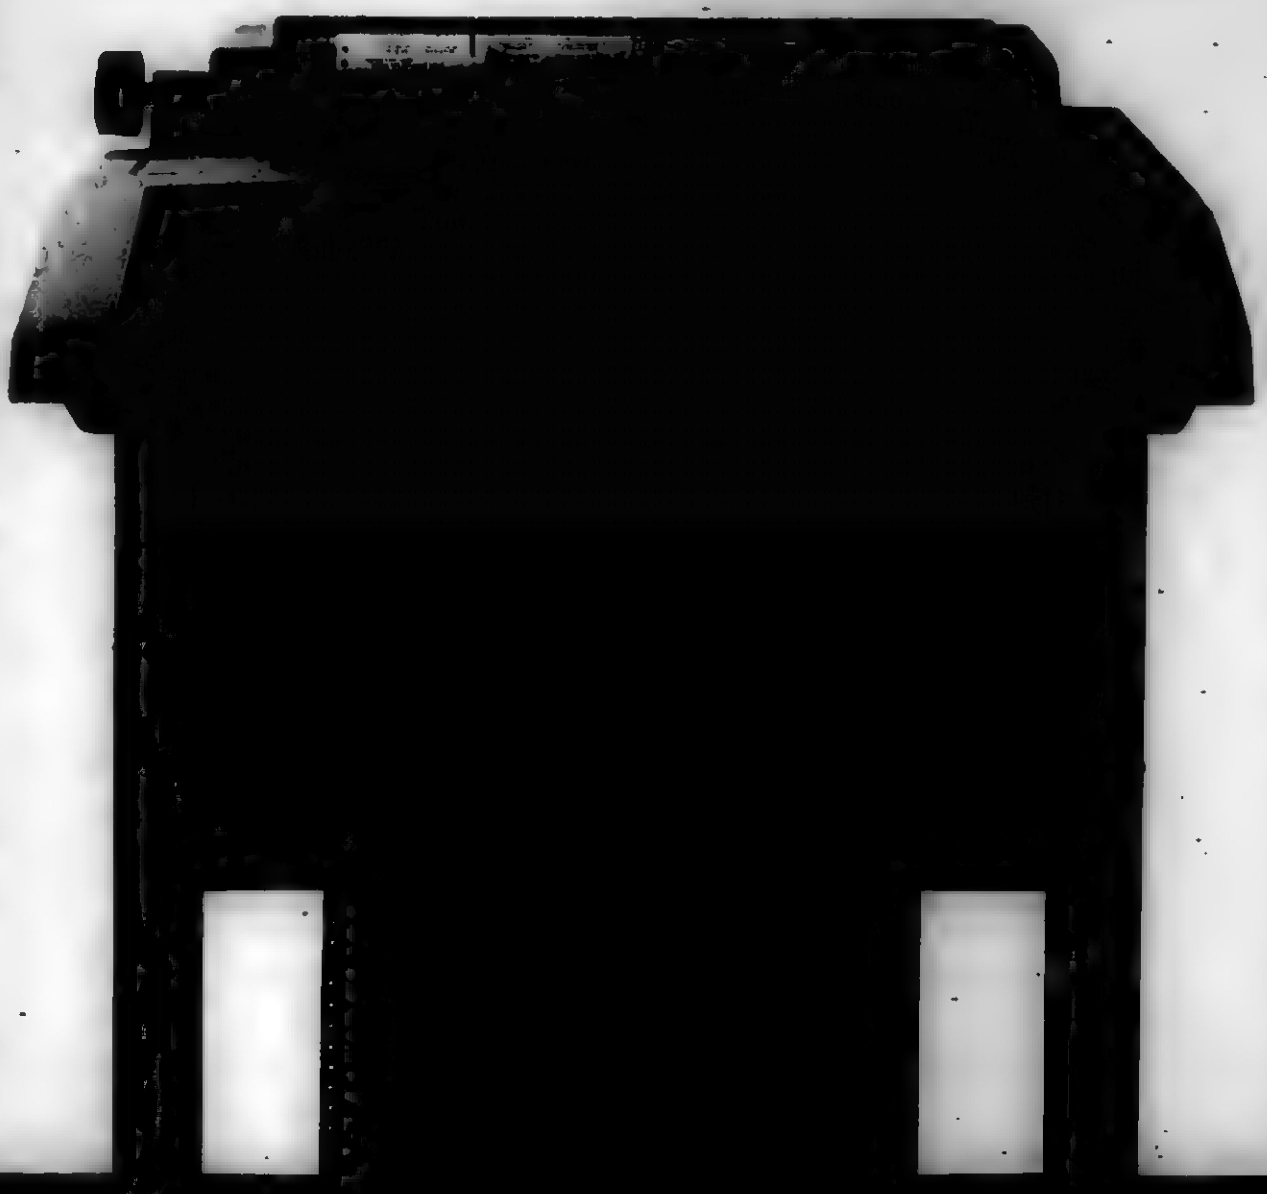
Even the briefest glance explains why the DECwriter III™ (the LA120) teleprinter has established Digital's long-standing reputation in the terminals market. This heavy duty teleprinter is every bit as tough as it looks.

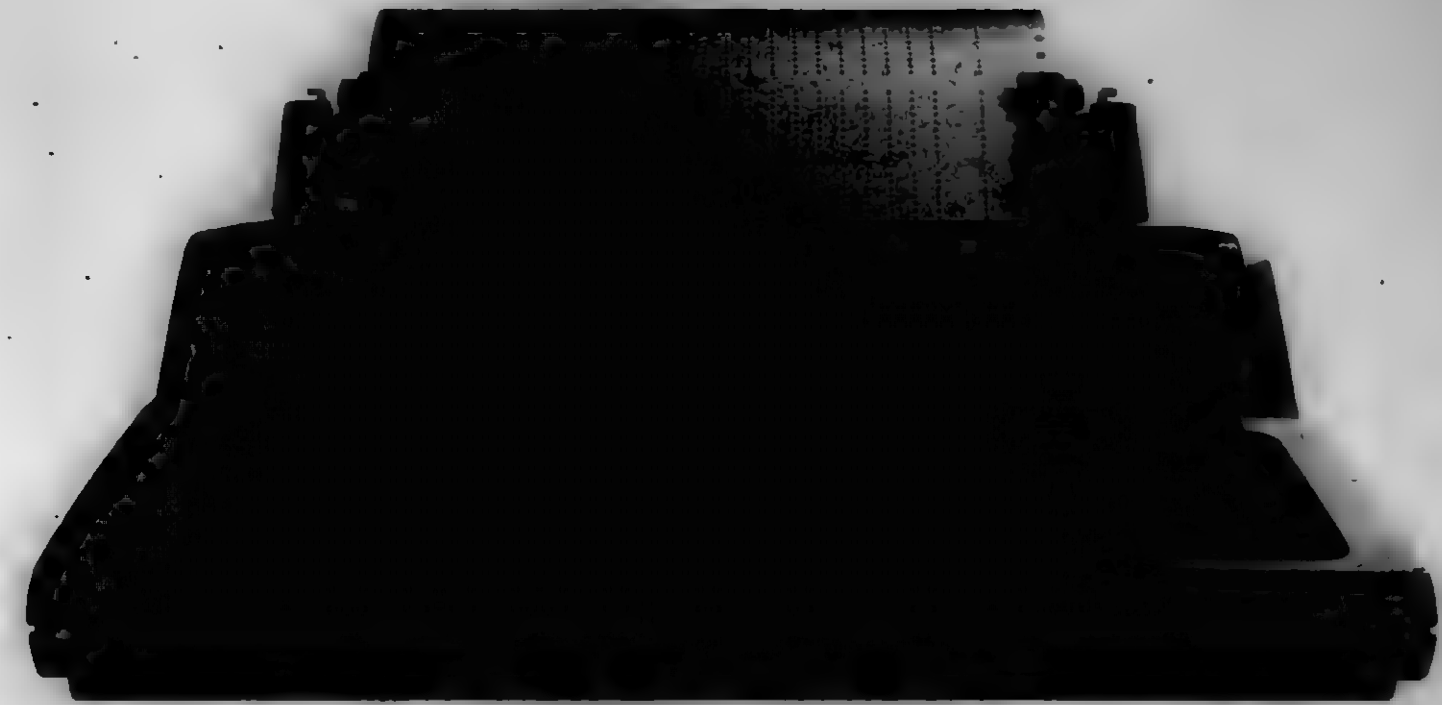
It gives you exactly what you want. Fast draft speed printing at 180 characters per second. Fanfold paper capabilities in widths up to 15". A choice of 8 character widths. And extensive communications support, including auto answerback and auto disconnect.

Most importantly, the DECwriter III teleprinter is a true master of forms. Some 45 features, like horizontal pitch, left/right and top/bottom margins, as well as horizontal and vertical tabs, are all summarized right on the keyboard, allowing you to set up formats in an unusually quick and simple manner. Then, once set, all can be stored in non-volatile memory. And the DECwriter III teleprinter can provide crisp, legible forms up to an impressive 6 parts.

DIGITAL'S LETTERWRITER 100. THE BEST ENGINEERED TELEPRINTER FOR THE OFFICE.

Flexibility is the word that best describes the Letterwriter 100™ teleprinter. For starters, you have a choice of multiple print speeds. You can print a draft copy of a one page proposal in just 10 seconds. Then,





by simply pressing a single button, you can shift from a high speed 240 characters per second to a high quality 30 characters per second, with printing that's difficult to distinguish from true letter quality. There's even an optional 80 character per second memo mode that's ideal for interoffice correspondence.

For further versatility, the Letterwriter 100 teleprinter lets you select from 8 different character widths, multiple character sets and a wide variety of typefaces. In fact, you can store 5 different typefaces resident within the teleprinter, and the selection can include Courier 10, 12, and Italics, Gothic 10 and 12, Orator 10, and APL, so you can select the style that suits the job as easily as pressing a key. And, in the event you'd like to illustrate a particular point, bit map graphics help you do just that.

The Letterwriter 100 can handle the paper that best suits your needs. Sheet, fanfold or roll, in any width up to 15."

Finally, the Letterwriter 100 product tackles all your forms. Setup is simple, and the high quality dot matrix printhead provides crisp, legible copies through 4 part forms.

In short, the Letterwriter 100 is the one teleprinter that finally lives up to the requirements of your whole office.

THE DECWRITER CORRESPONDENT. THE ONLY FULL-FEATURED COMPACT YOU'LL FIND.

In many situations, the applications themselves suggest a clear solution.

But just as often, the solution isn't quite so clear.

That's when you need Digital's Correspondent™ teleprinter. It's the closest thing to an ideal, all-around terminal.

Consider its wealth of features. The Correspondent teleprinter allows you to use ordinary single sheet, roll, or fanfold paper for high quality output that won't fade over time like thermal paper. It also gives you the flexibility to print multiple part forms and labels. And you may customize the text output to your own particular style by selecting from a wide variety of character sets, widths and sizes alone or in conjunction with bit map graphics.

But what makes the Correspondent teleprinter truly impressive is that you get all these features in a compact little 20-pound package. A package complete with three communications interfaces. Not just the usual RS232-C port, but a 300 baud acoustic coupler and a 300/1200 baud modem as well. That means the Correspondent teleprinter can function as a console or as a transportable terminal that can move from desk to desk or office to office, ready to communicate in whatever mode is available.

No matter how you look at it, the Correspondent teleprinter gives you a lot of capability in a small package.

BEST ENGINEERED MEANS ENGINEERED TO A PLAN.

Digital's teleprinters, like all Digital hardware and software products, are engineered to conform to an overall computing strategy. This means that our products are engineered to work together easily and expand economically. Only Digital provides you with a single, integrated computing strategy direct from desktop to data center.

For more information and the name of the Authorized Terminals Distributor or Digital Representative near you, call 1-800-DIGITAL, extension 700. Or write Digital Equipment Corporation, 2 Mount Royal Avenue, UP01-5, Marlboro, MA 01752.

THE BEST ENGINEERED COMPUTERS IN THE WORLD.

Q: How Many People Are Afraid Of Your 4-GL/DBMS?

A: None, If You Have EZNOMAD.

That's right. EZNOMAD is a major extension of NOMAD2 that pulls novice and infrequent end-users into the mainstream of mainframe computing. EZNOMAD's screen-driven environment requires no key words, system commands, or knowledge of syntax for operation.

With EZNOMAD, your end-users can sit back and follow a series of English-language instructions, menus, and pick-and-point screens. Now, those busy "management types" who "never have the time" to learn mainframe computing don't need to take the time. Infrequent users no longer need to "relearn" the system every couple of months.

EZNOMAD's micro-like capabilities access essentially all of the functions and power of NOMAD2. Imagine a senior manager in your company developing databases, creating applications, maintaining databases, and writing ad hoc reports — without your help.

Your senior management will not only be pleased with the capabilities of EZNOMAD, they will also be delighted with the cost of EZNOMAD—its's free to all NOMAD2 licensees.

In other words, you get the ease-of-use of a micro and the tremendous power and flexibility only a mainframe can deliver. And the price is right.

It's nice to know that when you pick NOMAD2 as the 4-GL/DBMS for your company, EVERYBODY will know first-hand that you've made the right choice.

EZNOMAD is the latest innovation in end-user computing from Dun & Bradstreet. NOMAD, now NOMAD2, has evolved over the years to keep pace with the demands for providing business professionals with maximum computing power. EZNOMAD is a major stride in that direction.

SOFTWARE & SERVICES

JAD project aids design

User involvement stressed in structured method

By Gary Rush
Special to CW

Most DP professionals agree that increased user involvement ensures better systems design and reduced maintenance. Now there is a new way to achieve this through a structured meeting technique called Joint Application Design (JAD).

This technique, developed by IBM, uses an impartial, trained session leader and an agenda structured to extract a high-quality statement of business system needs in a fraction of the time normally required when using traditional methods.

This method replaces traditional techniques in which analysts interview users and then translate their needs into DP terminology. The traditional methods often fail because of the communications gap between data processing and the business community or user.

The JAD method provides a technique for documenting business requirements from the user's perspective and in the user's language. It does this with clearly defined steps, an impartial session leader to guide the participants, workbooks to assist both the session leader and the participants and the dynamics of a workshop environment.

In companies using JAD, the relationship between DP and users has improved, requirements and design specifications are being gathered more quickly, maintenance is being reduced because the system was designed right the first time, and backlogs have significantly diminished.

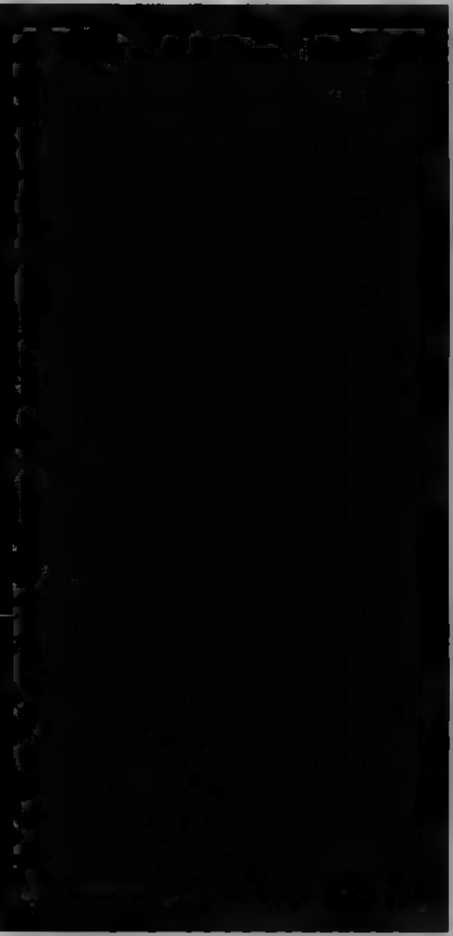
JAD can provide better requirements faster. Furthermore, involving users in the process of designing their business systems makes users feel that the system developed really is their system.

JAD works because it enables the business community to specify its system needs without having to resort to technical jargon. In addition, an impartial session leader ensures that all sides are represented, the workshop environment fosters a concentrated effort, and preworkshop preparation ensures high-quality needs.

The JAD process begins by identifying a user executive who sponsors the business system. The executive sponsor provides

See JAD page 38

Rush is a member of Exxon Corp.'s Development Center in Florham Park, N.J. He has functioned as a Joint Application Design (JAD) session leader and is a comanager of the JAD project within Guide, an IBM users group.



■ Help/38 Systems, Inc. announces a productivity aid for RPG-III/34

All software should be free, software developer maintains

By Maura McEnaney
CW Staff

TYNGSBORO, Mass. — Richard Stallman faced the crowd and boldly voiced his opinion. "I don't believe that people have the right to hoard software. Those who do are enemies of society."

Stallman, 31, is the originator of the Emacs editor and a former affiliate of the Artificial Intelligence Laboratory at MIT. Recently, he has become an outspoken advocate of free software.

As one of four panel members at a recent Wang Institute of Graduate Studies discussion of software protection and later during a phone interview with *Computerworld*, Stallman outlined his latest project — a Unix-compatible software system that will be given away to the public.

Stallman has been independently working on GNU, which stands for Gnu's Not Unix, a project that reportedly will include a kernel and utilities needed to write and run C programs. The product is

Sigma passing mourned

Sigma is dead.

The charter of the provisional Special Interest Group on Software Maintenance (Sigma) of the Data Processing Management Association (DPMA) was revoked last month for failure to recruit enough new DPMA members. The group plans to reorganize but as an independent entity.

Sigma's failure is unfortunate. With all the attention that software maintenance has received over the last couple of years, it would seem that the time was right for more formal recognition of the complex factors involved. It is generally agreed that maintenance costs in the average DP shop are approaching 50% of the programming budget. In some cases,

RPG Lite converts RPG-III into free-format language

MINNETONKA, Minn. — Help/38 Systems, Inc. has announced a productivity aid that makes IBM's System/38 language — RPG-III — a free-format language.

According to a spokesman, RPG Lite allows programmers to type in source statements without prompting or formatting, just as they would for Cobol, Fortran or Basic. The package allows programmers to indent their coding into logical blocks and it then converts the code into compilable, formatted RPG III.

RPG Lite is said to reduce the IBM source entry utility (SEU) load on the System/38, allowing many programmers to code simultaneously without slowing response time because programmers can enter up to 100 lines of RPG-III without hitting Enter. Multiple statements reportedly can be coded on one SEU line. New programs can be coded with RPG Lite and new routines can be added to old programs.

RPG Lite is priced at $795, the vendor said.

More information is available from Help/38 Systems, which is located at 15102 Minnetonka Industrial Road, Minnetonka, Minn. 55345.

SIGMA

from page 31

that figure is closer to 80%. Sigma's commendable purpose was to draw attention to this issue. But its execution was faulty, at least as far as the DPMA was concerned. In revoking Sigma's charter, the organization said that Sigma had failed to recruit 100 DPMA members — a de facto requirement for certification. The DPMA also noted that Sigma had failed to petition for transition to regular status — a requirement for provisional DPMA special interest groups.

Christian Meyer, international vice-president for association growth and support at the DPMA, said, "Other than generating a newsletter, no further formative work went into the special interest group." He added that the basic structure was simply not in place to expand membership.

The group's officers maintain that they tried to recruit new members but could not satisfy the DPMA's requirements. "DPMA felt Sigma had not done enough in recruitment," said Ned Chapin, a DP consultant at Infosci, Inc. in Menlo Park, Calif., and former president of Sigma.

Sigma did succeed in signing up about 55 DPMA members and 115 non-DPMA members during its charter year. However, DPMA rules require all members to become part of the DPMA once the special interest group moves to regular status. For members, that would have meant paying the $50 DPMA fee plus an additional $15 for Sigma membership.

The group also apparently had never been clear on the requirements for certification as a DPMA special interest group. "We were trying to get members whatever way we could on a limited budget," said Nicholas Zvegintzov, editor of Sigma's newsletter, "Software Maintenance News." However, he added that Sigma never really knew how many DPMA members it had.

What Sigma lacked in organizational details it made up for in zeal. In 1984, Sigma members spoke at the National Computer Conference, the Information Management Exposition & Conference and professional development seminars for the DPMA and the Association for Computing Machinery. It was also heavily involved with the Second Annual EDP Software Maintenance Conference held in Washington last May.

No lack of interest

Those who were involved with Sigma agree that the organization's failure was not due to lack of interest. "The subject is still not very popular," said Girish Parikh, a Chicago-based consultant and author of two books on software maintenance. "Most people concentrate on development. People don't usually want to think about their problems."

However, no one sees the maintenance issue going away soon. Parikh said he believes attention will be refocused only through the efforts of groups like Sigma to bring maintenance to the floor.

In the meantime, the group's officers have vowed to try to create a new software maintenance group that is independent of the DPMA. "Software Maintenance News" will continue to be published. Chapin is interested in hearing from anyone who may want to participate in the new group. He can be reached at Infosci, Box 7117, Menlo Park, Calif. 94026.

In addition, the DPMA is welcoming comments from people who would like to rejuvenate software maintenance activities within the DPMA. Meyer is located at BST Consultants, P.O. Box 23425, Tampa, Fla. 33623.

'. . . and a computer with 64K memory, a floppy disk drive, a CRT with a light pen and full software packs.'

Imagine.™ Expand the way you think about information retrieval. It's the only query and reporting system built for CICS with: Entirely menu-driven architecture • Integrated on-line and batch query and report writing • Comprehensive system-managed control of CPU resources and data security. • Integration of production files into an on-line informational data base. For more information, call (617) 547-8050.

MULTIPLICATIONS ✳

UCCEL has selected Imagine for use with its application software products. Multiplications has offices in the following locations: Cambridge, MA. Atlanta, GA. New York, NY. Oakland, CA. Rochester, NY. Toronto, CN.

DunsPlus: The Micro Solution That Reflects The Way You Do Business

You've heard the buzzwords: user friendly, integrated, smarter, faster, cheaper. But when you push the rhetoric aside you're still asking the same question, "Why can't I get a system that solves more problems than it creates?"

You can. It's called DunsPlus and it's built to respond to your information-related business demands without creating demands of its own.

DunsPlus gives the IBM PC XT a built-in business environment. This lets you mold DunsPlus to fit the way you do business.

Within the DunsPlus environment is a software base of the best. Lotus, MultiMate, Western Union electronic mail (to name but a few), are all ready for immediate use. But additional programs to solve your unique problems can also be added with ease.

Instant, yet controlled, access to your choice of mainframes and subscription databases is also a part of the DunsPlus environment. And transferring data throughout the system is as easy as moving a piece of paper from the In Box to the Out Box.

Immediate end-user productivity is not an issue: DunsPlus is a menu-driven system requiring minimal keystrokes for maximum results.

Installation is not an issue: DunsPlus is installed by IBM.

End-user training is not an issue: Training and support are part and parcel of DunsPlus.

Flexibility is not an issue: Any part of the DunsPlus solution--hardware, software, or service--can be tailored to meet your precise business needs.

In fact, there are no issues. DunsPlus does what you want, the way you want it--now.

Designing systems that reflect the way you do business is business as usual for us. NOMAD2, the premier 4th-Generation-Language/DBMS from D&B Computing Services, has made us a leader in the field of information management services. And as your needs evolve, so do we. DunsPlus is just the latest step in translating technological advances into usable business tools --tools that reflect the way you do business.

DunsPlus: An Innovation In End-User Computing From Dun & Bradstreet

The key word in that long, drawn-out headline is system.

A system built for PCs.

At Hewlett-Packard, it's a quality system of personal computers, plotters, a truckload of software, and Local Area Network (LAN) capability.

It's all matched and designed to work brilliantly together.

Yet the system is so flexible each part can stand alone. Or even team with an IBM PC.

So you can build just the system your staff needs.

It all starts with two of our Hewlett-Packard personal computers.

We call one the HP Touchscreen and the other (because it can do even more) the HP Touchscreen MAX.

The first comes with two double-sided disc drives that give you 256K bytes of main memory, expandable to 640K bytes.

The HP Touchscreen MAX has even more capacity, with the added power of a 14.8M byte Winchester disc drive.

And both have DSN/Link, to let you set up a direct line of communication between them and your HP 3000 Department Computer.

As the names imply, you can actually change things on either screen just by touching the screen.

That makes the Touchscreen PCs easier to use. And a lot easier to learn.

The system also includes two printers many people think are simply the best around.

Our Hewlett-Packard LaserJet and ThinkJet printers are both breathtakingly fast and refreshingly quiet.

The ThinkJet printer runs at a rapid 150 characters per second.

Yet because the ThinkJet paints each character with a small jet of ink (instead of smashing the paper with keys), it's as quiet as a sigh.

At 300 characters per second, our LaserJet printer is even faster.

Ten times faster than the best daisy-wheel printers. Yet the image is as sharp as you'll get from a printing press. Amazing.

and when you get to your hotel, change everything.

Two different plotters are also part of the HP personal computer system.

Both create full-color graphics. One with two pens, the other with six for even more detail.

If you like, the system can be knitted together through a LAN.

It lets a number of HP personal computers link up, talk to each other, share printers, and exchange information.

By the way, there can be a lot of information to exchange. That's because there are more than 500 business software titles available. For word processing, accounting, spread sheets and graphics. You'll find the big names there, too.

1-2-3™ from Lotus™ *WordStar™** MicroPlan™*** And the whole catalogue of software from HP.

Finally, when you travel, you can take the system with you.

Hewlett-Packard's portable personal computer turns your hotel room (or your den at home, or your customer's desk) into another part of your personal computer system.

The Portable has plenty of capacity; 272K bytes of RAM and 384K bytes of ROM. And with its built-in modem, it can link you with your office printers and plotters. Not bad for a computer that weighs just nine pounds and can fit into a briefcase.

The system is all linked up, all on the same programs, all designed to work together, and all ready to go.

And all from Hewlett-Packard.

Just dial 800-FOR-HPPC, toll free, to find the name of a Hewlett-Packard dealer or sales representative near you.

is said to include an Emacs-like editor, a shell, C compiler, linker and assembler. Stallman said he hopes to have the project completed by the spring of 1985.

According to Stallman, "GNU will be able to run Unix programs but will not be identical to Unix." Longer file names, file version numbers, terminal-independent display support and a Lisp-based window system are planned for the product, Stallman said.

Through GNU, Stallman said he hopes to create a complete software system free for anyone to redistribute. "I consider that the golden rule requires that if I like a program I must share it with other people who like it. I cannot, in good conscience, sign a nondisclosure agreement or a software license agreement," he said. Once GNU is launched, Stallman believes they will have a system that no longer requires users to pay for their software. "The purpose of this is to make it possible [for me] to use computers without being ashamed of what I'm doing every minute."

Copies improve software

All software should be free, Stallman said, because it is improved upon only when it is built upon, just as "any [form] of art progresses most quickly when people build on each other's work. Every time you make copies of a program, you make things better for society."

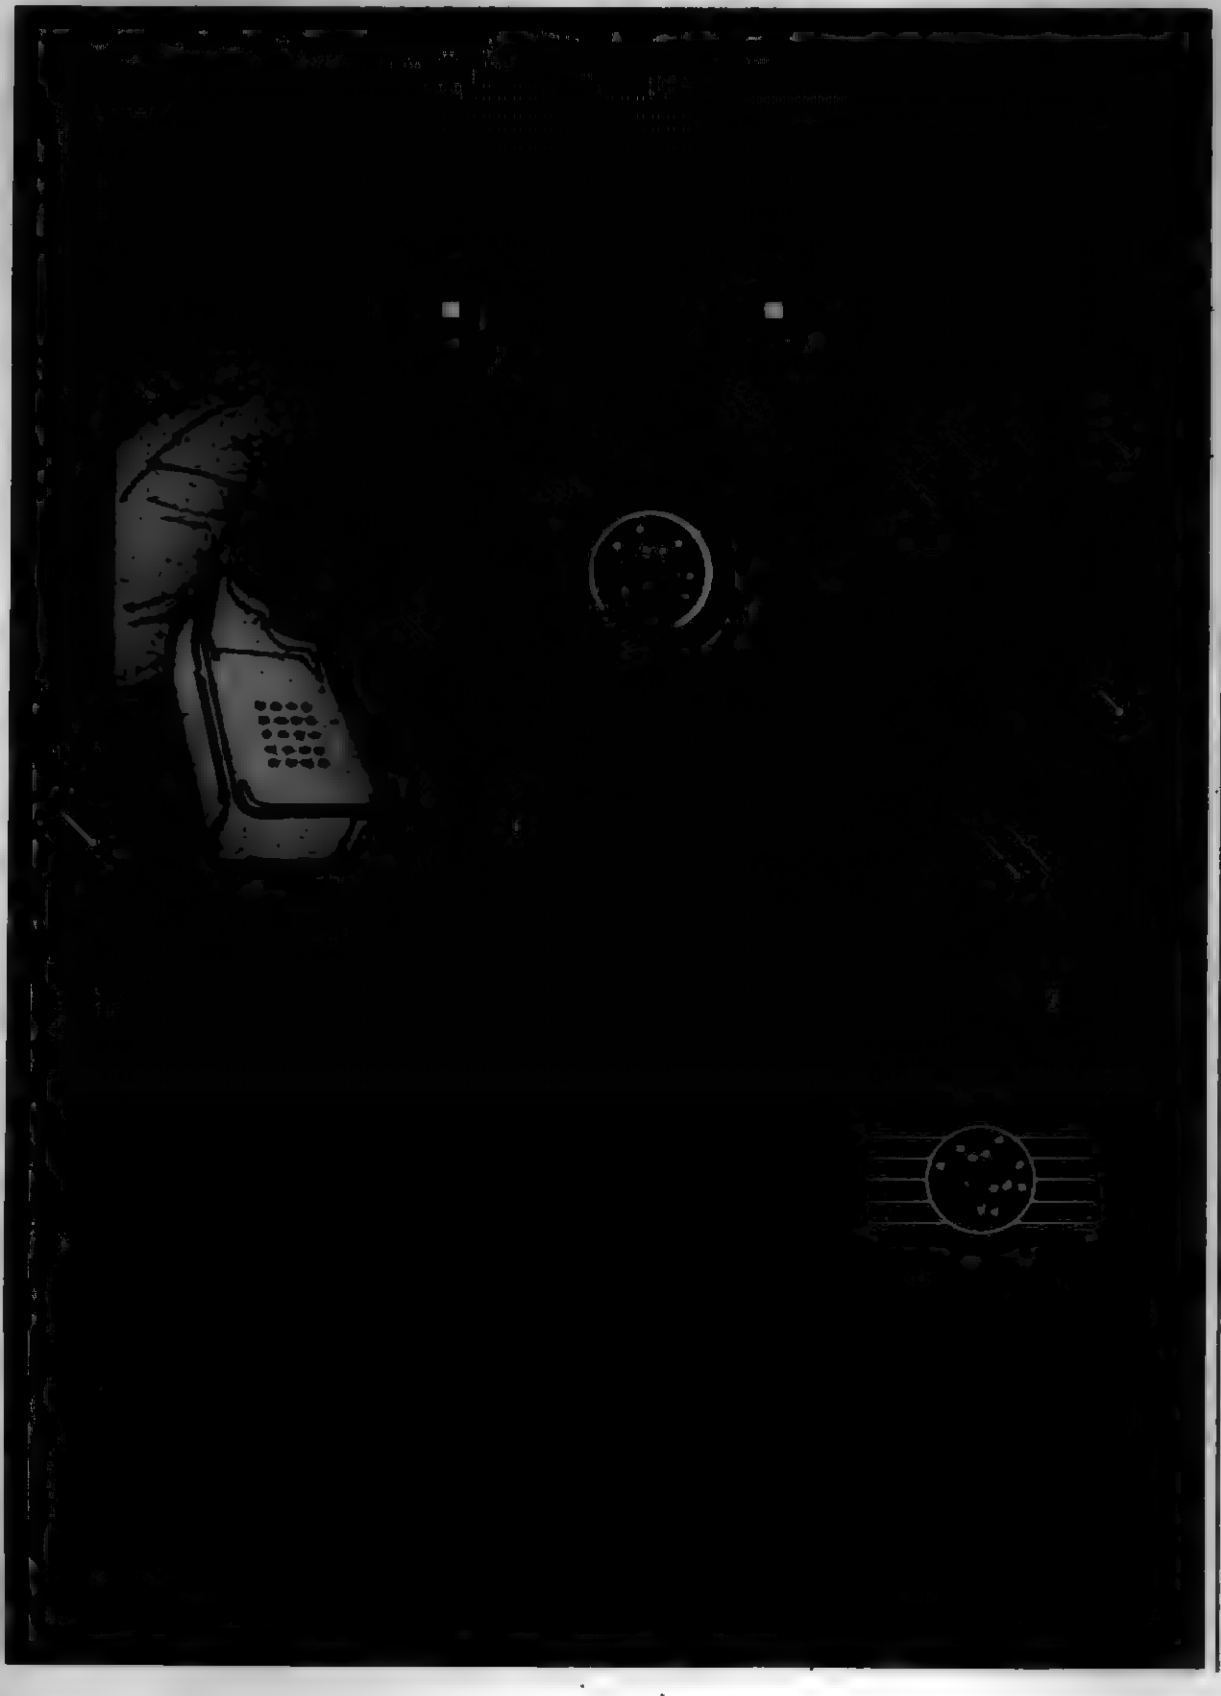
Licensing software only prevents people from being better neighbors, he noted.

"I consider it an utterly intolerable offense when people say I can use a program only if I agree not to share it with other people," he said. With GNU, Stallman said, "I wish to promote the sharing of software and interfere as much as I can with other people's attempts to interfere with the sharing of software."

Copyright laws provide a major interference with software sharing, Stallman said. These laws actually discourage users from being "good neighbors" and can result in fewer people using software programs and a deteriorating quality of the program, he said.

Software protection laws are similar to arson, Stallman said, since, "you threaten to destroy wealth if people don't pay you for it."

Although Stallman supplements his income by consulting for Lisp Machine, Inc., he maintains that, "what I write has to be shared."



JAD

the management perspective and sets the purpose and scope of the effort. This management commitment is important to the success of the system design.

The preparation further involves completing a management definition guide and a familiarization guide and preparing the workshop agenda. The purposes of the management definition guide are to obtain user management commitment on timing and support; assign personnel for the sessions; define what management considers to be the purpose, scope and objectives of the project; and to identify the constraints of the project.

The familiarization guide is used by the session leader who interviews line management about the current business environment and encourages users to think about the upcoming design. The information collected is used to prepare the workshop agenda. For very large projects, the preparation also consists of a functional decomposition of the business by both the DP and user participants to ensure that only manageable pieces are tackled at one time.

System needs developed

In the JAD workshop session, all of the business requirements and systems needs are developed. These sessions generally run eight hours a day and usually no more than three to four days at one time. The sessions involve the session leader, one or two people to document the results, one or two DP personnel — usually the project leader and one technician — and up to eight users.

The users range from the lead clerks or technicians up through the second- or third-line management. The data processing personnel are involved to provide assistance to the users and background information on existing systems and technology. They also ensure that they understand the users' needs and can translate the resulting documents into a meaningful system design.

The basic session follows a very simple, flexible, yet thorough agenda. This agenda consists of 10 steps; two involve preparation and eight involve design.

The first two steps cover the ground rules and structure of the session and the current business environment. The remaining eight steps follow the life of a business function through a given area (see story page 31).

Materials, books, checklists, visual aids and other tools to support the technique and the session leader have been developed by IBM. The technique, developed in 1977 by IBM's Chuck Morris, was originally used to assist in installing distributed systems.

In 1980, IBM Canada adapted JAD so that it could be used for any requirements and design-gathering activity. Since then, it has been used by various companies to design everything from grain elevators to robotics to standard DP applications.

JAD consulting and training are now offered by IBM's Information Systems Services organization. In addition to IBM, the technique is used by such companies as Texas Instruments, Inc., American Airlines, Inc., CNA Insurance, Bell Canada, New York Life Insurance Co. and Carrier Corp.

COMMUNICATIONS

Report warns of Inter-Lata mart shakeout

By James Connolly
CW Staff

CHICAGO — The flock of 400 Inter-Local Access Transport Area (Inter-Lata) carriers will thin to 100 in a few years, and that group will be dominated by two dozen carriers who are now building their own networks, according to an industry report by Telephony Publishing Corp. here.

Taking its name from a famous economist, the study, titled "The Independents: The Gospel According to Adam Smith," found that the image of independent communications firms as "sitting ducks in the new competitive market" is a myth.

"Some years ago, the independents [such as MCI Communications Corp. and GTE Sprint Communications Corp.] saw that deregulation was becoming a fact and competition would be a permanent part of their business," the report noted. Seeing the writing on the wall, the independents pursued a two-pronged strategy. "They concentrated on digitizing their networks and also expanded into the more lucrative opportunities that would become available. The resulting mergers, acquisitions and joint ventures were suffused with the spirit of Adam Smith. The independents have now entered the performance phase of their strategy," the report said.
